MISCELLANEOUS

PREVENT LOSSES from Coccidiosis, Diarrhea, in your chicks. Use our prevention solution in drinking water. Money refunded if not satisfactory. Sixty cents per pint. Fox Hall Poultry Farm, Dover, Del.

ROOFING REMNANTS—Smooth surface 1-ply $.80; 2-ply $1.10; 3-ply $1.40; 80-pounds slate surface, $1.75. Buffalo House Wrecking and Salvage Company, 477 Walden Avenue, Buffalo, N. Y.

NEW 3 Bottom Vulcan Plow for sale. Cost $275.00, will sell for $100.00. Have sold tractor, therefore no use for it. Allamuchy Farms, Allamuchy, N. J.

SLIGHTLY USED Standard Incubators and brooders. All sizes. Express half paid. 20th year. Save 50%. No postals. L. F. Jones, Danbury, Conn.

WILSON SOY BEANS—$2.25 per bu. Missionary and Gandy Strawberry Plants, $4.00 per 1,000. Aaron Mast, Westover, Md.

CASH PAID for Dairymen's League Certificates of indebtedness, all series. L. F. Thornton, Dimock, Pa.

WANTED—Four row potato sprayer. Give description and price. C. E. Cassel, Hershey, Pa.

PLANTS

CABBAGE PLANTS—My frost proof cabbage plants will head three weeks earlier than home grown plants and double your profits. Varieties: Copenhagen Market, Jersey and Charleston Wakefield, Succession, Flat Dutch and Golden Acre. Prices, by express in quantities $1.00 per 1000. By mail, postpaid: 500 for $1.25, 1000 for $2.25. Tomato plants, leading varieties, by mail, postpaid: 500 for $1.50, 1000 for $2.50. By express, 10,000 and over $1.50 per 1000. All plants wrapped in damp moss to assure safe arrival. Prompt shipments, satisfaction guaranteed. P. D. Fulwood, Tifton, Ga.

TIFTON'S RELIABLE PLANTS—Frost proof cabbage, Bermuda onion plants. Varieties: Copenhagen Market, Early Jersey and Charleston Wakefield, Flat Dutch, and Succession. Tomato plants. Varieties: Greater Baltimore, Bonnie Best and Livingston Globe. Prices postpaid, 250, $1.00; 500, $1.50; 1000, $2.50. Express collect: $1.60, 1000; 10,000 and over, $1.25, 1000. We guarantee to ship size to please you. References: Bradstreet, Bank of Tifton and Postmaster. Tifton Plant Co., Tifton, Ga.

FROST PROOF CABBAGE PLANTS—If you want an early crop, set our hardened outdoor grown plants. 300, $1.25; 500, $1.50; 1000, $2.50 prepaid. Expressed collect, 10,000, $15 cash. Prompt shipments, delivered in good condition or money refunded. J. P. Councill Company, Franklin, Va.

BUY YOUR Grimm alfalfa seed direct from the introducer, and know that your foundation stock is pure, pedigreed seed, bred from the original Grimm strain. Acclimated to severe northwest temperatures since 1857. A. B. Lyman, Introducer, Excelsior, Minn. The House of Grimm Alfalfa.

SEED CORN—Yellow dent, 1925 crop. Sure to grow, hand selected, no tip grains, prize winner. New Jersey state corn show seed exhibit. 1 bushel $2.50; 5 bushels or more $2.00 per bushel. J. H. Croshaw, Wrightstown, N. J.

FROSTPROOF cabbage plants, Wakefields, Flat Dutch, Copenhagen, Succession. 300—$1.00; 500—$1.50; 1,000—2.25, prepaid. 10,000 collect, $12.50 cash. Good plants, satisfaction guaranteed. Maple Grove Farms, Franklin, Va.

FROST PROOF CABBAGE PLANTS—10 million ready—500, $1.25; 1000, $2.25 postpaid. Express collect 10,000, $10. No order too large. Good delivery guaranteed. Wholesale Plant Co., Thomasville, Ga.

COPENHAGEN and Wakefield cabbage plants, $1.00, 1,000; tomato, $1.00; Bell pepper, $1.50; onion, $1.25; Porto Rico plants, $2.00; large, open field grown, carefully packed. Quitman Plant Co., Quitman, Ga.

BEAUTIFUL FLOWERS—Great value. 35 Gladioli, 4 Dahlias, 4 Cannas, 4 Iris, $1. Postage 15c. Lowest price list. Flowers, shrubbery. Guarantee quality, service. Stunroads, Yeagertown, Pa.

APPLE TREES 25c, peach 15c, pear, plum, cherry, quince, and apricot 40c, prepaid. Catalog free. Malta Nursery, Malta, Ohio.

CLARAGE CORN holds world's record, 168 bushels per acre. Also fine for silage. Dunlap & Son, Williamsport, Ohio.

DAHLIAS DeLuxe. Extra choice varieties. Catalog upon request. Doty Dahlia Gardens, Seneca St., Ebenezer, N. Y.

MILLIONS, cabbage, onion and tomato plants, $1—1,000. Descriptive circular free. Clark Plant Company, Thomasville, Ga.

60 BLOOMING GLADIOLI ... None alike. 12 Dahlias, $1.25. Catalogue. A. Sherman, Chicopee Falls, Mass.

BUY YOUR Grimm alfalfa seed direct from the introducer, Sam. Bober, Newell, S. D., and save money.

DAHLIAS—12 live bulbs, 60c. Anna Learo, Forest City, Pa.

POTATOES

CERTIFIED SEED POTATOES—Irish Cobbler, Carman No. 3, vigorous, high yielding stock. Inspected and passed three times last season by experts from State College. Write today for prices. N. A. Baker & Sons, Fairport, N. Y.

CERTIFIED Irish Cobbler potatoes. Passed first inspection with less than 2% total disease. Second inspection less than 1%. Just a few of the vigorous strain left. Glenn Carter, Marathon, N. Y.

POTATOES Early Irish Cobblers, hill-selected, official yield 413 bu. per acre. Russets. All raised from certified seed. Wm. Jones, Truxton, N. Y.

CERTIFIED SEED POTATOES, Smooth Rural type, heavyweight strain, 305 bu. per acre. H. L. Hodnett & Sons, Fillmore, N. Y.

ASPARAGUS

ASPARAGUS Why not plant the largest, tenderest, most profitable - The Washington", 100 roots $1.25; 1000—$8.00. Prepaid. Sunnybrook Farms, Lancaster, Pa.

ASPARAGUS ROOTS for sale. Washington rustproof variety, heavy yielder. Write for particulars. John E. Kennel, Gap, Pa.

ASPARAGUS ROOTS—Mary, Martha Washington, $1.25 hundred; $7.50 thousand prepaid. Pleasantview, Sadsburyville, Pa.

MOTORCYCLES

MOTORCYCLE BARGAINS—Used, rebuilt, Guaranteed. Shipped on approval. Catalog free. Floyd Clymer, 815 Broadway, Denver, Colo.

SITUATIONS WANTED

WANTED, by an experienced, successful farmer and dairyman, a position as manager or head farmer where knowledge and industry will be appreciated. Have just sold my own herd of Jerseys and equipment. Am thirty-eight years old; have wife and one daughter. Address X. Y. Z., Pennsylvania Farmer.

Wonderful *New* Method

Milks Cows Like No Other Machine Ever Milked Cows Before

AT LAST something *new* has happened in the history of machine milking!

For 15 years milking machine makers have been bringing out new models—telling of the grand improvements they have made—BUT when all was said and done, it proved to be mostly talk, which didn't mean a thing to the farmer.

Now—the Pine Tree Milking Machine Company has brought out something *really* new.

The wonderful SURGE Milker has changed all old ideas of what a milking machine ought to accomplish. You cannot judge this machine by anything you ever knew of milking machines in the past. Breeders who used to be afraid to put a machine on their record making pure breds are using the SURGE. They tell us they are making wonderful records—and the udders have never been kept in better condition by the most careful hand milking.

Dairymen producing for city milk trade who couldn't make pure, clean milk with old type machines are earning premiums for low bacteria count—and spend no more time washing the SURGE than they used to spend washing milk pails.

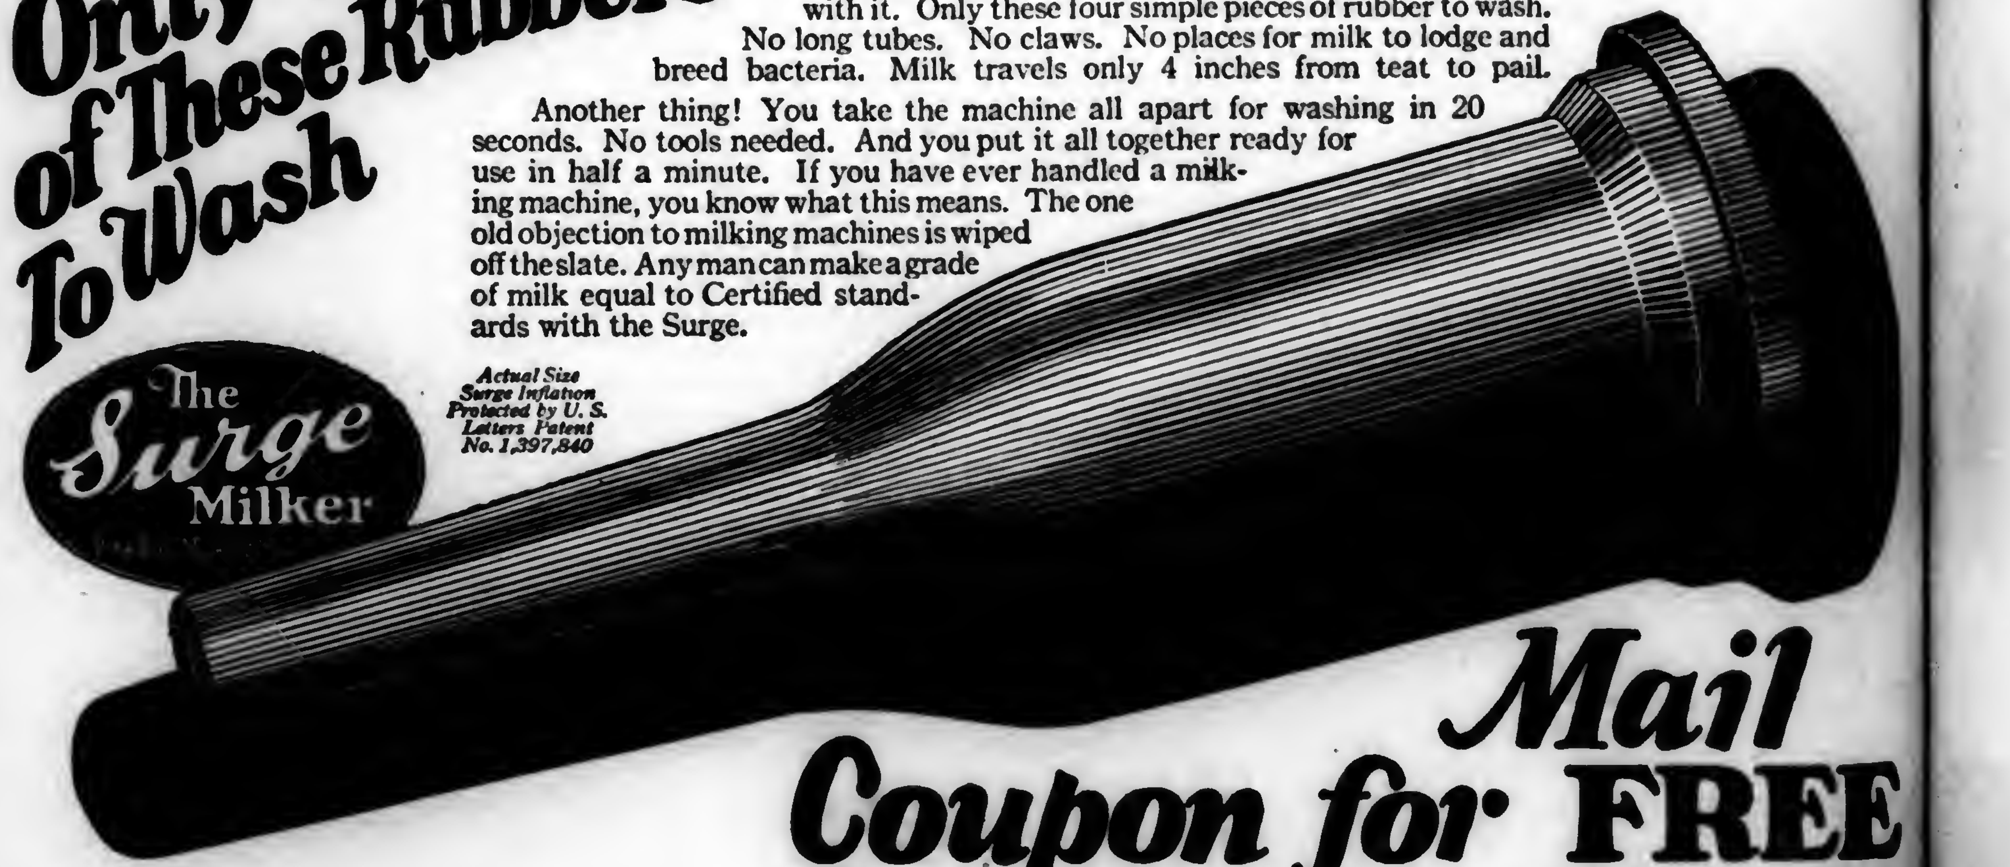
The SURGE is sweeping everything before it. It is the greatest thing that has happened in the dairy industry for many years.

Send the coupon below for details of our surprising offer that gives you a chance to prove out these things for yourself before you obligate yourself to buy a thing.

Only 4 of These Rubbers To Wash

Think of that! You men who have tried so hard to keep old "Long Tube" milkers clean—and couldn't get by with it. Only these four simple pieces of rubber to wash. No long tubes. No claws. No places for milk to lodge and breed bacteria. Milk travels only 4 inches from teat to pail.

Another thing! You take the machine all apart for washing in 20 seconds. No tools needed. And you put it all together ready for use in half a minute. If you have ever handled a milking machine, you know what this means. The one old objection to milking machines is wiped off the slate. Any man can make a grade of milk equal to Certified standards with the Surge.



Actual Size Surge Inflation Protected by U. S. Letters Patent No. 1,397,840

The Surge Milker

Why Do We Call It the "SURGE"?

You will know at once when you see it work. That surging action—back and forth, gets the milk as no milker ever got it before. Cows that would never give down their milk to a machine, milk out DRY with this wonder milker. It sucks from the front, just like a calf. It gets the strippings as no machine ever got them. For two years it has been milking a herd of freak cows that we got together to put this machine to the most difficult test that any milker ever had to meet.

Pine Tree Milking Machine Co. Dept. 31-23
620 South Delaware Avenue, Philadelphia, Pa.

Please send me, without cost or obligation, your special offer on the Pine Tree Surge Milker.

I milk........cows.

What power will you use? ☐ Gas ☐ Electricity

Name..

Address..........................*R. F. D.*..............

Mail Coupon for FREE Demonstration OFFER!

You've been reading here the most surprising statements you have ever read about a milking machine. But you will never believe them as we believe them until you see this wonder milker working in your own barn, on your own cows. That's why we are ready to offer you a chance to have a FREE demonstration without obligating yourself to buy anything. We want you to see the Surge Milker milk out a cow that you are ready to bet can't be milked by machine. We want you to take the machine apart and wash it, *yourself*. Just to see how quick and easy it's done.

Once you see these things for yourself, we don't have to spend any time trying to "Sell" you an outfit. You'll never let us take it out of your barn. But we're taking the chance of that—not you. Our FREE demonstration offer leaves you open to do exactly what you want to do. It is the most surprising offer ever made in milking machine history. Send today for full details.

Easy Terms

Any man who wants to buy a Pine Tree Surge Outfit after our free demonstration, can make a deal to pay for it on very easy terms. We'll figure with you to keep the cost down by using any equipment you may have already installed in your barn. You'll be surprised how little it will amount to. Fill in the coupon and mail it right now. It doesn't obligate you to do a thing but listen to the proposition we have ready to make you. Mail the coupon at once.

Quality First
— then Low Price —
but we never sacrifice quality
to make a Low Price

Ask "*What Quality?*" as well as "*What Price?*"

There is an advantage in using Ward's Catalogue to look up every article you need to buy.

Because Ward's Catalogue is based upon Quality First—then Low Price.

The difference is that Your Satisfaction with what you buy at Ward's is always assured. And satisfactory service—long wear, more months of use—determines in the end the actual cost. Price is what you pay—service is what you get. By sacrificing serviceability, prices can be made lower and lower. At Ward's, serviceability is never sacrificed to make a low price.

How Ward's Low Prices Are Made and High Quality always Maintained

Ward's low prices are made by quantity buying for ready cash by one of the most skilled and expert buying organizations in the world.

Sixty Million Dollars in cash were used in buying goods for this Catalogue. The markets of the world were searched. Goods were bought by the thousand dozen, by the car load, to secure lower-than-market prices. Our prices are as low as any merchandise power can secure. But they are never lowered by reducing quality.

We do not use inferior leather for the undersole of a shoe to take fifteen cents off the price. We do not use tin where galvanized iron gives longer service. We do not use old reclaimed rubber in a tire where new rubber is required. This carefulness to maintain quality, to secure longer wear, is part of Ward's service to you.

Use Your Catalogue With Confidence in Ward Quality

For Fifty-five years, Montgomery Ward & Co. has sold merchandise that always ***is what it seems to be***—merchandise that will stand your inspection and your use. For Fifty-five years we have done business with our customers in the full Spirit of the Golden Rule.

Your orders are shipped within 24 hours

Your orders will be shipped within 24 hours. That saves time. Besides, one of our seven big stores is near to you. Therefore, your letter reaches us quicker. Your goods go to you quicker. It is quicker and cheaper, and more satisfactory to send all your orders to Ward's.

Mary Decided To Get Married

This Is the Story of the Cake That Made Her Wedding a Wonderful Success

By HOWARD MITMAN

MARY decided to get married; and with Mary, to decide a thing was as good as accomplishing it. She cast an appraising eye about and over the sprinkling of eligible, unattached male material in the vicinity and Louis was elected. In her own feminine way she apprized Louis of the honor in store for him, and the thing was settled, pronto.

Mary is a nice girl, a very nice girl, using the term in its finest sense. In fact, she is all we generally mean to convey by the phrase. She is the daughter of one of our near neighbors, a farmer, who belongs to that large, variegated and assorted group we list together as "foreigners." But I can truthfully say this country would be much better off had we more "foreigners" of the type of Mary and her family.

As Everybody Knows There's More Than One Way

Now, there are various ways of getting married and I am not trying to say which is the best. Bill Nye once said the most energetic, business-like justice-of-the-peace he knew in the West used this formula when officiating at a wedding: "Rise; jine hands; hitched; six dollars."

Mary, however, demanded something more. The group to which she belongs considers four things essential to a good wedding: A throng of guests; wine or more potent liquor; dancing; and a wedding cake. Incidentally a bride and groom are also needed, and a priest to conduct the ceremony; but the first four are essential.

Mary liked all the four essentials, except the second, but it seemed unescapable, even tho undesirable. She would minimize it as much as possible, and instead would provide a wonderful wedding cake.

She came to see the missus a week or so before the wedding and asked her to build for her the greatest wedding cake it was possible to build. "Mary X.," said she, "had a wedding cake that weighed twenty-five pounds and I want a bigger and better one."

> "THE whirring clatter of the egg beaters rose and fell, rose and fell, in cakely cadence. The bakers bore about with them that distraught, self-centered, concentrated air ladies so often assume when a wedding is in the offing, raised to the *nth* power, in this case, by the equally absorbing motivation of cake construction."—from Mr. Mitman's story about Mary's wedding cake.

She carried her point, for we all like Mary; and the ladies of the house determined to build for her wedding a very Jumbo of a cake—the largest, best and highest the oven would hold. Everything about it must be in the superlative.

No cake pan at hand was large enough for this giant cake, and none could be purchased; so the tinsmith was commissioned to make one; and he did, sixteen inches square.

It Was a Hectic Time for All Concerned

Then there was a gathering of materials, a studying of cook books, an inspection of utensils, and thermometers and weather reports and a score of other agencies and considerations that might help or hinder the architectural development of a great cake. It was a hectic time; but the temperature rose almost to the fusing point when the day before the wedding came and the carpentering of the cake actually began.

There were, or so it seemed, about six hundred dishes and spoons and beaters and containers of materials, all and sundry, scattered about the kitchen, piled on the tables, the windows, the floors; and even hanging from the ceiling. It was a stirring time. The whirring clatter of the egg beaters rose and fell, rose and fell, in cakely cadence. The bakers bore about with them that distraught, self-centered, concentrated air ladies so often assume when a wedding

Indiana County Talks Electrification

Farmers and Utility Men Discuss Problems of Building Rural Power Lines

FARMERS of Indiana County and public utility men got together in Indiana, Penna., on March 18 to talk over the problem of bringing electricity into the country districts and using it profitably on the farm and in the farm home. The occasion was Rural Electrification Day, arranged by County Agent J. W. Warner.

County Agent Warner

J. M. McKee, secretary of the Joint Committee on Rural Electrification, gave one of the principal talks of the meeting, reviewing the function of the Joint Committee as a clearing house for questions arising between farmers and the power companies. He explained the workings of General Order 28, recently issued by the Public Service Commission to govern the building of electric lines in rural sections.

Order 28 provides, in part, that rural lines shall be built by the power company, but that the consumers on that line shall be subject to a minimum monthly charge amounting each month to two per cent of the cost of the line. As this two per cent of the construction cost is divided among all the power users on the line, the more consumers there are the less the minimum monthly charge will be. This means that if all the farmers in a community agree to use electricity they can secure it much cheaper than if only a few of them sign up.

The method of procedure for a farmer who wishes to secure electric service is this: First, he should see how many of his neighbors will agree to cooperate with him in securing service. Then he should take his list of prospective buyers of electric current to the power company that serves his section, and make an agreement with the company for the building of the necessary rural line to connect with the existing electric lines. If unable to reach an agreement with the electric power company he should then explain the whole situation to Mr. McKee, of the Joint Committee.

The history of the Joint Committee and the problems it has encountered were discussed by Miles Horst. It is not the cost of generating electricity, but the cost of delivering small quantities to isolated farms, that has hindered rural electrification. Electricity will not be of greatest usefulness to farmers until they find many ways to utilize it profitably. Farm business isn't attractive to the public utility companies as long as farmers, living on long and expensive transmission lines, use little more current than city people.

Pictures Show Ways Electricity Is Used on Farms

J. R. Haswell, State College Extension Agricultural Engineer, gave an illustrated lecture on ways electricity is being used on some Pennsylvania farms. One of his pictures showed an electric motor mounted on a small hand truck with a short shaft. The motor was belted to the shaft, which had pulleys of three different sizes, making it easy to fit the motor to any farm machine.

The power company men on the Rural Electrification Day program were Harry Zieme, E. W. Matthews and F. W. Womer, all of the Penn Public Service Corporation. They devoted much of their time to the discussion of questions raised by the farmers. Following are some of the points brought out in this discussion:

Farmers may reduce the minimum monthly charge for electric service by contributing labor or poles used in the construction of their rural line. The company figures the two per cent per month minimum charge on the amount it spends in building the line. The more the farmers contribute to the cost of the line the less the company will have to spend and the lower the minimum charge will be.

When the company gives an estimate of the cost of building a certain line the cost of right-of-way is not included. If someone charges an exorbitant amount to allow the line to cross his property that amount must be added to the construction cost.

It may require two or three times as much money to build a mile of line in one section as in another. The cost depends on the amount of blasting that must be done for pole holes, the distance poles have to be hauled, the amount of brush that must be cut, etc.

People who refuse to take electric service until after their neighbors have had the line built are only cheating themselves. They must share the cost of the line when they do come in with the rest, so they gain nothing by waiting.

Among the Indiana County farmers on the Electrification Day program were John Smith, of Penn Run, who told how his community got electric service, and William S. Wetzel, of Marion Center, who explained how he uses electricity for pumping water.

County Agent Warner exhibited several reels of very interesting motion pictures showing how electricity is lightening the burdens of the farm woman and simplifying the farmer's power problem.—C. L. W.

Editors' Note.—Copies of General Order 28 and information about its application may be secured from J. M. McKee, Joint Committee on Rural Electrification, Telegraph Building, Harrisburg, Penna.

If you want extra traction and long tread wear in addition to balloon tire comfort, be sure you get this quiet-running *new-type* Goodyear All-Weather Tread

Costly NOT to Have

When it comes to the lowest possible mileage cost, a good tire is only half the battle.

The other half is the *service* performed for you by your local Goodyear dealer.

He makes sure the tire you buy is the right size and type for your car. He mounts it on the rim for you. He fills it with air.

During the whole life of that tire he is pledged to help you give it the care it should have to deliver the maximum results.

This service cuts down your tire bills. It saves you money. It is something mighty costly *not* to have.

It is part and parcel of the Goodyear policy: *to build the greatest possible value into Goodyear products,* and *to provide facilities so that the user can get all this inbuilt value out.*

Goodyear makes a tire to suit *you*—whether you want the incomparable All-Weather Tread Goodyear, the most famous tire in the world, or the lower-priced Goodyear standard quality Pathfinder

NESHAMINY GARDENS

WHERE AN EDITOR WORKS AND THINKS

BY R. P. KESTER

I HAVE a suggestion this morning that I should write some notes on what to plant this year that would be sure to make a profit. The man who suggested the idea assured me that it would be popular. But it is much easier to play the part of a prophet than it is to make a profit. Then, I have read that a prophet soon loses his honor (reputation) among those who know him well. But supposing I did know, would it be good business for me to tell the public? Should I not keep such valuable information to myself and cash in on it? That would be according to human nature, and the fact that I shall probably tell what we plant at Neshaminy Gardens will indicate that I do not know anything about what will be profitable and what will be raised at a loss.

◆ ◆ ◆

I HAD a letter the other day from a man up-state who wants to raise one or two money crops this year,—something that will be sure to bring good prices and pay a profit. Like the colored man who was asked if he could change a twenty-dollar bill, I thank him for the compliment but I can't advise him. Nobody knows whether or not a given acre of tomatoes, celery or peas will return a satisfactory profit. The market gardener, as well as the general farmer, fares best when he diversifies his crops. Two years ago we made money on muskmelons. Last year we did not make a dollar, altho we planted four times as many. The whole thing simmers down to the adoption of a regular policy, and the raising of a sufficient variety. In this way we establish a sort of check-and-balance system, meaning that if one crop proves to be unprofitable another may offset the loss by making a profit. To those who expect me to name crops that will be surely profit makers, this answer will seem like an exhibition of fence-straddling.

◆ ◆ ◆

I DON'T remember that we ever planted anything out-of-doors on the 18th of March before. But the weather was so fine and the ground turned up in good planting condition and we planted some peas and spinach. We have no concern about the spinach seed whatever the weather may be. In fact, there is little use in planting this crop unless it can be put in early. Wrinkled peas are more easily rotted by cold wet weather than the smooth varieties and it is a gamble to plant them so early, but we take a chance on a few. Planting them at this time is on a par with betting on a coin tossed in the air.

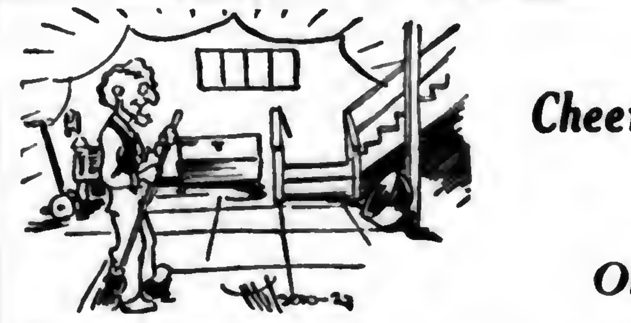
◆ ◆ ◆

WE LEFT the dead tops on the asparagus last fall and mowed them off this spring. The year before we mowed them in the fall. We started the disc harrow over the field after the tops were burned. This will be followed by a regular harrow and then the cultivator.

◆ ◆ ◆

WHEN I started out to look for a two horse-power electric motor to run the pump, I soon found out I did not know anything about motors. I had supposed that a motor was a motor, but I learned differently. They asked me whether I wanted an induction motor, whether the current in our neighborhood required a one-phase, two-phase, or a three-phase motor, and whether the wiring was to be a two-wire or three-wire system. All of this was like asking me riddles in the Greek language. But after telling them I didn't know the answer to any of the questions and getting what information they could give me, and going to the power company and pumping them, then going to other dealers, I finally got a fairly liberal education in electric motors and can talk fluently if not learnedly on the subject.

"The modern girl's hair looks like a mop," says a critic. But that doesn't worry her. She doesn't know what a mop looks like.—London Opinion.



The Cheerful Plowman

The Old Cellar

OH, WELL I remember my father's old cellar, a gloomy old cell he had under his house, a nightmare to me when a slight little feller I worked in its depths with the spider and mouse. It had not a window to let in the daylight, you entered the place thru a two-by-three door, and save for a crack that admitted some gray light 'twas black as the raven that said, "Never more!" Full well I remember the walls,—they were boarded, they bulged in the centers from pressure of ground; and stringers above, they were sooted and sordid, and darkened, and colored, and mottled, and browned.

Each spring, I remember, potatoes in storage insisted on sprouting as tubers will do, and I, as a method of earning my porridge, broke sprouts from each tuber until I was thru! By light of a lantern, so yellow and sickly, I sprouted, and sprouted, and sprouted, for days, until every nerve in my body was prickly and all of my brain was a whirl and a haze! The day it was endless in father's old cellar in spite of the fact that no daylight was there; 'twas endless to me as a slight little feller I sat in the sprouts at the foot of the stair!

Ah, well, that is over and over forever, the darkened old cellar I'll try to forget, and tho I remember I still shall endeavor to rub out the record I'm carrying yet. My basement is roomy, and airy, and sunny, as splendid a room as I have in the house, it cost me a neat little quota of money, it hasn't a spider, it hasn't a mouse! I try to forget as I view its dimensions the cellar my father had under his floor, that darkest, and dampest of ancient inventions, with never a window and scarcely a door!—J. Edw. Tufft.

FOR a quarter of a century the J. C. Penney Company Department Stores have been solving the shopping problems of American families through utilizing their tremendous co-operative buying and selective power.

Our great buying advantages and cash purchases save millions of dollars every year. These important savings are passed on to our customers in better quality at lower prices.

The J. C. Penney Company has become a household word thruout the United States for *quality* in General Dry Goods, Outer-Apparel, Millinery, Corsets, Dress Accessories, Clothing, Hats, Furnishings, Footwear for the entire family, and also well-known notions at 4 cents and 8 cents.

Some of our own Nationally-known brands and values: Lady-Lyke Corsets, 445 and 449 Full-Fashioned Silk Hosiery, Honor Muslin, Penco Sheets and Sheeting, Ramona Cloth, Pay-Day Overalls and Work Shirts, Nation-Wide Work Suits, Big Mac Work Shirts, Marathon Hats, the famous J. C. Penney Company Shoes and other brands.

Our Silver Anniversary Offering of 26-piece sets of original and genuine Rogers' guaranteed Electro Silverplate Tableware, is a high spot in our long, enviable history of Value Giving. Whether you buy one of these beautiful sets for yourself or for a gift, it represents one of the most extraordinary savings ever offered. It is a Great Memento Silver Offering for a Great Silver Anniversary.

The convenient location of our 773 Stores, distributed over 46 States, gives everyone the advantage and pleasure to be had from personal selection. If there is not a J. C. Penney Company Store near you we would like you to write to us.

26-PIECE SET
Original and Genuine
Rogers'
Guaranteed Electro
TABLE SILVERWARE

6 Forks	6 Tablespoons
6 Knives	1 Sugar Shell
6 Teaspoons	1 Butter Knife

$5.90

Per Set, In Artistic Box
By Mail, 25c. Extra

One of the largest makers of quality silverplate has liberally collaborated with us in providing this Silverware in a new, original "Silver Anniversary Pattern," as illustrated above. Its chaste lines and beautiful design will always be in good taste in every home and for every occasion. It is made of the highest quality nickel silver metal with a heavy deposit of pure silver. Knives have quadruple silverplated handles with steel blades that will not corrode or stain. Forks and spoons have reinforced plate where wear is greatest.

The manufacturer's certificate of guarantee accompanies every set. The price—$5.90—is so low as to bring this Silverware within reach of all for everyday use.

"THE PROOF OF GOOD SERVICE IS CONSTANT GROWTH"

WRITE TODAY FOR "THE STORE NEWS"
beautifully illustrated by rotogravure, showing you how to save large sums on Dry Goods, Clothing, Furnishings, Shoes and kindred lines—standard quality goods! A postcard will bring it.

OUR JOB is to serve our readers. Whenever you are puzzled write to us and we will help you if we can.

Don't part with your illusions. When they are gone you may still exist, but you have ceased to live.
—Mark Twain.

Political Forces Uniting

WE HOPE that the people of Pennsylvania are keeping a close watch on what is being done by the politicians at Harrisburg. The signs are that there is an amalgamation going on, uniting the political machine of the Pittsburgh area with that of Philadelphia. The union of these forces for the common purpose of preventing any reform or improvement of the election laws by the Legislature, so that crooked elections may continue to be held with impunity, is disgusting to honest citizens. The political leaders who presume to ride roughshod over the people in the dictatorial manner now in evidence at Harrisburg should be remembered and rebuked. If they foolishly believe that the tremendous majority given to Mr. Fisher last fall carried with it a carte blanche authority to crooked politicians they must be blind, or else believe the people are fools.

Governor Fisher's majority was a rebuke to dishonest leaders and expressed a hope that he was a man able and willing to retrieve the fair name of Pennsylvania by making it impossible to continue the holding of farcial elections. If Chairman Mellon's idea is to assure reelection of Dave Reed next year, he is taking a long chance in affronting the intelligence of Pennsylvania voters by working not only to retain the present election laws, but to make detection of fraud still more difficult.

Farmers and the Tariff

ONE of the principal arguments of the proponents of the McNary-Haugen Bill was that it would apply the tariff principle to agricultural products and prevent surpluses from acting as importations. Farmers fully realize that if no more food were produced in this country than our own needs require, the present tariff law would be operative. This is shown by its action on dairy products, poultry and eggs, livestock, etc.

But it is difficult, if not impossible to reduce the big staples such as cotton, wheat, corn, etc., to domestic needs only. To do this would necessitate the increase of pasture and grazing lands, and this in turn would soon over-supply the meat market. Dairying, poultry raising, market gardening and similar lines would naturally be substituted and this would put these branches in the surplus-producing list.

If the protective tariff principle is responsible for the progress and prosperity of this nation in an industrial way, say those who demand farm relief, some way must be found to apply it to agriculture else the protective principle must be abandoned. They claim that the work of the Tariff Commission has failed of its purpose, pointing to the fact that there have been thirteen increases made and only two decreases,—live Bob-whites and paint brush handles. The creation of a tariff commission has so far failed to take the tariff out of politics.

The Mexican Pot Still Simmers

A LITTLE news continues to trickle out of the Mexican situation to the public, but it is not satisfying nor complete. The crux of the matter seems to be whether the United States shall permit the Mexican government to apply its newly made land and concession laws. These laws are retroactive and attempt to correct alleged abuses by irresponsible parties prior to 1917. Some oil land holders in this country claim the laws are confiscatory and ask the government to intervene in their behalf. Reports state that out of 387 foreign oil companies holding 28,500,000 acres of oil lands acquired prior to 1917, all but twenty-two have complied with the new Mexican laws; that but six per cent of this acreage is in the refusal to submit, and that half of this six per cent is the old Doheny holdings, and a lot of the rest belongs to Mr. Mellon. Americans who remember the oil scandals in this country the past three years will not be inclined to get excited over the controversy.

Farm Equipment in Pennsylvania

IN SPITE of the fact that the years from 1920 to 1927 have been seven lean years for farmers, the figures show that there has been sufficient prosperity to advance the move for better equipment materially. For instance, the number of tractors has increased five-fold, and the number of farms supplied with electricity three-fold, while the number of gasoline engines has nearly doubled. However, the field for further development in modern equipment is still large. Out of the 200,000 farms of the state only 12 per cent have tractors, 43 per cent have gasoline engines, and 14 per cent are equipped with electricity. It takes time and money to modernize a farm, but those who have been able to do so find that it pays in more ways than one, provided, of course, that the owner is a good farmer.

Lancaster's New Milk Ordinance

THE Lancaster Board of Health has announced a strict enforcement of a local ordinance which requires milk to come from tuberculin tested cows. The ordinance was passed in August, 1926, but a local milk dealer secured a temporary injunction against the city officials. A decision was just recently handed down by the Lancaster County Court which dissolved this injunction. It is said that the decision will be appealed to the Supreme Court.

This is but one example showing the drift of city legislation on this question. Leaving out of consideration the question of its justice, such legislation has so far been pronounced legal where it has been tested, and the signs are that other cities will follow the same course. We have received several letters denouncing our stand on this matter (See Page 16), but we have been trying to advise the acceptance of the inevitable so that dairymen would not be put out of business because they refused to do what they could not prevent. Calling us names and making foolish and untrue statements about our being dominated by State College and the veterinarians will not help to sell proscribed milk when the critical time comes. Consumers may be wrong, but they have the final say.

Outlook for 1927

THE old saying that, "One man's guess is as good as another's," may be cited when the question of the future outlook in farming is discussed. Men in the industrial and financial worlds have given more time and attention to gathering facts upon which to base prophecies of future business conditions than have farmers. Of late years the Department of Agriculture has been doing this to some extent. The gathering and publishing of figures relative to "intentions to plant," products on hand and in storage, the trend of prices, probable foreign demand, domestic conditions, etc., all help in formulating a "guess" as to what may be expected during the immediate future. Of course, no formula of any kind can forecast actual happenings because of the unknown and uncertain climatic conditions. The latest judgment of the Department relative to 1927 is summed up as follows:

"A slightly larger supply of farm labor, and possibly lower wages."

"Lower prices for spring and Durham wheats."

"Corn growers are faced with the prospect of lower prices unless acreage is substantially reduced."

"Oats and barley are likely to be in greater demand for feed."

"Prices of cattle are likely to be somewhat higher than in 1926."

"Hog producers have a favorable outlook if production is held down to present levels."

"The dairy industry is on a stronger basis than a year ago."

"Egg and poultry producers may not expect as profitable a year as 1926."

"Potato growers should guard against over-planting."

"Trend of fruit production is upward but as large a crop as last year is not likely. Don't plant more peach trees."

"Increase alsike and red clover seed production."

This information is valuable only as each and every farmer acts if he were the only farmer in the United States and produced all the food raised in the country.

Editorial Sidelights

OCCASIONALLY, in every farming community, valued animals die without apparent cause. Poisonous plants are responsible in many cases. A series of valuable illustrated articles by Doctor E. M. Gress, scheduled for publication in early issues, will enable anyone to identify the common plants that are dangerous to livestock and frequently to children.

Doctor Gress is State Botanist of Pennsylvania. Some of his recent publications on weeds and their control, issued by the State Department of Agriculture, have attracted a great deal of attention. He is interested in crop seeds as well as weeds, and one of his important concerns is to protect farmers from unscrupulous seedsmen who would knowingly sell noxious weeds to those who think they are buying clean seeds.

RECIPROCITY REVIVED

Canada Proposes New Trade Pact—Cautions Against Hasty Income Tax Cuts—Radio Men Tackle Task.

Washington, D. C.

RECENT proposals coming from the Canadian government officials for restricted reciprocal trade arrangements between the United States and the Dominion indicate a revival of reciprocity as a live issue before the next Congress.

Back in 1911, the Laurier-Taft reciprocity pact was passed by Congress, but failed to meet the approval of the Canadian parliament. And it was on our statutes, but inoperative, until it was repealed by the tariff act of 1922. It was promoted by American industrial interests that wanted cheap farm products from Canada, but is now strongly urged by the farmers of western Canada who want an outlet for their farm products in the United States.

Grange Opposed Reciprocity

The National Grange is the only national farmers' organization now functioning that was in existence back in 1910-11, when the Taft-Canadian reciprocity bill was before Congress. At its annual session in 1911 the legislative committee, headed by Dr. T. C. Atkeson, presented a strong resolution in opposition to Canadian reciprocity, and it was adopted by the organization.

The present proposition as it comes to Washington is understood to be for free trade between the two countries in fish and other natural products which are interpreted to mean farm products. It is predicted that this is the kind of arrangement the western farm leaders may get if they start any tinkering with the tariff. Protected industries are not likely to lose any advantage under any reciprocity arrangement or revision of the tariff.

Should Pay Debts First

It is asserted by Secretary Mellon that the Treasury surplus for the present fiscal year ending June 30, will be in excess of $500,000,000. Much of this will be applied to retirement of the public debt but there will be an insistent demand for income tax reduction and tariff revision. The administration has let it be known that it is opposed to overhauling the tariff in the next session of Congress, and President Coolidge holds that ample time should be taken to see what the business trend is before making any calculations as to the rate of income tax reduction. It is probable that a 25 per cent cut in income taxes will be proposed, but the sentiment is steadily growing that the surplus should be used in reducing the public debt.

Commission Must Close Stations

The Federal Radio Commission has begun to function in spite of the failure of Congress to provide an appropriation for salaries and maintenance. And the members are finding their task far from easy. The law creating the commission cancelled all of the 18,000 licenses to operate radio stations that are now outstanding. Of these 18,000 radio transmitting stations about 700 are engaged in broadcasting, but with only 90 available wave channels it is evident that some of these will have to close.

Canada Wants More Wave Lengths

Canada is also insisting on having for the exclusive use of its broadcasters at least twelve wave lengths, and it is the desire of the commission to take care of Canada in the reassignment of wave channels so that its stations may broadcast without interference from United States broadcasters.

More Dairy Products Imported

A decline in exports and an increase of imports of dairy products in 1926 compared with the previous five years is reported by the Department of Commerce. Over a five-year period from 1922 to 1926 the export value of these products dropped from $5,441,064 to $3,696,450. This falling off is attributed to the decrease in both the quantity and value of cheese exported.

In the five-year period, 1922 to 1926, the import value of milk, cream, butter and cheese brought into the United States rose from $20,385,563 to $33,186,019. Imports of butter increased in value from $2,645,685 in 1925 to $2,798,736 in 1926, notwithstanding the boost in tariff from 8 to 12 cents a pound.

Addresses Voteless Women Voters

In an address before the Voteless League of Women Voters of the District of Columbia, Senator Arthur Capper said that woman suffrage will fail to justify itself unless the women of America participate to a greater extent in the primary and general elections. "In the five presidential elections between 1880 and 1896, 80 per cent of those entitled to vote did so. This was in the period before we had woman suffrage. In 1920 and 1924 less than 50 per cent of the qualified voters, including men and women, actually cast ballots. More than 25,000,000 men and women who should have voted in the 1924 presidential and congressional elections failed to do so. Surely that is a disgraceful condition, and one that if continued will bring our form of government into disrepute and ultimately to ruin."—E. E. R.

JERSEY TESTS CHICKS

Those Not Up to Standard Are Rejected—Farmers Advised to Arrange Wages with Laborers Beforehand.

Trenton, N. J.

UNDER direction of the State Bureau of Markets something like 4,000,000 chicks from blood tested parents are being raised this spring on New Jersey farms. The department records show that over 125,000 birds were inspected this last season with a rejection of 28,000. Of the total number inspected, 90,000 were tested for hereditary disease and over 7000 were accredited last year and so were not tested, the test being made every two years.

The cost for this work amounted to $9000 last year and is self-supporting in that the poultryman makes a slight payment to defray costs.

Market Growers to Meet

The Trenton Market Growers' Association will hold its annual meeting and banquet in Trenton on March 31st. The membership covers practically all of Mercer County and the activities of the association have been resultful in securing better farmer market conditions in Trenton and other cities in the county. A. E. Mercker, new chief of the State Bureau of Markets, and Charles H. Nissley, state extension specialist in vegetable growing, will address the gathering.

Anticipate Large Berry Crop

Growers in Burlington and adjacent counties report a 20 per cent increase in strawberry acreage this season and indications are that New Jersey should have a large crop this year. Jersey growers are planning to market their berries at as early a date as possible this season.

Committee Sets Wage Scale

The labor committee of the Gloucester County Board of Agriculture issued a notice to members recently to arrange definitely the prices they will pay harvesting men this season. In some cases harvesting men have been paid $15 to $22 for a ten-hour working day because they worked in fields with an abundant yield, but the farmer paid the same price per crate as did his neighbor who had a poor crop and who paid big prices for his harvesting. The effort is not to reduce the wage scale but to encourage the members to arrange with their laborers on a proper scale before the season starts.

The committee suggests to its members a wage of 60 cents to 80 cents per crate for asparagus, $1 to $1.25 for cutting and bunching. On tomatoes the scale recommended is 5 to 8 cents per basket, on peas 15 to 25 cents, on beans 15 to 20 cents. There is a lower tendency in central New Jersey on wages for regular farm hands this spring, there being as much as $2.50 to $5 difference between current and last year's prices.

To Discuss Legislation

The topic for discussion by subordinate Granges thruout New Jersey during April is on farm legislation during 1927. At that time the legislature will have finally wound up its session and the Grange will review the new laws and the bills proposed which fell by the wayside. In announcing this topic the State Grange urges the Pomona and subordinate Granges thoroly to consider these farm measures so that there will be a definite and uniform policy developed on important farm matters, before the annual farm legislative conference next fall. The Atlantic conference of the Grange, affecting the states of New York, New Jersey, Pennsylvania, Delaware and Maryland, has been scheduled for New Brunswick on August 22 to 24th.—W. H. B.

PRACTICES CHANGE

Upstate Sections to Increase Potato Acreage—Other Crop Plantings Estimated—Move to Place Responsibility.

Ithaca, N. Y.

A NUMBER of important changes in farm practice are indicated this year in the latest reports from farmers. Fair prices for potatoes have apparently stimulated farmers to plant more next year, especially in upstate sections. Long Island growers are planning little change. Two poor bean years have led to the determination to plant in this state but three-fifths of last year's crop. Cabbage growers are planning to grow more acres of cabbage next year. Peas for both market and canning factories will be decreased. Winter wheat came thru well, and more than the usual spring wheat will be sown. Grain crops will be increased. These estimates are subject to revision should there be decided weather changes from normal.

Bill to License Milk Stations

A bill to license all managers of milk stations, and one to bond operators of such stations, have been introduced by Assemblyman Witter, the dean of the Assembly and the outstanding farm leader in the legislature. This is a move to safeguard the handling of milk, both for the consumer and for the farmer, from such practices as have brought disgrace on some dealers. The former bill will make the manager of such plants directly responsible for any "dishonesty, incompetency, inaccuracy," or other violation of law by any person working under his direction, and would provide for the revokation of his license under such circumstances.

Maple Season Doomed

The most unseasonably warm March since the early eighties promises a cessation of the run of maple sap unless some real cold weather comes very soon. A few good runs have been had by those who were ready early, but lack of frost has halted the flow of sap for the present. —M. G. F.

Deplorable Cut Hits State College Hopes

A MOST deplorable job of paring has been done by the Senate Appropriations Committee on the State College appropriation bill. The bill as introduced called for total appropriations for the use of the State College during the next two years of $4,234,500. Of this amount $2,181,000 was to be used for the general maintenance of the College, $403,500 for agricultural research, $650,000 for agricultural extension and $1,000,000 for new buildings.

The bill as reported out by the Senate Committee reduces these amounts to an extent that will make it impossible for State College to progress as it should during the next biennium. The item to provide for much needed research on agricultural problems suffered the most severe cutting, being reduced from $403,500 to $100,000.

The effects of the pruning of the fund for agricultural extension will be felt in every county of the state if the bill is passed and approved in the form reported by the Senate Committee. Altho $650,000 was asked, and is needed, for extension work, the Committee sliced off $250,000, leaving only $400,000 of state money for the support of extension activities during the next two years. Fortunately, this amount will be pieced out by the federal appropriation, but even with that aid the quarter million dollar reduction will hamper the work in this state.

The committee reduced the general maintenance fund by $31,000, and the proposed new building fund by $150,000.—W.

Editors' Note.—News about other bills before the Pennsylvania Legislature will be found on Page 15.

THIS TRIO WOULDN'T BE MISSED ON THE FARM

TEXT CUT OFF

Three generations of American farmers have endorsed "AA Quality" Fertilizers

TIME is the great test of all things. In the long run only good survives.

"AA Quality" Fertilizers are backed by a first, second and third generation of consistent, enthusiastic farmers—whose soils have been enriched, whose crops have been increased, whose profits have mounted into big money. "AA Quality" Fertilizers have "made good" in the soil, year after year, for three generations.

Sixty years of continuous scientific research and manufacturing experience have been devoted to making "AA Quality" Fertilizers mean better crops and bigger profits. Thousands of practical tests on farms like your own have proved their unequaled crop-producing powers.

You can depend upon these reliable, time-tested crop-producers. Use them for all crops.

Parsnip Tops Quarter Cabbage Worms

YESTERDAY, March 10, we finished digging those of our parsnips which wet weather compelled us to leave in the ground over winter. They tasted fine for supper and today we will enjoy some newly dug salsify or "vegetable oyster," another root crop which winters safely in our climate.

To command the top of the market parsnips must be thoroly washed and solidly packed, the top layer or two being "ringed." That is the tops of the roots are placed outwards, the points centering in the round bushel baskets. A little experience enables one to put up a very handsome package.

Among the rotted down parsnip tops it was interesting to discover two fat and healthy looking cabbage worms which had wintered under the litter. However, this pest more commonly winters in the chrysalis form in the northern states, the butterflies emerging on warm sunny days in late March or early April are ready in a day or two to deposit on our newly set cabbage plants the eggs from which worms will hatch within a week under favorable conditions.

Four Generations Work on Late Crop

As a rule this pest is not as serious on the early crop as on plantings for late summer and fall harvest. This is explained by the fact that three or more generations develop during the summer, grand-children and great-grand-children of the early butterflies all being on the job by autumn.

If it were not for a rather long list of natural enemies the common cabbage worm would undoubtedly prove a much more serious pest. Certain large wasps prey on the worms. There is a little bug that lies in ambush within flowers which the butterflies frequent. The bug rushes out, captures the butterfly and sucks away its life fluids.

Several very important parasites of the cabbage worm have been introduced from Europe. The winged adults of these fly about and deposit eggs within the cabbage worms, the larvae eventually killing their hosts. In addition to this there is a disease which sometimes destroys numbers of cabbage worms while many birds consider them a delicacy.

Spray or Dust Applied Early

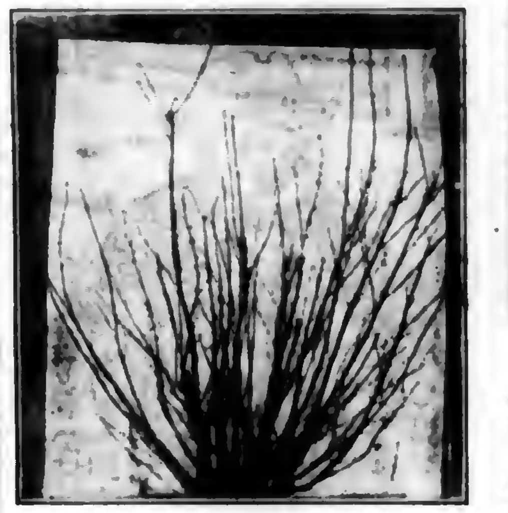
When artificial methods of control are required the all-important thing is to start early, as soon as a serious infestation appears imminent from the discovery of limited damage or the appearance of numbers of the butterflies. Moreover, arsenical poisons may be used with perfect safety before the heads develop to an appreciable extent. As a spray 1½ pounds of calcium arsenate, or 3 pounds of lead arsenate dissolved with 2 pounds of soap in 50 gallons of water is a standard recommendation. Dusts may be applied to advantage when the foliage is wet with dew. A pound of either of the poisons with 5 pounds of hydrated lime provides a good mixture.

Liberal application is necessary. Where the area is not extensive a large tin can with plenty of holes punched in the bottom will serve to shake the dust into the plants. The efficiency of such a device may be greatly improved as follows: Cut a square piece of heavy flat tin or other thin sheet metal of such a size that it will just go into the can and rest flat on the bottom. Remove the tin and with a pair of pliers bend about one-half inch of each corner at right angles so that we now have a sort of little table. Place this in the can, legs down and the dust will no longer pack or clog the holes but will sift thru evenly.—G. S. W.

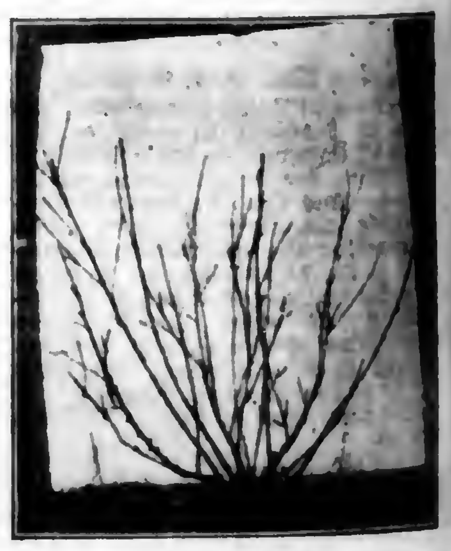
Pruning Currants Shouldn't Be a Hit or Miss Operation

IN PRUNING red and white currants the habit of bearing ought to be kept in mind. The fruit is borne on one-year wood and on spurs from two- and three-year or older wood. The best clusters are found on wood not over three years old.

It is customary to remove all branches over three years old, leaving enough of the vigorous one-year gray-colored shoots to replace them. If these have made a strong growth they may be tipped back a fourth of their length. All weak new growth should come out, and any sprawly shoots or branches should also be removed as fruit borne there is certain to get down in the mud. The center of the bush is kept open. A rule often followed is to leave three one-year shoots, three two-year branches, and three three-year branches to a bush.



Before pruning.



After pruning.

Gooseberries are pruned in a similar fashion. The branches bear more numerous and vigorous sideshoots than do currants, and these may need thinning.

Black currants bear on one-year wood, and wood older than two years is customarily taken out. They are pruned rather vigorously, leaving six to eight branches and maintaining an open center.—R. L. Scharring-Hausen.

$1,000 for a NAME for Lee Buttonless

Union-Alls, Overalls Play Suits

Presto . . . . it's open!
Presto . . . it's closed!

ONCE more Lee leads the world in improving work clothing. Think of it . . . no more worrying buttons. One pull and it's fastened better than buttons ever could fasten it. A time saver . . repair saver.

The Lee Hookless Fastener is the greatest improvement ever made in work and play clothing. It is combined with the superior long wear Lee fabrics introduced last year. The Hookless Fastener will not jam, rust or break and launders with perfect safety. It can be had in Lee Union-Alls, Overalls and Play Suits. The same garments available with buttons also.

Ask your dealer to show you the new Lee Buttonless Union-Alls, Overalls and Play Suits. Inspect them . . . try them on . . pull the Hookless Fastener up and down. Then enter the $1,000 cash prize contest.

$1,000 *in Cash Prizes!*

First Prize	$250
Second Prize . . .	125
Third Prize	75
Fourth Prize . . .	50

One Hundred Prizes of $5 Each

Rules—

1. These prizes will be given for the best names received for Lee Buttonless Work and Play Garments, together with reasons for the name, written in not more than 25 words. Any number of names may be submitted but each name must be accompanied with reasons.
2. All names with accompanying reasons must be written on a Lee Official Entry Blank. Entry blanks can be secured from any dealer in your town handling Lee Union-Alls, Overalls or Play Suits. There are Lee dealers in nearly every city and town in the United States.
3. You can get many valuable suggestions for a name by carefully inspecting the Lee Buttonless garments at any Lee store and by talking to any man or boy who wears Lee garments.
4. Send your entries to Prize Department 128 The H. D. Lee Merc. Company, Kansas City, Mo. No entries returned.
5. In the event of a tie for any prize offered, a prize identical in all respects with that tied for will be awarded to each tying contestant.
6. Contest opens March 1st and closes June 1st, 1927. Anyone may compete except Lee employees and their families.

Williamsport, Pa.

Nitrate of Soda For Fruit

EVERY orchardist knows that he must give his trees a liberal supply of nitrogen every year to get a good crop. The Experiment Stations all recommend Nitrate of Soda for this purpose.

Your home trees should be treated the same way. One pound of Nitrate of Soda to each one inch of tree diameter is the proper amount. Spread it as far as the branches reach out.

Apples and pears do well in sod but the ground under peach trees must be cultivated to get good peaches.

Nitrogen is so universally lacking in practically all of our cultivated soils that it is always safe and profitable to apply Nitrate of Soda to growing crops.

For Profitable Crops

Our pamphlets on fertilizing fruits and gardens will be sent you if you will *cut out this advertisement*, write your address in the margin and mail to our nearest office. 2333

Rambles of a Pennsylvania Fruit Grower

III. In Western North Carolina

THE district of which Asheville is the center is appropriately called "The Land of the Sky," from its towering peaks and azure skies. We reached it from Bristol, Tenn., over a marvel of mountain highway engineering which left us dizzy. Offhand, I should say that this road has at least fifty curves of ninety degrees, or more, to the mile.

In these mountains can be seen, at close range, the impact of the new order on the old. "Our Southern Highlanders," as they sometimes are called by northern philanthropists, are white folks of arrested development. They are mostly of Scotch and Irish descent. Hidden among the mountains for generations, remote from the expanding life of the lowlands, they have continued to live the crude life of the frontier, often in an appalling ignorance and lack of the common home conveniences that most of us consider essential.

Where Man Is at a Standstill

The mountaineers are a distinctive type—the men lank, stoop-shouldered, hands in pockets, keen-eyed but enervated, the inevitable quid of tobacco bulging the cheek; the women slattern, metallic-voiced, the snuff stick hanging dejectedly from their lips. They all have a furtive, hunted look, as tho haunted by the rigors of their meager existence. Here the white man's civilization has been at a standstill for over a century.

"The old order changeth, giving
place to the new,
And God fulfills Himself in
many ways."

The genii that are working miracles among the mountain whites of the South are the familiar ones of good roads and good schools. Modern cement and sand-clay roads are piercing districts once remote, bringing the mountaineers into touch with the surging life of the Piedmont and the valleys. They still go to market in their canvas-covered Conestoga wagons, exact reproductions of the "prairie schooners" that led the vanguard of civilization in the West. From every little over-shot water mill in the mountain glades rides a man on horseback, with flapping saddle-bags, a sack of meal slung across the horse behind him. I met more horse-flesh in a day's journey than can be seen in a month's travel on Pennsylvania roads.

Here and there are modern consolidated rural schools, with the auto buses that carry the children to and fro. There is one in the meadow that was a rhododendron thicket twenty-two years ago, when I wandered up and down the nearby stream, and occasionally caught a trout.

Consolidation Solved Problem

I sympathize with the Editor of a contemporary farm paper in his fight against the compulsory consolidation of rural schools regardless of the wishes of the people of the district, especially where the roads are snowbound frequently. Here, however, the main roads are clear all the winter, tho the side roads may be desperately muddy, and consolidation is a practicable solution of the problem. North Carolina and her daughter, Tennessee, are making tremendous strides in rural education and are putting to shame some of the richer states of the North, Pennsylvania not excepted.

Good roads, good schools and good churches are essential to rural progress, here or elsewhere. They are transforming "Our Southern Highlanders," once objects of northern charity, into alert, self-respecting and self-supporting citizens of the republic.

"Good Road" Tried Car's Power

Only the main highways of western North Carolina are improved; most of the side roads are unspeakably muddy at this time of the year. I have learned, by sad experience, that in this part of the country a "good road" means any public right of way that is not hopelessly impassable. One side trip that I took, by slow and slippery stages, carried me to the brink of a morass that I had not the courage to attempt. So I sat me down, by the side of the road to watch the race of men go by.

Life brings a varied assortment of trials, but few are more exasperating than to sit by a mudhole in a real car and watch a string of "flivvers" plow thru, making no more noise about it than usual. Every impudent driver gave me an airy wave of the hand and a sardonic grin as he emerged on solid earth. After coming to the boiling point under this humiliating treatment, I tried it myself—and made it.

I find that most of the muddy places in life, that we are afraid to cross, are not as deep as they look.—S. W. Fletcher.

The U. S. D. A. Takes a Hand

THE United States Department has established grading rules for asparagus that will apply to New Jersey, Pennsylvania, Delaware and Maryland conditions. This is the first time that the federal department has taken steps to systematize the grades of asparagus that are marketed from these big commercial producing sections. These new rules are expected to bring order and a common understanding between sellers and buyers out of the present chaotic condition that now exists on the determination of specific grades.

Under the present system of grading asparagus, every grower packs what he considers fancy, extra fancy, colossal and cull grades. In numerous instances one farmer's fancy is another's colossal grade, and vice versa. This haphazard system has resulted in growers being dissatisfied with the prices returned by the commission houses and the utter impossibility for the city dealers to quote prices according to any definite grade. It has created dissatisfaction among the retail dealers, because they could not buy over the telephone according to definite rules. It has resulted in the retailer going into the market and picking out the grades that his trade demands rather than buying according to some specific standard.

With the idea of clarifying this situation, the department has established rules that will be easy to meet on any ordinary farm, without the installation of any additional machinery or equipment.

Grades

The U. S. No. 1 grade shall consist of fresh well-trimmed stalks of

---

sparagus which are not badly ooked and which do not have oken or spreading tips. These lks shall be free from decay and mage caused by dirt, disease, in- ts or mechanical means.

Unless otherwise specified the di- meter of each stalk shall be not less an 1-4 of an inch and the length all not be less than 8½ inches.

In order to allow for the proper ariations incident to proper grad- s and handling, not more than 5 r cent by count of any lot may ot meet the size requirements. In ddition not more than 10 per cent y count of any lot may be below e remaining requirements of this ade but no part of this tolerance all be allowed for decay.

Size Requirements

The following terms are provided r describing the diameters of any t: Very small means less than 1-4 ch; small means 1-4 to 9-16; me- um means 9-16 to 3-4 inclusive d large means over 3-4 of an inch n diameter.

Color Specifications

In addition to the size and grade, y lot of asparagus may be classi- d as green asparagus if 90 per nt by count of the stalks in any is of a green color covering not ss than 4½ inches of the length of e stalk.

Definition of Terms.

"Well-trimmed" means that the tts of the stalks shall be evenly d smoothly cut and free from ringy and frayed ends.

"Badly crooked" means that the stalk is so misshapen or curved that its appearance is seriously affected.

"Diameter" means the thickness of the stalk taken at a point not more than 8½ inches from the tip.

These requirements are not being enforced on the growers, but are merely the advance step in the establishment of the packing regulations that will finally be adopted in the marketing and selling of asparagus.

These rules have the approval of the retail buyers who have for many years been asking for definite grades on the asparagus crop.

The asparagus crop of the four states mentioned above returns the growers about four million dollars every spring and it is growing in importance as an early money crop.—A. K.

Paper Prevents Scald

At the Farm Show in Harrisburg I saw apples packed with oiled paper in the baskets. Does this stuff bring more money on the markets?—L. R., Chester County, Pa.

A comparison of prices will show that apples packed with shredded oiled paper will bring 10c to 50c per bushel more than equally good stock packed without the paper. In addition to this there is often a greater difference for when apples are placed in storage the paper helps prevent scald. Scalded apples are hard to sell, especially when the market is oversupplied and recently Pennsylvania apples that were badly scalded sold as low as $1.25 per barrel.—W. R. Whitacre.

hila. Trade Wants Green Grass

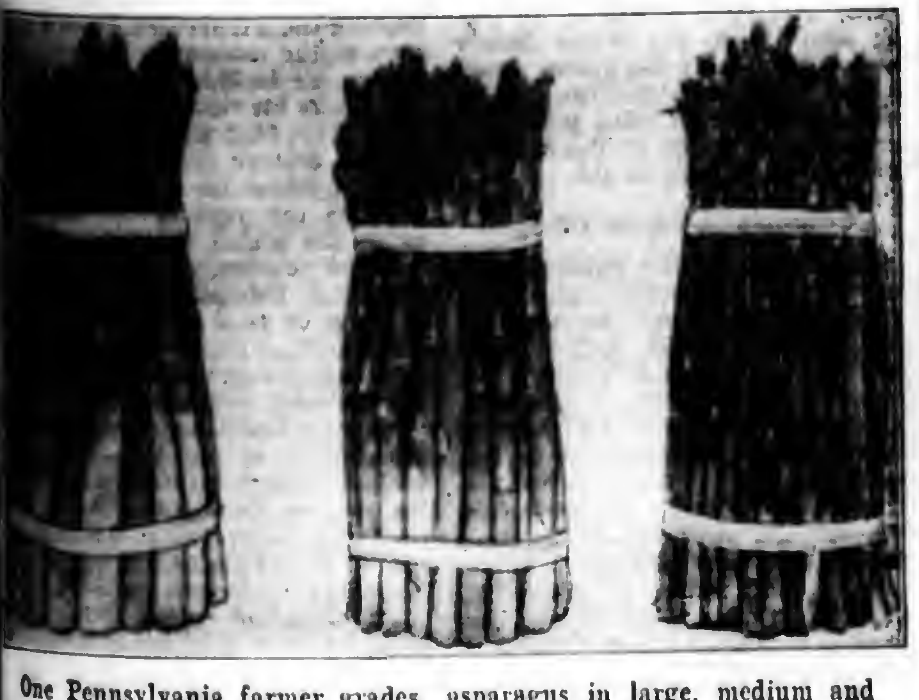
Is there a good market for Penn- ylvania asparagus? I am planning to put out five acres this year and want to know about selling.—S. T., Bucks County, Pa.

Philadelphia would probably be e market in which you would sell st of your asparagus. In general nnsylvania asparagus brings a gher price on this market than at from other sections. This is iefly because Philadelphia buyers nt green asparagus and the larger rcentage of the Pennsylvania "grass" coming here is green. By een the buyers mean that about ree-quarters of the stalk is green.

White asparagus is popular in me markets and to grow it the ws are kept well hilled and the lks cut as soon as they push thru e soil. Green asparagus is not hill- and it takes a longer time until it ready to cut. For this reason a riety should be chosen that does t shoot quickly and holds a firm p or head. Some growers claim at they will get a larger yield by owing white asparagus since the stalks will average larger in diameter and give more bunches per acre.

There are a number of things that help in the marketing of asparagus. To bring top prices it should be graded into as many sizes as the grower finds practical. Three is the usual number. The illustration shows how one Pennsylvania farmer bunches his stock. He claims that he is well repaid for his time and labor. Most growers with a commercial acreage use bunching machines and use a tape to tie the bunches. Some have their name or trade-marks printed on this tape. The tapes should be tied as close to the ends as practical since it makes the bunch look longer. The butts should be cut off evenly with a sharp knife.

A crate holding one dozen bunches is most popular as it displays the stock to best advantage and can be easily used for express shipment to nearby markets. The bottoms of the crates should be lined with a moist moss or parchment paper to keep the asparagus fresh.—W. R. Whitacre.



One Pennsylvania farmer grades asparagus in large, medium and small sizes as shown above.

You might just as well have the best

THERE still seem to be a great many people who have the idea that Kelly-Springfields cost more than other makes of tires.

This impression speaks well for the Kelly reputation, but as a matter of fact Kellys don't cost any more than the ordinary tire of the better grade. In other words, whether you buy Kellys or not, you are paying for Kelly quality—and you might just as well have what you are paying for.

Kelly also makes the Buckeye, a lower-priced tire that at its price represents unbeatable value.

"Kelly dealers everywhere—there must be one in your town."

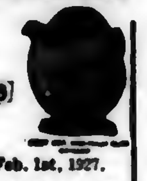
KELLY SPRINGFIELD PNEUMATIC TIRES

Another Poultryman Recommends Dr. LeGear's Poultry Prescription

Every progressive poultryman has surely heard of Keelerville, one of the world's finest poultry plants and home of Keeler's great prize-winning, egg-laying White Wyandottes. If you're not familiar with Keeler success, send for his free 32-page 1927 catalog—and amazing story of world records.

Behind Mr. Keeler's remarkable success is 32 years of experience in profitable poultry raising. Also for 30 years he has been a judge at America's best shows. His advice, therefore, when given on any phase of the business is everywhere valued for its sound, practical value. He speaks not from theory, but from dollar-making, egg-laying, prize-winning knowledge. Read his letter and what he says about

CHAS. V KEELER
White Wyandottes



Dr. L. D. LeGear Medicine Co., Feb. 1st, 1927.
St. Louis, Missouri.

Gentlemen:—If the poultry breeders only realized that their success depends upon keeping their flocks in good healthy condition at all times, they would make much more profit and be far more successful.

My thirty-two years of scientific breeding has resulted in producing "The World's Greatest Strain" of White Wyandottes. They are not only wonderful egg producers, but they win the coveted prizes in America's leading poultry shows when exhibited by me and my customers. My strain is known in many foreign countries. I know that to produce birds of this quality, it is necessary to keep them in good healthy condition.

I use Dr. LeGear's Poultry Prescription because I have found it a wonderful and safe tonic. It undoubtedly increases egg production and fertility, and develops chicks to maturity quickly. Best of all, it keeps the whole flock in a healthy laying condition and hastens moult.

I use Dr. LeGear's Poultry Prescription in the fall and when the first cold, damp weather starts in, as a preventive of colds—a forerunner of ROUP—a disease I have not had for at least fifteen years because of using this tonic as a preventive. It gives me great pleasure to recommend Dr. LeGear's Poultry Prescription because I feel Dr. LeGear's wide experience as a veterinarian enables him to prepare products that are reliable and safe, and can be used by the beginner as well as by the experienced breeder alike successfully.

Yours very truly,
CHARLES. V. KEELER.

Dr. LeGear's Poultry Prescription

Mineral-ized Contains essential *minerals* for egg production, rich blood, bone tissues and feathers—*tonics* for the blood, nerves and egg organs—*conditioners* for the digestive organs—*laxatives* for the bowels; all being vital ingredients lacking in home or commercial mixed feeds, without which best results cannot be obtained from poultry.

Get a pail or package from your dealer. Mix with mash feed. If not thoroughly satisfied with results, return empty package to your dealer and he will refund your money. Convince yourself by trial and test that it is all—does all—that thousands of successful poultrymen claim for it.

White Diarrhoea Baby Chicks' Greatest Enemy

This highly contagious disease can wipe out whole flocks. No chick up to two weeks is immune. Protect them by putting Dr. LeGear's Chick Diarrhoea Tablets in all drinking water until third or fourth week. Thousands of poultrymen for years have used no other preventive. Also clean up your poultry houses with *Dr. LeGear's Dip and Disinfectant*. Get rid of winter filth, germ diseases and vermin. If not satisfied with any Dr. LeGear product return empty package and dealer will refund purchase price.

FREE "Dr. LeGear's Complete Poultry Guide and Feeding Manual," an authoritative and up-to-date treatise on disease, care, housing, feeding and every conceivable poultry question. Gives the feeding formulas for most every state and big egg-laying contests. Ask your dealer for a copy, or send us 6 cents in stamps to cover mailing. Let this book help you to bigger poultry profits. Ask for it today.

POULTRY

R. L. SCHARRING-HAUSEN
Staff Contributor and Adviser
Glenview Farm

Is There Any Better Than the Barred Rock?

We plan to get a few chickens this spring. Have not had any for several years. Preference has always been for Barred Rocks as all-around fowl. Is there any better? There is a splendid market here for chickens for eating. How do Jersey Black Giants and Cornish Indian Games do for market? What about capons?—Mrs. W. S. H., Cape May County, N. J.

Plymouth Rocks make one of the best general purpose and table fowls, and for your purpose a good laying strain would be the thing, rather than a strain bred for exhibition purposes. There is all the difference in the world between bred-to-lay poultry and the ordinary kind.

Leghorns make the best small broilers, while the heavier breeds make better chickens for cutting up to fry. Giants make very good large roasters. A cross between Cornish and Wyandottes also makes a very good roasting chicken. I do not think you will make much on capons unless you have a special market.

Let me suggest that you get in touch with the County Agricultural Agent at Cape May Court House and ask his advice as well.—R. L. Scharring-Hausen.

Cut Off Her Head!

I found a pullet with her head and neck bloody as tho she had been fighting. The next day she was very weak. She died in the night. Is there a disease that would cause hemorrhage of the comb?—H. W. P., Bradford County, Pa.

Hemorrhage of the comb, such as you describe, seems to be quite common but it is not a disease and the other members of the flocks are in no danger. The bleeding is caused by some injury to the comb, not necessarily received in a fight.

If you find such a hen in time before she is too much weakened by loss of blood, and can stop the blood by applying alum or some other tic, she will generally recover. ever, if she seems weak the thing to do is to cut off her and put her in the pot, as the is perfectly wholesome.—R. Scharring-Hausen.

Turkey Eggs Will Hatch in Incubat

I have a turkey hen that has knees. Please give me some ideas hatching young turkey eggs and goo eggs and whether it is advisable t hatch same.—J. E. Y., Butler Co ty, Pa.

If the turkey hen has rough, legs it would help to soak them warm, soapy water and afterw apply carbolated vaseline, repeati every day or two.

Eggs from young birds are not good for hatching purposes as the from older birds, but sometimes good results. Turkey eggs are hatch ed in incubators the same as h eggs, but goose eggs are not v successfully hatched that way.— L. Scharring-Hausen.

Cockerel Has Rheumatis

I have a Park's Barred Rock cockerel that has a stiff knee that ju acts like rheumatism. What can I do for him?—T. G. S., Clearfield Cou ty, Pa.

Unless your lame cockerel is pa ticularly valuable it would be bett to replace him with a healthy, activ bird than attempt to cure him a use him for breeding purposes. N bird with any sort of ailment h any place in the breeding flock.

If the cockerel seems in goo health and weight aside from th lameness you might give him a do of worm remedy, feed a diet contain ing greens and milk, give three four drops of cod liver oil a day, and see that he is exposed to direct sunlight.—R. L. Scharring-Hausen.

Geese Easily and Cheaply Raised

ANY farmer who has a piece of marshy pasture near his buildings with a small stream running thru it has a good chance to make a little extra money by raising a flock of geese. Geese are easily and cheaply raised, requiring feed only as young goslings and during the fattening period. The goose is a grazing bird, and makes most of its growth on pasture.

There are two common breeds of geese: the gray Toulouse and the white Embden. The adult Toulouse gander attains a weight of 26 lbs. The adult goose and young gander weigh 20 lbs., and the young goose, 16 lbs. The adult Embden gander weighs 20 lbs., the adult goose and young gander weigh 18 lbs. and the young goose weighs 16 lbs.

Chooses Mates for Life

Geese make the best breeders after they are two years old, and should be kept for about ten years, or as long as they breed well. Adult geese are very hardy and long-lived. One or two geese are generally mated to one gander, and it is best to make the matings sometime in advance of the breeding season, as they are sometimes very choice in such matters. They generally mate for life, but will take other mates if the original mating is broken up. The eggs are more fertile if the geese are able to mate in deep water.

No special house is required for old geese; merely an open shed for protection in the worst weather. My own geese find shelter about the buildings. They find their own living during the winter unless the ground is covered with snow, when they get a little scratch feed and a few apples, of which they are very fond.

Gander Has Shrill Cry

In determining the sex of geese it will be noticed that the male is larger and coarser in appearance, has a heavier head, and a shriller cry than the female. When the flock is feeding the gander will spend a large part of the time with his head high in the air looking for possible danger, while his mates are quietly grasing. As a final test, an examination of the vent of the female will disclose a series of folds, while pressure on the vent of the male will cause the sexual organ to protrude.

Geese commonly start to lay during late February. Some time in January it is a good plan to give them a little laying mash in a hopper, and also to provide oyster shell. During cold weather they are often shut in a small pen deeply littered with straw at night, and the eggs gathered the first thing in the morning to keep them from freezing. Later the goose will make a nest in the pen or in a spot of her own choosing, line it with down, and lay there. If "broken up" when she becomes broody a goose will lay two or three clutches of eggs, from fifteen to thirty in total number.

(Continued on next page)

The first eggs are usually set under r hens, which cover from three to e, while the later ones are given to goose, which can take care of or more. When set under hens he eggs should be turned by hand wice a day and sprinkled with warm ater occasionally, especially tord the last. The incubation ped takes four weeks.

It is a good plan to take the gos away as soon as they are out the shell and put them in a warm until they have dried off and ined strength; otherwise they may tramped on and killed. Later they can be put back in the nest.

About a day after they are hatch the goslings are ready to eat. It been my experience that if they not fed soon enough they will become weak and refuse to eat altogether. Bread and milk or equal parts of corn meal and middlings ake good feeds. A colored woman my acquaintance who is very sucssful with all kinds of poultry feeds y corn meal to young goslings and declares that any other sort of mash is "pisen."

oslings Require Sand or Grit

Young goslings also require sand fine grit and a growing sod to ick, or some other form of green uff. They must have plenty of resh water so provided that they cannot get into it.

Unless the weather is warm and settled it is best to keep the youngters in a pen or limited run for the rst ten days, as it is almost imposble to revive a wet and chilled gosng. Then, if the weather is nice, they may be allowed to range with he hen or goose. Geese are very ainstaking with their small fry, and he gander accepts his share of the esponsibility in raising them. I ally think that if the goslings are ft to the care of the old geese ey do best, altho they do well with hen or even when raised entirely y hand.

After they are several weeks old ey may be given a chick growing ash if it is desired to feed them. It a good idea to see that the growg goslings are under shelter at ght until they are feathered out, fter which they need nothing but well watered pasture until the e comes to fatten them in the ll.

Geese are very interesting and inlligent birds; more so than any ther kind of poultry on the farm.— L. Scharring-Hausen.

e Think Gas Stove Works Fine

A FEW years ago we bought an oil brooder for 300 chicks. We d a small gas stove, the kind to at a bathroom. We put heavy re around the stove to keep the icks from getting too close to the ve, put sand on the floor and put e hover over the stove. We buy 300 icks at a time and put a wire ound hover and give the chicks re room as they grow older.

When a few weeks old we put the icks in a room made by putting board or wire two feet high across e house. We have a gas stove in ere and we put timothy chaff on e floor. Then we get 300 more icks and start over again.

When the second lot gets old ough to leave their baby pen we ve the first lot to the winter pen nced with wire and let them run. t night they roost in the house.

The second crop stays in the first ouse until fall. We keep a window pen where the gas stove is and ave no trouble with fumes. When e use both stoves we open two winows. Our windows slide. Our ouse is low, has a shed roof and we ut cheap roofing over the floor very year. We like the gas fine and e soon understands how to use it. —W. J. M., Westmoreland County, Pa.

Why Camel leads the world

GOODNESS has made Camels the leader of the world that they are today. Goodness means the quality of the tobaccos from which they are made, the skill with which the tobaccos are blended to bring out the fragrance, to produce the mildness, to give that subtle quality and taste that smokers find only in Camel.

Goodness means such a standard of uniformity that the billionth or the trillionth Camel is sure to be just as good as the first. It means the honesty, the truthfulness, the sincerity of purpose to make and keep Camel the leader—the cigarette most preferred by the greatest number.

Have a Camel!

New
Chick Mash contains all necessary minerals and cod liver oil meal

ALL IN ONE!

Dead chicks are dead loss. Any chicks, if not fed correct food will eat up profits and give nothing in return. Minerals, Buttermilk and Cod Liver Oil Meal are absolutely necessary to the proper growth and development of strong, sturdy chicks. No better feed can be had for baby chicks than one composed of pure grains—selected animal proteins—and the vital and necessary mineral elements. Now—these are combined in QUISENBERRY'S BUTTERMILK STARTING FOOD. No mixing and fussing by adding minerals. This food is properly prepared—correctly proportioned and very easy for the tender baby chick to digest and assimilate.

Start your chicks on the road to health. Their entire future as broilers or layers all depends on the start they get now. Realize your lost profits from them. Feed them Quisenberry's Buttermilk Starting Food from the start—it is easily digested and contains every element that is recognized the world over to be necessary for proper, even and constant chick development.

FREE Radio courses will be given to every person using Quisenberry's Buttermilk Starting Food. Illustrated printed lectures will be sent Free to all those who request them.

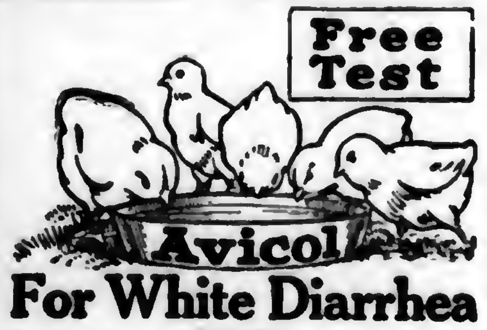
FENCING We manufacture a ready-made Cedar Picket and Galvanized Wire Fence—Interwoven — Painted Green — Red — or Plain,—made in 3 or 4-ft. heights. For chickens, farms, yards and lawns.

Used extensively for snow protection along Highways. Write for prices and catalog.
NEW JERSEY FENCE CO., Burlington, N. J.



For White Diarrhea

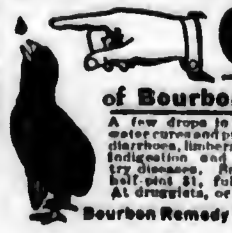
In few hours, disease is stopped and sick chicks full of pep.

It's easy to stop chicks dying from white diarrhea. All you need do is drop an Avicol tablet in the drinking water. Thousands of poultry raisers, year after year, raise nealy every chick by this simple precaution. Mrs. E. E. Franks, Ramsdell, Tex., writes: "I was losing 10 to 15 chicks a day before I received the Avicol. I haven't lost one since.

A free test of Avicol will show how easily white diarrhea is prevented and stopped. The way it makes sick chicks lively and healthy, in just a few hours, is positively amazing. If you have never tried Avicol, write for a free sample, or send 50c for a full-sized package, to **Burrell-Dugger Co., 847 Postal Station Bldg., Indianapolis, Ind.** It costs nothing to try the 50c package, because Avicol is guaranteed to do the work or money refunded. But if you prefer, try the free sample first.

For Barn Sanitation
Use Agricultural Gypsum

It keeps down flies and odors in barns, poultry houses and other buildings. Increases value of manure. Adds lime and sulphur to the soil. Many other uses. 100-lb. bags, freight prepaid, only $1.50. Special price carload lots. *Write for valuable free book.*
The American Gypsum Company
Dept. B Port Clinton, Ohio



One Drop
of Bourbon Poultry Remedy
Cures Gapes

A few drops in the drinking water cures and prevents white diarrhoea, limberneck, cholera, indigestion and other poultry diseases. Small size 60c, half-pint $1, full pint $1.50. At druggists, or sent by mail.
Bourbon Remedy Co., Box 8, Lexington, Ky.

NEST BOX NOTES

BABY chicks should receive no solid food until two or three days after they are hatched. This gives the yolk of the egg which is taken into the body of the chick just before it is hatched a chance to be absorbed. Food taken before the yolk is absorbed interferes with digestion and causes diarrhea which may result in death.

• • •

As the chicks are put in the brooder, each one should be given a few drops of sour milk with a medicine dropper or have its beak dipped in a pan of the milk so that it gets a swallow or two. The sour milk acts as an intestinal disinfectant and helps to ward off white diarrhea. Dilute condensed buttermilk serves the same purpose.

• • •

Baby chicks are very thirsty and should have all the sour skimmilk or dilute buttermilk they want from the very first. After feeding commences the milk may be continued, but a separate fountain for water should be supplied as the milk alone does not seem to be sufficient to satisfy their thirst.

• • •

Half-inch square mesh wire makes a better fence to keep the chicks near the stove for the first few days than does the ordinary inch mesh poultry netting, as some enterprising individuals always manage to squeeze thru the latter. This fence should be removed before too long as it is not a good plan to confine the chicks under the hover any longer than is necessary.

• • •

Drinking fountains must be kept clean or intestinal trouble will follow. This is especially true of the milk vessels which soon acquire a high smell if not cleaned out every day.

• • •

Toe picking and cannibalism may be caused by lack of minerals or by improper temperature conditions. This often causes serious losses. There are several methods used to prevent this trouble. A teaspoon of iodized salt or of baking soda per gallon of drinking water is used by some poultrymen. Last season I found that condensed buttermilk fed as it comes from the keg, in amounts that the chicks would clean up in 20 minutes, stopped the trouble in my flocks.

If condensed buttermilk is fed to chicks in its original form it should be spread on a piece of board and this leaned up against the side of the pen so that the chicks can pick it off without getting their feet in it. Otherwise it may start the chicks to toe picking and will also cause balls of dirt to form on the toes of the chicks.

• • •

From this time on it is a good thing to feed Leghorns all the grain they will eat, or to give a fattening mash at noon composed of equal parts of cornmeal, rolled oats, and condensed buttermilk, allowing 5 pounds of the mixture to 100 hens. Leghorns that are laying heavily are liable to get thin and then may fall off in production or get prolapsis of the oviduct.

• • •

A good many poultrymen are planning to keep their chicks inside for several weeks after they are hatched, and some will not be let out at all. These measures are designed to protect the chicks from worms and coccidiosis which are present in infected soil. A well-balanced ration with the addition of cod liver oil and green stuff will keep confined chicks in good health and prevent leg weakness.

• • •

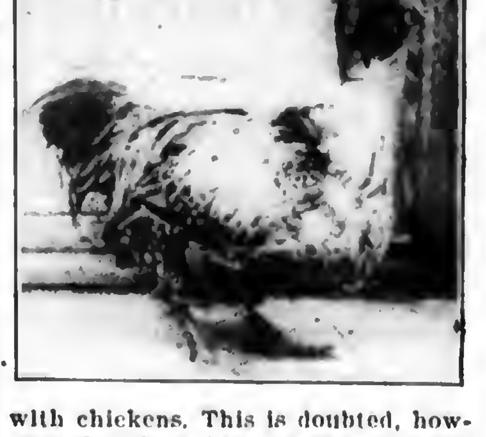
It is a good thing to whitewash the brooder houses before the chicks are put in. Floors should be carefully scraped and disinfected. We often whitewash the floors in addition as the lime not only acts as a disinfectant but also seals harmful material in.—R. L. Scharring-Hansen.

Brooders Burn Gas

I NOTICED a small item about brooding with gas. I have some information which may be useful. I am now brooding 2400 baby chicks with gasoline, under four colony brooders heated with a gasoline burner under each. I used this last year with satisfactory results. I would use city gas instead except that the cost is prohibitive. There are several brooders which ordinarily burn cheap fuel oil but which I think could be arranged to burn natural or city gas.—W. S. B., Cumberland County, N. J.

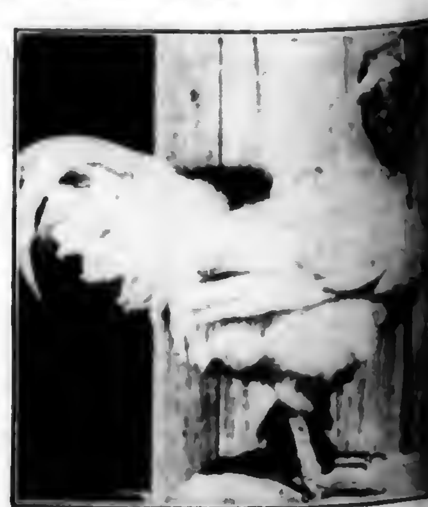
What Do You Think They Are?

THE accompanying photographs show two specimens of a strange kind of bird called turken. Some western breeders claim to have produced turkens by crossing turkeys



with chickens. This is doubted, however, for these bare-necked chickens breed true and such a crossing is not encountered under ordinary farm conditions.

The Feathered World of London, England, says that the Naked Necks have been raised in that vicinity for at least 40 years, being known as German Naked Necks. They are bred in all parts of the United States and have been exhibited at leading poultry shows. Turken enthusiasts claim that their birds are good layers and satisfactory for meat, but no one claims they are beautiful. The photographs on this page show turkens in the flock owned by E. M. Mengel, Lehigh County, Pa.



ome Bills That Keep Pennsylvania Legislature Busy

THE Legislature has entered the last three-week lap of its session with a large percentage of the 700 bills introduced still in committee. March 23 was the final date et for the introduction of bills in he House of Representatives and up to that time about 1900 bills were introduced.

• • •

PUBLIC WANTS BALLOT REFORM.—Public sentiment has become so strong that the passage of lection reform bills in some form s practically assured. Real progress as been made during the past week. While a bill limiting campaign expenditures has not been reported om committee, other bills providing r the use of voting machines, the andatory opening of ballot boxes, d limiting the assistance which an be given voters at the polls have ade progress. While the bills are ot out of danger, according to close bservers, the prospects for favorable ction are good at this writing.

• • •

THREE-CENT GAS TAX BILL AY PASS.—The three-cent gasoline tax bill, while opposed by the Grange and automobile clubs, will be eported favorably by the House ommittee, according to the latest reports.

• • •

ARMORY BILL INTRODUCED.—he latest move to secure more adeuate facilities for housing the State arm Products Show in Harrisburg s the introduction of a bill by Repsentative Brown which asks for an ppropriation of $350,000 to be used y the Department of Agriculture d the Armory Board in erecting a ilding to be used for the farm how in January each year and for mory purposes during the remainer of the year.

• • •

WOULD MORTGAGE CROPS.—wners and tenants of land will be le to mortgage their interests in owing crops, including fruit and egetables, if a bill introduced in e Senate last week passes.

• • •

DOG LAW AMENDMENTS OFRED.—Several amendments to e State Dog Law have been preted during the past week. One uld make the present dog law ap to the entire state. Philadelphia, tsburgh and Scranton have not en included in the state enforcent of the law during the past; s was taken care of by local cials. Another amendment rees the age at which dogs must be ensed from six to four months. ll another modification would ke it impossible for a police officer other local official to shoot a ensed dog running at large until definite case of rabies is estabhed.

• • •

NO ACTION ON TAX COLLECON BILL.—In spite of constant itation for reducing the cost of tax llection, the Schantz bill, which ovides for the collection of taxes ru the county treasurer has not en reported from the Committee on nance to which it was referred re than a month ago.

• • •

WOULD MAKE TULIP THE ATE FLOWER.—A bill designatg the tulip tree and flower as the ate tree and flower for Pennsylnia has been introduced by Sen Earnest. Pennsylvania is said be the only state that does not ve a state flower. The tulip has n selected because it is found in parts of the state, because it is important timber tree, because its f resembles a keystone in shape d because it is one of the most autiful shade trees.—J.

A man worth knowing—The Delco-Light Dealer

The Delco-Light Dealer comes to your home with a Delco-Light Plant on the back of his car. Without obligation he will demonstrate Delco-Light Electricity in your home. He is a trained farm electric specialist. Welcome his demonstration.

DELCO-LIGHT

Demonstrated, installed and serviced by over 3500 Farm Electric Specialists

DELCO-LIGHT men are factory-trained men—men who understand the farmer's needs—men who know their products—men who have demonstrated their ability and knowledge of farm electricity on more than two hundred and seventy-five thousand farms now serviced by Delco-Light.

There is a Delco-Light man near you. Ask him to show you how you can get the greatest benefit from Delco-Light farm electricity. Have him demonstrate Delco-Light—how it operates—what it does. Let him show you how, at low cost, you can have electricity that does the chores—how you can have electric light wherever you want it—light to read by—light to work by—*clean, safe, dependable* Delco-Light.

If you are not already acquainted with the Delco-Light man in your community, write to us for his name and complete information.

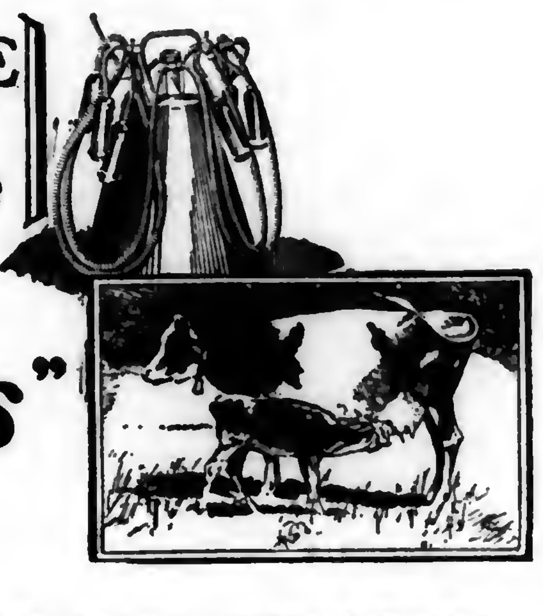
SAY you saw the advertisement in Pennsylvania Farmer when you are writing to our advertisers.

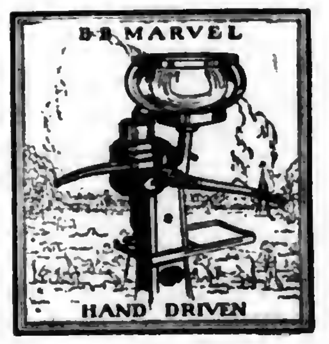
Is machine milking better than hand milking?

EMPIRE Milking Machine Owners vote "Yes"



EMPIRE owners say that machine milking is easier and cheaper, takes less time, keeps cows in better condition, gives cleaner milk, saves the wages and keep of a hired man, gets more milk per day for more days—that if they had to go back to hand milking they'd sell their cows and go into some other business.

If you keep six or more cows you are losing money by hand milking. You could put the money you now pay out for wages and keep of a hired man into the bank and make dairying a better, more profitable business. Sold on easy payment plan. Send for booklet—mail the coupon today.



The New B B Marvel Cream Separators—more cream from every can of milk

The improved, permanently balanced bowl of the new B B Marvel is the greatest separator improvement in twenty-five years. It does away with bothersome neck springs and bushings. Its automatically oiled ball bearing spindle supported by a stationary shaft assures freedom from vibration—clean skimming—all the cream all the time.

Rerun skim milk from any other separator through a B B Marvel. Note the results. You too will want this extra cream from every can of milk. Sold on easy payment plan. Send for booklet—mail the coupon today.

You certainly can afford running water

The Empire Water System is a small investment that pays big dividends in comfort and convenience, saves time and work every day in the year. Costs only about what you pay for a first-rate radio set—about a nickel a day to run.

You get bath room conveniences, and big savings in time and labor in kitchen, laundry and dairy work. Fire insurance costs are lower. Cows and hogs get all the water they want—more milk and heavier hogs.

Empire Water System—motor, pump and tank equipment—is easy to install, automatic and silent in operation, provides a steady flow at any faucet, capacity 300 gallons an hour. Sold on easy payment plan. Mail the coupon today.

DAIRY

A. A. BORLAND,
Staff Contributor and Adviser
Head of the Department of Dairy Husbandry
Pennsylvania State College

The Manager Tells His Own Story

TO HAVE the highest producing dairy herd in the county cow testing association is no mean honor in these days when the handling of cows for efficient milk production has become a science.

This honor in the Venango Cow Testing Association for 1926 goes to River Ridge Farm, Franklin, Pennsylvania, of which the late Joseph C. Sibley was proprietor and John L. Hanna is the manager. The herd of purebred registered Jerseys averaged 414.9 pounds of butterfat for the year and outstripped its nearest competitor by 47.8 pounds of butterfat per cow.

Yours for the Asking

PENNSYLVANIA is a great vegetable gardening state and it also has a great vegetable forcing industry, ranking third among all states in sales of products grown in greenhouses. Vegetables are raised in greenhouses in more than 30 counties. Two bulletins on vegetable production in the Keystone State have been published by the State Department of Agriculture. No. 396, "The Pennsylvania Vegetable Forcing Industry," deals with the production of vegetables under glass. No. 408, "The Vegetable Industry in Pennsylvania," gives valuable information about the production of vegetables in gardens and on truck farms. These bulletins may be obtained free from the Department of Agriculture Harrisburg, Pa.

Upon the request of the writer, Mr. Hanna has very kindly given the following interesting account of the River Ridge herd and the methods used to obtain the excellent results that are being secured.

"Hon. Joseph C. Sibley, who owned this herd up until his death, May 19, 1926, was a close student of Jerseys for fifty years, having owned the best blood obtainable in this country. He confined himself entirely to American bred animals. All credit for our success with Jerseys is tirely due to Mr. Sibley, who only possessed a most brilliant m but was a deep student and a kee and practical observer. Our polic of breeding and rations were entire ly directed by him and carried ou to the last word.

Prefer Large-Boned Type

"Believing that an animal have a robust constitution, we sta our calves on a small quantity o lime water, which is given each da in their milk ration. We think tha this helps in making a large bo frame to which we are more parti than to the more delicate type.

"We also believe in plenty of fres air and avoid a close or heated barn. Our cow, Passport, which beat th world's record for pounds of mil production in 1915 by producing 1 694.8 pounds of milk was kept i the open air during the entire ye her test was carried on. Throu the winter she was confined in a she with the south side open and th temperature going as low as 2 de grees below zero.

"We have always mixed our rations, changing the mixture quently when we feel that such change would be beneficial. roughage we feed clover hay, fa, ensilage and beets, making ent combinations of the rough which prevents the cows becomi stale on any one.

No Chills for Our Cows

"We believe that during the col months the water should have th chill taken off and an abundant su ply should be within reach at a times. The silage and beets wou be better if the chill was taken o as less feed would be needed to ma tain the bodily warmth and heat this cold mass of food.

"We milk at 5:30 in the morni and 5:30 in the evening and th hours are never varied. When milker takes it on himself to rough and is inclined to be a lo broadcaster or to change the milki period he resigns without delay.

"Too much attention cannot given to the manner of milking an care of udders as a good produ

(Continued on next page)

"Controlled by State College"

DEAR MR. KESTER:—Enclosed find some literature which you may be interested in.

As I understand your paper is controlled to a certain extent by State College it is not to be expected that we can count on you for any assistance for our cause.

However, I have no objection to letting you know that we are still on the job.

I take it that the reason you are not making any mention of the growth of our movement is that you are afraid we will secure still more followers.

I do not believe that in the end you will secure much satisfaction from having taken this position.

Very sincerely, Joseph Cope.

The literature referred to by Mr. Cope is a large eight-page circular much too long to be reproduced here. Its title is, "Some Glimpses of The Truth between The Atlantic and Pacific with The Assistance of Government Agencies." Assuming that Mr. Cope would like to see it widely distributed we take the liberty of saying that copies may be obtained the Department of Publicity Membership, Pennsylvania Farmer Protective Association, Chester Coun ty Unit, Oakbourne, Pa. This is th name that appears on the circular.

The letterhead used by Mr. Co gives this as the purpose of the Pen sylvania Farmers' Protective As ciation, Chester County Uni "Pledged to do as much as possib to discourage the compulsory ods which may be used to accom the tuberculin testing of cattle."

The Association, we learn, was ganized April 15, 1926. The ex tive committee is given as foll President, Clarence B. Hope, P oy; vice president, George D. T West Chester, R. D. 3; secretary, Paul Emery, Honeybrook; treasur A. S. Copeland, Coatesville, No. W. B. Cornog, Uwchlan; Jo Cope, Oakbourne; F. H. Strickl Glen Moore.

The letterhead is embellished these sentiments:

"Why study the history of Roman Empire if not to preve similar fate for America?"

"Eternal vigilance is the pri liberty."—The Editors.

UNADILLA
the most convenient silo made

Instead of laboriously *pitching* tons of silage out over your head twice a day for seven or eight months every year, *push* it out the *Unadilla* way!

Air tight, water tight, frost repellent doors that just *can't* freeze or stick—give a continuous opening at the level of the silage.

The money you put in a Unadilla is insurance of good silage, well kept and the greatest degree of convenience found in any silo made.

Write for prices and big illustrated catalog. Worth-while discounts allowed on early shipment, cash orders.

Makers of sturdy storage tanks, vats and water tubs—ask for literature regarding this Unadilla line.

Harder Silos
"The Bulwark of the Paying Dairy"

SILAGE is the best possible feed for cattle. If the corn crop disappoints you, fill your silo with ANY crop you have—clover, alfalfa, etc. And let your Silo be a Harder—

Built to Endure

of selected White Spruce and Oregon Douglas Fir, extra-thick and doweled at every joint. Anchored to breast the storms. So simple that you can put it up without skilled help.

Be sure to get Harder prices and attractive payment proposition before you decide on a silo. Write for details. Give number of cows or size of silo desired.

HARDER SILO CO., Inc.
Box E Cobleskill, N. Y.

Buy Now – a Year to Pay

may be greatly injured by a slow, lazy milker as well as by one who does not always milk straight down, thus avoiding the tendency to pull at an angle which is the cause of defective quarters in the udders of many cows. This is especially true of the left rear quarter.

"In the fitting of race horses, Mr. Sibley found they could not be brought and kept in form by choice feeding and careful training alone, but that the brush and rubbing cloth, with hand friction, were also necessary. The toxins of the human body are carried off thru the bowels, the kidneys and the pores of the skin, and doubtless to some extent by the exhalations of the lungs. Great records from horses or cows will not be made when only one factor is taken into account. The coordination of all factors is necessary and each must be given its proper value. No piece of machinery is ever capable of performing its most valuable service unless all of the parts are in perfect alignment. 'The little rift within the lute' makes for discord, if not disaster.

Heredity, Culture, Environment

"The bulls we are now using in our herd are Choice and None Such and we are greatly pleased with the uniformity of type, high milk production and butterfat of the two-year-old heifers sired by these bulls.

"As breeders we must fully recognize the value of heredity (long lines of good ancestry without bar sinister) culture, i. e., good care, good feed, good water, then environment, meaning good air, quiet and peaceful surroundings, with well mannered ladies and gentlemen around us. A cow has her 'hell on earth' as well as the human when her highly nervous system is racked by shouting and cursing, as well as by blows.

"We may feed our families with an abundance of the choicest food, but this will avail but little in making a happy home when love and gentleness are absent. Governor Hoard used to say, 'Treat a cow as a lady if you wish to find money in the pail.' The production of milk is a nervous function and you cannot disturb that function without financial loss."—A. A. Borland.

Dairy Cow Needs "Salads" Too

I have a ten-year-old Jersey whose milk causes a can of cream to get an old odor. Last summer, just as she was going dry the same thing occurred.—J. S., Lawrence County, Pa.

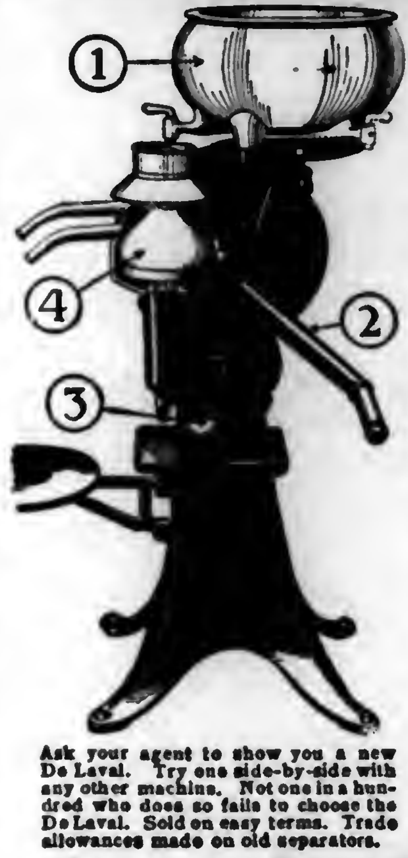
The milk from certain cows that are well advanced in lactation sometimes shows an abnormal character, especially when the animals receive no succulence, such as silage and roots. At times the milk develops a salty or bitter flavor. After a few hours a pronounced odor of rancid butter is noticed. Milk in this condition is not in any degree unwholesome but so objectionable in odor and taste that it is worthless.

Lipase Prevents Churning

The cream from such milk is churned with great difficulty and sometimes cannot be churned by any method that can be devised. This trouble is not, like most abnormal tastes which develop in milk, caused by the action of bacteria but by an enzyme known as lipase which is secreted in the milk and which causes a decomposition of the fat resulting in the rancid odor.

Reducing the grain ration to the amount actually needed by the cow and giving two or three doses of Epsom salts at intervals of three days may assist in removing the cause. The only certain method of preventing the development of the condition in the milk is to heat the milk to the boiling point immediately after milking and then to cool as rapidly as convenient.—A. A. Borland.

Announcing!
The NEW 1927 SERIES
DE LAVAL SEPARATORS



Ask your agent to show you a new De Laval. Try one side-by-side with any other machine. Not one in a hundred who does so fails to choose the De Laval. Sold on easy terms. Trade allowances made on old separators.

THESE brand-new De Laval Separators are now on display by De Laval Agents. We invite all cream separator users to see and try them, for we are confident all who do so will agree that they are the best cream separators ever made. They are the crowning achievement in nearly 50 years of separator manufacture and leadership. New features are:

1. Turnable Supply Can. The supply can may be turned so that tinware and bowl may be put in place or removed without lifting the supply can from its position on the separator. Every user will like this feature.

2. Easier Turning. For three years the De Laval experimental and engineering departments have been conducting extensive tests, to develop still easier turning separators. The results of these tests are embodied in this new series, which both start and turn easier than any other machines of even less capacities.

3. Oil Window. The new oil window enables you to see at all times the level and condition of the oil. It shows at a glance whether or not the separator is being properly oiled.

4. Floating Bowl. All new De Lavals have the wonderful "floating bowl," now used in De Laval Separators with such wonderful results. It is self-balancing, runs smoothly without vibration, with the least power and wear, skims cleaner and delivers a richer, smoother cream.

CRAINE SILOS

Free Trial of Proved Swedish Abortion Treatment

Famous Foreign Formula quickly relieves badly infested herds. Gives amazing results in cases believed hopeless.

Thousands of American Farmers say the Froberg Swedish Abortion Treatment has saved their herds from destruction. This remarkable treatment has been used with complete success in the big dairy herds of Sweden for many years, and has cleaned up whole districts over there literally rotting with contagious abortion.

It was only after great expense of time and money that this secret formula was made available to American Farmers. During the past nine years the treatment in American herds has given all the amazing results that made it so famous abroad. Herd after herd has been rid of this disease. Even cows considered hopeless by veterinarians have yielded to its healing qualities and been restored to health and produced fine vigorous calves.

SAVED HIS HERD

David Mohr, Jenison, Michigan, says: "Last year I raised only one good calf out of 14 cows bred, all other calves were aborted. I was desperate. I used your C.C.C. treatment. This year with the same herd I have not lost a single calf. It's wonderful. My neighbor lost 3 calves in a few days—I gave him some C.C.C. and it stopped the trouble right there."

The fame of Cow Calf Control (C.C.C.) the name of this treatment has spread from breeder to breeder. Today it is put out only on an absolute binding guarantee that it will stop every case of abortion; that every cow treated will deliver a normal calf, or the treatment cost is refunded. Two reliable banks stand behind our guarantee. You can't lose. C.C.C. is practically 100% successful.

SEND NO MONEY

Mr. John W. Froberg, a native of Sweden and a large dairy owner, is responsible for introducing C.C.C. into this country. He has made the treatment easy to give, and at a cost per animal that every farmer will gladly pay.

Write today for full details explaining our free trial offer. Just send your name and address without further obligation to Froberg Remedy Co., 18 Lincoln St., Valparaiso, Ind.

LEADCLAD FARM FENCE
"Good Fences Make Good Neighbors"

Make Three Potatoes Grow Where One Grew Before—

If you could triple your potato, grain or fruit crop, without any extra expense, you'd jump at the chance.

Leadclad Fence presents practically the same opportunity—Leadclad triples your fence wear. Leadclad long-service fence reduces your fence costs to but one third the cost of ordinary fence.

It's just as profitable to erect fence that will last three times longer than ordinary fence as it is to make three potatoes grow where one grew before.

Leadclad Lasts Longer

The heavy coating of pure lead which protects Leadclad Wire from rust, doesn't chip, crack or wear off like the coating on ordinary wire. This jacket of pure lead enables Leadclad Fence to endure any degree of hot or cold weather, dampness or smoke, years longer than ordinary fence.

Don't keep losing money on fences. Erect Leadclad and cut two-thirds off from your fence costs.

Write for the big Leadclad catalog of Fence and Roofing—its free.

GLOBE SILOS
Perfect silage with a Globe Silo
ONLY the Globe has the *extension roof, an exclusive feature, which reduces the cost per ton capacity to its lowest terms.* No waste unfilled space after silage settles. It offers the cheapest way to handle your corn crop. Made of selected Canadian spruce and Douglas fir with double splines, sealed joints and adjustable doors, it is absolutely air-tight and lasts a lifetime. A Globe Silo increases the value of your farm, the milk yield of your cows and farm profits.
Write today for the name of our representative in your community and catalog; tanks, tubs, ensilage cutters, stanchions, etc.

W. H. TOMHAVE
Staff Contributor and Adviser
Head of the Department of Animal Husbandry, Pennsylvania State College

Terms Unfamiliar

In looking over your reference number I found two things that I am asking questions on. What is gaskins on a horse and what is the purse as applied to beef cattle?—C. B., Delaware County, N. Y.

The score card used in the reference number of Pennsylvania Farmer is similar to those used in schools and colleges in scoring animals for points and getting the different parts of the animal fixed in the mind of the student. The term gaskins in the score card refers to the muscle on the hind leg above the hock.

The term purse in fat cattle refers to scrotum, bag or external covering remaining after an animal has been castrated. This usually extends as the animal improves in condition and in a measure indicates the degree of fatness in a finished animal. —W. H. Tomhave.

Sorghum Nearly As Good As "Canned" Corn

Is sorghum (sugar cane) good feed for milk cows and will it make as well in a silo as corn fodder? Which is best for little pigs, sweet or sour, milk, cooked food or uncooked food? —A. J. B., Crawford County, Pa.

Sorghum may be used either as silage or as a soiling crop for dairy cattle. It has a high feeding value and ranks next to corn as a crop for silage. Experiments conducted at the Kansas Experiment Station show that only about three to five per cent more milk is produced when cows are fed corn silage than when sorghum or cane silage is fed. It can be put in the silo fully as well as corn.

It is doubtful if it is as economical to grow the sorghum for silage in Pennsylvania as corn because of the longer growing season required. In the southern states it is considered more economical because of the greater yield, but that would not be true in Pennsylvania.

The sweet milk is better than the sour milk for the small pigs which you are feeding. While there may be no appreciable difference in the feeding value of sweet and sour milk, small pigs will do better on the sweet milk because it is a more uniform product than the sour milk.

It is not considered necessary or economical to cook feed for pigs. Practically all experiments that have been conducted to determine the value of cooking feed for pigs show an actual loss in food nutrients or the efficiency of the feed thru cooking. In addition to the loss in feeding value you have the expense of fuel equipment and labor.

The only time when it pays to cook the feed for swine is when potatoes are fed. During cold weather it is often desirable to use warm water for pigs as this will make them consume more water.—W. H. Tomhave.

Skimmilk Powder Satisfactory for Pigs

Can skimmilk powder be fed to pigs the same as skimmilk with the same results?—C. D. S., Broome County, N. Y.

The skimmilk powder can be fed to pigs in place of the skimmilk from the cream separator with satisfactory results. A combination of 9 pounds of skimmilk powder and 91 pounds of water will be the equivalent to 100 pounds of skimmilk.

The results secured from the use of skimmilk powder are fully as satisfactory as when the skimmilk is fed. In feeding trials conducted, it was found that no difficulty whatever was encountered in the feeding of skimmilk powder.

The only factor of importance that will have to be taken into consideration is the cost of powder as compared with skimmilk.—W. H. T.

It was a dark night and the motorist was lost. Presently he saw a sign on a post. With great difficulty he climbed the post, struck a match, and read, "Wet Paint."—Georgia Cracker.

Doctor Lipman's Weekly Talk on Soil Fertility Problems

Won't Produce As It Is

Last spring I seeded an eight-acre field and secured a very good stand. However, this soil is in bad condition and cannot be expected to produce a good crop of hay. The principal requirement is more nitrogen. When would you advise that I sow nitrate of soda, and how much should be applied to insure a good crop?—F. L. B., Potter County, Pa.

Nitrate of soda may be used on your grass land at the rate of 75 to 150 pounds per acre, and the application could be made early in April. It is probable that an application of 100 to 125 pounds per acre would give you the most economical returns.—J. G. L.

Failed Second Time

My grass seeding failed last year so I sowed alfalfa in the fall. Due to the drought or to bad seed that also failed. Can I secure a hay crop this summer if I harrow the ground early this spring and sow grass seed again?—M. T. S., York County, Pa.

Your chances for getting a good stand of grass if you harrowed the ground and sowed grass seed in the spring would not be very good. It would be better for you to plow the ground as early as you can, or, if you prefer it, to disc it and harrow it thoroly and sow oats with clover seed. The oats could be harvested early, to give you a good hay crop. The clover would then come along if your land is not too sour.

Instead of red clover, you might sow sweet clover with the oats, or you might sow a mixture of oats and Canada field peas together with the red and sweet clover seed. In this way, you would have hay for feeding in the late summer and fall, and would have a good stand of clover for next year.—J. G. L.

Bothered With Quack Grass

Please advise me what can be done to kill quack grass.—C. D. C., Susquehanna County, Pa.

Clean cultivation of crops planted in rows or hills is considered the most important means for ridding the land of quack grass. Other methods suggested are fall plowing and a partial summer fallow. Crops like barnyard millet, which fully shade the ground, are often helpful.—J. G. L.

Guaranteed
Your dealer will tell you that the Champion guarantee is the strongest behind any article of automotive equipment. It is your complete assurance that Champion *must* be the better spark plug. That is why Champion outsells throughout the world two to one. And it is why Champions enjoy an equal preference on the farm for stationary engine, tractor and truck use.

Car manufacturers recommend, and hundreds of thousands of motorists are changing spark plugs every 10,000 miles to insure better and more economical car operation. This is true, even of Champions, in spite of their world-wide reputation for remarkable long life.

Care of Cow Prior to Freshening

Please give me information regarding care of cow from now until she has her calf, probably about the middle of June.—R. G. G., Jefferson County, Pa.

A cow should be allowed to stand dry six to eight weeks. If you were to dry her off between the middle of April and the first of May she would have about the proper rest period. It usually takes about two weeks to dry off a cow if she is giving a fair allowance of milk. The best method is to cut down her feed. The grain mixture may be entirely removed and the roughage should consist largely of timothy hay, corn stover, or other roughage low in protein.

The common method of drying a cow is to lengthen the interval between milking by omitting one milking each day. After a few days the milk is drawn only once in two days. When the production of milk reaches as low a level as four to five quarts daily, the milking may be discontinued entirely. You are not likely to have any trouble with the cow's udder by this method. The udder will fill up for a few days and then the milk is gradually reabsorbed and no harm will result.

In case the milk becomes clotted in the cow's teats before the drying off period begins, the allowance of grain should be cut down and the ration be made laxative in character. Bran is especially adapted for feeding at such a time. The milk should be drawn several times during the day. The portion of the udder affected should be bathed with hot water and vigorously rubbed or kneaded afterwards. Camphorated oil or vaseline may then be applied.

Minerals Stored for Future Use

A good grain mixture for a cow when dry may be made from two parts by weight of corn meal, two parts of ground oats, two parts of wheat bran, and one part of linseed oil meal.

About a week before the cow freshens corn meal may be left out of the grain mixture and the grain allowance cut to about one-half the usual amount. A cow should be well fed during the dry period as it has been found that this is the time when she stores up nutrients and especially minerals to be used after she freshens. A grain allowance of 7-12 pounds daily will be advisable during the period when she is dry, except for a few days before freshening when half this amount would perhaps be sufficient.

The cow should also have plenty of good leguminous roughage during her dry period. Alfalfa hay, clover hay or soy bean hay is excellent for this purpose.—A. A. Borland.

Soil Science Congress Meets in June

THE first International Congress of Soil Science will be held in Washington, June 13-22, 1927. Dr. A. G. McCall, executive secretary, says this will be a world-wide conference of soil scientists to discuss soil investigations, soil utilization, and soil conservation. The most distinguished soil workers from all foreign countries will attend at the invitation of the Federal government. Dr. J. G. Lipman, Soils and Fertilizers Editor of Pennsylvania Farmer, is president of the organization.

At the close of the conference a trans-continental excursion to the Pacific Coast via the southern route and back thru Western Canada and the Middle West, will be run to give the foreign delegates an opportunity to study the various soil types and conditions on the American continent. The estimated cost is around $300 from Washington and return.

Judith of Blue Lake Ranch

By JACKSON GREGORY

Copyright Charles Scribner's Sons

The Story Thus Far

JUDITH SANFORD, part owner in Blue Lake Ranch since the death of her father, Luke Sanford, fired Bayne Trevors, general manager, because he wasn't square. The men grumbled. Trevors made trouble in every way possible. Bud Lee, horse foreman, and old Carson promised to stay. Judith could depend on them and on "Doc" Tripp, veterinarian and a friend of her father.

Busy days followed. Mrs. Simpson took up her duties caring for the ranch house and Pollock Hampton, part owner of the ranch, arrived with his guests—Major and Mrs. Langworthy and Marcia, their daughter; Marshal Rogers, lawyer, and Frank Farris, artist.

The night of Marcia's farewell party, just after Lee had kissed Judith and cursed himself immediately for doing it, he and Carson rode into Rocky Bend. Quinnion, the man Judith believed responsible for the death of her father, had been talking, not only about Lee but about Judith. In a back room of the "Jailbird" Lee found his man and in the fight which followed injured him, forced him to say he'd been lying and to leave town without delay.

Months passed. Hampton was no longer the "city guy." Soon after Marcia's return Doan, Rockwell & Haight addressed him as "general manager" when sending an unsolicited order for a large shipment of cattle and horses at a ridiculously low figure. The order bothered Judith. Trevors had sold to that concern when manager. Trouble was brewing. A few days later Hampton rushed up to Carson and ordered him to crowd the cattle to the lower End, 500 were to be sold to Doan, Rockwell & Haight. Carson was angry. And when Hampton a few minutes later greeted Lee with "we're cutting loose, Bud, at last and piling up the shining ducats! Selling 100 horses to Doan, Rockwell & Haight" Lee's heart was sore. Why had Judith done this thing without a word? Coming into the bunk-house that evening Lee found Carson prophesying dire calamity to the ranch and all concerned.

Continued from last week

LEE didn't hear the rest. It had been his intention to come in and smoke with the boys, and perhaps play a game of whist. Anything to keep from thinking. But now, moving on impulse, he turned and left the shack, going swiftly up the knoll to the ranch-house.

Just stepping into the courtyard soft under the moon, tinkling with the play of the fountains, stirred his heart to quicker beating. He had not set foot here for over two months, not since that night which he knew he should forget and yet to whose memory he clung desperately. This was the first time in many a long week that he had gone out of his way to seek Judith. And now words which Judith herself had spoken to him one day were now at least a part of the cause sending him to speak with her. She had said that he was loyal, and that she needed loyal men. He still took her wage, he was still a Blue Lake ranch-hand, he still owed her his loyalty, tho it came from a sore heart.

If she were hard driven in some way which she had not seen fit to confide to him, if she were forced to make this tremendous sale, if she were mad or had at last lost her nerve, frightened at the thought of the heavy sums of money to be raised at the end of the winter, well, then it still could do no harm for him to speak his mind to her. Hampton had told him the price which the horses were to bring; it was pitifully small and Lee meant to tell her so, to tell her further that he would guarantee an enormous gain over it if she gave him time. He would be doing his part tho she called him meddler for his pains.

MARCIA LANGWORTHY, hidden in a big chair on the veranda, watched him approach with interest, tho Lee was unconscious of her presence. He had lifted a hand to rap at the door when she called to him.

"Good evening, Mr. Mysterious Lee. Have you forgotten me?"

Tho he had pretty well forgotten her, it was not necessary to tell her that he had. He came toward her, putting out his hand.

"Good evening, Miss Langworthy," he said cordially. "I haven't seen much of you this time, have I? Two reasons, you know: busy all day and half the night, for one thing, and for another, Hampton has monopolized you, hasn't he?"

Marcia laughed softly.

"To a man your size the second reason is absurd. . . . Will you sit down? You see, I am taking it for granted that you came here to see me. Unless," and her eyes twinkled brightly up at him, "you were surreptitiously calling on Mrs. Simpson."

"I'd love to talk with you," he assured her. "But, as I've just hinted, my work here has got into the habit of running away with me into the night. I really came up for a word with Miss Sanford."

"Oh, didn't you know?" asked Marcia. "Judith isn't here."

"Isn't here?" He frowned. "No, I didn't know. I haven't seen much of her lately and didn't know her plans. Where is she?"

"In San Francisco. Her lawyers sent for her, you know. Something about a tangle in her father's business. Funny you hadn't heard; she left Saturday night."

Saturday? This was Tuesday evening. Judith had been away three full days. Lee, thinking hurriedly, thought that he saw now the explanation of Judith's ordering a sale like this. Her lawyers had found what Marcia called a "tangle" in Luke Sanford's affairs; there had been an insistent call for a large sum of money to straighten it out, and Judith had accepted the only solution.

Still, it didn't seem like Judith to sell like this at a figure so ridiculously low. Doan, Rockwell & Haight were not the only buyers on the coast; Lee himself could get more fon the horses if he had two days' time to look around; the cattle were worth a great deal more than they were being sold for, even with the market down.

"Did she have an idea what the trouble was before she left?" he asked finally.

"Why," said Marcia, "I don't know. You see, she slipped out late Saturday night after we'd all gone to bed. There was a message for her over the telephone; she got up, dressed, saddled her own horse and rode into Rocky Bend alone, just leaving a note for me that she might be gone a week or two."

Just why he experienced a sense of uneasiness even then, Lee did not know. It was like Judith to act swiftly when need be; to go alone and on the spur of the minute to catch her train; to slip out quietly without disturbing her guest.

"You have heard from her since?" he demanded abruptly.

"Not a word," said Marcia. "She doesn't like letter-writing and so I haven't expected to hear from her."

Lee chatted with her for a moment, then claiming work still to be done, turned to go back down the knoll. A new thought upon him, he once more came to Marcia's side.

"I expect I'd better see Hampton," he said. "Do you know where he is?"

"Where he has been every night since Judith left," laughed Marcia. "He's old Mr. Business Man these days. In the office."

There Lee found him. Hampton, his hair ruffled, Judith's table littered with market reports, and many sheets of paper covered with untidy figures, looked up at Lee's entrance.

"Hello, Bud," he said, reaching for cigarette and match. "Got everything ready for tomorrow?"

"Why didn't you tell me Miss Sanford had gone away?" was Lee's sharp rejoinder. Hampton flushed.

"Devil take those two eyes of yours, Bud," he said testily. "They've got a way of boring thru a man until he feels like they were scorching the furniture behind him. Well, I'll tell you. While Judith is away I am running this outfit. And if the men think I'm coming straight from her with an order they obey it. If they get the notion she isn't here, they're apt to ask questions. That's why."

"This sale to Doan, Rockwell & Haight," said Lee quickly. "You didn't cook that up, did you, Hampton?"

"Lord, no!" cried Hampton. From its place on a file he took a yellow slip of paper, tossing it to Lee. "She sent me that this morning."

It was a Western Union telegram, saying briefly:

Pollock Hampton,
Blue Lake Ranch.

Am forced to sell heavily. Sending Doan, Rockwell & Haight Wednesday morning, one hundred horses; as many beef cattle as Carson can round up. Accept terms made in their letter to you last week.

Judith Sanford.

The date-line upon the message gave the sending point as San Francisco.

"THEY wrote you a letter offering to buy?" said Lee, his eyes rising slowly from the paper in his fingers. "How'd it happen they didn't write to her?"

"Well, it's a natural enough mistake, isn't it? Knowing that she and I were both part-owners, knowing that we were both here, isn't it quite to be expected that they would write to the man instead of to the woman? Of course I gave her the letter as soon as I had opened it."

"Of course," answered Lee.

But his thoughts were not with his answer. They were with Bayne Trevors. He knew that Trevors had long ago sold to these people; he knew, too, that at least two of the heavy shareholders in the Western Lumber Company were interested in Doan, Rockwell & Haight. Tom Rockwell himself was second vice president of the lumber company.

"Have you had any other word from Miss Sanford?" he asked.

"No."

"Know who her lawyers are?"

"No. I don't."

"Anything in her papers here that would tell us?"

"No. Her papers are in the safe yonder and it's locked and I don't know the combination."

"Know what hotel she is stopping at in the city?"

"No. Look here, Bud; what are you driving at? I don't get you."

"No?" answered Lee absently.

What Bud Lee was thinking was: "Here are too many coincidences!" Little things, each one in itself safe from suspicion. But when he meditated that the offer had come from this particular firm, that it had come just a few days before Judith's first departure from the ranch, that it had been addressed not to her but to Hampton, so that he must have the opportunity to read it, that she had been called suddenly to the city, that that call had come after the house was quiet, its occupants in bed, that no letter had come since she had left, that no one knew where to reach her—when he passed all of these things in review the bitterness in his heart died under them and the first anxiety sprang up anew, grown almost into fear for her.

"THERE'S just one thing, Hampton," he said, his eyes hard on the boy's face. "We don't sell a single hoof in the morning. Not a cow nor a horse until Judith is here herself."

Hampton, new in his role of general manager, flushed hotly, his own eyes showing fight.

"I like you, Lee," he said sharply, his tone that of master to man. "And I don't want us to quarrel. But Judith wired me to sell, I've wired the buyers an acceptance and we do sell in the morning!"

For a full minute Bud Lee stood stone still, staring into Hampton's face. Then, tossing the telegram to the table, he turned and went out. His face had gone suddenly white.

"They've got you somehow, Judith girl," he whispered thru tense lips. "But the fight is still to be made. And, by gosh, there's a day of squaring accounts coming for a man named Bayne Trevors!"

He went to the bunk-house, neither seeing Marcia nor hearing her when she called after him, and with a word to Carson brought the irate cattle foreman hurriedly outside.

Bayne Trevors's way had ever been to play safe, the way of a coward or a wise man. Even now, no doubt he was giving an account of himself in legitimate endeavor at the lumber camp, putting in his appearance at his regular hour, safe miles lying between him and that which might occur upon the Blue Lake ranch, establishing alibis, conducting himself like the man he wished the world to think him. But in the mind of Bud Lee there was no question, no doubt. Bayne Trevors, or one of Bayne Trevors's gang, was even at this instant holding Judith somewhere until this

Business Men Backed the Boys and Girls

It will soon be time for the potato clubs to prepare for the 1927 season. This picture shows last year's boys' and girls' Disease-Free Potato Club organized in Somerset County by County Agent C. C. McDowell. Each club member received a bushel of disease-free seed from his sponsor, a Somerset business man, which was grown beside his father's home-grown seed for comparison.

colossal deal could be put over. Trevors or one of his gang—and Lee's face went whiter, his hands shut tighter into hard fists, as there came to his mind the picture of Quinnion's twisted face and evil, red-rimmed eyes.

"Well?" snapped Carson. "What now?"

"There's going to be no sale in the morning," said Lee, and at the new strange tone in Lee's voice Carson jerked up his head, thrusting it forward, peering at the other thru the moonlit night.

"Say it again," muttered Carson. "Who said so? Miss Judith?"

"She isn't here," replied Lee briefly. "Hasn't been here since Saturday night."

Now, with more cause than ever, did Carson stare at him.

"Then what did Pollock Hampton say sell for? By cripes, if this is one of that young hop-o'-my-thumb's jokes, I'm going up to the house an' murder him. That's all. An' right now."

Lee laid a hand on Carson's arm.

"Hold on, old-timer," he said shortly. "We'll have a talk with him after a while. Now I want to talk with you."

CONTENTING himself with the coldest of brief outlines, Bud Lee told Carson of Judith's absence and of his own suspicions. Carson, who had listened to him gravely, at the end shook his head.

"That's a pretty bald play, Bud," he said slowly. "I don't believe Trevors would get that coarse in his work. It doesn't look like him a little bit."

"Does this sale look the least little bit like Judith?" demanded Lee sharply. "Is it her style to go over our heads this way, Carson? If she's got to sell heavily, why pick out this particular set of buyers? Why is the deal rushed thru while she's away? I tell you there's a nigger in the woodpile and it's up to you and me to smoke him out. Come up to the house with me."

Marcia did not see them as they drew near in the moonlight. For, with a plan shaping in his brain, Lee judged best that they should not be seen. He and Carson passed in a wide arc about the left end of the courtyard, around the end of the house and so to a door opening from the office to the back of the house. This door he found unlocked and pushed quietly open.

Hampton lifted swift eyes, sensing something stern and ominous in this silent approach.

"We want to talk things over with you," began Lee.

"If you've come to bulldoze me out of that deal in the morning," retorted Hampton, "you might as well keep still. I'm going to sell."

"I don't know that you'd exactly call it bull-dozing," smiled Lee, determined to be pleasant with the young fellow as long as possible. "But you've got sense enough to listen to reason, Hampton."

"Have I?" jeered Pollock. "Thanks."

"If Miss Sanford wants the deal to go thru," continued Lee, "why, then, of course, thru it goes. If she doesn't, there's going to be no sale."

"I tell you she wired me to sell; I showed you the telegram—"

"But you didn't prove to me that she sent it. You didn't know yourself whether it had been sent by her or Doan, Rockwell & Haight, or by Bayne Trevors or the devil himself." He took up the telephone and said unto it, "Western Union, Rocky Bend . . . . That you, Benton? This is Lee of the Blue Lake. We want to get in communication with Miss Judith Sanford, somewhere in San Francisco. Send this message to every hotel there, will you? And rush it: 'Must have word with you immediately. Important. Telephone.' Got it? Oh, sign it, Carson and—and Tripp. Rush it, I tell you Benton. And if you get in touch with Miss Sanford in any way, tip us off here, will you? Thanks."

"She might be visiting with friends," muttered Hampton, little pleased at the thought that Lee and Carson were seeking to rob him of his newly acquired importance.

"Where's Mrs. Simpson?" asked Lee.

"Gone to bed," answered Hampton.

"And Miss Langworthy is still on the veranda. Now Hampton, Carson and I want a look at Miss Sanford's room. Come with us, will you?"

"I'm damned if I will!" cried the boy hotly. "I don't know what you are up to, but I'm boss here, and I'm giving orders, not taking them. If there's any reason in all this, I've got the right to know what it is."

"Yes," answered Lee thoughtfully. "You've got the right. I just don't like the looks of affairs, Hampton. I don't believe all that I hear. I don't believe Miss Sanford sent that wire. I don't believe she is in San Francisco. I do believe that your friend Trevors has got hold of her somehow, and that he is playing you for a sucker. That's our reason in this. Now will you come with us to her room?"

"Trevors?" said Hampton. Then he laughed. "You are like the rest, Bud. Trevors is a gentleman, and you try to make him a crook. Such a scheme as you imagine is absurd and ridiculous. And I won't go prying with you into Judith's room."

"Come on, Carson," said Lee. "If Hampton wants to stay here, let him."

But the young fellow was on his feet, his face flushed, his eyes excited.

"You'll get out of this house and do it quick!" he cried sharply. "If you think for one little minute that I'll stand for your high-handed actions, you're mistaken."

AT A LOOK from Lee, Carson stepped quickly forward, so that Hampton stood between them.

"You come with us," and now Lee no longer sought to be pleasant. "And keep still or we'll stop your mouth with a yard of cloth. This way, Carson."

With right and left arms gripped, with lagging feet and furious eyes, Hampton went between them to the door. For an instant only did he struggle; then, with a snort of disgust, seeing the futility of making a fool of himself, he went quietly.

Just what he expected as a result of a visit to the girl's room, Lee did not know. He hoped for some sign to tell him something, anything.

Quietly the three went thru the house until they came to Judith's dainty blue-and-white bedroom. Here all had been set in order by Mrs. Simpson. A great vase of rosebuds, brought by Jose this morning, accepted by Mrs. Simpson with suspicion and searched carefully for a lurking scorpion or a coiled rattlesnake, stood on a table by the window. On entering the room a sort of awkward shyness fell over both Lee and Carson. Hampton, freed now and standing alone, tho under Carson's hard eye, stared at them angrily.

"When you get thru with this foolishness," he told them stiffly, "you can either apologize or call for your time."

Neither answered. Carson little by little had come to share Lee's uncertainty and anxiety; and now, like Lee, sought eagerly to find a sign—something to tell that Judith had been lured away by Trevors or Quinnion; or that she had been overpowered here and taken out, perhaps thru a window.

But Judith had gone Saturday night, and Mrs. Simpson had done her work thoroly. It might be well to call the housekeeper and question her. Had she found a chair overturned, a rug rumpled, a table shoved a little from its accustomed place? But, again, it would be as well not to start suspicion and surmise in other minds if, after all, there were no true cause for it. Judith might be in San Francisco; she might have sent the order to sell.

"Chances is we're smelling powder where there wasn't no shot," said Carson hesitatingly.

"Bright boy!" mocked Hampton. "You'll make a great little gumshoe artist one of these days."

HAD Bud Lee not loved Judith as he did, with his whole heart and soul, it well might have been that he and Carson and Hampton would have gone out of the room knowing no more than when they had come in. But it seemed to Lee that the room which knew Judith so intimately, was seeking to open its dumb lips to whisper to him of danger to her. He had come here troubled for her; he stood, looking about him frowningly, his heart heavy, fear mounting within him. And at length he found a sign.

At the far end of the room, in a corner, was Judith's writing-table, on which were several opened letters, pen and ink, a pad of paper. Lee stepped to it. If she had been lured away after nightfall, then some message had come to her. If that message had come by word of mouth, there was no need seeking it; if it had been a note, fate might have kept it here.

Impaled on a sharp file was a sheet of notepaper. The note was brief, typewritten, even to the signature—that of Doc Tripp. It ran:

Dear Judith:

I am afraid of a new trouble. Have spotted another one of T's gang working for us. Also have got a bullet-hole in my right hand. Nothing serious so far. Come down right away. Don't let any one see you as I want to spring a surprise on them. Am not even using the telephone, as I've a notion they are watching me. Hurry.

Tripp.

"Come back to the office," said Le bluntly. And well in front of Car son and Hampton, who stared won deringly at the paper in his han he went to the office telephone an called for Tripp.

"How's your hand?" he aske when Tripp answered.

"All right," replied Tripp. "Why?"

"Get it hurt?"

"No."

"Did you write Miss Sanford hurry-up note within the last fe days?"

"No."

"Sure of that, Doc? Typewritte note?"

"Of course I'm sure," snappe Tripp. "What's wrong?"

"God knows," answered Lee short ly. "But you'd better come up her and come on the jump. Also, ke your mouth shut until you can ge a chance to talk with me or Carson."

He clicked up the receiver an turned terrible eyes on the two me watching him.

"They've got her," he said slowly. "They've got her, Carson. They'v had her since Saturday night!"

Carson read the note. Only the did it pass into Hampton's hands. The boy, angered at the way i which he had been ignored, insulted in his sense of dignity by tho words of Lee's to Tripp, "Talk wit me or Carson," seeing the reins o power being snatched from h hands, was speechless with wrath.

(To be continued next week)

Did you ever hear this one?—

Surprise in Store

First Guest—I'm sure I don't know why they call this hotel "The Palms" do you? I've never seen a palm anywhere near the place.

Second Guest—You'll see them before you go. It's a pleasant little surprise the waiters keep for the guests on the last day of their stay.—St. Louis Star.

Impartial Judgment

Teacher—Johnny, will you define the genders?

Johnny—There are two genders, masculine and feminine. Masculine is divided into two parts, temperate and intemperate; and feminine into torrid and frigid.

Pastor Johnson—"De choir will now sing, 'I'm Glad Salvation's Free,' while Deacon Ketcham passes de hat. De congregation will please 'member, while salvation am free, we have to pay de choir foh singin' about it. All please contribute accordin' to yo' means and not yo' meanness."

Cross Words

Botanist—"I've just discovered a new plant."

His Wife—"Call it Qtzphomx."

"Why?"

"Because it fits perfectly in this cross-word puzzle I'm inventing."—Christian Science Monitor.

Lady—Why did you become a tramp?

Hercules—The doctor's fault, mum. He told me to take walks after meals, an' I've been walking after 'em ever since.—The Medical Quip.

His First Choice

Pat and Mike were looking into a jeweler's window.

"Mike," said Pat, "how'd ye loike to have your pick here?"

"Faith," answered Mike, "Oi'd rather have me shovel."

Woman (examining squirrel for coat)—Could I wear this in the rain without hurting it?

Shop Assistant—Have you ever seen a squirrel carrying an umbrella?—London Tit-B'ts.

OUR YOUNG PEOPLE'S FORUM

From Forum Members and Friends

Dear Cousin Ruth:—I have four tame rabbits. They have little ones now. I get in the wood in the evening when I get home from school and feed my rabbits, then my work is done and I go sledding till supper is ready.—Vance Kohler, seven, York County, Pa.

Dear Cousin Ruth:—My grandpa Kulp had a sale on March 8th. My grandpa died, now they are stopping farming. In a few weeks we are moving on that farm where grandpa lived. — Harold Kulp, Lancaster County, Pa.

TWO DAYS AFTER CHRISTMAS
Ada P. Gehman, (X), Lehigh County, Pa.

Dear Cousin Ruth:—I took a trip to Pike County. I was there for two days. Two of my brothers go hunting there every year. One of my brothers has killed three deer and the other has killed two deer.—Corinne Taylor, Lackawanna County, Pa.

Dear Cousin Ruth:—I have spent part of my winter crocheting altho I have my school studies.

I took music lessons three different summers and found it wasn't hard to learn.—Evelyn Stake, Franklin County, Pa.

Dear Cousin Ruth:—I received my membership pin last week, thank you. Father is getting better. We have three calves and we are raising two of them. My brother and sisters and I are helping to raise them.

I am going to tell you about our trip to Shillington. The road we went down was rough and stony; it was up one hill and down another. The road we came home on was a state road and it was around one corner and up a hill or down hill and around another corner.

Last summer when we put the wheat away father had not been well so my oldest sister and I pitched some of the wheat and it made us very tired. My sisters are helping me hold the horse in the picture.—Lida Moore, thirteen (X), Lancaster County, Pa.

I'M STANDING AT THE RIGHT
Lida Moore, (X), Lancaster County, Pa.

Dear Cousin Ruth:—I received my membership pin and letter a very long time ago. I wanted to write to the Y. P. F., but due to the sickness of my sister-in-law it was impossible. I took care of her two babies and was kept quite busy. Thank you very much for the pin. I think it is very pretty.

It is very nice today; so warm. The pussy willows are in bloom here and the robins are singing out in the woods. My brother found a swan and we don't know what to do with it yet. My brother is going to try to get a picture of it, then maybe I'll send one to you. The swan couldn't walk or fly any more it was so tired but it is all right now and I guess my brother will let it fly again.—Theodora Grunthaner, (X), Elk County, Pa.

Dear Cousin Ruth:—At home we have two little steers. They are called baby beeves. We got them to raise and then we will have to take them up to Harrisburg to the State Farm Show. We call them Sambo and Tex. We have 86 chickens and get about 61 eggs. We are building two brooder houses and we are going to get 1500 little chicks.

In my school I won two prizes. One was for knowing the capitals of the United States. Another one was for getting the most words out of the word quadruplication. I got 82 and one boy in my class got 81, so it was pretty close.—Clarence B. Hollinger, (X), Dauphin County, Pa.

Dear Cousin Ruth and Forum Friends:—We have a pet dog and cat. The other day my pet cat got in the oven and my grandmother shut the door without seeing the cat. My pet dog barked for her to open the door and kitty was crying. My grandmother did not know what my dog meant until she opened the oven door.—Dorris F. Bennett, twelve, Bucks County, Pa.

Dear Cousin Ruth:—I am a freshman in Sinking Spring High School and rank first in a class of twenty. I play forward on the class basketball team. I am a member of Troop 1 Boy Scouts of this town and am a first-class Scout.

We expect to take a trip to Michigan this summer to visit some friends of ours.—Stanley Weidman, Berks County, Pa.

Dear Cousin Ruth and Forum Friends:—I am a sophomore in high school. We sophomore girls have cooking this year and we cook every Tuesday, Wednesday and Thursday. I am sending you a recipe of what we made last Wednesday.

COCOANUT KISSES

4 egg whites
2 cups granulated sugar
¼ teaspoon vanilla
1 cup cocoanut

Beat egg whites and sugar up well with an egg-beater. Then add vanilla and cocoanut. Beat until stiff enough to drop from a tablespoon into a buttered and floured pan, then sprinkle a little cocoanut over the top of your kisses and let brown in a moderate oven until done. I hope you have luck with these cocoanut kisses.—Tulli Kelly, Chester County, Pa.

Dear Cousin Ruth:—My sisters and I each have a little Bantam and one of them stole her nest and hatched out four little ones. I hope it stays warm now for them for they are so small.

I help my mother when I am home from school and mind my little sister and go for milk.—Phyllis S. Amster, Chester County, Pa.

Dear Cousin Ruth:—We have a society in our school. One of the girls is president, one secretary, one treasurer and I am librarian. I expect to take the high school entrance examination this spring. — Josephine Light, thirteen, Lebanon County, Pa.

ALL OF US
Isabel Pontius, Union County, Pa.

Dear Cousin Ruth:—We have two cats now. We only had one that would stay at home. Her name is Wampus. The other is Buttercup. She wanted to stay at Uncle Charley's all the time for our dogs would run after her but the dogs don't bother her now. Our old dog came from Italy. She is a Collie.—Pearl E. Hall, nine, Centre County, Pa.

OUR LITTLE FOLKS' PUZZLE CORNER

DEAR LITTLE FOLKS:—One of the pleasantest signs of spring in the city streets is the popping up of little stands where flowers are sold right in the midst of the roaring traffic and so placed that even those people who feel it is very important always to be in a hurry find time to stop and look. Sometimes they buy flowers to take back into their offices and then they will find that there are things more important than being in a hurry. I must have come upon a number of these little flower stands,—and maybe loitered in a city square where plants are poking their heads up in the flower beds and in the very grass itself.

The first flower you get a whiff of in the puzzle this week begins with "NAR," and I think we all know that "CISSUS" will need to follow in order to give the name "NARCISSUS." If you look carefully at the little bits of flowers in the puzzle, you will find the rest of that word, and I don't really believe you will have much trouble in finding the names of the nine flowers hidden (or not really hidden —just popping up unexpectedly) in the puzzle below.

When you have all these names, let me have your list either on a postcard or in a letter. BE SURE TO SAY HOW OLD YOU ARE, and please tell me the name of the county where you live and when your birthday comes. The prizes go to the ten children, sending in the correct answer, whose cards or letters are the best in grammar, spelling, punctuation, penmanship and general appearance. Address all puzzle answers to The Puzzle Editor, Pennsylvania Farmer, 261 South Third Street, Philadelphia, Pa.

NAR	DELION
HYA	CUS
DAN	LET
DAF	UTUS
VIO	CINTH
PAN	IP
CRO	FODIL
TUL	CISSUS
ARB	SY

The answer to the March 12 puzzle (about the fast walking-stick) is: HURRICANE. The high winds had evidently twisted one of the letters about, but the following Little Folks won out:

Vera R. Angstadt, age 11, West Leesport, Pa.; Josephine Bertovich, age 11, Masontown, Pa.; Melvin C. Chronister, age 11, Dillsburg, Pa.; George R. Davis, Jr., age 8, West Grove, Pa.; Catharine Hostetter, age 12, Littlestown, Pa.; John L. Hunter, Jr., age 9, Smithfield, Pa.; Margaret MacCare, age 9, Burgettstown, Pa.; Dorothy Mulford, age 6, Bridgeton, N. J.; Harvey Ogden, age 8, Brandywine Summit, Pa.; Harry Pierce, age 8, Livermore, Pa.

Dear Cousin Ruth:—At school we play ball. In winter we go sledding and have fun. Some of us fall off in the snow. We have five more weeks of school and I am glad when school stops.

We are going to get about 500 Leghorn chickens. I am getting sleepy so I guess I will close.—Harold Good, eight, Lancaster County, Pa.

Dear Cousin Ruth and Forum Friends:—As this is a day of sorrow for me, I will try to cheer myself up by writing. Yesterday I got the grippe. I did not want to miss school but suppose I will have to. I am trying for high honors in my class. —Virginia Althoff, (X), Adams County, Pa.

Decision Isn't Ready

WORDS in front of us, words in back of us, words to all sides of us! Contest papers are piled so high here in the office we can hardly see over the top. So far we've been getting all those lists in shape, now I hope to be able to look them over. Right now I haven't the least idea who found the most words or who will win the prizes but by this time next week I think that I'll be ready to tell you. My desk neighbor got discouraged when she saw all your long lists coming in and gave up in despair, so that's one prize I won't have to think about any more.

Many of you are forgetting to give your addresses when writing the Forum. I have pins for Esther Wynn, Mary E. Ressler, and Bertha Rupert and can't send them because I haven't their post office addresses.

Several are asking what the (X) after a name means. If you'll look at the end of each week's list you will see. Forum friends who have been made members because of especially good contributions to the page have the (X) appearing with their names.

Many other questions are on my desk waiting for answers. I'll try to get around to them before very long. Sorry to keep you cousins waiting.

COUSIN RUTH.

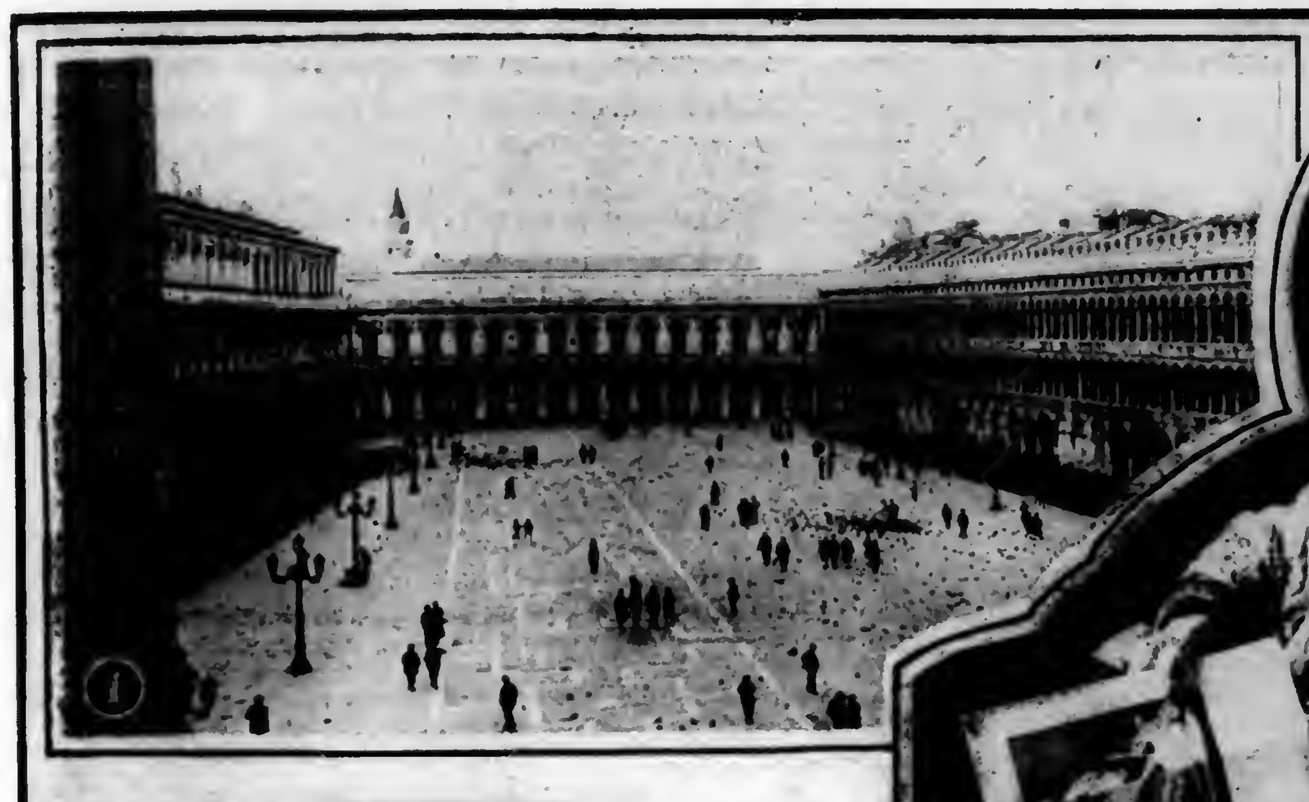
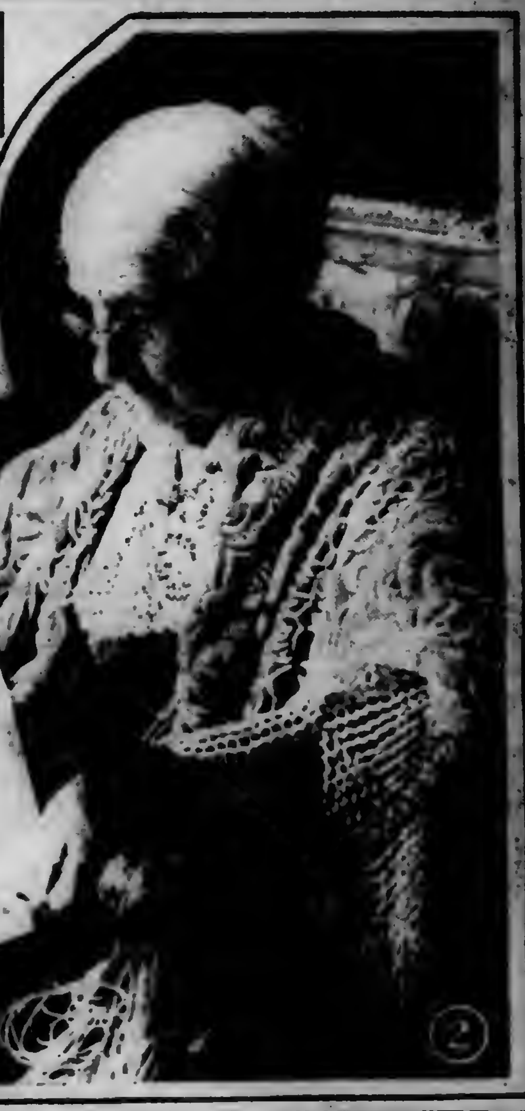
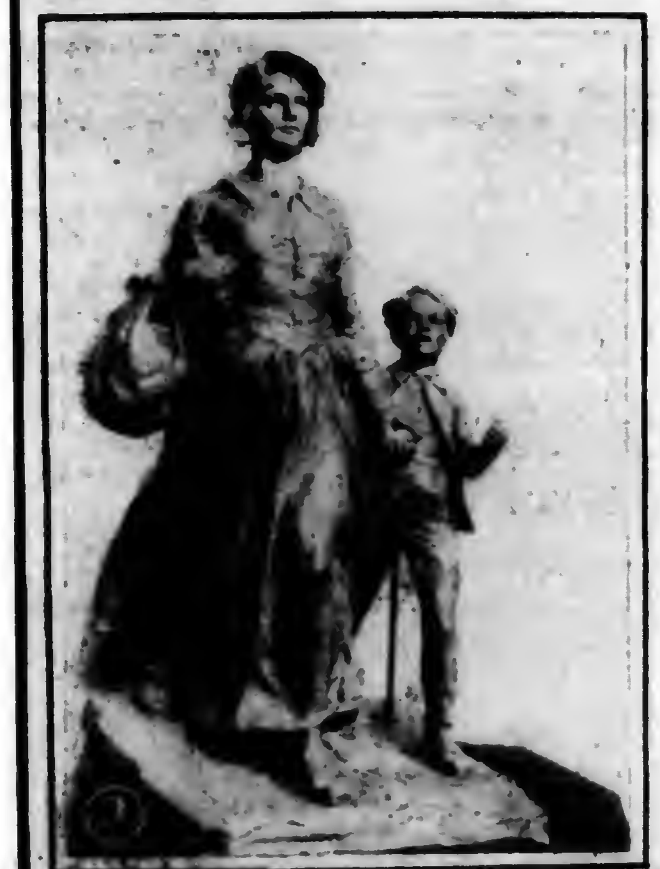
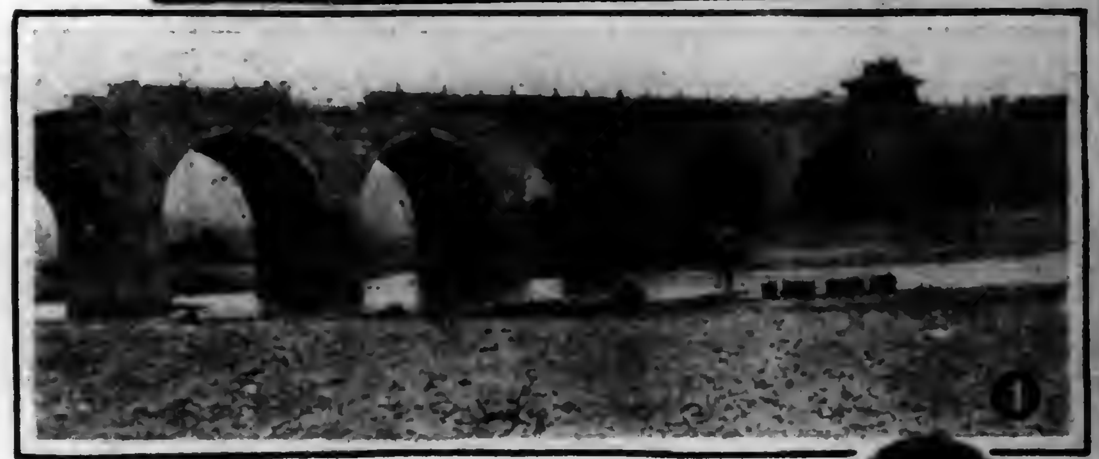
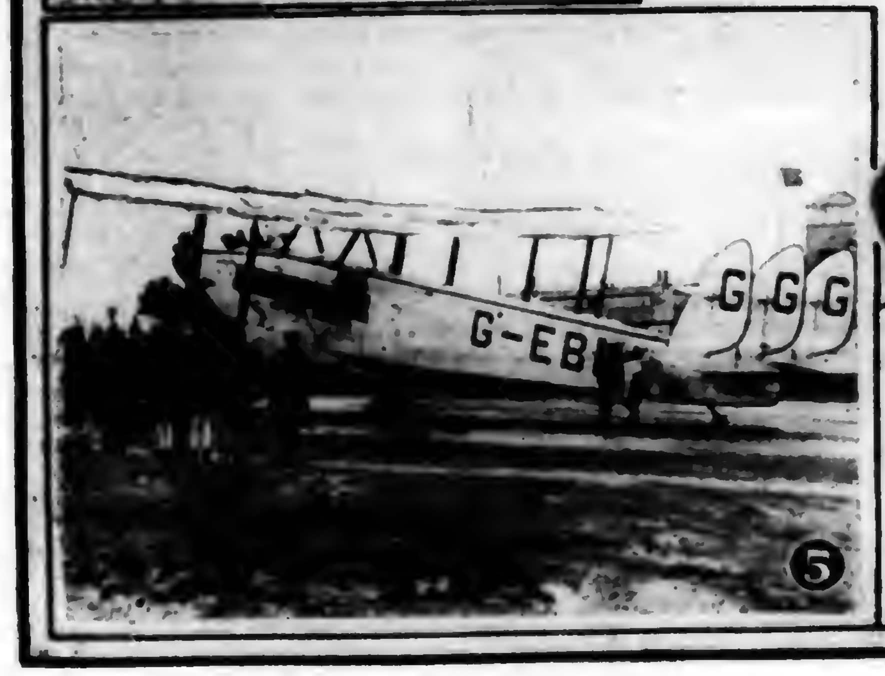
PASSING EVENTS IN PICTURES

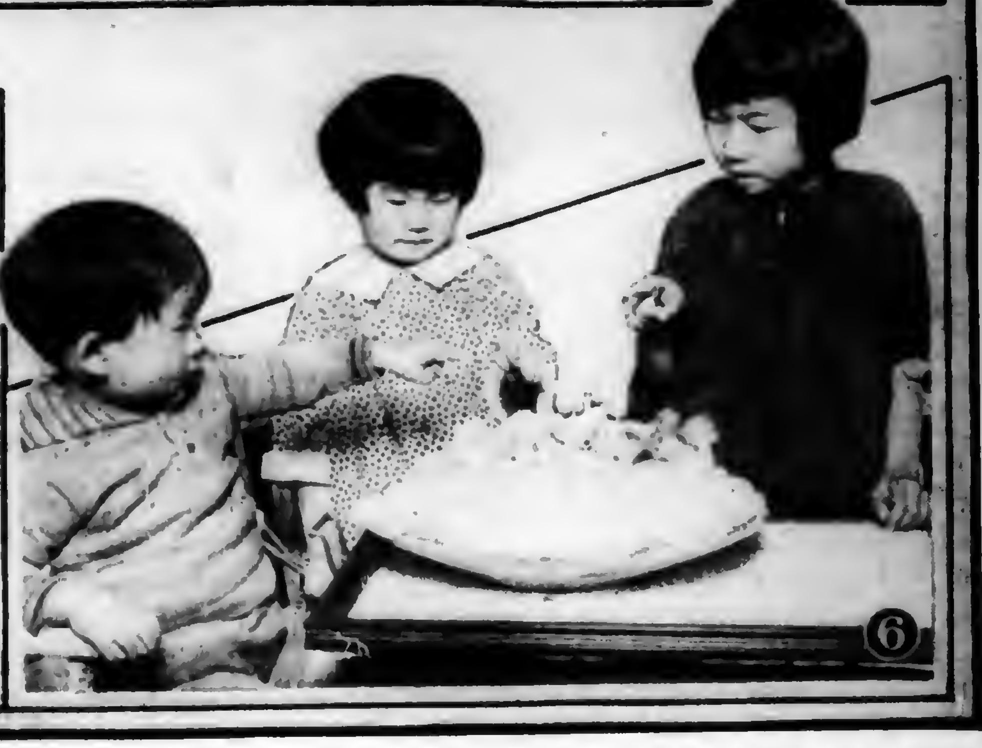












(Copyright by Underwood and Underwood)

1.—The picturesque Plaza of San Marco in Venice, Italy, is a gathering place for huge flocks of pigeons.

2.—Mrs. Betty Wollman, 91-year-old Kansas frontier woman, was chosen to select one of twelve models on exhibition in New York, for a statue of "The Pioneer Woman" to be erected in Oklahoma. Mrs. Wollman, who is a stock broker now, still remembers the exciting days "on the border."

3.—One of the twelve models for "The Pioneer Woman" from which Mrs. Wollman (see No. 2.) found it difficult to choose.

4.—That the Romans got the idea of the arch with the keystone from China is substantiated by this old, broken bridge at Ching Hsing, Shansi Province, which was built about the time of the birth of Christ.

5.—The first service machines of a new air route between England and Egypt left Croydon for Cairo on March 8th. Four of the passengers were women.

6.—Little Sumi Tamura, daughter of the Japanese Consul at Chicago, celebrated her sixth birthday with a doll party.

Mrs. GERTRUDE S. STEWART

Father Hadn't Any Trouble Keeping Daughter on the Farm

"YES, Madge," I addressed my sixteen-year-old daughter in a business-like tone, "I am going to grant you the use of the back chicken-lot. Yes, I want to give you the opportunity of raising those broilers you have been talking about."

"Oh, daddy, do you really mean it?"

"Yes, my dear, I really mean it under one condition—that you do not allow them to get out and mix up with my White Leghorns."

"I promise you, daddy, I will take care of that, but what about the rent?"

"I don't want any rent," I assured her. "I want to prove to some of these farmers around here that you can make good on the farm as well as some of their sons."

Madge was delighted, her face beamed with anticipation.

Hog Money Buys Chicks

"I certainly appreciate that kind offer, daddy. I will take the money I got for my hog last fall and buy 200 Rhode Island Red chicks. I am sure they will not interfere with my school work and music."

"But you will have to get up earlier every morning," I warned her.

"Oh, I don't mind that. What's an extra hour of sleep compared to raising chickens?"

Madge was young and full of energy. Rising an hour earlier had no telling effect on her. She arose smiling and happy—out with the chickens by the time I was at the barn feeding the stock. Under this early morning exercise her appetite grew keener and she soon became rosy cheeked.

Immediately after breakfast she washed the dishes for mother then spent one half hour at the piano. School was out the first of June and she graduated with high honors despite the fact she had interests at home.

By the middle of June she had raised 175 out of the 200 chicks, and sold them at the top market price.

Tackles "Truck" with Vengeance

She was radiant when the last shipment was off and back came her check for $160. So interested had she become in earning money that she insisted I should allow her to take charge of my roadside stand. It is needless to say that a bright, happy smiling girl made good there.

She brought out many good ideas of her own. She arranged the shelves more attractively than I deemed it possible for plain garden "truck" to look. She added fresh home-made pies and cake, butter and candy. She readily built up a trade far and wide, earning sufficient money to pay her first term thru college.

Her application is in for next summer's job in the roadside stand

Timely Tips

WHERE there is no vacuum cleaner a large heavy rug can be freshened without removing from the floor if it is sprinkled with perfectly dry salt. Do this on a bright, sunny day. Leave the salt on the rug for an hour, then sweep with a clean broom—against the nap of the rug. Take up the salt and sweep again, this time with the nap. The salt will sweeten the rug, freshen the colors and prove helpful in keeping away moths.

• • •

When the cane seats of chairs have become loose and sagging they can be tightened satisfactorily by turning the chair upside down and washing the cane well with warm water and soap. Leave the chair in the open air to dry. If the cane is not broken the seat will be as firm as when new.

• • •

Use one-half cup of hot vinegar and 3 tablespoons of salt to clean copper and brass. After the tarnish has been removed a few drops of olive oil rubbed briskly over the metal gives it a burnish. Apply the oil frequently and the metal will need no cleaning for several weeks. Kerosene may be used instead of the olive oil.—Jane M. Bush, Pa.

• • •

A slice of raw potato will remove mud stains from finely-woven, black silk. The starch from the potato that remains on the cloth may be brushed off easily after it dries.

• • •

Becoming and suitable clothes, not necessarily those that are expensive, make one well-dressed. The State College at Ithaca, N. Y., has a new bulletin on artistry in dress which may help solve some problems. Those who ask for copies should mention number E-144.

Cook Books Take a Lot for Granted

MANY cook books credit the inexperienced cook with something like divine intuition about the period of time necessary for baking. "Bake until done," "bake until nicely browned," "bake in a moderate oven" or simply "bake" is likely to be the only instruction given. But with no more direction than this, the same recipe may come out of the oven in countless variations.

A plain loaf cake beaten one minute after mixing and put into an oven at 340 degrees Fahrenheit, bakes evenly to a medium brown in about 40 minutes. The same cake baked at 400 degrees Fahrenheit is dark brown in half an hour, is likely to hump in the middle and fall after once rising and probably crack.

A slow oven means one with a temperature from 250 to 350 degrees Fahrenheit, a moderate oven is one from 350 to 400 degrees, and a hot oven is one from 400 to 450 degrees. A little knowledge of the temperature to use and an oven thermometer to help in regulating the temperature will prevent many disasters.—New York State College of Agriculture.

My Two Neighbors —Merry Leisure and Peggy Drone

TODAY our village school sent the children home an hour earlier, for the parents and teachers are having one of their fine get-togethers at the school building. Merry Leisure went driving by at about one o'clock, for she has already learned the benefits of seeing how her children measure up with forty or more others of the same grade and age. She will spend a profitable hour in each of two rooms, and be on time for the meeting when roll is called. Peggy Drone will not be there. She will not be thru in time to go, and then the supper must be prepared. Altho she has but one child, her work is never done. There is no getaway to attend any of the community welfare meetings and she seldom pays the friendly call.

These two neighbors have many similar characteristics. Both are hustlers; both are ambitious; both are splendid wives and good mothers. Merry has studied a little more and has with the interest and cooperation of her help-mate, tried a little harder to keep up with progress. She has more improvements in her home, and one which she praises most often is her oil range. She says it is her chief economy—not only for fuel, but for the moments it saves.

The year before Merry made this purchase, the wood burned in the kitchen range (for cooking only. A basement heater did the rest.) cost an average of six dollars each month—seventy-two dollars for the year. The time spent by her good husband splitting is not included in that cost. The new oil range operates on an average of three dollars per month, and does the same amount of cooking, baking, canning and laundry chores for that same family of four

Clings Tenaciously to Old Range

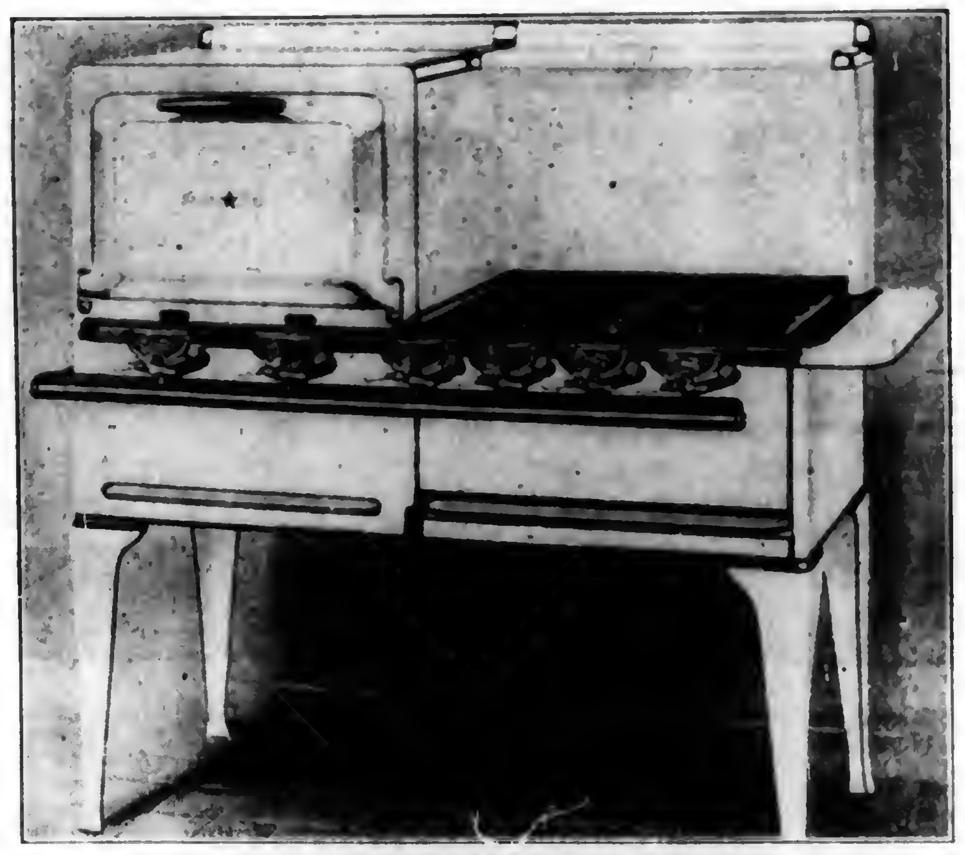
Peggy Drone clings to her old wood range. She is parched and wearied with summer cooking and canning. The house and entire family are made uncomfortable, too, by the constant heat of that big mass of iron that cools so slowly. Today when Merry lighted her oven for baking and was preparing the tasty dinner and arranging for a quick supper, Peggy was going dolefully from task to task of routine housework never daring to forget to return about every twenty minutes to place a few more sticks on the kitchen fire. Even then she wasted a half hour coaxing it up to a fair heat at eleven o'clock when she wished to prepare a supper pudding along with dinner cooking. Dinner over—Merry washed off her oil range as deftly as a dish, and left a peaceful kitchen. Peggy, wanting a neat kitchen, too, gave another half hour to blackening and polishing the dusty, red, old thing.

Lost Hours Never Return

How much money do you waste each year in fuel? Perhaps enough to buy a very good oil range.

How many of those coveted hours escape while you are coaxing and feeding your beloved wood-fire? Perhaps enough to enable you to share the benefits of Parent-Teacher meetings and other gatherings all for the good of you, your family, and your community.

You may never have thought of comparing the two kinds of ranges in just that way before. Get your pencils and do a little figuring. A just decision may save you many hours of useless fatigue, put a few dollars in your purse for needed improvements, give you time to do the things you have dreamed about, and keep you young. Is that worth while?—Gertrude S. Stewart, N. J.



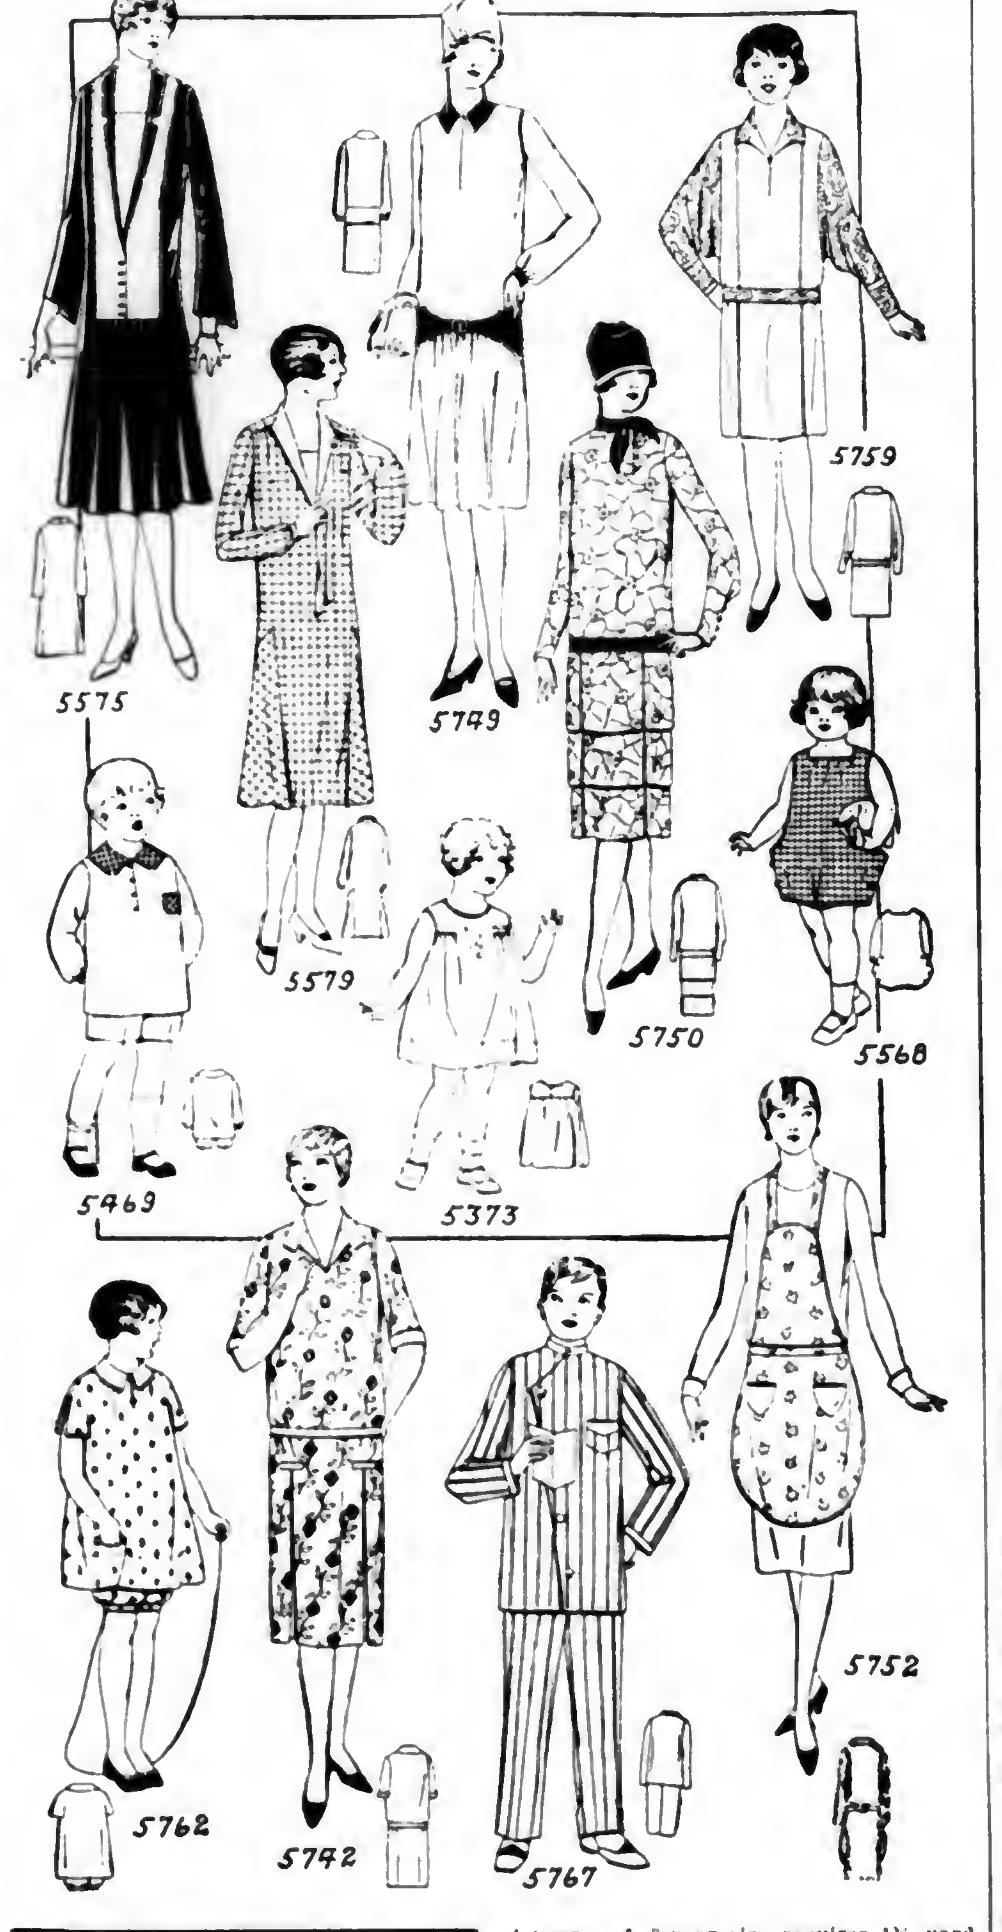
No city bride with an up-to-date electric range is prouder than my country neighbor who uses this porcelain oil range. For information about it write: Home Page Editor, care of Pennsylvania Farmer, 261 S. 3rd St., Phila., Pa., sending self-addressed, stamped envelope for reply.

Pickle Supplies Dwindle This Time of Year

WITH one can of corn use one small head of cabbage chopped fine. Add one can of pimento cut in short strips. (Or one green and one red pepper may be used.) Cook with one pint of vinegar and two cups of sugar, for ten minutes. Then seal. It will keep without processing, and is relished as a salad to eat with any kind of sandwiches. We like it here as an occasional sandwich filling. The above proportions may vary with family tastes.—Mabel G. Felnt.

Unique Touches Relieve Severity

And They Add a Lot of Satisfaction, Too



Directions for Ordering.—Give figure or figures of each pattern exactly as printed at beginning of each description. Give bust measure when ordering waist patterns, waist measure for skirt, and age for children's patterns. Address Pennsylvania Farmer, 261 S. Third Street, Philadelphia, Pa.

5575.—Six sizes 34, 36, 38, 40, 42 and 44 inches bust measure. A 38-inch size requires 3⅝ yards of 40-inch material together with ½ yard of contrasting material. Price 10c.

5749.—Six sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. A 38-inch size requires 1½ yard of lining 36 inches wide for the underbody, and 3¼ yards of material 40 inches wide together with ⅝ yard of contrasting material. Price 10c.

5759.—Four sizes: 8, 10, 12 and 14 years. A 10-year size requires 2⅛ yards of 40-inch material with one yard of contrasting material. Price 10c.

5469.—Three sizes 2, 4 and 6 years. A 4-year size requires 2 yards of 36-inch material with ⅛ yard of contrasting for pocket, collar and cuffs facing. Price 10c.

5579.—Three sizes: 16, 18 and 20 years. A 16-year size requires 3⅛ yards of 54-inch material with ¼ yard of contrasting material. Price 10c.

5373.—Five sizes: 6 months, 1, 2, 3 and 4 years. A 2-year size requires 1½ yard of 40-inch material. Price 10c.

5750.—Six sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. A 38-inch size requires 1 yard of 36-inch lining for the skirt portions, 4 yards of 32-inch material and ⅝ yard of contrasting material. Price 10c.

5767.—Five sizes: 8, 10, 12, 14 and 16 years. A 14-year size requires 3⅜ yards of 36-inch material together with ¼ yard of contrasting material. Price 10c.

5752.—One size, medium. It requires 1⅞ yard of 36-inch material with ⅝ yard of contrasting material 6 inches wide for the pockets. Price 10c.

Send 10c in silver or stamps for our up-to-date spring and summer 1927 Book of Fashions.

Gas Service for Cooking

No Matter Where You Live

THE COLEMAN AIR-O-GAS Stove is a modern up-to-the-minute cooking unit. It brings all the advantages of city gas service right into your home—no matter where you live. It is easy, economical and safe to operate. It makes and burns its own gas—no piping, no wiring, no installation expense. It's ready to begin active duty the minute it is set in your kitchen.

The Air-O-Gas generates quickly to full cooking heat. Produces a cleaner cooking fire—no dirt, no smoke, no soot on utensils. Quicker cooking action—boils half a gallon of water in less than five minutes. You have a steadier cooking blaze—instantly regulated to any heat desired, from a low simmer to the hottest blue flame you'll ever need. Uses any good grade of regular motor gasoline as fuel.

Air-O-Gas Stoves are attractively designed and finished. Built in a variety of practical models to meet every cooking need. Priced within the means of everybody.

Let your dealer demonstrate this great stove. If he is not supplied yet, write us for descriptive literature, prices, etc. Address Dept. PA-8

"Plant your corn, and forget about the crows"

is the message that W. E. Tyler, of Dewittville, N. Y., sends us, and permits us to broadcast to the thousands of corn-growers all over the country. Mr. Tyler, like every other corn-grower, had been losing hill after hill of corn. Scare-crows nor shot-guns could keep his fields clear of the pests. And what the crows didn't spoil, the moles, squirrels and gophers got away with as fast as they could. What to do, what to do, what to do, was Mr. Tyler's daily worry. Every day it became necessary to replant, costing him valuable time and valuable seed-corn. Then he heard of

Stanley's Crow Repellent

Like most other corn-growers, Mr. Tyler didn't believe that anything could stop the awful waste caused by the pesky crows. But he was willing to try almost everything. So he sent for some Stanley's Crow Repellent. He coated his seed-corn with it, and planted it at once, as it is not necessary to wait for it to dry, nor does it clog the planter. And from that day, Mr. Tyler's worries over crows were over for good and all time. If you want to stop your worries too, then do as hundreds of corn-growers are doing. Large can, enough for 2 bu. of seed-corn (8 to 10 acres), $1.50. Half size can, $1.00. "Money Back" guarantee. If your hardware, drug or seed store doesn't have it in stock, then order direct. Address, Cedar Hill Formulae Co., Box 500-R, New Britain, Conn.

No, I'm not dead, but what is that stuff?

"I Pulled 74 Stumps in One Day Without Help"

Read These Letters:

My Kirstin One-Man Stump Puller is certainly a dandy and does more than you claim. Since receiving it, I have given it every test and my Kirstin satisfies me better than I really expected.

I pulled 74 stumps in one day, without help, at a cost of less than 4 cents each. My stumps run up to two feet in diameter.

(Signed) J. F. Sherrill,
Shulls Mills, N. C.

Our Kirstin One-Man Puller is a wonder. It does our work for one-third the former cost.

George McKinley,
Supt. of Parks, Flint, Mich.

Clutch Type One-Man Puller—lighter weight; easier to move; more powerful.

Drum Type One-Man Puller, mounted on wheels. Easy to move.

Writes J. F. Sherrill, "At Cost of Only 4c Each."

Read Mr. Sherrill's letter opposite and what others say. Think of it! He pulled 74 stumps—a lot of them big ones, too, in a single day without help, with his KIRSTIN One-Man Stump Puller. Prove to your own satisfaction, on your own stumps, that the KIRSTIN is the most powerful One-Man Puller made. See how the KIRSTIN gives enormous power to pull your stumps without help. Know the facts—how the KIRSTIN will increase the value of your land, give you greater income, turn waste acres into profit.

30-Day Trial on Your Farm

You take no risk with a KIRSTIN. This One-Man Puller is guaranteed to make good all claims. Easy to operate; easy to move. Four speeds. Automatic take-up; extra long cable enables you to pull many stumps without moving. Try it for 30 days in your own stump field and be convinced.

Kirstin One-Man Stump Puller

Sold direct from factory to user at low factory prices—cash or easy terms. Weighs, costs less. New models represent many improvements—greater power, more speed, stronger—easier to use. One-Man Clutch and Drum types, also Horse Power, on small monthly payments if desired.

One Year to Pay— You can not only try the KIRSTIN on your own farm, on your own stump field for 30 days trial, but you can have one full year in which to pay on easy terms. Ask also about the special introductory offer.

Backed by $10,000 Bond—3-Year Guarantee

Thousands of KIRSTINS in use—every owner a booster. A KIRSTIN quickly pays for itself in increased land values. Many owners make good profit clearing land for others after getting rid of their own stumps.

30-day trial—Easy terms—One year to pay

Armed With Field Glasses Children Learn to Love Birds

ONE great joy that comes to us who live in the country is that of hearing and seeing the birds. Yet how many people there are who live in the country year after year who cannot identify the songs, and do not know the birds by sight.

A pair of field glasses was given to the children recently, and I am regretting the years that I have lived without them. Brother at five knew the commoner birds by name and knew their songs. Among his favorites were the sparrow, robin, bob-o-link, red-headed woodpecker, red winged blackbird, bluejay, bluebird, turtle dove, Baltimore oriole and crow.

The thing that pleased me was his interest and now that interest will grow from year to year. Sister at ten knew more birds and their songs than her mother.

One member of our family who is an ardent bird fan, armed himself with field glasses last Sunday and went to the woods down by the river. He identified 60 birds that day. I was amazed — for I would have guessed that we do not have over 30 varieties in this section.

The children are delighted to have a trip to the woods with this particular uncle, who knows so many interesting things to tell them about the birds and animals.

Turtle Doves Live in the Orchard

We have a turtle dove family in our orchard—we like to think the same family comes back year after year. I never had a good look at them until we had the field glasses this spring.

Then in a pear tree by the house we have a Baltimore oriole nest. There was great excitement one day recently. Both children came rushing into the house: "Mother, Mother, the orioles are back, the orioles are back."

I was very busy that day, but I found time to listen for the orioles, and when I heard their song I dropped everything, armed myself with the bird glasses and sat on the edge of the porch until I had a good look.

I love the summer mornings. As soon as I get up I throw open the doors and windows and flood the house with the early morning sunshine and the songs of birds.

Does it not add cheer to the breakfast and start the day right to hear the full bird orchestra when the family has gathered together?

It does not take any extra time to develop an interest in birds—it does not take an extra moment to listen to the bird songs that flood the air—so let us resolve that having eyes we will see, and having ears we will hear.—May H. Mumaw—Ohio.

Year After Year Perennials Make Us Glad

PERENNIALS are my dearest pets. Nothing gives greater pleasure as spring opens than watching bulbs peep thru the ground and soon blossom. When we move to a new home and find flowers, I always feel grateful to those who have loved flowers, and have given me so much pleasure. When I plant perennials I know that sometime in the future someone will be made glad. We have narcissi, tulips, and hyacinths.

At one home where we lived there were fifteen lilac trees in the yard. One year we sold ten dollars worth of blossoms, but they gave us far more than money value in delightful fragrance. I decided then that if we ever owned our own home I would plant fully that many lilacs.

Peonies are such a joy, too. We have three varieties and are gladdened yearly with the way they multiply. A flowering currant bush is thrifty and easy to grow. I am told they grow and live forever. With a slight expenditure of both time and money, you can start a fine collection of perennials.

The old-fashioned flower garden is one of the pleasures of long ago, which farm women of today should adopt and cherish.—Mrs. L. K. Crowell, N. Y.

Why All the Rumpus?

WHEN the weather gets so it invites us to come out of doors, somebody says, "It's time the house had a thoro cleaning;" and then it is on. Rugs come up, curtains come down, furniture is disarranged, meals are irregular, and in the general turmoil dispositions get upset as well. While making things spic-and-span indoors, the fresh breezes, the birds, and the sunshine are neglected and when it is over everyone, for several days, is too tired to enjoy them.

But why all the rumpus? A house that is given reasonable care thruout the year should not be especially dirty. If the annual or semi-annual cleaning which takes in every crack and cranny is spread out over several weeks instead of being concentrated into a period of a few days, it can be done with very little of the traditional flurry.

One or two rooms cleaned each week, with curtains washed and rugs cleaned, leaves the rest of the house in order and preserves the tempers both of those who do the cleaning and of the others who have to live in the house during the process.—N. Y. State College of Agriculture.

Stamped for Embroidering

SUMMER days will soon be here when the woman who plans her daily household tasks will find short in-between-whiles to sit on the front porch with a piece of fancy work, a book or a magazine. If you haven't any fancy work ready for those in-between-whiles perhaps you'd like to order one of the following stamped ready for embroidering.

No.	Stamped for Embroidering	Price
1161	Silver case for knives, stamped on crash	50c
1162	Silver case for forks, stamped on crash	50c

Friendly Talks

By EDGAR L. VINCENT

IN a severe storm one of our plants standing out-of-doors was bent away over and the slender stalk broken.

"We might as well throw it away," some one said.

"But wait a few days," another said. "Let's see what we can do for this plant."

And he found a long round rod, cut it off the required length, drove it down into the soft earth by the stem of the broken plant and tied it there with a soft string. Then we waited. Would the plant, hurt so by the wind and storm, die and be lost? No! Leaning hard on the support of the rod, it kept on growing, and the day came when it bore a lovely blossom. We brought it in from outdoors and placed it on Father's table, for he it was who had begged for its life.

"You were right, Father," the one who gave it to him said. "We would have thrown the plant away, but now we are all glad we did not."

Storms Encompass Us

Wounded, yet blossoming! Have you never seen anything like that in the life of mortals? So often men are broken and wounded by the bitter experiences they have to endure. Storms of temptation, winds of passion, whirlwinds of every sort lash and pound the heart of us all sooner or later. Well for us if we are strong enough to stand up against these influences and not be utterly cast out.

But is there not something almost human in the story of the plant after it had been crushed and bowed down by trouble? It lay with its head bent and its prospects broken; but after all it came to its blossoming. It could not have done this, however, had not a kindly hand lifted it and supported it while it was growing from budding to blossoming.

And do we not know of men that have apparently lost out and gone down to defeat, who by the help of some man or woman in whose heart the love of God reigns have been redeemed, and beautified and blessed all the rest of their days? It is wonderful what the love of God can do. No man can be so broken, so borne down by evil that there is not a chance for him if he will yield himself to the uplifting influence of good.

Let's Put a Lamp in the Window

But what a helpful thought it is that you and I may be the means of helping these bruised souls to the life of beauty and usefulness! And how kind God is in using such humble instrumentalities as we are to accomplish such a great purpose! That is His way. He makes you and me His helpers; and if we do the little things we can, He will put His strong Hand under ours and lift till joy comes.

"But I never could do anything like that!" Don't say it! Many a wayward boy has been led safe home at last by a lamp in a window. Only a smile at the right time and a kindly word may win a wanderer back to the ways of right.

For God never asks any of us to do things that are beyond our power. We can light the lamp and set it in the window. We can pull the curtain back so that the light may throw its beams far down the road. We can speak the kindly word, and we can, if nothing more, say to the sorrowing one, "I am sorry for you!"

Let's not cast out life's broken flowers! Let's drive down a good strong stake and some day our hearts will be rejoiced by the blossoms they bear!

Build Fences This Spring!

Good fences bring about better farming resulting in better crops at lower cost. They save freight and hauling costs because crops are marketed as pork, beef, eggs, wool and dairy products. They distribute the work and save hired labor. Decide now to make Super-Zinced Fences help you make bigger profits for this year and many years.

Super Zinc-ed REG. TRADE MARK

Pittsburgh Perfect and Columbia Fences

repay their cost many times over because they modernize the farm, permit diversified farming, increase farm profits and add to the value of the property. They are made in our own mills from the finest steel and are protected against rust by the heaviest armor of zinc that can be successfully bonded to wire.

Super-Zinced Fences are guaranteed unexcelled in quality and durability, and meet every need for farm, poultry, garden and lawn. They give 100% protection and their great durability means lower cost per year of service. Write for catalogue and the new vest pocket booklet "Farm Records"; both FREE.

Seven Years Successful Service—

CENTAUR—For Easy, Thorough Cultivation at Bed-Rock Cost

A POWER cultivator! Quick, thorough, comfortable—and remarkably inexpensive to buy and operate. That's the CENTAUR at cultivating time—a money-maker and labor-saver, *without equal*. At other seasons of the year it does plowing, harrowing, harvesting and dozens of other jobs.

The CENTAUR Tractor is *correctly* built for cultivating. It straddles a row or works between rows—and handles *one or two rows* at a time, thoroughly, quickly and more profitably than a team. Thousands of big-acreage farmers use it only for this important operation, yet for the small farm it serves *every* power purpose adequately,

Plows a 12" Furrow—Does All Field Work

At a cost of only a few cents an hour CENTAUR will do all your field and belt work. The different attachments for it are all of *standard and nationally known make* and can be interchanged in a few minutes time. *Seven years of outstanding success* on thousands of farms is your guarantee of CENTAUR'S quality and capability.

A Small Payment Buys A Centaur

Let us tell you how easy it is to own a CENTAUR—on terms to suit your needs and *with one full year to pay*. You need the CENTAUR on your farm. GET THE FACTS NOW! Mail the coupon—or write—today.

CORONA
Saves Time, Money and Trouble

Farmers often complain about poor service, delays and mistakes when ordering goods by mail. But how many of them stop to think that one cause for this may be their own unreadable handwriting.

One man told the editor of his farm paper that when he ordered some mower parts he received instead a set of connecting rods for his Ford. The editor investigated, and found the man's writing so poor that no one could have told whether he was ordering sugar or stove polish.

Use Corona to write all letters, orders and records. Keep carbon copies. This will mean fewer mistakes and costly delays. Corona is easy to use, easy to carry, easy to buy.

L. C. Smith & Corona Typewriters, Inc.

Now Mr. McCabe gets Uniform Tractor Speed~

Mr. R. C. McCabe, Neodesha, Kansas writes:

"The Governor I purchased from you in September I installed on my 15-30 McCormick-Deering tractor three weeks ago.

"HAD NO TROUBLE IN MAKING THE CHANGE and I have used the tractor since that time filling silos and for threshing. It seems so far to prove perfectly satisfactory, AS THE SPEED IS CONSTANT during changes of load.

"There is hardly any comparison between the Pickering and the regular equipment on these tractors.

I AM SATISFIED YOUR GOVERNOR MEETS EVERY REQUIREMENT."

Mail coupon for free pamphlet S-F which describes the Pickering adapted to your tractor.

THE PENNSYLVANIA FARMER PHILADELPHIA, PA.

Mary Decided to Get Married

(Continued from page 3)

is in the offing, raised to the nth power, in this case, by the equally absorbing motivation of cake construction.

From morn to noon they stirred, from noon to dewy eve; and when the electric light first gleamed it fell on the perfection of a cake ready for the icing and the ornamentation.

I am not sufficiently conversant with the technique of caking to detail its manufacture; but it was made in strata or layers, superimposed, one upon another, like Ossa piled upon Pelion, near Tempe's Vale. Between the strata were wondrous mixtures of minced nut meats and other commestibles, so essential to a wedding cake. The icing was put over the whole, binding the layers together into a homogenous entity.

Then the wedding tracery was put on. Wreaths of green leaves and pink rosebuds grew where none had been known before. Vines climbed its cliff-like sides and o'er-leaped its rounded top. There was every delight the most imposing wedding cake could demand. It was a triumphant cake, a marvel of a cake, and it weighed FORTY POUNDS!

Only the Best Good Enough

Of one of the ingredients only have I any direct knowledge. No confection can be better than the materials of which it is made. A cake made of Chinese eggs or frozen eggs or of stale, moldy eggs, will be just that kind of cake; no better. Nothing but the very best must go into Mary's cake, and the very best eggs did go in—our new-laid, white eggs, and there were sixty-four of them!

We learned afterward, there were over 150 guests at Mary's wedding, so in every slice of cake there was approximately four-tenths of an egg.

This mammoth among cakes cost Mary $25.00 and when, after it was all over, she came to pay for it she was bubbling over with delight; possibly being newly married had something to do with it, but much, I am sure, was owing to her successful wedding cake. Said she, "It put out the eye" of the other Mary.

Goshawks Visit Pennsylvania This Year

GOSHAWKS are ordinarily rare birds in Pennsylvania. This year, however, there has been an unprecedented invasion of these birds from the north where their food supply has been so depleted that it has been necessary for them to move southward in order to find enough food upon which to live.

The goshawk is a large, heavy-bodied bird about two feet long with a wing spread of over three feet. They are long-bodied, short-winged, swift-flying birds, gray in color. Any large, dashing, short-winged, long-tailed hawk is likely to be of this species.

Hawks with a white mark above the tail should not be shot. Long-winged, short-tailed hawks should not be molested.

Goshawks are so savage in temperament and so fearless that they often pursue chickens and game into houses or hollow trees and they have been known to snatch wounded birds from the very hands of hunters. Therefore, those who hunt these hawks may see the birds actually pursuing their prey.—Penna. Board of Game Commissioners.

"Hello, Smith, suppose a man marries his first wife's stepsister's aunt, what relation is he to her?"

"First — wife — step—aunt—er—let me see. Oh, I don't know."

"He's her husband."—Ottawa Citizen.

Greet Red Mite Invaders with Oil Bath

A NUMBER of fruit growers in central and southern New Jersey are using oil to destroy the European red mite infestations on their trees this spring, reports A. L. Pierstorff, extension specialist in fruit growing, Rutgers University.

The minute red eggs of the insect pass the winter on the under side of twigs and limbs and hatch early in the spring. It has been found that these eggs can be largely destroyed by spraying them with dilute oil just before hatching occurs. At this time the egg covering seems to be more easily affected.

Observation has shown that this sensitivity of the eggs is fairly high during the period beginning just before the apple buds swell and ending when the fruit buds show silvery. That is the time to turn on the spray.

To avoid any chance of injury to the apple trees, oil must not be used after the buds reach the silvery stage. On peach trees the application should be made before the buds swell. Likewise the oil mixture must not be too strong. The New Jersey Experiment Station recommends for apple trees a stabilized lubricating oil emulsion spray, at the rate of 3 per cent actual oil or 2¼ gallons of oil emulsion to 50 gallons of water. On peach trees the oil emulsion should be used at the rate of 1½ gallons of emulsion to 50 gallons of water. Miscible oils also can be used, at the manufacturers' recommendations.

Oil sprays should not be applied to the trees when the temperature is below 45 degrees Fahrenheit. Thoro spraying is necessary to successfully control the red mite.

"Billy" Sunday at the wheel of the new 10-20 tractor which is going to speed up work on his 120-acre farm in the Hood River Valley, Oregon.

Dairy Demonstration Train Starts Travels Early Next Month

A BOYS' and girls' dairy demonstration train will be operated by the New York Central Railroad in the northern, central and northwestern counties of Pennsylvania beginning May 8th. The plan for the operation of this train is the result of the success of a similar project carried out in the spring of 1925 when the New York Central Lines, in cooperation with the State Chamber of Commerce, the Pennsylvania State Department of Agriculture, the Pennsylvania State College and other agencies cooperated in the operation of a soil testing and soil improvement laboratory and demonstration train.

Soil tests were made for nearly 1500 farmers and 64 sweet clover soil improvement demonstrations were established in nine counties.

Purposes Outlined and Approved

The next logical step toward better farming is the development of greater interest in dairy cattle of the better kind. To promote such development the following outline of purposes for this year's Dairy Demonstration Train has been drawn up and approved by the cooperating organizations.

1. To direct and focus attention of all people of the state to the importance of boys' and girls' club work and the agricultural projects in the schools, particularly in dairying.

2. To stimulate the greater use of milk and all dairy products thruout the state, particularly among school children, and to emphasize child health.

3. To further and assist the State Department of Education, Division of Vocational Education, in the establishment of dairy calf projects of Jersey, Holstein, Guernsey and Ayrshire breeds among the boys and girls and to supply dairy calves to boys' and girls' club members where desired.

4. To coordinate the work and programs of the agricultural, commercial and financial interests of the territory covered in the deevlopment of boys' and girls' activities in connection with agriculture.

5. To encourage a closer working relationship between the business interests of town and country and the educational and dairy interests of the state.

Preliminary dairy meetings aud rallies for adults will be held during April thruout the territory to be visited by the train. These meetings are being arranged by local committees of the cooperating organizations.

Schedule Subject to Change

The following tentative schedule has been adopted for the Dairy Demonstration Train. Three or four of the towns named may be dropped if there is not evidence of sufficient interest in the dairy program.

Date.	Day	Town.	Time.
May 7	—Sat.	North Girard	9:00-12:00
		North East	1:30- 5:30
" 8	—Sun.	Erie (lay over) possibly open	2:00- 4:00
" 9	—Mon.	Russell	9:00-12:00
		†Warren	1:30- 5:30
" 10	—Tues.	Youngsville	9:00-12:00
		Titusville	1:30- 9:30
" 11	—Wed.	Beaver Falls	9:00- 4:00
" 12	—Thur.	Jamestown	9:00-12:30
		†Stoneboro	1:30- 5:30
" 13	—Fri.	Franklin	9:00-12:00
		Shippenville	1:30- 5:30
" 14	—Sat.	Clarion	9:00-12:00
		Brookville	1:30- 5:30
" 15	—Sun.	Clearfield (lay over)	
" 16	—Mon.	DuBois	9:00-12:00
		†Clearfield	1:30- 5:30
" 17	—Tue.	Philipsburg	9:00-12:00
		Mill Hall	1:30- 5:30
" 18	—Wed.	Jersey Shore	9:30-12:00
		Wellsboro	1:30- 5:30
" 19	—Thur.	Tioga	9:00-12:00
		†Elkland	1:30- 5:30
" 20	—Fri.	Knoxville	9:00-12:00
		Harrison Valley	1:30- 5:30
" 21	—Sat.	Westfield	9:00- 4:00

† Indicates that train can be held for evening program if desired by the committees and people of the community.

Back Railroad in Undertaking

The following organizations are cooperating with the railroad in the promotion of this comprehensive dairy improvement program:

The Pennsylvania State Chamber of Commerce; State Department of Education, Vocational Bureau; agricultural supervisors in high schools and county supervisors; State Department of Agriculture; Dairy Department, Pennsylvania State College; National Dairy Council; The National Dairy Association; Pittsburgh Dairy Council; American Jersey Cattle Club; Holstein-Friesian Association of America; American Guernsey Cattle Club; Jersey, Holstein and Guernsey State Associations; The Dairymen's League; Pennsylvania Dairymen's Association; local Granges; Pennsylvania State Bankers' Association; local banks; local Chambers of Comerce; Civic Clubs; other organizations.

Taken from the Week's News

A NEW YORK STATE chicken thief was sentenced to 12 years in prison the other day. That isn't the regular penalty for chicken stealing in the Empire State, but this man had already been convicted of crime twice. Under the new Baumes law, which is said to be driving hardened criminals out of New York, old offenders are given extra heavy sentences.

• • •

It required about 250,000 TONS of milk (500,000,000 pounds) to make all the butter, cheese and condensed milk imported into the United States last year. Until December butter imports and exports were nearly balanced, but during the last month of the year the New York price went enough higher than the London price to permit more than 2,000,000 pounds of butter to enter this country, in spite of the tariff.

• • •

How much does it cost to maintain and operate farm machinery? H. B. Josephson, research engineer at the Pennsylvania State College, is trying to answer that question. He is going to farmers of typical Pennsylvania counties for the answer. College students aiding in the work have gathered facts from machine-equipped farms in Clearfield, Chester, Erie, Blair, Bradford and Centre Counties. The state and federal departments of agriculture are cooperating in this fact-finding project. The completely summarized returns should contain some interesting facts.

• • •

This is an early season for the early season growers. By March 1 daily shipments of lettuce from California amounted to 200 carloads, and Texas was sending 75 cars of spinach to northern markets every 24 hours.

• • •

The states of Missouri and Virginia shipped more eggs to Philadelphia during February than Pennsylvania. Minnesota, with her cooperative creameries shipped more than half of the 5,762,565 pounds of butter received in the same month.

• • •

More milk powder and condensed milk, and less whole milk, is being used in manufactured products such as milk chocolate, according to figures on 1926 consumption just released by the U. S. D. A.

Why Do Without Electric Service?

Model 600 GENCO Light & Power Plant

You can equip your property with electricity for approximately
ONE DOLLAR A DAY
for one year

The following is the approximate cost of wiring a farm property including installation of GENCO LIGHT & POWER Plant, Model 600 with 16 cell, 32 volt, 80 A. H. Battery.

HOUSE—9 outlets at $3.50 per outlet	$ 31.50
TOOL HOUSE—1 outlet, 1 snapswitch	4.00
CHICKEN HOUSE—2 outlets, 1 snapswitch	6.00
BARN—2 outlets, 1 snapswitch	6.00
OUTSIDE WIRES—180 ft. at 7c running foot	12.60
CONNECTING OUT BUILDINGS—$2.50 per building	10.00
SETTING UP PLANT, FUSE BOXES, ETC.	10.00
MODEL 600 GENCO LIGHT & POWER PLANT F. O. B. Hanover, Pa.	295.00
	$375.10

For a short time only we will furnish gratis a set of eight Electric Fixtures, Brown Tone Finish, no charge. Value $45.

Can you afford to delay the installation of electric service on your property at this cost? Write us for full information on how you can install this service on term payments as low as $19 a month.

White hominy	31.75@32.75
Yellow hominy	31.75@32.75
Gluten feed	38.85
36 per cent cottonseed meal..	36.25@36.75
41 per cent cottonseed meal..	39.75
43 per cent cottonseed meal..	40.75@41.75
34 per cent linseed meal......	49.75@50.20

Millfeed in continued light supply with moderate demand.

GRASS SEED—WHOLESALE PRICES

Toledo, Ohio, March 26, 1927.

Cloverseed, cash, foreign, $17.40 asked; domestic, $27; March, foreign, $17.40 asked; October, domestic, $17. Alsike, cash, $23.75; March, $23.75. Timothy, cash, $2.60; March, $2.60; April, $2.60; May, $2.70 asked.

Stronger Tone Felt in Few Markets

Review of the Week Ending March 26

EGGS—Trading was rather slow on the New York egg market toward the close of the week and prices were slightly lower. Nearby white eggs were irregular and the demand was not sufficient to clean up daily arrivals. Some dealers were putting fresh stock in storage rather than sell at lower prices.

POULTRY—There was a fairly active demand for live fowl in New York and the market was firm. Prices were slightly higher. Receipts of broilers were light and the demand active. Chickens held steady and there was a good demand for old roosters.

BUTTER—Following a week of declining prices with buyers purchasing for immediate needs only the butter market advanced sharply. The strengthening of the market was due chiefly to lighter supplies and to the fact that buyer's stocks were exhausted. At the close of the week the market showed an easier tone but in most cases prices held firm.

POTATOES—The markets thruout the country showed a weaker tendency. Supplies were moderate to liberal and trading rather slow. Shipping point markets also reported a slow demand. In Philadelphia prices were lower on all but extra fancy stock. There were a few lots of fancy Bucks County potatoes that jobbed out at around $1.60 per bushel.

LIVESTOCK—The Chicago hog market was strong and prices were higher than last week. Heavy steers advanced about 25c and heifers were higher. Cows were irregular with heavy calves steady. Stockers and feeders were generally steady.

HAY—The markets were steady. Receipts were light but fully ample for the demand. The demand for timothy was light in the eastern markets.

GRAIN—Prices were lower than last week on practically all grains. Country receipts of corn fell off due to farm work but commercial stocks were large. Corn futures were about 3c lower on account of the limited demand. Wheat prices were lower but export business increased at the lower levels.

FEEDS—The market showed a weaker tendency. Wheat feeds were slightly lower at most markets and the moderate supplies were more than ample for the demand.

County News and Comment

BERKS COUNTY, PA.—We have had ideal spring weather for some time. Roads are drying off and where the supervisors are on the job, streets are improved. Most of the manure has been taken to the fields already and farmers are taking advantage of the fine weather to gain headway in their spring work. Clover seed has been bought by the county committee for the county for all the Granges and delivery will be made in a few days. Plowing has been started both for oats and corn and the ground seems to be in a fair condition. Daily shipments of little chicks are being received at local post office at an average of 98 per cent delivery. One car of dairy feed was unloaded by the local Grange last week and two carloads of spring fertilizers have been ordered for delivery the first week in April. A big acreage of potatoes will again be planted in this section. Many farmers have already placed their orders for spray materials. Farm stock sales have all been held and fair prices realized. Most of the wheat has been sold to dealers during the last few weeks and very little remains in storage on the farms. Prices: wheat, $1.30; corn on cob, 68c; oats, 48c; potatoes, 90c; eggs, 24c; apples, 50c. Chickens at sales as high as 34c; pigs, $18 cwt.—W. N. M., March 21.

BLAIR COUNTY, PA.—We have had some fine weather and quite warm. It is cooler now. There is quite a lot of plowing done and some clover seed down. Many sales of farm equipment this spring. Wheat is looking fine. Is none the worse for lying bare much of the winter. The wheat market is slack and it is only bringing $1.20 at the mills. Corn, 75c; oats, 50c; seed oats, $1; hay, $25; straw, $15; eggs, 25c.—H. E. H., March 26.

CENTRE COUNTY, PA.—The State College creamery held its annual social evening for its patrons on March 17th. The program was entirely different from any ever had before. The music was furnished by the College Band. Each family took a cake and the creamery furnished ice cream and coffee. The great crowd of dairymen and their families was abundantly served in record time.—A., March 21.

DAUPHIN COUNTY, PA.—Very warm weather during first half of March. Grain that was sown early looks good, later grain not so good. Much progress in farm work. Some oats sown. Quite a lot of plowing done. Not much grass seed sown yet. Blossoms have not yet appeared. Much work being done improving roads. Local prices: wheat, $1.32; corn, 78c; oats, 50c; potatoes, $1.50; eggs, 25c; butter, 60c.—I. F. M., March 26.

LUZERNE COUNTY, PA.—After ten days of spring weather we are having a two-day rain. Shickshinny reports the thermometer at 70 degrees in the shade. Several public sales have been held in the vicinity of western lower Luzerne County lately. At one a fine big team of horses brought $407, at private sale they were offered for $350 to a tenant farmer. Miss Catharine Wheeler, of Muhlenburg, who has finished three years of club work, has won a trip to Washington, D. C., the week of June 16, to attend the First National Club Camp. Each state is entitled to send two boys and two girls. Plans have been prepared for a new steel bridge across the Susquehanna River at Retreat Insane Asylum below Hunlock Creek. The estimated cost of the bridge is $200,000. Newport township is asked to share the cost of erection. Prices: apples, $1 per bushel in market but only 50c in the country; chickens, 26c; hay, good, $20@25 ton, poor $15; eggs, 30c; butter, country, 50@52c; creamery, 58c.—M. G. T., March 20.

MONROE COUNTY, PA.—The weather was very warm during the past week and the thermometer registered as high as 93 one day. No clover seed sown. Grain is looking good. Few farmers have begun plowing. Stock bringing big prices on public sales, cows from $80 to $200; horses slow, yearlings from $40 to $50. The West End Fair Association purchased its own property and will incorporate. It was the only fair in the county last year and is in the heart of the agricultural district. Francis Marvin, of Bartonsville, offers a site for county fair with all buildings and conveniences. Quite a number of chicks have been hatched in the county. The county superintendent is conducting a spelling bee of all school children in the county. The roads have opened and are being scraped. Prices: rye, $1; oats, 60c; poultry, 25c; pork, 18c; corn, $1.10; buckwheat, $1.25.—G. E. S., March 20.

TIOGA COUNTY, N. Y.—At this writing it is bright and sunny and the snow is mostly gone. Sugar making is in full progress but promises a short season as the nights are too warm. Markets are full of produce and prices low. Potatoes are selling at cars in some villages for $1 per bu. Peddlers on the streets selling them for 35c a peck and turnips the same. Carrots, $1 bu.; onions, 5c lb.; eggs, 25c at store to producer; apples, $1@2, according to varieties. Strawberries are now on market at 45c qt. —C. A. A. B., March 26.

Truck Acreage Estimates

ACCORDING to the estimates on the intended acreages to be planted to truck crops in New Jersey, a falling off of five per cent from last year's acreage is predicted for both table and can-house tomatoes. Cantaloupe plantings will decrease seven per cent, while watermelons, according to these early compilations, will suffer a still greater cut of 15 per cent. Sweet corn acreage will be five per cent short of last year's market, if the farmers plant as they have indicated. Onion and string bean plantings will show a slight set back of three per cent. The lima bean acreage will drop 12 per cent.

Strawberries promise to be plentiful this summer, with a 20 per cent increase in acreage. A government report warns that prices will probably be lower than last year, because of the large acreage planted to strawberries in the South and Mid-West. Green peas will be more plentiful by 10 per cent than they were last season.

Other crops which show increases are as follows: Cucumbers, eight per cent; asparagus, seven per cent; peppers, six per cent; spinach (spring), three per cent, and lettuce (spring) two per cent. No change is indicated in the acreage of cabbage, celery and eggplant.

These estimates are based on the present intentions of farmers and will be checked by later figures made after the crops are in the ground.

Results of Fruit Survey

SECRETARY W. B. DURYEE, of the New Jersey State Department of Agriculture, has just issued some important figures on the peach marketing situation as it affects New Jersey growers. The statistics give the ages, varieties and numbers of peach trees growing in New Jersey and competing states. The results of this survey show New Jersey orchardists how they can meet the severe competition of other states by regulating the kinds and quantities of their future plantings.

California is the leading peach producing state, with nearly as many trees as the entire Atlantic Seaboard. While most of this western state's peach crop is canned or dried, her carlot shipments of fresh peaches have been increasing. The average age of California trees is nearly eight years, while that of New Jersey's is seven years.

New Jersey is third of all states in the number of trees in commercial peach orchards, while North Carolina shows herself as a dangerous competitor, with very young trees averaging less than 5½ years. Both North Carolina and Illinois, which is fifth in the total number of commercial peach trees, all of them averaging less than five years, will be giving New Jersey stiff competition in the Pittsburgh market within a few years.

In New Jersey the Elberta is by far the leading variety in point of numbers. So popular is this variety that along the entire Atlantic Seaboard it comprises 53 per cent of all commercial plantings. Nearly 10,000,000 trees thruout this coast section are Elbertas. Approximately 60 per cent of them are under eight years of age, so that they have not yet reached the peak of production.

The results of its apple survey are likewise given out by the Department of Agriculture. The survey includes the leading varieties, numbers and ages of apple trees by counties. Comprising 17 per cent of New Jersey's apple trees, the Delicious variety stands first in number. It has gained steadily in popularity for the last few years.

Over a period of 25 years, the Stayman had always led other apple trees in numbers. In 1921, this variety reached its peak of popularity, 27 per cent of the entire state's plantings being in Stayman. By 1924, however, Stayman plantings had dropped to 15 per cent of the state's total.

The Department announces that information in greater detail will shortly be available for public distribution in a publication known as circular No. 110.

Do Federal Funds Help?

Does the federal government contribute to any of the education costs in Pennsylvania?—R. J., Chester County, Pa.

Yes. The government of the United States contributes annually $576,765.74 for the purpose of aiding in promoting vocational education in agriculture, home economics, trade and industry, and continuation school subjects, and for training teachers for above fields.—K.

A Buying Guide

BEFORE you order dinner at a restaurant, you consult the bill-of-fare. Before you take a long trip by motor-car, you pore over road maps. Before you start out on a shopping trip, you should consult the advertisements in this magazine. For the same reasons!

The advertising pages are a buying guide to you in the purchase of everything you need. A guide that saves your time and conserves your energy; that saves useless steps and guards against false ones; that puts the s-t-r-e-t-c-h in family budgets.

The advertisements in this magazine are so interesting, it is difficult to see how anyone could overlook them . . . fail to profit by them. Just check with yourself and be sure that you are reading the advertisements regularly—the big ones and the little ones. It is time well spent . . . always.

Avoid time-wasting, money-wasting detours on the road to merchandise value. Read the advertising "road maps"

Reliable Day-Old Chick Hatcheries

TRAPNEST BRED CHICKS
No need to buy commercial hatchery chicks. At just a penny more than ordinary chicks cost you can get Kime Chicks from stock trapnested the year around. We specialize on Barred Rocks, S. C. Reds, S. C. White Leghorns. The foundation stock was from some of the finest pens produced by America's leading breeders. All three varieties $16 per 100. 100% alive, postpaid. Order from ad. Catalog Free.

Quality Is the First Consideration of Consumer—Price the Second

THE exporting of apples and the requirements of fruits and vegetables to meet the chain store demands were two of the leading questions discussed at the meeting of the Middle Atlantic States marketing officials, in Wilmington, Del., March 15th. "Europe is no dumping ground for apples that will not meet the requirements of the best American trade," said Herschel Jones, New York, who exported over 1000 cars of apples to foreign markets the past winter.

If this country should lose its foreign apple market, it would result in a reduction of at least one dollar per barrel on all the fruit sold or sacrificed in the local markets. With a forty million barrel crop and an export safety valve market of six million barrels this channel has added close to $50,000,000 to the income of the American fruit growers.

Mr. Jones further stressed the need for higher fruit standards than those known as U. S. Number 1.

When you hear the rattle it's time to jump.

The European buyer is particular about what he buys. He demands a certain grade and nothing but the best will answer his full requirements. The exporter must pay more attention to the packing of a super pack for this discriminating market and he will be amply repaid for the effort. Evidence of this was shown in some particular lots of apples that netted the growers close to $6 per barrel at shipping point.

Might As Well Be Kept at Home

Mr. H. Q. Baum, buyer for one of the largest chain stores, also stressed the need for a higher standard and recommended that at least one-third of the stuff now shipped to terminal markets be left at home, or disposed of thru other channels.

Mr. Baum further recommended that packages be made smaller and that more fruit and produce be packed in consumer packages, like the four-quart climax for peaches and tomatoes. The one-dozen-bunch asparagus crate for New Jersey asparagus was advised.

The western grower has it on the eastern grower because the produce and fruit is packed in an attractive display package. An attractive package is half sold on its appearance. The consumer does not buy on a price basis. Quality first and price as a second consideration has been the experience of this store buyer who sells nearly two million dollars' worth of food products every day in the year.

"The New Jersey tomato gives us a headache," was the answer to a question regarding this commodity. "We have more trouble in handling this one crop during three weeks than we have all the rest of the year, by buying tomatoes from every part of the United States."

Shipping point inspection has grown from 50,000 cars four years ago to over a quarter of a million last year, according to F. G. Robb, fruit inspection service, Washington. Shipping point inspection protects the shipper and assures the buyer that he is getting what he is paying for. It has helped to build confidence between consumer and producer as no other factor in recent years. Inspection for canning crops is still in the experimental stage but he believed that it would be worked out satisfactorily in a short time.

A discussion on poultry standardizations was opened by Dr. A. M. Jull, Washington. The big problem is to get the poultrymen of the eastern group of states and the group in the middle western states to agree on the establishment of definite terms for certification and accrediting of poultry flocks in the disease elimination campaign now going on in all parts of the country.

Representatives from all of the Middle Atlantic group of states spoke on the work they were doing in the control of disease in their respective states. New Jersey was represented in this discussion by A. C. Jones, of Trenton.—A. K.

Interesting Old State Laws

A LAW enacted in Pennsylvania in 1881 which made any dairyman who brought watered, sour or tainted milk to a creamery, or kept back the "strippings," subject to a fine of $10 to $100.

As early as 1862 a law was passed which required the cutting of Canada thistles on all land. The owner could be fined $15 for not doing so.

One of the first, if not the first law, to regulate the sale of fertilizer by providing for chemical analyses to check on guarantees, was passed in 1879.

One of the first state appropriations for animal disease control work was made in 1878 when "$200 or as much of it as necessary" was appropriated to the State Board of Agriculture for the actual expenses incurred in the investigation of "epidemic or endemic diseases among domestic animals."

The first law to regulate the operation of automobiles was passed in 1903 for the purpose of keeping "the highways as free as practicable from reckless use of dangerous motor vehicles." The speed limit in cities was fixed at eight miles per hour and at 20 miles per hour on the open highway. Each automobile had to carry "two lighted lamps" in front and one red light in the rear and be equipped with a "bell, horn or other signal device." The motor vehicle was required to stop when signaled to do so by the driver of a horse when meeting on the highway.—Geo. F. Johnson.

To Study Marketing Problems

MORE than 130 leaders of farmers' cooperative organizations and other authorities on cooperation from Europe and America will lecture at the third summer session of the American Institute of Cooperation in Chicago, June 20 to July 16th. Sessions will be held at the Northwestern University School of Commerce. The Institute will be devoted principally to problems of marketing livestock and wool, dairy and poultry products, perishable fruits and vegetables, grain and cotton. The first summer session of the Institute was held two years ago at the University of Pennsylvania, Philadelphia.

White Diarrhea

Splendid Success of Mrs. Ethel Rhoades in Preventing White Diarrhea

Mrs. Rhoades' letter will no doubt be of utmost interest to poultry raisers who have had serious losses from White Diarrhea. We will let Mrs. Rhoades tell it in her own words:

"Dear Sir: I see reports of so many losing their little chicks with White Diarrhea, so thought I would tell my experience. My first incubator chicks when but a few days old, began to die by the dozens with White Diarrhea. I tried different remedies and was about discouraged with the chicken business. Finally, I sent to the **Walker Remedy Co., Dept. 512, Waterloo, Iowa,** for a $1.00 box of their Walko White Diarrhea Remedy. It's just the only thing for this terrible disease. We raised 700 thrifty, healthy chicks and never lost a single chick after the first dose."—Mrs. Ethel Rhoades, Shenandoah, Iowa.

Cause of White Diarrhea

White Diarrhea is caused by microscopic organisms which multiply with great rapidity in the intestines of diseased birds and enormous numbers are discharged with the droppings. Readers are warned to beware of White Diarrhea. Don't wait until it kills half your chicks. Take the "stitch in time that saves nine." Remember, there is scarcely a hatch without some infected chicks. Don't let these few infect your entire flock. Prevent it. Give Walko in all drinking water for the first two weeks and you won't lose one chick where you lost hundreds before. These letters prove it:

Never Lost a Single Chick

Mrs. L. L. Tam, Burnetts Creek, Ind., writes: "I have lost my share of chicks from White Diarrhea. Finally I sent for two packages of Walko. I raised over 500 chicks and I never lost a single chick from White Diarrhea. Walko not only prevents White Diarrhea, but it gives the chicks strength and vigor; they develop quicker and feather earlier."

Never Lost One After First Dose

Mrs. C. M. Bradshaw writes: "I used to lose a great many chicks from White Diarrhea, tried many remedies and was about discouraged. As a last resort I sent to the **Walker Remedy Co., Dept. 512, Waterloo, Iowa,** for their Walko White Diarrhea Remedy. I used two 50c packages, raised 500 White Wyandottes and never lost one or had one sick after giving the medicine and my chickens are larger and healthier than ever before. I have found this company thoroughly reliable and always get the remedy by return mail."—Mrs. C. M. Bradshaw, Beaconsfield, Iowa.

You Run No Risk

We will send Walko White Diarrhea Remedy entirely at our risk—postage prepaid—so you can see for yourself what a wonder-working remedy it is for White Diarrhea in baby chicks. So you can prove—as thousands have proven—that it will stop your losses and double, treble, even quadruple your profits. Send 50c for package of Walko (or $1.00 for extra large box)—give it in all drinking water and watch results. You'll find you won't lose one chick where you lost dozens before. It's a positive fact. You run no risk. We guarantee to refund your money promptly if you don't find it the greatest little chick saver you ever used. The Pioneer National Bank, the oldest and strongest bank in Waterloo, Iowa, stands back of our guarantee.

Walker Remedy Co., Dept. 512, Waterloo, Iowa

MARTIN METAL Brooder Houses

Stop Your Baby Chick Losses this year. Raise 2lb. broilers in 8 weeks—buy or hatch your chicks earlier and get higher prices. You can if you have a Martin.

Monroeville (O.) Hatchery writes—"Raised 97 per cent."
A. J. Swineford writes—"Had 2lb. broilers in 8 weeks."
Mrs. W. Leffler writes—"Expect to buy another Martin in the spring."

Brooding chicks in a Martin is safer, easier, surer, FIRE-PROOF, rat and weasel proof, sanitary, dry, warm—even in zero weather, stove in center, no corners—prevents crowding. **"Ray-Glass" Windows** let in the Violet Rays of the sun. Ideally ventilated—no drafts. Sizes, 500 chick and up. Shipped knocked down—easy to put up. Last a life-time. Write for illustrated folder and price.

The Martin Steel Products Co., Dept. 220 Mansfield, O.

Why Farmers Stay on the Farm

An Attempt to Analyze the Situation

By H. G. NIESLEY

NOT "How are you going to keep them down on the farm?" but "Why farmers stay on the farm" is the topic in which both you and I are interested. Why people continue to live on the farms of the United States in the face of the many alluring possibilities that present themselves daily to the modern farmer is a question more difficult to analyze than why they leave.

According to government figures the movement cityward is not very extensive. There were only 1.5 per cent fewer people living on the farms January 1, 1926, than on the same date of 1925. This number was exceeded so much in many of the past years that we can safely say that agriculture has lost about four and one-half million farm people during the past half century. Yet, why do not more leave, especially since the year 1920 during which time we experienced the greatest demoralization of agriculture since the period immediately following the Civil War?

Purchasing Power Has Diminished

In terms of the other things that it would buy the purchasing power of farm produce has been so low since 1920 that it has tended to lead people away rather than toward the farm.

That the farm offers a home where family and labor may be kept together certainly must be placed first in any enumeration of reasons why people stay on the farm. From personal observation you can easily point out hundreds of farmers in this and other states who are still living on farms that have long since passed the point of making a profit for the operator. Why? Because of a tie that it is next to impossible to break. These farms provide sufficient food and shelter for the occupants and under favorable seasons a little surplus may be left to sell.

The farmer stays on the farm, too, because it provides an independence that few other industries offer. By nature he is a lover of ownership. He has food in plenty and most of it is of the type that he desires. Farm crops, garden, livestock and dairy products, even if not produced on a commercial basis, may be produced in sufficient quantities to satisfy the owner's or operator's primary desires.

A peaceful and quiet life such as probably no other industry can offer is provided by the old farm. This attribute alone has a very strong affinity for those who have spent the greater part of their useful years tilling the soil and who would enjoy their greatest happiness thruout their remaining years in a place where they are familiar with conditions.

Farmer Held by His Land

Habit, one of the all-powerful factors in determining our destiny, is especially exemplified in the farmer who still clings to the land. Influences there have been so strong that they have excluded many outside influences. Probably you have often heard farmers remark that they were glad to return to their farms after spending a busy day in the city.

Country boys and girls soon begin to share the tasks on the farm by helping with the chores about the barn, by owning a calf, pig or colt, in organized club work, thus molding them for a love and joy in rural conditions.

From a social and economic viewpoint the independence of the farmer is most important in keeping him on the farm. He is not tied down by routine hours and days of labor. By that I mean that fifteen minutes late does not lead to a discharge, tho if this be negligence the farmer is unable to successfully meet competition. He has within his own power, to a considerable extent, the arrangement of his own hours of labor. However, this phase of independence is less in our commercialized system of farming than it was at one time when we were a self-sufficing agriculture. Yet this may be cited as an item much appreciated by the farmer and one that often holds him on the farm.

Farming Permits Free Thinking

Farming is then a business that permits free thinking and acting to a very large extent and develops initiative. The farmer chooses his rotation, crops, varieties, fertilizer, and markets much according to his own likes. Often he has a choice and his primary job is to make decisions. This was what led Theodore Roosevelt to say once, "The permanent greatness of any state must ultimately depend more upon the character of its country population than upon any other factor. We cannot afford to lose that preeminently typical American, the farmer who owns his own farm."

The love of posterity seems to predominate so in the minds of the rural classes, that they willingly sacrifice the city influence for their children's freedom and independence.

Desire for gain is another attribute that keeps farmers on the farm. The hope for increased value of land now owned.

Nothing is quite so fascinating as nature, and so the farmer, in observing crop and animal growth, is attracted by the wide open spaces. His association with animals carries with it an attraction hard to divorce, after it is once established.

The present-day educational system has had a tremendous influence in educating for the farm rather than away from it, and good schools lead farmers to stay in the country to educate their families.

Not Easily Liquidated

The technical immobility of its capitalization makes the farm a very difficult asset to liquidate. Many would leave the farm today but they cannot sell. It has not offered the brightest opportunity in recent years and capital moves toward profitable enterprises.

Land is the basis of life, and thus offers a security that attracts people beyond the passing lure of high wages in the city and factory. Land remains after all else goes, which makes it the greatest security of investment.

Farmers, therefore, will continue to live on farms, even tho immediate returns may not be great; they build their futures on hope, both of posterity and future goods.

While we can expect to find much movement away from the farm, yet these great magnetic influences will continue to exert an almost irresistible attraction for farm people.

May Write Own Will

Would a will written by the testator hold good in Pennsylvania?—J. S. B., Pennsylvania.

A will written by a testator himself, if written so that his purpose is clearly set forth, and is dated, witnessed and signed will hold in this state. All that the courts require is that there be no uncertainty as to what the testator wishes to do with his property. Of course, he must be of sound mind and not subject to any charge of "over influence" by another. But these conditions apply to any will.—K.

Advice thru this department is free to our subscribers. Each communication should state history and symptoms of the case in full; also the name and address of writer. Initials only will be published. We invite readers to make use of this service. Clippings from the column when properly preserved and classified, make one of the most valuable medical symposiums a farmer-stockman can obtain.

SHEATH SWELLS.—I have a horse that swells at his sheath. What is good to reduce the swelling? The same horse rubs his tail.—C. F. M., Pottstown, Pa. Wash the sheath with warm water and toilet soap, cleaning the inside carefully. Allow regular exercise with a good grain to which a handful of oil meal has been added. Rubbing the tail may indicate worms. You can relieve this condition usually by washing the base of the tail with warm water and soap. Groom the animal carefully daily. Exercise will help and increase the grain ration as exercise is increased.

DEPRAVED APPETITE. — When my cows are in the barnyard they begin to lick the ground. Can you tell me just what is lacking in their feed that would cause them to do this? They are also constipated. What should I do for them? For two weeks I have been feeding just a sloppy bran instead of the other mill feed. Salt is placed so that they can lick it whenever they care for it. Is there any danger of their getting too much salt?—J. K., Baden, Pa. Add a handful of oil meal once or twice daily to the feed. Feed the bran dry for a change and note the effect. Allow the animals to have access to a mixture of 4 parts steamed bone meal and one part salt. They can eat an unlimited amount. You might try adding tankage or fish meal to the feed beginning with very small amounts until the animals get used to the feed. After they develop a taste for it, try using two to four tablespoonfuls in the diet daily.

PROPER TIME FOR CASTRATION.—Are cats too old to be altered when two years old?—L. M. B., Pittsburgh, Pa. Cats may be operated on at two years of age altho the mortality is higher than when kittens. You could feel reasonably safe regarding the operation by securing the services of a small animal specialist. Living at Pittsburgh makes this problem easier to solve.

A Common Nuisance

I have just received thru the mail, (as did mostly everyone else in the neighborhood) a package of neckties for which we are to send a sum of money, or, if we don't want them, there is postage inclosed for their return. Pocketbooks were sent to some. What can we do to discourage this nuisance?—G. S., Lycoming County, Pa.

The business of merchandising this kind of goods by chance in this way has become altogether too common of late. Names are secured from telephone directories, and in other ways, and the sender mails out small articles in a wholesale way. A price is put on which covers the cost, postage and a calculated loss. Usually the price asked is not exorbitant, but it is not good business and should be discouraged. Many people will send the money, since it is so easy to do so; or, if they do not do so at once, they respond after receiving an urgent letter.

Perhaps the only way to discourage it is not to return the goods or the money. Nothing can be done about it, providing the goods are not destroyed or used. The receiver is not even under obligation to take them to the post office. However, the average human being is a believer in fair-play, and is not inclined to follow this course, even tho he is safe from legal prosecution. The best way would be for everyone who receives a package in this way to return it at once. If sales were not satisfactory the business would soon be discontinued.—K.

Our Readers' Classified Advertising Department

A market place to buy or sell at little expense. Over 100,000 farm families read Pennsylvania Farmer every week. Rate 6 cents a word each for one, two or three consecutive weekly insertions; 5 cents a word each for four or more insertions. Count each number and initial and send cash with order. Orders, discontinuances or changes of copy must reach us by Wednesday of week preceding date of issue. All advertisements set in uniform style, no display type or illustrations. Poultry advertising may run here, but if displayed or illustrations used must run in display advertising columns at commercial advertising rate (65 cents per agate line). Livestock advertising not accepted in this department. Minimum, ten words.

for Economical Transportation

CHEVROLET

1-Ton Truck complete with Stake Body $680 f. o. b. Flint, Mich.

Quality Features of the world's most popular gear-shift truck!

Chevrolet is the world's most popular gear-shift truck because it offers, at amazingly low prices, scores of quality features not found on any other haulage unit in the low price field.

These all contribute to the modern design which has made Chevrolet Trucks famous the world over for dependable, economical transportation, slow depreciation, handling ease and driving comfort. Included in the list are numerous recent mechanical improvements of the utmost importance, such as—AC oil filter and AC air cleaner to protect the motor from excessive wear and to maintain at its peak efficiency the smooth, effortless power for which Chevrolet's motor has long been famous.

Other new features are an improved transmission and new gear-shift lever; a new and more conveniently located emergency brake; crowned fenders; a new radiator of greater cooling capacity; a new 17-inch steering wheel—and even bullet-type headlamps have been added to give a distinctive touch of smartness.

These are but a few of the many new quality features offered you in Chevrolet Trucks—in addition to the 6-inch channel steel frame, super-rugged rear axle, oversize brakes, semi-elliptic springs set parallel to the load, and numerous other examples of truck-type construction that long ago swept Chevrolet to unrivalled sales leadership in the field of gear-shift trucks.

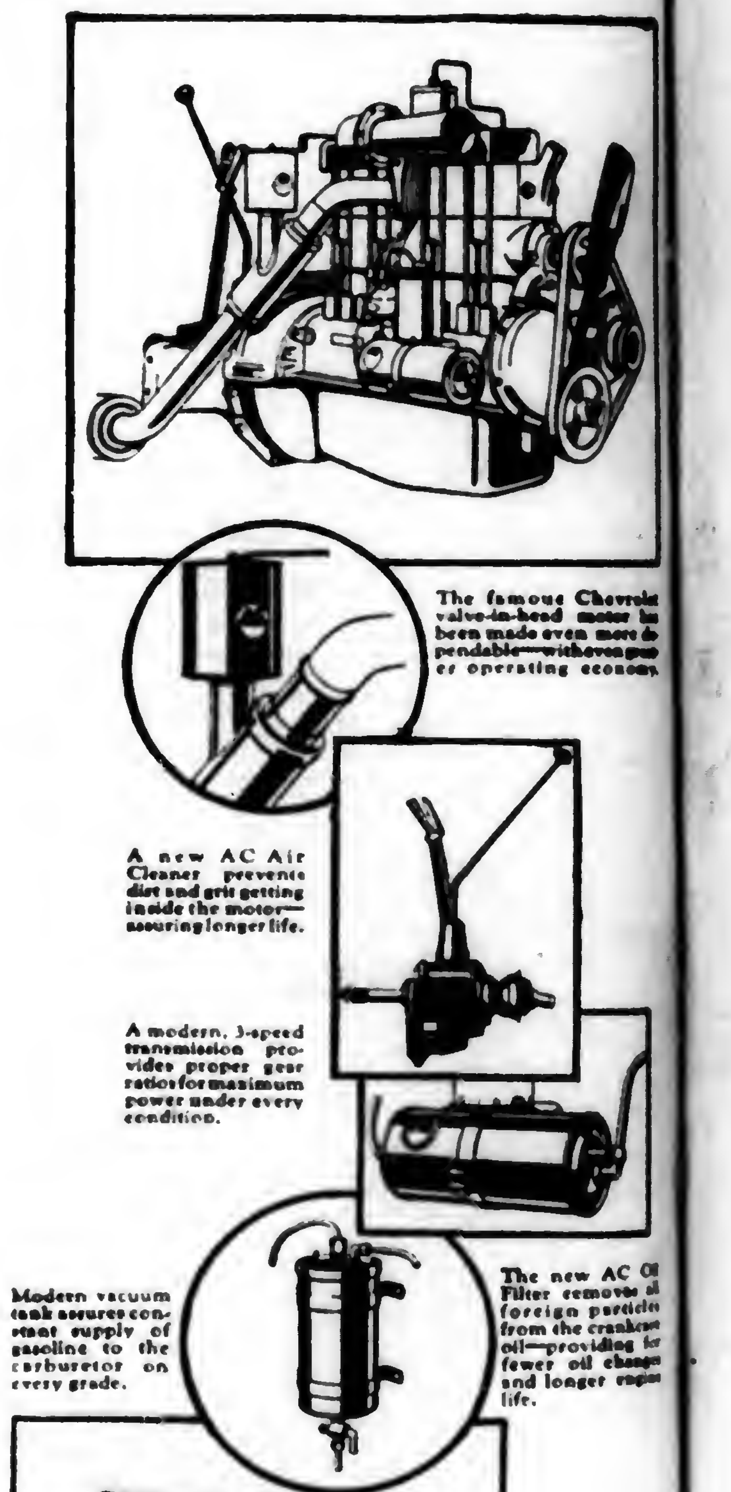
If you want the utmost in commercial transportation combined with true economy, see the nearest Chevrolet dealer. Have him show you why Chevrolet Trucks have been the choice of so many thousands of buyers—from men who operate only a single unit, to large companies which maintain huge fleets. Have him give you a trial load demonstration—*have him prove the advantages of buying a Chevrolet Truck!*

CHEVROLET MOTOR COMPANY, DETROIT, MICH. Division of General Motors Corporation

1-Ton Truck Stake Body $680
1-Ton Truck Chassis $495
1-Ton Truck Panel Body $755
½-Ton Truck Chassis $395
1-Ton Truck Cab and Chassis $610

All prices f. o. b. Flint, Mich.

In addition to these low prices, Chevrolet's delivered prices include the lowest handling and financing charges available.



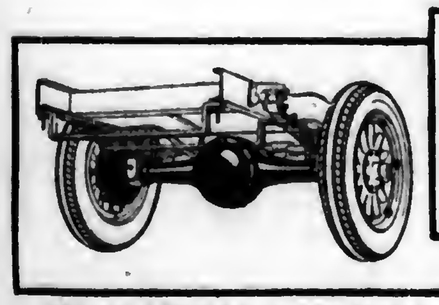
The famous Chevrolet valve-in-head motor has been made even more dependable—with even greater operating economy.

A new AC Air Cleaner prevents dirt and grit getting inside the motor—assuring longer life.

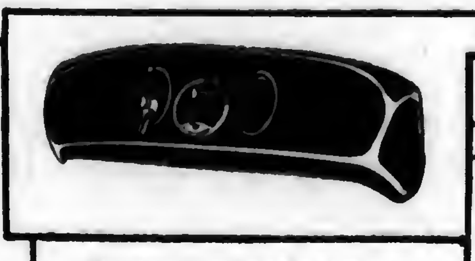
A modern, 3-speed transmission provides proper gear ratios for maximum power under every condition.

Modern vacuum tank assures constant supply of gasoline to the carburetor on every grade.

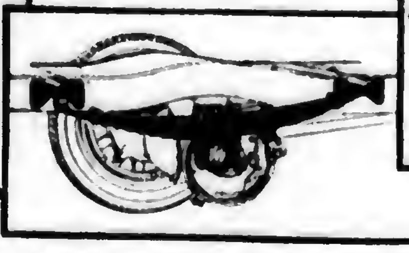
The new AC Oil Filter removes all foreign particles from the crankcase oil—providing for fewer oil changes and longer engine life.



The rugged Chevrolet rear axle possesses abundant strength and stamina for the heaviest haulage duty—giving faultless performance under every condition.



The instrument panel is conveniently located and is complete with speedometer, oil gauge, ammeter.



Heavy, extra-leaved semi-elliptic springs—set parallel to the frame—effectively cushion the load and chassis against road shocks.

A husky, 6" channel steel frame is a contributing factor to the long life and faultless performance of Chevrolet Trucks.

John Deere NJ Two-Row

Save $4.50 Every Day with This Two-Row

One man, with three horses and the John Deere NJ Two-Row, does as much work in a day as two men, with four horses and two single-row cultivators. That means a saving of approximately $4.50 a day.

Built Especially for Narrow-Row Crops

This two-row cultivator can be used in rows from 28 to 40 inches wide—just what you need to reduce your costs in cultivating potatoes, beans, tobacco, cabbage, etc.

Cultivates rows planted with either single-row or two-row planter—spacing lever in front of seat enables you to space gangs instantly to conform to rows as they vary in width.

Master lever raises or lowers all rigs at same time—no stops at ends of rows.

Easy guide through pedal control. Rigs always work parallel—shovels always point straight ahead and cut out full width of gangs. Four-horse hitch and tractor hitch can be furnished.

John Deere KH Cultivator

The popular single-row cultivator for narrow-row or wide-row crops. Quickly adjustable to rows from 28 inches narrow to 48 inches wide.

Quick, easy lever control to meet all requirements of thorough work. Quick and wide dodge in crooked rows. You will like its strength—frame will not sag, wheels will not spread.

WRITE TODAY for free folder describing the type of cultivator in which you are interested. Address John Deere, Moline, Illinois. Ask for Folder SJ-6-36

THE TRADE MARK OF QUALITY MADE FAMOUS BY GOOD IMPLEMENTS

LEADCLAD FARM FENCE

"Good Fences Make Good Neighbors"

Thoroughbred or Scrub—Which?

When you buy seed corn, alfalfa seed, or a sire for your flock or herd, you pick the best, for you know by experience that QUALITY PAYS.
When you pick the fence to protect your fields and your stock, do you pick quality fence or just buy the cheapest?
Leadclad fences are thoroughbred fences that give you high returns for your money, the same as quality seed and thoroughbred breeding stock.

Seven Times More Coating

Leadclad fences have seven times as much coating as the ordinary fences you have been using, and that heavy coating is old fashioned Lead.
We want to PROVE to you that a Leadclad fence will make you money by lasting as long as several ordinary fences, but we can't prove it, unless you TRY it.
If you have a piece of fence to renew this spring, put up LEADCLAD there, and PROVE to yourself that a THOROUGHBRED FENCE PAYS just the same as THOROUGHBRED STOCK or HIGH QUALITY SEED.
Send today for the catalog. It's free.

Boneset's Cousin, White Snakeroot, Has Vicious Tendencies

By Dr. E. M. GRESS, Penna. State Botanist

Editors' Note.—This is the first of a series of articles on poisonous plants commonly found in Pennsylvania and adjoining states.

MILK-SICKNESS was a dreaded disease among the earlier settlers of our country, particularly in the Ohio Valley where the white snakeroot is so common. The common name milk-sick-plant was derived from the fact that the milk of cows eating the plant caused sickness and often the death of those who drank the milk.

A few years ago the following article appeared in one of the newspapers: "Poison milk fatal to farmer and wife. Succumbing within a few hours of each other of milk poison, the result of cows eating white snakeroot plant, Cletus Watson, 30, and his wife, Ella Watson, 24, of Cowden, Illinois, were buried in the same grave. They were ill only eight hours."

It has been reported also that milk-sickness caused the death of Abraham Lincoln's mother. Of course, in those early days it was not known that the poison was caused by white snakeroot.

In experimenting at the North Carolina station, a cow was fed white snakeroot in sufficient quantity to produce "trembles," which is the name applied to this sickness in cattle. A calf was then fed the milk and died of trembles, and butter made from the milk killed rats in a few hours.

No Farmer Should Harbor the Weed

From the above accounts it can be seen that white snakeroot is very poisonous and since it is so common in Pennsylvania every farmer should become acquainted with the plant so as to be sure to keep it out of his pasture.

White snakeroot, called scientifically "Eupatorium urticaefolium," is known locally by many other common names. Among these are white sanicle, Indian sanicle, rich weed, hemp agrimony, upland boneset, stevia and nettle-leaved sanicle.

White snakeroot is a woodland plant and consequently has decreased with the reduction of our forest area. The plant is still quite common thruout Pennsylvania and, no doubt, is still causing some loss of livestock, particularly where pasture fields include a wooded area.

It has perennial roots but an annual herbaceous stem. It begins to bloom the latter part of July and continues to October or even later. The plant is from one to four feet high. The leaves are opposite, ovate, sharp pointed, with three prominent veins and toothed margins. The small white flowers form heads which are arranged in rather loose spreading clusters.

White snakeroot is a close relative of the plant commonly called boneset or thoroughwort, also of the famous Joe Pye weed, both of which are medicinal plants.

The marked symptom of poisoning in animals is trembling due to muscular weakness which causes the animal finally to fall to the ground. The breath has a foul odor described as "garlicky," "pungent" or "fetid." The symptoms of milk sickness in human beings are weakness, debility, loss of appetite, obstinate constipation, violent vomiting, foul breath and finally coma and death.

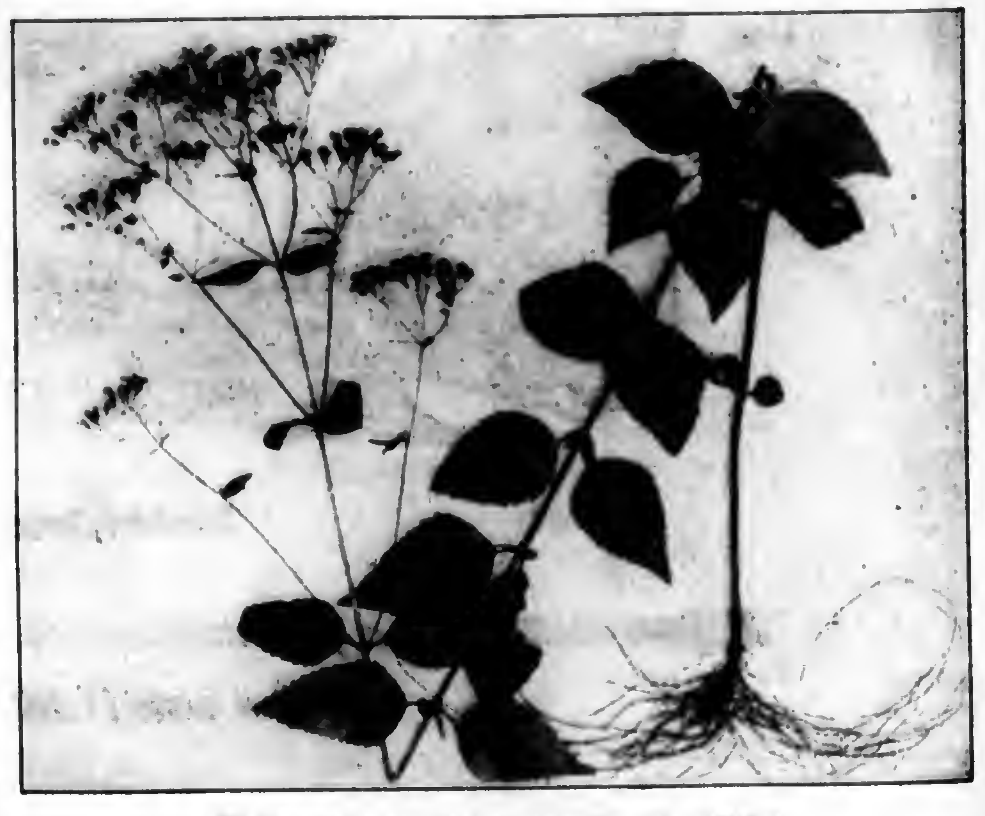
There is at present no satisfactory remedy for the sickness caused by this poisonous plant. If pastured animals show any symptoms of white snakeroot poisoning, the pasture should be searched for the plant. If found it should, of course, be eradicated at once, which can be done most effectively by pulling it up by the roots.

The Kind of Business That's Out-of-Date

A FRIEND of mine bought a five-eighths bushel basket of New Jersey potatoes on the Dock Street market a few weeks ago. They were what are commonly called "red skins" and are quite popular with some classes of trade, because of their good cooking quality.

It was one of the finest looking baskets of potatoes I have seen this season. All the potatoes on the TOP of the basket were clean and of good uniform size. The basket of potatoes was to be divided among three of us and when they were dumped out I saw one of the most artistic frauds that I have ever seen on the market. In the bottom, on the top and along the cracks in the sides were fine large potatoes. The center had carefully been filled in with potatoes ranging from the size of a pullet egg to that of a marble.

This is the kind of business that hurts the potato market and is responsible for the bad feeling between farmers and dealers. Dishonest packing is going out of fashion and it is well that it is, for it does not pay. —W.



White snakeroot is no respecter of persons.

It Is Easy To Stop The Oat Smut Thief

A Few Cents and a Few Minutes Will Save The Bushels That Now Are Lost

By R. S. KIRBY

Extension Plant Pathologist, The Pennsylvania State College

IF THIEVES or other marauders got into your oats field each year and destroyed all oats plants in one out of every 12½ acres, every oat grower would spend considerable cash and a lot of time protecting his crop from this loss. Yet, a fungus thief has each year been quietly entering Pennsylvania oat fields and robbing them of more and more grain, all because farmers will not spend a couple cents and a few minutes to protect each acre.

Smut is the name of this oat field thief. Due to lack of treatment, smut has been increasing year by year. In 1923 it caused an average loss in Pennsylvania of nine-tenths of a bushel in each acre, while last year the yield was reduced 2.76 bushels in each acre, or a total of about 3,091,000 bushels for the whole state. This means a monetary loss of about $1,500,000 or $1.34 for each acre of oats grown for grain.

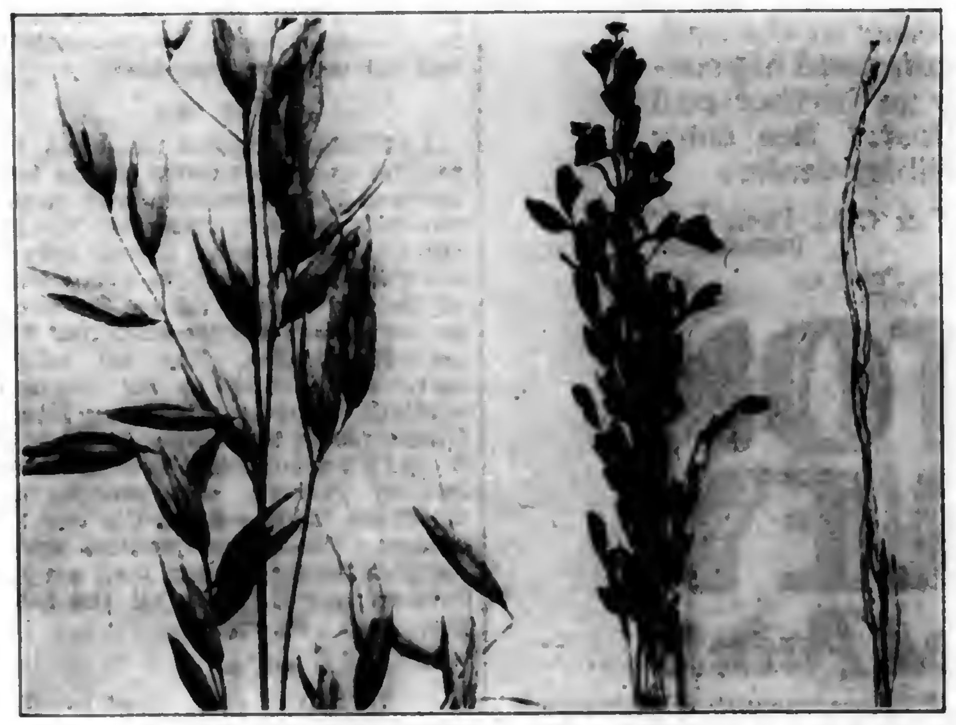
Robbers in the Plant World

Smuts like those occurring on oats are nothing but plants which have lost their power of making their own food and must, therefore, rob some higher plant of food. The little smut plants are like the higher and larger plants, in that they have delicate root and stem-like structures and seeds which botany books call spores.

The two smuts attacking oats look so much alike and pass their life in so nearly the same way that they will here be considered as one disease.

Oat smuts are first evident as the heads emerge. Affected heads consist of a brownish-black smut mass which has replaced all of the oat kernels and most of the glumes or hulls of the oats. The smutted heads fail to form a spreading panicle like the healthy ones and the black powdery smut mass is usually blown away, leaving the bare stems and a few empty hulls that easily escape observation at harvesting. The smutted plants are, on the average, slightly shorter than the healthy ones.

The dusty brownish-black masses of oat smut are composed of millions of seed or spores of the parasitic smut plant. As the healthy heads emerge a little earlier than the smutted ones, they have reached the blossoming stage by the time the smut spores are being spread. The spores are carried to healthy heads by the wind or by direct contact. They either lodge on the outside of the oat hull, or, falling between the open hulls, adhere to the parts of the oat flower. Those spores lodging on the outside of the hull do not play an important role in the infection of the seed. Those that adhere to parts of the oat flower start to sprout by the production of a short, delicate, root-like tube. This minute fungous tube grows down between the oat kernel and hull, where it forms numerous branches as the kernel matures, and this fungous growth finally becomes dormant along with the seed. Under exceptionally dry conditions at the time the spores are scattered they may not germinate and grow into the seed coat until after the oats are stored.



Left to right: A healthy oat head; a smutted head; what is left after the smut has finished its work.

Winters Inside the Hull

Thus the fungus usually passes the winter as resting root-like tubes (mycelium) chiefly in the seed coat and inside the hull. The mycelium in the seed coat is chiefly responsible for the smutted plants arising from inoculated seed. In the case of hulless oats, the fungus passes the winter as mycelium only in the seed coat. In the spring when the seeds sprout, the growth of the mycelium is renewed.

The disease penetrates the young sprout of the oat before the plant reaches the surface of the soil. No infection results after this time.

Once inside the plant the fungus continues its growth in the young developing tissues without any marked external evidence of the disease. As the young flower parts of the oat plant are formed, the fungus develops vigorously within them, bringing about their replacement with its own spores or seed. It is not until these affected oat heads emerge that the percentage of diseased plants in a field can be readily determined.

Soil temperature and soil moisture at planting time have a marked influence on (to page 16)

They Hunted for Pork in Those Days

Jersey Farmers of Colonial Times Treated Their Hogs Like Wild Game

By CARL R. WOODWARD

New Jersey State College of Agriculture

HOG raising was an important part of the diversified farm business of the early settlers in New Jersey. When the Swedes and the English migrated to the New World, they brought their hogs with them. Here the animals rapidly multiplied, and being given a large measure of freedom to range thru the woods, the feeding problem at first gave little trouble.

Thomas Budd, a Quaker of Burlington, writing in 1685, remarked:

> "The Hogs are fat in the Woods when it is a good Mast-year." (A year when nuts are plentiful.)

Under these conditions, the hogs tended to revert to their former wild state, and the story is told of an old Swede whose father bought land from the Indians:

> "Whilst he was yet very young, the Swedes . . . . had already a sufficient flock of all these animals. The hogs had propagated so much at that time, that they ran about wild in the woods, and that the people were obliged to shoot them, when they intended to make use of them."

But even before the end of the 17th Century, the region which one day was to originate the splendid Duroc-Jersey hog, had made considerable progress in pork production, and the opportunities of the trade were pointed out by Thomas Budd:

> "Pork is about half the price as in England, therefore, the Inhabitants will seldom have their Market spoiled by any that come from England, of which Commodity the Inhabitants in a few years will have Quantities to sell to the Merchant, which is salted, and packed in Barrels, and so transported to Jamaica, Barbadoes, Nevis and other Islands. Hams of Bacon are also made, much after the same manner as in West-Falia, and the Bacon eats much like it."

Porker Causes a Stir in Philadelphia

Apparently the Jersey farmers progressed in the art of pork production. Nearly one-hundred years later the colony produced a record-breaking hog, which created considerable interest in Philadelphia. In the Pennsylvania Chronicle for December 7, 1767, appears the following account:

> "One Day last Week a Hog that weighs upward of 850 lbs. was brought to Town, alive, from New Jersey. Those who have seen him think he is the largest creature of the Kind ever raised in America. It is said he will be sold, next Market Day, for the Gratification of the true Lovers of fat Pork."

But by this time, the profits in swine were dependent upon the corn-pork price ratio. The following from the diary of Jacob Spicer, farmer and prominent citizen of Cold Spring Neck, Cape May County, speaks for itself. (Incidentally, who said farm cost accounting is a new idea?)

> Feb. 2, 1762. Weighed my old sow, she weighed 220½ lbs., and my stunted pig, about 6 months old weighed 89½. She eat up almost all my crop of corn!"

After a long calculation of what it cost him to feed and fatten 8 hogs, he comes to the following conclusions:

> "So that the value of the hogs was totally sunk by feeding them, particularly when corn is worth 3 s. per bushel, and pork 30 s. per 100 lbs. The common governing rate when they sell hogs here alive, is 2 s. per pound poor, and when filled with swill will weigh prodigiously."

THE F-S COLOR GUIDE

GIVES COLOR COMBINATIONS showing pictures

at your dealers

This book will decide the color question *for* you. Save time and worry and see it *first*. It doesn't show samples—but complete buildings.

Felton-Sibley Ready Mixed Paints will save you time and worry too. Best of all they'll save you *money* in the end. Why? Because of *quality* and big *coverage capacity*. They go further and they *"certainly do last."* See color book at your Felton-Sibley dealer.

NESHAMINY GARDENS

WHERE AN EDITOR WORKS AND THINKS

BY R. P. KESTER

THOSE who think it should be an easy matter for farmers to regulate the size of crops to suit the demand and thus prevent surpluses and consequent low prices are talking thru their hats. For instance, every well-informed farmer knows that the potato crop last year was big enough to meet the demand and at the same time return fair prices. In spite of this knowledge, the figures showing the intention to plant this year indicate an increase of fifteen per cent in the acreage planted to potatoes. If the intentions are carried out and the yield is a normal one, potato raisers will be begging for a market and selling at low prices next fall. But how can it be helped when farmers themselves will not use good judgment?

◆ ◆ ◆

LETTERS continue to come in relative to my comments on the letter from the young man who would like to have a rich man start him in the poultry business. These letters neutralize each other, as about half of the writers pat me on the back for my answer and the other half hit me with a brick. The net result leaves me holding to my original opinion. A most interesting letter from a reader in Delaware tells how he and his wife started with nothing, but by industry and practice of thrift are fairly well on the way to success. These two qualities made a reputation for them in their neighborhood and they get all the help they need. So, there!

◆ ◆ ◆

A FRIEND of mine asked me the other day whether the picture at the head of these notes was drawn to represent me at Neshaminy Gardens. When answered in the affirmative he said he thought it was not true to nature. When asked the reason he said he believed that if it were drawn from life the man would be seen sitting under the tree. Well, I do sit under a tree sometimes. What's the use of shade if you don't use it occasionally? But I also use a hoe, and pride myself in the quality of work I do with it. In fact, I find few people who can use a hoe properly.

◆ ◆ ◆

A READER in Wayne County, Pa., asks several questions which I shall answer briefly without repeating the questions.

Grapevines should be pruned severely, leaving two buds on four or six lateral branches. It should have been done before this. They may bleed badly now. Fruit trees may be pruned almost any time of year. Thin out the branches so that the head is open and there are no overlapping limbs. Cut back limbs which made excessive growth. Trees may be grafted any time after sap starts to flow, usually from the middle of May to the middle of June in your locality. Strawberry, blackberry and raspberry plants should be taken up and reset as early in spring as possible. Cut back the tops of the raspberry and blackberry plants to six or eight inches and be sure to set them at least as deep as they were.

◆ ◆ ◆

AN IMPLEMENT dealer in our town, seeing my note relative to our desire to get an orchard disc, telephoned that he had one and asked us to look at it. It was just the kind I had in mind and, the price being satisfactory, we bought it. We tried it out in the peach orchard the other day and it promises to be just the thing. It is of the cutaway type and it seems as if it would thoroly pulverize the top soil if used as it should be. There are small patches of grass here and there, but by beginning early and keeping at it the disc will make short work of the grass. An orchard disc is one which is spread out by having two halves fastened on the ends of a long plank beam, thus permitting the disc to work close to the trunk by reaching under the limbs. The discs are adjustable and reversible.

The Cheerful Plowman

Fireproof Safe

MY UNCLE, Henry Grigger, had virtues by the score, he wouldn't steal a penny or bust a neighbor's door. He lived and moved uprightly in all the walks of life, was careful of his horses and gracious to his wife! Yet, Henry, (can you beat it?) was careless every day with all his legal papers, he laid them not away! That is, he did not file them where they were safe and sound, in bureau drawers and boxes his papers lay around! Yes, deeds were stuffed in boxes and mortgages and wills in envelopes were hidden in cedar chests and tills!

His home burned down one Sunday when Henry was at Church, and how that fire upset him and put him in the lurch! It balled him up so badly and mussed his business so for many months he scarcely knew where to turn or go! He paid some bills, I'm certain, that he had paid before, for his receipts had perished in flames behind the door! A pile of paper money, some tens and twenties, too, went up in smoke that Sunday. What else was there to do? The mortgage on old Shipley's fair piece of fertile land was burned right where it rested, —beneath the parlor stand! A contract for an auto, a license, and a deed, were all reduced to ashes along with other screed!

Poor Henry; lack of system, and lack of decent care for precious legal papers brought him some silver hair! I learned my lesson early from watching him perform, I lost all taste for facing a mix-up and a storm, so long ago I purchased a dandy fireproof safe, against whose steel fire demons may spend their force and chafe! Each precious legal paper of which I live possessed is filed away securely; my feelings are at rest!—J. Edw. Tufft.

BELOW: *Rear view of the McCormick-Deering 15-30 and the new corn stubble pulverizer developed by the Harvester engineers to destroy stalks and borers left in the field.*

Three Trainloads *of* McCormick-Deering Tractors *off to fight the Corn Borer*

THE U. S. Department of Agriculture, in carrying out its carefully organized program for corn borer control, has recently put into service several hundred McCormick-Deering 15-30 Tractors. The illustration above shows the first special train of tractors leaving one of the tractor plants of the Harvester Company.

The emergency order was given precedence over regular tractor deliveries, the entire consignment being headed eastward at once, going to the infested areas in three trainloads. Over a hundred International Motor Trucks were hurried overland for use in delivering tractors and other equipment to the various sections.

800 Corn Stubble Pulverizers

As further weapons in the borer warfare the government is using 800 corn stubble pulverizers, a special implement designed by the Engineering Department of the Company to aid in destroying the pest which has been wintering in the corn stubble of the east central states. The pulverizer is a sturdy 2-row implement which occupies an important place in the eradication program. It covers 25 to 30 acres a day and is operated by power from the tractor.

Heavy-Duty Tractor Power

These McCormick-Deering Tractors are all of the heavy-duty 15-30 h. p. size, especially qualified by their three-plow capacity and three-way power delivery—drawbar, belt, and power take-off—to play a major part in the government's plans for corn borer control.

War is declared on the Borer

POWER and machines must hold the front line trenches against the European corn borer which is threatening the corn belt.

The prime objective is to kill the borer or rid the fields of the stalks that harbor the borer. Pulverizing the stubble or turning it under by super-clean plowing, turning the corn into ensilage for the silo or into shredded fodder, low cutting with a special attachment for corn binders are among the practices recommended by the authorities.

We will mail to any address free illustrated booklets regarding the corn borer, its history, the official plans for its control, mechanical and other methods of procedure.

Vol. 95, No. 15 Phila., Pa., April 9, 1927 Whole No.1560

OUR JOB is to serve our readers. Whenever you are puzzled write to us and we will help you if we can.

We are haunted by an ideal life, and it is because we have within us the beginning and the possibility of it.
—Phillips Brooks

Fix Up the Home Grounds

MANY rural people are making an effort to improve the appearance of their farms and home grounds because of the increased number of passersby. Good roads and automobiles have increased the travel many times in almost every locality, and those having even a little bit of civic pride are responding by cleaning up, planting, painting and otherwise adorning their premises. But there is still a great opportunity for improvement in most places. It is one of the ways farmers may advertise their places and their products, and at the same time add to their own pleasure of living. A well-kept lawn planted to a few shrubs, rose bushes and other flowers would transform into a thing of beauty many a place that is now ignored as being slovenly. We have gone far past the time when anyone may hold the old-fashioned thought that fixing up about the place is a waste of time. The times demand it and our own pride should cause it to be done.

Reduce Production Costs

IT IS NOT necessarily suggesting an increase in production to urge the application of plenty of plant food for crops. "More from each acre, but fewer acres," is a motto which we would like to see adopted by every farmer, fruit-grower and gardener. It is sound economic sense, because it automatically reduces one of the largest items of production costs—labor. The plowing, preparing and cultivating of two or three acres when the same amount might be produced on one acre is disastrous, yet there are thousands of farmers who do this year after year. A glance at the average yields of any state, or of the United States, and a comparison of them with what is done by some is proof of the statement. Land which will not so respond should be considered as not adaptable to that crop and be given over to something else. Fertilizer prices now are closer to pre-war prices than any other thing in the cost of production. Let us concentrate labor and fertility.

Low Stocks of Grain

WITH the exception of wheat there is less grain remaining on farms at this season of the year than there has been for several years. In the case of wheat, the figures show that there were 6,786,000 bushels in farmers' hands on March 1st. This is about 1,000,000 bushels more than last year and about the same amount as the five-year average. The stocks of corn, oats, barley and rye are much below last year and the five-year average.

"Fuel Dope" Ineffective

THE United States Bureau of Standards after making more than one hundred tests of "fuel dope," preparations made for the purpose of increasing the power of gasoline, has given out the information that none of them has shown any appreciable merit. We pass this information along so that our readers may be informed if an invitation to buy dope of this kind comes their way.

Who Wants to Know?

IN SPITE of our frequent requests that readers sign their names to letters when writing this office, we continue to receive letters asking for information which can be given by mail only because the questions are not of sufficient general importance to merit publication. For instance, we have on the desk a card signed "A Farmer," asking where he can find goats for sale. Answers to such questions are not proper subjects for news columns because it would be giving free advertising, altho we answer by mail hundreds of similar requests in a year. Just why "A Farmer" should withhold his name in writing is not clear. If he succeeds in getting some goats people will find it out anyway. We are always anxious to accommodate our readers, but when they fail to sign their letters—well, "that gets our goat."

Be Sure of Your Seed Corn

AGAIN we urge our readers to test their seed corn before planting time. The county agent in your county will gladly help you in determining the viability of seed corn. While the practice of testing seed should be an annual custom, it is ten times more important than usual this year. The investigations which have been made in all parts of the country show a tremendous amount of poor seed, some of the tests showing only twenty-five per cent germination. Dead seed cannot always be known by looking at it. While that which is discolored is evidently bad, sometimes clean bright corn is low in vitality and will produce a poor stand. It is not enough to select at random a given number of grains. Each ear should be sampled, marked and tested. In this way the grains from a poor ear are detected and the ear may then be eliminated.

Ballot Reform Moves Slowly

WE HAVE always had full confidence in the integrity of old "Vox Populi," once he is aroused. The only trouble is it requires an earthquake to shake him out of his indifference. But such an event occurred when the crooked political leaders attempted to kill Governor Fisher's ballot reform bills and pass others which would make election control still easier. The protest from the public was so great and so ominous that even the thick hides and the calloused consciences of the gang leaders were pierced and they took the hint and put the bills back upon the calendar. But not without some alteration, however, and the dropping of one of the four bills.

Governor Fisher has received considerable criticism for consenting to any change. But one must remember that, since the opposition was strong enough to kill all of them, some compromise no doubt was necessary in order to get anything thru. The bills as they now stand will be a great step forward in the matter of assuring cleaner elections.

Farmers and Firearms

THE political leaders at Harrisburg have given out word that the farmers of the state caused the defeat of the Salus Arms Bill—a measure intended to make it difficult for gangmen, thieves and hold-up men to secure and possess weapons which are easily concealed on the person. Somehow, we doubt the truth of the statement. Even if farmers did not approve of the bill, since when have the legislators begun to pass or defeat measures at the behest of a few farmers? There is evidently something else in the woodpile besides wood. When one considers the people who were really opposed to it, and realizes the relationship which exists between gangmen and gang politicians, the doubt concerning the influence of farmers increases. True, some sportsmen opposed the bill because of the requirement that every gun owner should secure a permit to own a gun, but we do not believe that there was any strong uprising on the part of either sportsmen or farmers.

Editorial Sidelights

MR. KIRBY, who writes this week on the control of another destructive crop disease (Page 3), is a man of broad education. He started out by going to college and getting a degree in New Mexico. Then he went up into the Corn Belt and got another degree at the Iowa State College. Finally he secured his Ph. D. at Cornell University and then came down to Pennsylvania to fight plant diseases as a member of the State College Agricultural Extension Department. We should call him Doctor Kirby, but that doesn't come natural yet.

WE DOUBT if any agricultural organization can claim greater accomplishments in the last few years than the cow testing associations. The results obtained by these organizations in Pennsylvania are amazing. For example: In 1920 only one association in the state had reached average butterfat production of more than 300 pounds. In 1926 15 passed the 300-pound average.

Again, in 1920, no Pennsylvania association averaged as high as 8000 pounds of milk per cow for the year. In 1926 no less than 11 associations had an average production per cow above that amount.

To give still more figures, in 1914 only four C. T. A. herds in Pennsylvania had an average production of more than 300 pounds of butterfat per cow. In 1920 some 94 herds passed that average, and in 1926 the number had jumped to 377. The owners of the 377 herds which reached the 300-pound goal in 1926 were awarded ribbons at the recent State Farm Products Show by the Pennsylvania Dairymen's Association.

That brings us to the list of names on Page 14. Beginning with the Coventry Association this week, we plan to publish the names of all C. T. A. members in Pennsylvania who reach the average of 300 pounds of butterfat per cow during 1927. As each association completes its year's work the names of the herd owners who pass the goal will be given. Thus, at the end of the year we shall have given a complete list of those who will be honored by the Dairymen's Association at the next Harrisburg meeting, in January, 1928.

GETS WHAT HE'S AFTER

Advocate Tells One Story, Opponent Another—Women Concerned About Public Affairs—Buys Thoroughbreds.

Washington, D. C.

THE farm situation investigator seems to be able to get what he goes after. If he is an advocate of the McNary-Haugen plan of farm relief he brings back the report that this is what the farmers want and they will not be satisfied with anything else. If he opposed the McNary-Haugen equalization fee scheme he usually returns with plenty of first-hand evidence that the farmers are not asking for any such legislation. It is quite definitely settled, however, that whatever farm relief bill comes up in the next Congress, it will not be the McNary-Haugen bill in its present form.

Women Are Aroused

The women of the nation are becoming thoroly aroused over the laxity of law enforcement and the need of public officials who are in sympathy with the law. A women's conference on law enforcement is called to be held in Washington May 6 and 7th. The leaders issuing the call say the women of the United States will not favor the nomination or election of any candidate for any office who is not loyal to the Constitution of the United States.

Pensions Won't Be Withheld

The 493,000 veterans of the Civil, Spanish-American and Indian Wars, and their widows, will receive their pensions money as usual, according to a ruling of the comptroller general, with the approval of President Coolidge, which makes available for the payment of the May and June pensions, Treasury funds aggregating $37,500,000.

Canada Gets Six Wave Lengths

The Federal Radio Commission announces that in view of the existing situation between the United States and Canada relative to the use of broadcasting channels, six of the 95 available wave lengths will be reserved for Canadian broadcasters. These are the same channels that were maintained exclusively for Canadian broadcasting stations until last July, when a decision of the attorney general resulted in the withdrawal of authority over radio broadcasting from the Department of Commerce.

Horse Isn't Extinct

Since the government's horse breeding activities have been transferred from the Department of Agriculture to the Army Remount Service, the United States Army has become the world's most extensive breeder of horses. With the recent purchase of 14 thorobred stallions the government now has 510 stallions. The records show that these stallions have produced close to 25,000 colts, 7000 having foaled in the last year. It is expected that the number of foals will reach 10,000 this year. Much success is attending the work of the government in horse breeding at the Morgan Horse Farm in Vermont, where many excellent Morgans have been bred.

Must Consider Farmer's Pocket

Suggestions looking toward the bettering of home conditions on the farms were made by Secretary of Agriculture Jardine in an address before the Better Homes Conference in Washington. The farmer lacks just now the ready money that the city man has. Therefore, according to Secretary Jardine, when the makers of apparatus and appliances start out to improve the conveniences of the farm house, they must invent things adapted to the conditions which surround the farm home. There must be less expensive heating plants, less costly kitchen facilities—for lighting, cooking, disposal of sewage, and radio sets adapted to farm use.

Tenant May Move Silo

When a tenant erects a wooden silo on the property of the landlord at his own expense, he has the right of ownership and can remove the silo off the farm, according to recent court decision. In the case just decided, the silo was purchased by the tenant and erected on a cement foundation. After the order was placed the landlord notified the tenant that he was not interested in the wooden silo, and would not be holden for payment.—E. E. R.

BILLS FOLLOW BUDGET

More Money Available Than Expected Eases Situation—Many Farmers Sign Up for Testing—Collect Weed Data.

Harrisburg, Pa.

APPROPRIATION bills before the two houses of the Legislature in the wind-up of the present session are closely following the budget except where some special considerations call for increases. In the House the manner in which the appropriation committee kept in touch with the budget authorities was especially notable. If this is maintained there is every probability that the budget will be really fixed as the guide for a long time to come. The fact that more money is in sight than estimated at the start of the administration has eased up some of the situations created where departments made requests for funds to carry out certain plans which could not be provided for at first.

One of the features of the last week has been the manner in which opposition to the extra cent in the gasoline tax abated. As this money is to be devoted to roads there has been much activity to secure additions to the primary system.

Cattle Work Increasing

Indications are that the Legislature will adhere to the allowances worked out sometime ago for State College, tuberculosis work in cattle herds and other matters pertaining to agriculture. Efforts have been made to find more money for the field operations on cattle and the pests. Experience the last eighteen months in the cattle campaign has been closely checked up. One of the remarkable features is the way in which owners of herds in the central counties, especially in the Susquehanna Valley, have commenced to sign up for testing.

Awards Due Any Day

The State Highway Department will offer something like two dozen road construction projects for bidding in April. Awards on March bids are due any day and meanwhile preparations are under way for a flying start on the extensive mileage carried over from 1926.

Ready for the Weeds

State agricultural department authorities have begun organizing to combat weeds and have assembled data on practically every weed in Pennsylvania, making ready especially to advise people how to battle the dozen most destructive and troublesome. State Botanist E. M. Gress is urging farmers to watch seeds sown and to prevent weeds from maturing.

Favor More Medical Inspection

If plans now under way for the State Medical Service are carried out there will be an expansion of medical inspection in the rural districts. Intensive studies have been made and the Legislature is looking with considerable favor upon the requests for additional funds.

Governor May Tour State

Governor John S. Fisher may make some tours of the state during the summer and fall. The Governor has been declining invitations to speak until the Legislature is over and bills and reorganizations are handled.—T. C.

NEW BODY FORMED

Blueberry Growers Organize—Area Testing May Be up to Counties—Competitors' Apple Packs Are Better.

Trenton, N. J

THE Blueberry Cooperative Association was formed at Pemberton, N. J., last month with 95 per cent of the blueberry acreage in New Jersey represented in its membership. The association is to market the berries grown by its membership and is modeled closely after the cranberry association. Officers elected at the meeting of incorporation are: president, H. B. Scammell; vice president, Stanley Scoville; secretary and treasurer, Sidney Hutton.

Dairymen Approve Test Bill

The eighth annual banquet of the Salem - Cumberland - Gloucester Holstein-Friesian Association was held in Salem in late March, with practically all of its 250 members attending. Discussion at the meeting centered principally around legislative matters of interest to dairymen. Favorable comment was expressed on the passage of the new area testing bill which would permit counties to force tuberculin testing of dairy cattle.

General approval was also expressed over the passage of the new milk ordinance bill, in which New Jersey dairymen have been interested this season. One of the addresses of the meeting was on the subject of high quality in market milk, by Dr. Franklin N. Strickland, president of the Rhode Island Holstein-Friesian Association.

Eggs Must Weigh More

Both the Vineland and Bergen egg-laying contests will enforce a new regulation commencing with the new contests next November with reference to weight as well as number of eggs produced. Every egg will be weighed and the records will become a part of the official contest records. An egg in the 18-ounce per dozen class does not count; eggs to be officially counted must weigh more than 20 ounces per dozen. The new regulations are to enable the officials to weed out the hens which lay small eggs.

Talk Better Marketing

Apple growers in central and western New Jersey are discussing plans to aid sales at local and county meetings this spring. The comparison of western apple marketing methods with those now employed in New Jersey has brought to light many interesting facts concerning grading, package and general marketing methods. The horticultural leaders in the state have been pointing out that New Jersey growers must merchandise their apples in proper business ways or they will lose out to the well advertised packs of competing production areas.

The better handling of the fruit from the tree to the market has also been stressed, it being pointed out that the nearness of growers to good markets has encouraged them to market over-ripe and bruised fruit.—W. H. B.

WANT 1927 DAIRY SHOW

Move Afoot to Hold Exposition in N. Y.—Owls Aren't Enemies Claimed to Be—Commissioner Accountable.

Ithaca, N. Y.

OFFICERS of New York State cattle breeding clubs have lined up for support of an effort to bring the next annual dairy show to this state, the Chamber of Commerce of Syracuse lending approval. The show was held here for the first time in 1923, and the facilities of the state fair grounds were found admirable.

War on White Owls

A deplorable slaughter of the Canadian white owl that has come here in great numbers this winter still continues. Some sportsmen's clubs are even going so far as to ask members to wage merciless war on them, claiming they are eating rabbits and pheasants. Prof. A. A. Allen, of Cornell, told a Farmers' Week audience that he had had 200 dead white owls sent him this winter and had found bird remains in the crops of but two. Their food is rodents, on which they live in the Arctic regions.

The unusual migration of these beautiful birds was caused by the fact that once in every eleven years the mice on which the owls normally live are wiped out by disease, and the birds have to go south or starve.

State Fair Management

The state fair has been reformed in harmony with the principle of consolidation of departments. It will now be administered by a bureau in the state's agricultural department, the head being called the general manager, appointed by the commissioner of agriculture and responsible only to him. The former method of management thru a commission has gone tho it will continue in an unpaid, advisory capacity. Little change is expected, excepting that hereafter the commissioner of agriculture is now accountable for all departments, and there may be some economy in the new method.—M. G. F.

ABOVE: Arsenate of lead *with* KAYSO.
AT RIGHT: *without* KAYSO—note uneven coating.

INSURE 100% RESULTS
by adding just 2% to your spray cost

The best insecticide in the world can't protect your fruit unless the fruit is completely covered. Between the drops of spray shown in the right-hand illustration (without KAYSO) all sorts of insects and fungi can find plenty of room to start trouble.

For instance, in a laboratory test, even though double-strength arsenate of lead was used (without KAYSO), 50% of all the coddling moths put on an apple entered the fruit *between the drops of spray.*

Buy spray insurance

KAYSO corrects just that condition. It spreads the spray in a uniform, all-over coating, instead of a splotchy, uneven pattern. And it guards the spray against run-off during rains or heavy dews.

One pound of KAYSO is usually enough for 100 gallons of spray, so that it rarely represents more than 2% of the cost. And if you figure in the expense of the labor, KAYSO amounts to *less* than 2%. Isn't it worth that little additional investment to make sure of 100% efficiency?

KAYSO may be used in any spray mixture—wet or dry. Lime-Sulfur, Bordeaux, Arsenate of Lead, Nicotine and Whitewash, all cover better and stick longer, when mixed with KAYSO. It is the perfect emulsifier for the home-making of oil sprays that will not break down in the hardest water.

Meets all conditions

In all parts of the country—for dormant, pink, cover, or any other spray—under all conditions—KAYSO has proved its worth. We have testimonials to its effectiveness on thousands of acres of fruit and vegetables.

But prove it to your own satisfaction. See how much farther your spray will go, how much better it will cover, and how much longer it will stay on.

Ask your dealer or write us direct for full particulars.

MICHIGAN LIMESTONE

NOW HEAT-TREATED TO INSURE QUICKER SOLUBILITY

Michigan Limestone is now passed through huge rotary calcinators heated at 1200 degrees. This expands the grain of the stone and our mills pulverize it to greater fineness under half the pressure formerly used. "Michigan" now has a quicker, livelier reaction in contact with soil acids—its effect on the soil is prompt and powerful. Results are thorough and lasting, because the new Michigan Limestone is COMPLETELY soluble.

CALCITE BRAND
MICHIGAN LIMESTONE
OVER 99% PURE

Extreme Purity - Quick Effect - Full and Complete Solubility

These features make Michigan Limestone worth more to you than any other. And that's why more farmers use Michigan limestone than any other. No increase in price.

One Job Finished Is Worth Two Begun

BY THE time these notes reach our readers a great many of us will be in the midst of early planting operations. There will be many, many things all of which should be done at once, and which by necessity must be done one by one. The soundness of our judgment in determining the most important jobs, the ones to be done first, will influence profits in no small degree.

Peter Henderson, one of the foremost vegetable growers of the last century, advised that gardening jobs be taken up and completed one by one. It is the old irons in the fire adage applied to gardening. Certainly it strengthens morale to concentrate thought, horses, tractor and labor on each job until finished. Better one or two plots fitted and planted when rain comes than three or four ready or partly ready to plant and held up by inclement weather.

A few years ago a four-acre field which had been in late cabbage missed being fall plowed when a sudden freeze locked the soil for the winter. The area was to be planted in strawberries and accordingly had been listed for plowing at the earliest possible moment. About 9 A. M. one day in early April the tractor plow was started. Continuous operation completed this part of the job by 3 P. M. Right after noon that which had been plowed earliest was ready for the plank drag which was started with the team that had hauled three tons of fertilizer to the ends of the field in the latter part of the forenoon. Right behind the drag followed a one-horse, 7-foot fertilizer spreader.

Persistence Wins

BIOGRAPHY interests me. I like to compare notes with the lives of men and women who have won their share of life's good things. I like to check up and see just how I stand in this quest of fame and fortune. When I read that Conrad never wrote a line for publication until he was 40, never in fact, spoke English until he was 20; that Napoleon was almost forced to suicide thru despair of getting ahead; that Lincoln was a struggling, penniless, small-town lawyer at 32; that Woolworth "went under" twice before he could convince the public generally that his five-and-ten idea was a good one; then I just draw in my belt a notch or two, throw back my shoulders and set to with new hope, new enthusiasm. These men were no wonder-children Heaven sent to set the world on fire. They just had honest-to-goodness persistence in going after what they wanted to do.—Arrowheads.

Tractor Worked Unceasingly

The plowing completed, the tractor was started back onto the same field this time hauling a double acting disc harrow, cultipacker and plank drag, mixing in fertilizer, pulverizing, firming and smoothing the soil at one passage of the combination. By quitting time the field was ready to plant but was held a couple days in hope of a rain before actual setting was begun, a great advantage with strawberries.

That evening the tractor was gone over with oil and grease. The old automobile gas head lamp which had been mounted at the front was lighted and the outfit returned to the field to plow three acres for peas. This job was completed soon after midnight and the tractor operator slept until nearly 10 A. M., by which time the soil was in shape to harrow. The same combination used the day previous was put into operation and at 2 P. M. a gang seeder started drilling the peas, finishing the job, completing the planting, 21 hours after ground had been broken.

Not always are we able to accomplish things so expeditiously but anything we can do to drive the work instead of letting the work drive us is worth while. In the first case we are masters of the situation. In the second, we are in danger of becoming slaves to circumstances of weather, weeds, etc.

Depth Depends on Several Factors

The matter of depth of seed covering deserves especial attention in early spring. Consideration of soil variation, moisture content, drainage, exposure and rainfall make definite recommendations dangerous. In general we may cover much more lightly than is advisable later. Soil temperatures are inclined to be higher near the surface, germination may be quicker.

It is not always safe to set garden seed drills according to the indicated adjustments for rate of sowing. A long plank with a couple of strips of flooring, lath or narrow boards nailed on four inches apart makes a convenient runway for tests. The drill is run between the strips, the seeds cannot roll away and the actual rate of seeding may be accurately determined. It is important with most drills to push the machine at about the same speed at which it will be run in the field for the rate of sowing may be heavier at lower speeds. A memorandum of the actual settings used will be very useful later.

"Get Them While They Are Babies"

When we begin planting the kiddies will usually be buzzing around and will want to plant something, too. As a rule, they will surprise us in their aptitude. It may be only to set a few plants, at the beginning of a row or to drop and press in a half dozen hills of squashes but childhood impressions are lasting. Gardening, giving as it does so intimate contact with the soil, growing things, Nature, is first class education, for young and old.

I shall never forget how, when I was a little fellow, I dug near my father's greenhouse a hole perhaps three feet square and two feet deep, then broached to him the idea of filling this with rich compost and growing a crop of prizetaking pumpkins. He did not laugh but helped me wheel in the rich material and had me tramp it firm. That must have been a very busy time on Dad's truck farm with minutes and memory at a premium but he saw to it that I had seed of the biggest strain and that I planted them correctly. Later I was given lessons in weed control,—get them while they are babies,—and assistance in fighting striped beetles. I doubt if I appreciated it then but I certainly do today.—Gilbert S. Watts.

All Celery Hearts Aren't in the East

NOT long ago we wrote of the good demand for quality celery hearts. We growers in the East must "keep alive" for shippers also are discovering this market. Note the following clipping from a recent issue of Crops and Markets.

> CELERY HEARTS SHIPPED FROM CALIFORNIA
>
> The New York City market recently received a carload of celery hearts from California. The stock was bunched, wrapped and packed in asparagus crates. There were a dozen such bunches or packages in each crate, put up similar to asparagus, and each package contained eight hearts. Even tho the general market for celery was dull at the time this car arrived, the celery hearts sold readily at $1.25 per crate.

To avoid opportunity for oversight when work begins in the field I have just placed an order for the parchment paper which will be required to wrap celery hearts next August and later. This is to be cut in sheets 12 by 18 inches in size from what is known as 30-pound vegetable parchment, that is, a ream of 500 sheets 24 by 36 will weigh 30 pounds. At slight additional cost the farm trade-mark, registered in the state of Pennsylvania, will be printed to center 3 inches from the top and 5½ inches from the left margin. The paper will be shipped July 1 via freight and without further thought will be on hand when needed.—Gilbert S. Watts.

Does Lime Drive Ammonia Out of Fertilizer?

Will I get the same benefit from my fertilizers on lettuce and cabbage if I lime immediately before I set? My land needs lime but I have been told it will drive the ammonia out of fertilizer the same as from chicken manure if applied at the same time. Is there anything better than tar to use on sweet corn to keep the crows from pulling it?—R., Columbia County, Pa.

It is true that lime coming in intimate contact with manure tends to cause excessive liberation and loss of nitrogen. On the other hand, when lime and commercial fertilizer are both applied before planting and harrowed into the soil no such action takes place. In fact, this is a very common practice. The editors can suggest nothing better than coal tar, except the advertised commercial crow repellents, to protect sweet corn from crows. Unfortunately, the coal tar is quite difficult to apply under ordinary conditions. Readers are invited to send in letters telling of the extent of the damage they have suffered from crows, and of their experiences with commercial and other crow repellents.

Clubroot Lives from Season to Season

Please tell me something that will kill clubroot in cabbage.—Mrs. R. M., Washington County, Pa.

Clubroot on cabbage cannot be cured in the ordinary sense of the word but there are several things which we may do to ward off the attack or reduce the extent of infestation where the disease is already prevalent.

Bearing in mind that the organism lives over in the soil for a number of years we should be very careful to grow our plants in a location which has produced no cabbage, cauliflower, kale, etc., for six or more years.

In the second place, since clubroot thrives best in an acid or sour soil, we should lime well, preferably some time before planting the crop. In any event, lime.

Finally, cabbage should be grown in a rotation which allows four or five years between plantings of the crop or the closely related crops mentioned above.—G. S. W.

4-Wheel Brakes

Extra safety made possible by Engineering Leadership

The Whippet is the only light four-cylinder car regularly equipped with four-wheel brakes. Year after year at the National Automobile Shows the number of chassis shown with four-wheel brakes has been steadily increasing. In January, 1927, over 86% of those exhibited had 4-wheel brakes. The Whippet with 4-wheel brakes is more modern than any other light four-cylinder car.

In addition to this greater safety, you get fuel economy that no other light car can offer . . . and superior beauty of low graceful body lines . . . and more leg-room than in any other light car.

These features, plus many others, contribute to the Whippet's Engineering Leadership in the light car field.

LIME for BIGGER FARM PROFITS

CRAM-FULL of practical information on the Use of Lime on the Farm—authoritative—based on actual experience where liming the soil has increased crops to put big profits in farming. Also information on the use of lime for feed, for spraying, building and whitewash.

Warner's "Limoid" is pure hydrated lime. For 26 years it has been used to correct soil acidity and for all other farm uses. "Limoid" is economical; because of its extreme fineness, it more thoroughly impregnates the soil and goes further than other forms of lime. Easy to apply; no danger of burning grass, roots or soil humus. Every dollar invested in "Limoid" will turn a profit for you.

"Limoid" comes in the handy 50-lb. strong paper bags—easy to handle—safe to store.

Rambles of a Pennsylvania Fruit Grower

IV. Apple Growing Above the Clouds

BUNCOMBE COUNTY, N. C., of which Asheville is the metropolis, and the adjacent county of Haywood, of which Waynesville is the county seat, are coming forward rapidly in apple growing. We usually think of the South as too warm for commercial apple production, yet where the elevation is sufficient to insure cool summers, and the winters cold enough to provide an adequate resting period for the trees, the King of Fruits is quite at home.

There are over 12,000 acres of apples in these two counties, mainly in plantings of two to twenty acres and with a number of individual holdings of 150 to 500 acres, which would be considered large even in the North. More than half the trees are not yet in bearing; they were planted in 1917 and 1918, during the boom period, mainly by business men of Asheville and Waynesville.

One Asheville man, carried away by his enthusiasm, planted an orchard of 50,000 trees, and laid out a scenic highway thru the middle of it. Now, I suspect, he would like to drop method of soil management would be practicable here.

I failed to find any very striking evidence of the "thermal belt" or "frostless zone" which has been said to exist in these mountains. Certain elevations are freer from frost than others but this is determined by local topography and air currents and is not constant at any certain elevation. The "band of green along the mountain side," of which I have heard, exists mostly in imagination. In the Asheville district elevations between 2200 and 2600 feet are thought to be less subject to mountain fogs, which freeze on the blossoms, than sites that are higher or lower.

Equals Northern Averages

Mr. Black is a retired merchant who has brought to his apple enterprise the shrewdness and initiative that made him successful in business. He has 500 acres of bearing trees. Last year the home orchard of 250 acres yielded 100,000 bushels, which is as good as the average production of northern orchards. The trees are set about twenty-eight feet apart; they do not grow as large here as in the North. The training is poor, unless we hold to the idea that every tree ought to be allowed to grow just as it pleases, but he believes in and practices the open pruning that brings size and color. Each tree gets four pounds of nitrate before blossoming; it could use twice that amount with profit.

Mr. C. A. Black's apple orchard "above the clouds."

one or two ciphers from these figures.

"Apple Growing Above the Clouds" is literal description, not hyperbole. Some of the best orchards in this district are at an elevation of 3000 feet or over. The orchard of C. A. Black, near Waynesville, is at an elevation of 3200 feet but he has a block of trees on the mountain 800 feet higher.

As I drove up to his house the upper part of the home orchard was hidden by the white veil of a cloud, which clung to the mountain side at an elevation of about 3400 feet, but the mountain-top orchard was bathed in sunshine. This orchard, Mr. Black tells me, has failed to produce a good crop only once in eighteen years.

Only Tractor Orchard in County

The limiting factor here is frost killing the blossoms. Heretofore, the apples from the mountain orchard have been brought down laboriously on a sled, but a road is now being cut. Mr. Black claims that his lower orchard is the only one in Haywood County that can be cultivated with a tractor. Most of the orchards are terraced or have roads cut thru them every other row. Practically all are in sod, with orchard grass and blue grass predominating. Occasionally the sod is partially disced and red clover seed scattered. No other

Sprays Applied Five Times

I was surprised to find that the spraying problem is less serious here than in many parts of Pennsylvania. As a rule, the longer the growing season the more abundant the pests. Mr. Black sprays five times, using five large power outfits for the 250 acres. The delayed dormant application is oil; the pink, petal fall and one summer application are with lime-sulphur and lead; the last spray is Bordeaux and lead. He has not found it necessary to use nicotine, altho there are some plant lice. There is little scale, scab or bitter rot, practically no blotch, nor red mite, red bug, Oriental moth or Japanese beetle, and codling moth is easily controlled. I saw his fruit in storage and it looked clean.

Several mountain streams supply water to all parts of the orchard. Last year he dusted for the first time

(Continued on next page)

and is so well pleased with the results that he will continue it on certain blocks.

The list of varieties is familiar—Stayman, Rome, York, Winesap, Delicious, Black Twig, and finally that pair of irresponsible and irrepressible rogues, Ben Davis and Gano. A suave peddler in Asheville, who took me for a northern tourist and hence legitimate prey, tried to sell me a peck of Ben Davis as "Mountain Beauties, mighty fine." I gave him a short course in systematic pomology, without charge, and he departed a disillusioned man. The Staymans raised down here are exceptionally crisp and highly flavored. This variety, with Rome and Delicious, seem to be the most dependable sorts.

The best part of this story is yet to come. Here is that rara avis, a man who actually made money in apple growing during the last few years. His market is Charlotte, N. C., and other mill towns within trucking distance of 100 to 150 miles. None of his apples are graded except to take out the cider stock, and none are sold in packages. They are sold in bulk tree run, culls out.

From five to twelve truck peddlers come to the farm every day to take away apples from his two common storages and leave money; this is the advantage of a location on a paved road. Some are shipped in bulk by rail to Charlotte. The culls go there also, to be made into cider. This year the net price at the farm is seventy cents to $1.25 a bushel according to variety, Stayman and Delicious being the best sellers. Charles Webb, near Asheville, sold his 5000-bushel crop out of common storage for $1.75 to $3.50 a bushel.

Climate Increases Land Valuation

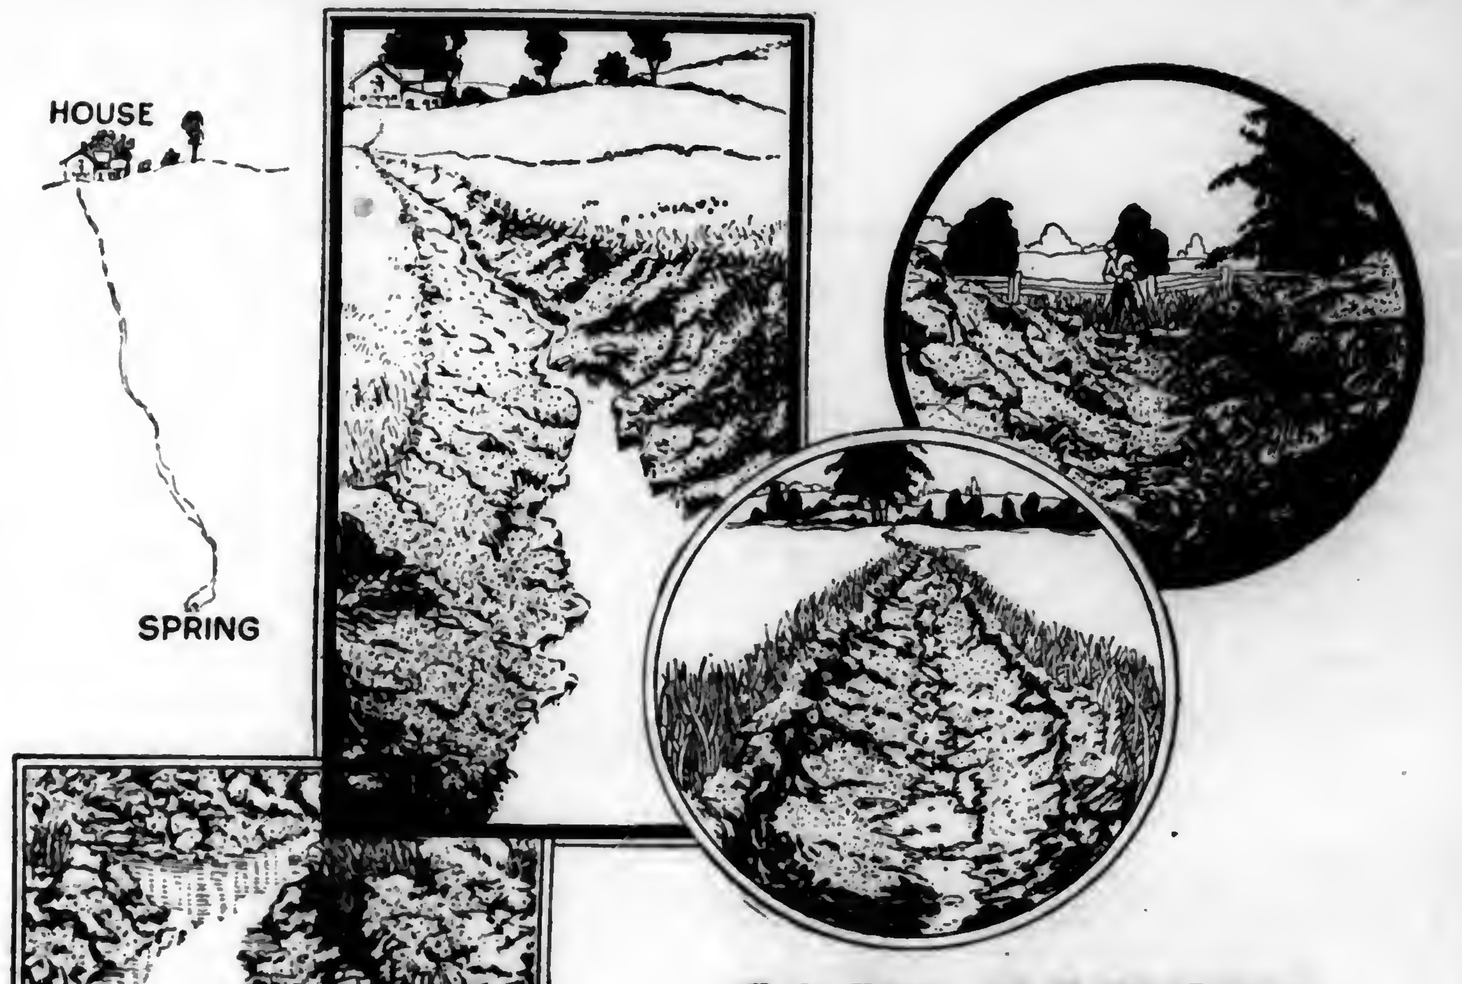
This is good money when we consider that the cost of production is low. Mr. Black figures that he could sell for fifty cents a bushel at the farm and still make some money. The saving on packages is a nice little profit in itself. Labor is comparatively cheap, but the land values are surprisingly high. Unimproved land, so steep that some people might think all it is good for is to lean up against, is valued at $150 an acre or better. I suppose half of this valuation must be in climate, which is capitalized around here almost as much as in California and Florida. It does have a certain attraction to a pilgrim recently released from icebound central Pennsylvania.

Today (February 10) there are indubitable signs of spring. The frogs are cheeping lustily in the meadows, the caressing notes of the bluebird rejoice the heart, the jonquil and yellow Jasmine gladden the eye. The great miracle of Nature—and portent of the resurrection—has once more come to pass.

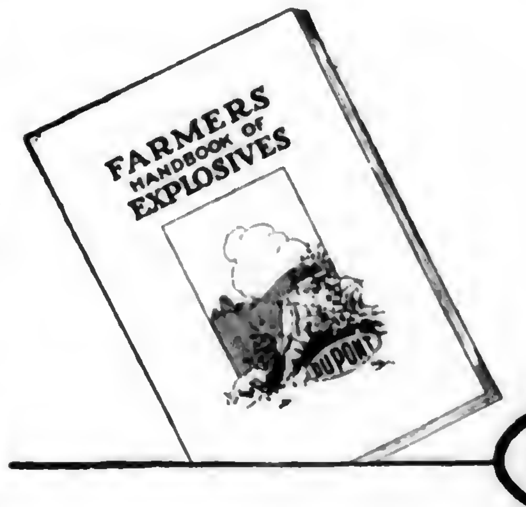
My impressions of the outlook for apple growing in the Land of the Sky are altogether favorable. Not everybody would care to have an orchard above the clouds. Steep land orcharding has its disadvantages, but against these must be set the assets of a long growing season, mild winters which help out in pruning, low cost of production, no packages required, and a ready market at a fair price. Then there is the climate, which, in this section, should always be spelled with capitals and followed by an exclamation point, thus: CLIMATE!—S. W. Fletcher.

Crib Corn Not Condemned

CORN in the crib will not be subject to the clean-up regulations in the campaign against the corn borer in northwestern Pennsylvania. Director Hadley, of the Bureau of Plant Industry, thinks it is advisable for farmers to empty their cribs before early June, but the danger of infestation from this source is not considered great enough to require regulations to enforce the destruction or use of crib corn.



Haven't you land to clear? ditching to improve your fields? trees to plant? Du Pont dynamite can do this work quickly, easily and safely when used as directed in the Farmers' Handbook of Explosives—your copy is ready on receipt of a postal request.



ONE DITCH
Reclaims 75 Acres and Carries Spring Water to House

A RAVINE on the James H. Berry Estate at Old Chatham, N. Y., was so poorly drained that some 75 acres of it were utterly useless.

At the foot of the ravine was a fine spring from which water had to be carried some distance to the farm house, at the upper end of the ravine.

The superintendent of the estate finally hit upon an idea for carrying the spring water to the farm house and draining the 75 acres by means of *one ditch*. With the cooperation of a du Pont representative they plotted the ditch, bored holes, loaded the holes with du Pont 50% Ditching Dynamite and at one stroke dug 14,000 feet of ditch to an average depth of 4 feet.

The pipe line through which the spring water was pumped to the farm house was laid and covered with 2 feet of soil, leaving a 2 foot deep drainage ditch. 75 acres of the best soil on the estate were brought under cultivation.

The entire job cost less than half the cost of digging such a ditch by hand.

Only one of the many uses of du Pont explosives on the farm. Perhaps *you* have a job for this very efficient, very low pay farm hand. Send for the "Farmers' Handbook of Explosives." It costs nothing to open your eyes to new opportunities.

Free Test

Avicol For White Diarrhea

In few hours, disease is stopped and sick chicks full of pep.

It's easy to stop chicks dying from white diarrhea. All you need do is drop an Avicol tablet in the drinking water. Thousands of poultry raisers, year after year, raise nearly every chick by this simple precaution. Mrs. E. E. Franks, Ramsdell, Tex., writes: "I was losing 10 to 15 chicks a day before I received the Avicol. I haven't lost one since."

A free test of Avicol will show how easily white diarrhea is prevented and stopped. The way it makes sick chicks lively and healthy, in just a few hours, is positively amazing. If you have never tried Avicol, write for a free sample, or send 50c for a full-sized package to Burrell-Dugger Co., 846 Postal Station Bldg., Indianapolis, Ind. It costs nothing to try the 50c package, because Avicol is guaranteed to do the work or money refunded. But if you prefer, try the free sample first.

For Barn Sanitation Agricultural Gypsum

It keeps down flies and odors in barns, poultry houses and other buildings. Increases value of manure. Adds lime and sulphur to the soil. Many other uses. 100-lb. bags, freight prepaid, only $1.50. Special price carload lots. *Write for valuable free book.*

The American Gypsum Company
Dept. B Port Clinton, Ohio

One Drop of Bourbon Poultry Remedy Cures Gapes

A few drops in the drinking water cures and prevents white diarrhoea, limberneck, cholera, indigestion and other poultry diseases. Small size 60c; half-pint $1; full pint $1.60. At druggists, or sent by mail.

Bourbon Remedy Co., Box 6, Lexington, Ky.

POULTRY

R. L. SCHARRING-HAUSEN
Staff Contributor and Adviser
Glenview Farm

Barnyard Fowls Replaced by Purebreds

I have a farm flock of mixed chickens but should like to get a better class. Should welcome any suggestions or advice as to the best way to improve the flock. The chicken house is anything but modern. Is it a good or a bad practice to allow chickens to pick at meat that is lying about the place?—Mrs. N. M., Chester County, Pa.

Your decision to replace your present barnyard fowls with a flock of purebreds is a very good one. Purebreds present a handsome uniform appearance, are more productive, and are able to transmit these qualities to their offspring. It is also often possible to sell hatching eggs from purebred flocks to commercial hatcheries at a figure much above the store price for ordinary eggs.

S. C. R. I. Reds make a good breed for a farm flock. A good way to start would be to buy chicks in March or early April and raise them in a colony house under a coal brooder. A 10x12 building will take care of 300 chicks, which should give at least 100 pullets in the fall.

I would advise you to get the chicks you buy in one lot, as they are easier to handle if all are of the same age and come into laying uniformly. It is also best to get chicks of the heavy breeds rather early, in order that they may mature in time to lay in the fall. Late hatched chicks are seldom profitable.

To avoid disease and parasites, it would be advisable to breed these chicks and raise the pullets away from the old birds that you have now. As they stop laying during the summer you can sell them and go into the winter with your new flock of nice purebred pullets.

For suggestions on brooding, and for plans for colony houses and laying houses, I would write to the New Jersey Experiment Station at New Brunswick, and to the Pennsylvania Experiment Station at State College, Pa. This service is free. If you have a county agricultural agent it would pay to get in touch with him, as he would be able to pay your farm a personal visit and make suggestions on the ground.

As for the meat you speak of, it is very liable to cause a disease known as limber neck, which is a form of poisoning coming from eating decayed substances. Affected birds lose control of their muscles and the neck hangs limp, whence the name. Fresh butcher scraps in small quantities are good for chickens, or meat may be boiled and used with the broth in mixing a wet mash with laying mash.

To get good chicks you will have to pay $20 to $30 per hundred, but while this may seem high, the results are worth it.—R. L. Scharring-Hausen.

Bird Lame Two Months

I have a chicken which hasn't been able to walk properly for two months. Please tell me what to give it. First I thought it was worms and gave two doses of castor oil.—Mrs. E. L. M., Chester County, Pa.

There are a number of things that might cause lameness in a chicken such as you describe. Worms, tuberculosis or certain internal disturbances that react on the nervous system might be responsible. If the bird is very light it may have tuberculosis in which case the bird should be killed and burned, as the disease is incurable and contagious. If the bird has been sick for a long time the best thing that you can do is to dispose of it.—R. L. Scharring-Hausen.

Jersey's a Good Place to Locate

How much capital do you think a man and wife should have to start in the poultry business? How many acres would you advise buying? What sections of New Jersey can you recommend? Are some sections of New Jersey better for poultry than southeastern Pennsylvania? What is the average profit per bird per year in New Jersey, etc.?—Mrs. G. P. B., Cook County, Illinois.

There are two prominent centers of poultry production in New Jersey: the Toms River section near the east coast, and the Vineland section in the south central part. Both sections have a light soil, a comparatively mild climate, and are near the wonderful markets provided by the Jersey coast resorts, as well as not far from New York City. A great deal of poultry keeping is done in other parts of the state as well.

New Jersey is peculiarly well situated for the production and sale of high class eggs, has a very strong poultry department at the State Experiment Station, and from these standpoints is not excelled by any other section in the East.

Extra Land Comes in Handy

Laying hens are not given much range on many poultry farms, but range must be provided for breeding stock and rearing pullets. It seems to me that ten or fifteen acres would make a handy size farm, especially if young stock is to be reared, as it is necessary to change the range from year to year.

A little extra land to provide room for a garden and allow for future expansion would seem advisable. Such a farm would cost from $5000 to $15,000, depending upon its location, the dwelling and other buildings and equipment. Some cash, at least, would be required in buying, and you would have to take into account interest on the remainder and taxes and insurance.

To rear a pullet will probably cost over a dollar. To feed her for a year will cost around three. Experienced, successful poultrymen make a profit of from $2 to $4 per bird a year above feed costs, with overhead expenses still to come out.

Better Start on a Small Scale

The possibilities in poultry are very great, especially in selling breeding stock from trapnested, high producing strains, and are excelled by no other branch of farming. At the same time, thousands of would-be poultrymen have failed, because poultry farming requires more than ordinary ability to insure success.

One of the most important causes of such failures is starting in on a large scale without experience; and most successful poultrymen have started in a small way, expanding as they mastered the details of the business. One man can handle from 1000 to 2000 layers when he knows the business; but it is much safer to start with 200 and work up.

If you should purchase a poultry farm here, it might be a good plan for your husband to secure employment on a poultry farm in the neighborhood for a year for the sake of the experience, while you take care of a small flock at home; provided, of course, that you intend to take an active part in the work.—R. L. Scharring-Hausen.

Friendly Talks

By EDGAR L. VINCENT

"I'M GOING down to the city today. Any errands you want done?"

That was the call we received over the telephone from a neighbor one morning, and it sounded good, for there were some errands we needed to have done, and were too busy to stop all business to do them. So we thanked the good friend, and when he stopped on his way to town we had our jobs all written down so that he would not forget them.

Wasn't it kind of our neighbor to think of this? You know how it is with most of us when we make a trip to the city. We have so much to do! Keeps us busy from one end of the day to the other; and do the best we can, it may be late choretime when we reach home. And then to have things to do for other folks, that makes us hurry just so much more and the lamps may be lighted when we drive into the yard.

Ready to Help at All Times

Yes, it sure was fine in our neighbor to be so good; but that is his way, always ready to do a good turn when he can. Often we need a helping hand on the farm, and we do not have to send a messenger to this accommodating neighbor to let him know. Sometimes I think he must be just watching for a chance to come over and help me get in my hay when it looks as if we might have a shower any minute.

Some of our folks may be sick. Our good neighbor has a way of finding it out and he does not wait to be called before he drops in and offers to do the chores or anything else that needs doing. If something is needed from town he will get out the car and go after it. Our neighbor is worth his weight in gold.

I have been thinking—is not such kindness enough to make a man thoughtful? Am I not a better man because of the goodness of my neighbor? Does his offer to do me a good turn not awaken in me a longing to help him, and to give everybody else a lift when I can?

Why Are We Here?

After all, what are we in this world for, anyway? A man I used to know said one time that he thought this was one of the finest verses in the Bible: "What doth the Lord require of thee, but to do justly, and to love mercy and to walk humbly with thy God?" And there is another word of later date that makes it even stronger. "Pure religion and undefiled before God and the Father is this, To visit the fatherless and widows in their affliction and to keep himself unspotted from the world."

While neither of these may be a perfect definition of the Christian religion, I do think they cover doing errands down-town for other folks, bringing in the wood when everybody else is sick and helping with the chores whenever and wherever one can. The man who can do that, and do it with good grace and a spirit of love is on the straight road to the best there is.

"But we have so much else to do? How can we ever get round to live this kind of a life?" So we say sometimes, and I know of no better answer than this: Let us be sure we are placing first things first. Much that we do never ought to be done. It is only a worry and waste of life and strength. Why wear ourselves out to no purpose? Oh, if we only could have a clearer vision of the things which really count for most! How it would simplify and magnify life!

Try This One Man Stump Puller 30 Days FREE

Get Special Offer!

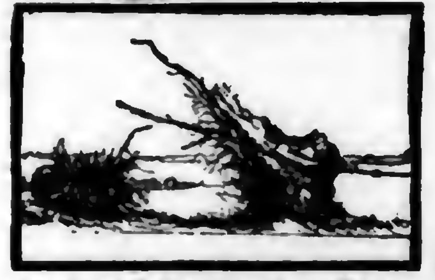
Limited Time Only—to introduce new models in each locality—also *easy terms—one year to pay.*

All I ask is the **privilege** of sending you the Kirstin to TRY 30 DAYS on your own stumps. I want you to **see** for yourself what a wonderful, easy-operating, fast-working, strong, substantial machine it is. When it comes, hook it to your biggest, toughest stumps. See how quickly and easily one man alone handles them. ***Prove All My Claims!*** 3 year guarantee bond with each Kirstin.

A. J. KIRSTIN
General Manager

One Man Alone Pulls Big Stumps

With the KIRSTIN ONE MAN ALONE handles biggest stumps! This feature has enabled thousands of farmers to rid their land of money-losing, land-wasting stumps. **No horses or extra help needed!** No digging, no chopping or other expense! Kirstin's scientific leverage principle is the reason! A few pounds pull or push on handle exerts tons on stump. One man pulls big, little, green, rotton, low-cut, tap-rooted stumps — trees, hedges, or brush. Clears an acre from one anchor. Works in swamps, boggy soil, thick timber, or on steep hill-sides where horses can't work. Easy to move around field.



One Man Pulls Big, Little, Green, Rotten, Low-Cut, Tap-Rooted Stumps

One Man Pulls Trees, Hedges or Brush

One Man Moves Buildings, Pulls Out Stalled Automobiles, Wagons, Tractors, etc.

Kirstin ONE MAN Stump Puller

Single — Double — Triple Power

The Kirstin weighs less and costs less. Has greater speed, strength and power. **Lasts longer! Guaranteed 3 years against breakage — flaw or no flaw!** Pulls stubborn stumps in a few minutes at low cost. Several speeds. Low speed starts stumps—high, **rips 'em out quick!** Patented, quick-cable take-up **saves time**, cable and machine. Government Officials, University Experts, Land Clearing Contractors, thousands of Farmers —ALL AGREE it is the cheapest, quickest and easiest way to pull stumps!

Read These Letters From Kirstin Users

My 13-year-old boy easily pulls big solid birch stumps from red clay with our Kirstin. It does all you claim and more.—G. E. Clark, Brampton, Mich.

It is wonderful the power your Kirstin develops. I use it for clearing steep hillsides of oak, pine and spruce stumps and standing trees. I would not be without it.—E. E. Frederick, Pocket Ranch, Quincy, Cal.

My Kirstin is a wonder. It pulled green oak trees up to 24 inches in diameter with surprising ease, and at less cost than any other method.—Albert Kahle, Gascondale, Mo.

My neighbors are astonished to see the Kirstin yank out the big ones. It pulls my largest stumps.—Martin Peterson, Rio, La.

My Kirstin cleared six acres of solid, sound tamerac and fir stumps measuring up to 60 inches from hard clay soil.—Charles Flannigan, Springdale, Wash.

Last fall I cleared land of stumps up to 24 inches in diameter. However, not a single one sat hard enough to show how much power my Kirstin would develop.—E. Thompson, Culver, Minn.

My Kirstin has pulled probably 4,000 stumps—some locust stumps with 20 to 35 foot roots. No stump puller could be better.—Adam Billett, Wrightsville, Pa.

World's Largest Makers of Stump Pullers

We make 14 sizes and models—including Kirstin One-Man Clutch, One-Man Drum, and the speedy, strong, powerful Horse Power models—the best and most efficient Horse Power Stump Puller you can get.

SEND THE COUPON For My New Book FREE

Contains valuable land clearing information; tells why expensive labor need no longer prevent pulling pesky stumps; why you should have all your land cleared NOW, available for **more crops—more profits!** Reproduces hundreds of letters from Kirstin users like shown above. Fully describes the famous new model Kirstin One Man Stump Puller. Shows how any Kirstin pays its cost in BIGGER CROPS and increased land value the first season—goes on making money **for years.** Send coupon for the FREE BOOK and for Special Offer! Important To Employers!

The Workmen's Compensation Act became effective Jan. 1, 1920, but it seems some employers ignore their obligations, intentionally or through misunderstanding. Failure to provide protection to employes makes the employer liable to a heavy fine in addition to the paying of benefits in accordance with the Compensation schedule.

Our Policy furnishes complete protection as required by the Compensation Act, and if the employer wishes, we can protect him against accident, while engaged in his work, or at all times during the day and night.

Our policyholders are receiving a large return premium each year. (17½% was returned to them in 1924 and 1925) when their premiums were above the minimum.

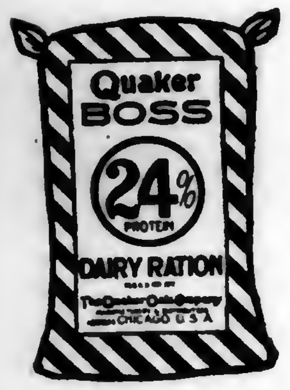
One of these fits your herd

Use the feed that fits *your* farm, *your* herd. That's the way to maximum milk production at lowest possible cost. To give you *exactly* the feed you should have, Quaker makes a complete line, and helps you determine which you should use.

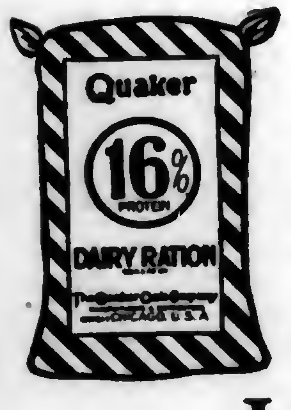


Is this it?

For example: If your cows are getting timothy hay, grass hays, straws, corn stover, or poorer grades of clover here's exactly the feed that fits your needs—Quaker Boss Dairy Ration!

or this?

If they are receiving low grade alfalfa hay, fair clover hay, or real choice mixed clover-and-grass hay, the feed for them is—Quaker Big "Q" Dairy Ration!



or this?

If your cows are getting choice clover hay, good alfalfa hay, or an excellent grade of fine mixed grass-and-clover hay, use this great feed—Quaker Dairy Ration! (Good for dry stock and young growing stock, too.)

In any case—

Whatever protein feed you use, you can profit by adopting Quaker Sugared Schumacher Feed as your carbohydrate supply. It combines ideally with any of the Quaker Dairy Rations. It may be used alone if the cows are getting liberal quantities of choice alfalfa. It's excellent for all stock—dry stock, horses, swine, sheep, steers.

All of these feeds contain molasses in dried form and are rich in the minerals which cows must have to make milk

See the Quaker Dealer near you. He has a stock of these famous Quaker Feeds—"the feeds in striped sacks"—waiting for you.

A Milking Machine That Gave Satisfaction for Seventeen Years

"WE USED our first milking machine between fifteen and twenty years," Mr. I. T. Ginder, of Lancaster County, Pennsylvania, said to me one day a few weeks ago when I stopped at his farm to ask him about his experiences with milking machines. "I don't remember exactly how long it was and I do not want to tell you an untruth."

"Well, let's put it down as seventeen years," I offered as a fair compromise.

"All right," he agreed. "I am positive, tho, we never had any serious trouble with it and if we had new tops on the buckets the whole outfit would be as good as ever."

Then Mr. Ginder told me that for twenty-five years he had been a Holstein breeder and owned at one time a cow which under regular farm conditions of two milkings a day gave 82 pounds of milk a day. He sensed, however, the demand for a higher testing grade of milk so sold his herd and started over again to develop a Guernsey herd.

He bought his first milking machine when he could not get capable help and soon found it gave him more milk than the changing hand milkers could coax from his herd. It never hurt his cows and they seemed to like it; even the heifers, he said, seemed to prefer the machine to hand milking. For the seventeen or more years he used it he kept from fifteen to twenty cows so gave it good use.

Two and a half years ago Mr. Ginder built a new modern dairy barn on one of his two farms and with the record of his old milker in his mind of course he did not hesitate about putting in another one. He is just as much pleased with his two years' service of the new machine as he was with the old one, altho it is a different make.

Satisfied with an Old Automobile!

One might just as well, according to Mr. Ginder's way of putting it, be satisfied with an automobile built fifteen to twenty years ago as to refuse to take advantage of the improvements which have been made in all types of farm equipment during the same period. His new outfit has three buckets and can do his milking considerably faster than any three men he ever had.

At present he has a herd of 26 tuberculin tested Guernseys and sells all his milk to a dealer in a nearby town for four dollars a hundred pounds. It must test five per cent or better and he has to have a fairly uniform flow thruout the year. He has considered the question of retailing his own milk but decided to let the other fellow have the troubles which go with that.—Thos. H. Wittkorn.

Here and There

IN KANSAS.—A bounty is paid for rabbit ears. Kansas farmers sometimes collect enough rabbit-ear bounty to pay their taxes. Besides, they sell the skins and feed the carcasses to hogs and chickens.

IN PENNSYLVANIA.—Since 1915 the Pennsylvania Board of Game Commissioners has released in Pennsylvania nearly 200,000 cottontail rabbits. During the fiscal year of 1925-26, 49,613 cottontails were purchased and shipped into the state at a cost of $1.08 each. Of course, this money came from the hunters' license fund, —but that didn't keep the rabbits from eating farm crops.

Coventry C. T. A. Ends Fifth Year

Ten Herds Exceed 300 Pounds Butterfat

THE Coventry Cow Testing Association operating in Chester County, Pa., finished its fifth year March 1, 1927, with twenty whole-year members. There were 547 cows in the association during all or part of the year. There was an increase of 433 pounds of milk and 19.8 pounds of butterfat above the previous year's results. The results for the members are as follows:

Total average number of cows in the association..	482.09
Avge. per cow: lbs. of milk	7840.
Pounds of butterfat......	308.3
Percentage of butterfat....	3.9
Value of product.........	$323.42
Cost of pasture	11.51
Cost of roughage	43.35
Cost of grain	58.27
Total cost of feed	113.13
Value of product above feed cost	210.29
Returns for $1 expended for feed	2.86

Many cows with exceptionally high records are found in the Coventry Cow Testing Association. These cows are grouped as follows:

Group 1—Above 500 lbs. butterfat, 4 cows.

Group 2—Between 400 and 500 lbs. butterfat, 48 cows.

Group 3—Between 300 and 400 lbs. butterfat, 180 cows.

Total number producing above 300 lbs. butterfat, 232 cows.

Fifty-two cows produced over 400 pounds of butterfat during the year.

Ten herds with an average of 5 or more cows exceeded an average production of 300 pounds of butterfat. A complete list of these herds follows:

White Diarrhea

Remarkable Experience of Mrs. C. M. Bradshaw in preventing White Diarrhea

The following letter will no doubt be of utmost interest to poultry raisers who have had serious losses from White Diarrhea. We will let Mrs. Bradshaw tell of her experience in her own words:

"Dear Sir: I see reports of so many losing their little chicks with White Diarrhea, so thought I would tell my experience. I used to lose a great many from this cause, tried many remedies and was about discouraged. As a last resort I sent to the **Walker Remedy Co., Dept. 517, Waterloo, Iowa,** for their Walko White Diarrhea Remedy. I used two 50c packages, raised 300 White Wyandottes and never lost one or had one sick after giving the medicine and my chickens are larger and healthier than ever before. I have found this company thoroughly reliable and always get the remedy by return mail."—Mrs. C. M. Bradshaw, Beaconsfield, Iowa.

Cause of White Diarrhea

White Diarrhea is caused by microscopic organisms which multiply with great rapidity in the intestines of diseased birds and enormous numbers are discharged with the droppings. Readers are warned to beware of White Diarrhea. Don't wait until it kills half your chicks. Take the "stitch in time that saves nine." Remember, there is scarcely a hatch without some infected chicks. Don't let these few infect your entire flock. Prevent it. Give Walko in all drinking water for the first two weeks and you won't lose one chick where you lost hundreds before. These letters prove it:

Never Lost a Single Chick

Mrs. L. L. Tam, Burnetts Creek, Ind., writes: "I have lost my share of chicks from White Diarrhea. Finally I sent for two packages of Walko. I raised over 500 chicks and I never lost a single chick from White Diarrhea. Walko not only prevents White Diarrhea, but it gives the chicks strength and vigor; they develop quicker and feather earlier."

Never Lost One After First Dose

Mrs. Ethel Rhoades, Shenandoah, Iowa, writes: "My first incubator chicks, when but a few days old, began to die by the dozens with White Diarrhea. I tried different remedies and was about discouraged with the chicken business. Finally, I sent to the **Walker Remedy Co., Waterloo, Iowa,** for a box of their Walko White Diarrhea Remedy. It's just the only thing for this terrible disease. We raised 700 thrifty, healthy chicks and never lost a single chick after the first dose."

You Run No Risk

We will send Walko White Diarrhea Remedy entirely at our risk—postage prepaid—so you can see for yourself what a wonder-working remedy it is for White Diarrhea in baby chicks. So you can prove—as thousands have proven—that it will stop your losses and double, treble, even quadruple your profits. Send 50c for package of Walko (or $1.00 for extra large box)—give it in all drinking water and watch results. You'll find you won't lose one chick where you lost dozens before. It's a positive fact. You run no risk. We guarantee to refund your money promptly if you don't find it the greatest little chick saver you ever used. The Pioneer National Bank, the oldest and strongest bank in Waterloo, Iowa, stands back of our guarantee.

WALKER REMEDY CO., Dept. 517
Waterloo, Iowa.

Send me the [ ] 50c regular size (or [ ] $1 economical large size) package of Walko White Diarrhea Remedy to try at your risk. Send it on your positive guarantee to promptly refund my money if not satisfied in every way. I am enclosing 50c (or $1.00). (P. O. money order, check or currency acceptable.)

New Jap Beetle Rules Go Into Effect

REGULATIONS that will govern the movement of farm products this summer from the area infested by the Japanese beetle have just been announced by Secretary William B. Duryee, of the New Jersey State Department of Agriculture. The rulings take effect April 1st.

The general statement governing the area is that all farm products, including vegetables, fruits and forage crops, are prohibited movement out of the regulated area from June 15 to October 15th. An exception is made to this, however, for those farm crops which can be treated or inspected so that they will be free from infestation. Machine grading satisfies this requirement for crops which can be so handled. After inspection and approval at various centralized points, they may be certified for shipment outside the regulated district.

Certain articles of produce such as raspberries, blackberries, hay and straw, which are difficult, if not impossible, to free from infestation, cannot be allowed movement from the infested territory unless chemical means of treatment are devised.

Another provision, however, permits the certification of all articles of farm produce grown in areas where the fact is established that no infestation of the Japanese beetle exists. Cumberland County, New Jersey, is such an area, and as a consequence its canhouse tomatoes may be shipped to Baltimore as formerly.

No restrictions are placed on the movement of white or sweet potatoes that are free from soil; this is likewise true of watermelons, dried fruits, dried vegetables, seeds and grains. Hay and straw are excluded from the quarantine regulations when these products are used to pack material or articles other than fruits and vegetables.

Agree Better Milk Is a Crying Need

A COMPLETE investigation of milk marketing in New Jersey is to be made, in an effort to improve the quality of the state's milk and to increase the market demand.

This decision was reached soon after H. W. Jeffers, Plainsboro, chairman of the executive committee of the New Jersey Milk Marketing Council, called that body to order recently in the State Department of Agriculture. The problem most urgently pressing for solution, the committee agreed, is the need of uniformly high grade milk.

It was decided to wage a state-wide campaign to show the value of good New Jersey milk, and to increase its consumption in this way.

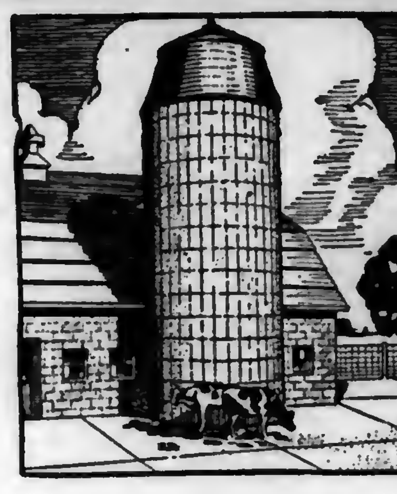
In the interest of health it was suggested that the New Jersey Sanitary Code, as it affects milk, be revised, so that there will be uniformity in municipal rulings governing production and distribution of milk.

More Farmers Have Phones

MORE than 124,600 farms, or 62 per cent of all farms in Pennsylvania, have telephones, according to the latest estimate of the Bureau of Statistics, State Department of Agriculture. Seven years ago about 100,000 farms had telephones.

The leading counties in percentage of farms having telephones are: Bradford, 87 per cent; Butler, 82 per cent; Chester, 80 per cent; Clarion, 76 per cent; Cumberland, 79 per cent; Delaware, 75 per cent; Franklin, 77 per cent; Greene, 78 per cent; Juniata, 77 per cent; Lycoming 76 per cent; Philadelphia, 93 per cent; Susquehanna, 79 per cent; Union, 77 per cent; Washington, 85 per cent; Westmoreland, 79 per cent.

Sure Death to Corn Borers!



Government authorities agree that ensiling of corn is sure death to the European corn borer.

They also agree that silage increases milk yield, as numerous tests have shown.

Build a Concrete Silo Feed Cattle From It All Winter

A Concrete silo solves the winter feeding problem, especially when drouth makes short hay crops.

"Concrete Stave Silos." Our free booklet tells the whole story. Write for your copy.

Why Pay More and Get Less?

Dairymen who have had the most experience with milking machines will tell you—

"Get a Hinman!"

That's the milker for reliable, profitable, year-after-year results. Made *right* from the start—and *proved* by *19 years' success on thousands of dairies.*

Yet it costs you less—both to buy and to operate! Because it's so simple! And that's also why it is the dependable, practical, successful milker of today.

Write for Catalog

Full of practical, interesting milker *experience.* See what's in this book. Send a postal today. Address

HINMAN MILKING MACHINE CO.
First St., Oneida, N.Y.

HINMAN
PORTABLE GAS ENGINE • STANDARD • PORTABLE ELECTRIC
MILKERS

Easy Milking

How much easier—and pleasanter—to milk cows that have perfect udders and teats, soft, silky, pliable. No nervous twitching, no kicking or holding back of the milk.

Thousands of dairymen use Bag Balm regularly as their guardian of the udder and teats. For quickly healing sores, chaps, cuts, inflammation, caked bag, bunches, cow pox, etc., it has no equal. In the most stubborn hurts the first application starts quick relief.

Bag Balm is sanitary, pleasant to use and does not taint the milk. Big 10-ounce can of this wonderful penetrating ointment only 60c, at feed dealers, general stores, druggists. If you have trouble getting Bag Balm we will send by mail, postage paid.

WHY MILK BY HAND?
When a boy can take the place of two men.

Let Your Boy Save You Money

"I wish you could see my 13 year old boy do the milking", writes one Perfection user. "With my Perfection he does the work of two hand milkers."

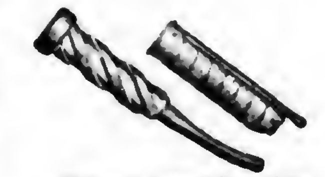
Cash in on your boy's interest in fine machinery. It will easily save you the time of one or two men every morning and evening. Time is money. You can do more in the field.

Yet the boy will do more than save labor. He will do a better job of milking because the Perfection is never lazy. Its gentle suction, followed by a downward squeeze and a period of rest, is just like the natural action of the calf. Cows like it and give more milk.

Perfection does away with all the drudgery of hand milking, and the new sanitary two piece teat cup makes it quick and easy to clean. One pull and it's instantly apart for washing.

The Perfection Milker is the old reliable, backed by 14 years successful service. On farm or dairy it is a profitable investment, and you can depend upon a Perfection to give you long and satisfactory service.

Why milk by hand when Perfection saves needed and valuable time. Send today for free catalog.



The new 2 piece Teat Cup. One pull and it is all apart for quick and easy cleaning.

PERFECTION MILKER

Eureka Potato Machines

Make Money for Potato Growers

Eureka Potato Machines take hard work out of potato growing. They reduce time and labor costs. They assure bigger yields.

Potato Cutter Cuts uniform seed. Operates with both hands free for feeding.

Potato Planter One man machines doing five operations in one. Over twenty-three years' success.

Traction Sprayer Insures the crop. Sizes, 4 or 6 rows. 60 to 100 gallon tanks. Many styles of booms.

Riding Mulcher Breaks crusts, mulches soil, and kills weeds when potato crop is young and tender. 8, 10 and 12 ft. sizes. Many other uses, with or without seeding attachment.

Potato Digger Famous for getting all the potatoes, separating and standing hard use. With or without engine attachment or tractor attachment.

All machines in stock near you

It's Easy to Stop Oat Smut Thief

(Continued from page 3)

infection. High soil moisture combined with high soil temperature results in complete elimination of smutting, while low soil moisture with medium temperatures is accompanied by relatively high percentages of smutted plants. Low soil temperatures usually result in a reduction in the amount of smut but this is not as marked as in the case of high temperatures.

Sowing oats early in the spring in a well-drained and a well-prepared seed bed will aid in reducing the amount of smut. Seed treatment, however, should always be practiced if the seed comes from a field showing any smut. A treatment that will control this smut effectively must be able to penetrate between the oat kernel and hull to kill the smut mycelium there, as well as any chance smut spores that may be clinging to the outside of the seed. Formaldehyde has been found to be the most efficient material for this purpose. Further, its cost is so low that it takes only about 2 to 3 cents' worth of formaldehyde to treat all the oats planted on an acre of ground.

Boys will be boys.

Dry copper carbonate dust,—while a very efficient material for wheat smut,—is not a practical treatment for oat smut, since it does not penetrate far enough to kill all of the smut, as formaldehyde does.

Directions for Treating Oats

MATERIALS NEEDED:

1. A small hand sprayer of the atomizer type holding one quart. (Price 50c to $1.50.)
2. One pint of 40 per cent formaldehyde for each fifty bushels of oats to be treated.
3. Grain sacks or blankets for covering treated oats.

PROCEDURE:

1. Pile the oat seed, after cleaning with a fanning mill, on a clean barn floor or canvas, or in a tight wagon box.
2. Dilute one pint of 40 per cent formaldehyde solution (formalin) with one pint of water and pour into a quart hand sprayer of the type commonly used about stables. This amount (one quart) will treat fifty bushels of seed. If a smaller quantity is to be treated, the amount of formaldehyde should be lessened proportionately.
3. While the oats are being shoveled from one pile to another, spray a little of the solution over each shovelful. Two strokes of the handle give about the right amount.
4. After all the oats are treated in this way, shovel them into a pile and cover with blankets or canvas, or with grain sacks which have been sprayed inside and out with the solution.
5. Allow the seed to remain covered for at least five hours, after which it may be bagged and drilled.
6. Treatment may be made any time previous to sowing.

ADVANTAGES:

1. The treatment does not wet the seed thus making it possible to treat and drill on the same day.
2. The seed is not injured when care is taken, and does not stick to the drill.

There's a Right and a Wrong Way of Thinning the Woodlot

CALVIN R. BASHORE of Bethel Township, Berks County, Pennsylvania, is a man after mine own heart. He lately gave a splendid address at the annual meeting of the Berks County Agricultural Extension Association. He said, in part:

"About 10 years ago I purchased 72 acres of woodland which adjoins my farm for $550, which was, of course, a great bargain. This woodlot I had long coveted and the owners wanted to sell to me, but I did not have the means before. The saw mill was in it about thirty years ago and cut the valuable timber. By this time a great many trees had grown up again ready for the mill, as in those days they did not cut so closely as we do now. I have cut about 25,000 feet of lumber. The first five years, I did not do much thinning, but took out heavy timber for lumber.

"For the last five years we have thinned about six acres per year for which we realized about $600 or $100 an acre. I figure it cost me about one-half for cutting and hauling which leaves me $50 net per acre.

"When thinning I cut about one-half the trees, cutting all the dead, crippled, ill-shaped, dogwood, sassafras, gum, and all such varieties which have no lumber value. Not only does it look nicer after the thinning but the remaining trees grow so much faster.

"Some people make the mistake of cutting everything as they go and then it is worthless for many years. By thinning this way when I am once over I can start again and thus have a continuous income.

"It hurts me to see a man cut a nice, healthy young tree for fuel wood. There is nothing finer than a forest of straight, healthy, growing trees. We have a sawmill on our farm with water power. This we operate only as a side issue—when other work on the farm is not pressing.

"We utilize everything, even the sawdust which we sell to the butchers for $6 a load.

"We get $9 a load for wood—about three-quarters of a cord cut to stove lengths.

"Our woodlot is a paying proposition. It is profitable in two ways—it brings in cash money and keeps my men employed in winter."—R. I. W.

Pennsylvania Legislature Busy During Closing Weeks

WITH only two more weeks to go the Pennsylvania Legislature is working overtime to handle the numerous bills which must be put thru the readings and passed or defeated before final adjournment on April 14th.

MAY RESTORE AMOUNTS CUT FROM PENN STATE BILL.—Several hundred appropriation bills have been up for consideration. The appropriation for the Pennsylvania State College was reduced $700,000 by the Senate last week but latest reports indicate that a large portion, if not all, of this amount will be restored in the House. The Senate reduced the amount for research from $403,000 to $100,000 and the amount for agricultural extension work from $650,000 to $400,000.

TWO MILLIONS FOR INDEMNITIES.—The general appropriations bill, as amended in the House, carries a total of $4,758,000 for the Department of Agriculture, which amount includes $125,000 for state aid to county fairs. Of the total figure, $2,000,000 is specified for animal indemnity, $1,000,000 for the work of the Bureau of Animal Industry, $517,000 for the enforcement of the dog law and $1,016,000 for the work of the Department outside the Bureau of Animal Industry.

THREE-CENT GAS TAX ALMOST ASSURED.—The three-cent gasoline tax bill has been reported favorably by a House committee and it appears that the bill will pass the House. It provides a two-cent permanent tax and a one-cent temporary tax for two years.

MAY RAISE HUNTERS' LICENSE FEE.—The bill providing for the creating of a Revenue Department for the purpose of collecting all state taxes has passed the House.

The Salus bill regulating the sale and possession of firearms and providing for the licensure of sellers and purchasers of revolvers and pistols has been defeated in the Senate.

A bill increasing the resident hunter's license fee from $1.25 to $2.00 has passed the Senate while a bill increasing the fishing license fee to $2.00 was defeated.

WOULD KILL OLEO RETAILERS' TAX.—The oleo bill which would eliminate the $100 license fee now being paid by retailers who sell oleo, came to life again during the past week. It was reported favorably from the House committee on health and sanitation and was later recommitted. It is likely that a hearing will be held on the bill soon.

MILK CONTROL BOARD PROPOSED.—A State Sanitary Milk Control Board is provided for in a bill just introduced. The board is to be composed of the Secretary of Health, Secretary of Agriculture, director-chief chemist of the Bureau of Foods and Chemistry, director of the Bureau of Animal Industry, chief of the Bureau of Communicable Diseases, chief of the Division of Milk Control and three members to be appointed by the Governor. The bill provides for certain grades of milk and cream, for the establishment of rules and regulations regarding the production, transportation, cooling, pasteurizing, etc., of milk, for permits to be issued to all milk dealers on payment of a $5.00 fee, and for procedure in case of violation of any rules or regulations.

FATE OF ELECTION REFORM UNCERTAIN.—The election reform situation has cleared some during the week. Three of the bills prepared and introduced at the request of Governor Fisher passed the Senate with certain amendments which make the bills somewhat less drastic but still effective. While a bill limiting the campaign fund has been scrapped apparently in the Senate, a commission to make a study of the whole election law situation is asked for in a Senate bill. Whether the House will accept the election bills as amended in the Senate, insist upon the bills going thru as originally introduced or make further amendments is not known at this writing.—J.

Three Demonstrations Scheduled

Machines Will Show What They Can Do

THREE great working demonstrations of labor-saving implements and machinery for fruit and vegetable growers will be held in New Jersey during the latter part of April. These exhibitions will be held in three widely separated parts of the state, giving growers from all sections an opportunity to attend.

The representatives of the machinery companies and the fruit, vegetable and agricultural engineering specialists of the New Jersey State College of Agriculture will open the series of demonstrations in South Jersey and move northward after the manner of a traveling circus. The schedule is as follows:

Cumberland County, Tuesday, April 19.—Del-Bay Farms (formerly Seabrook Farms) Bridgeton. (Five miles from Bridgeton on the Woodbury road.)

Burlington County, Thursday, April 21.—Campbell Soup Company Farm No. 2, Cinnaminson. (Along the main road from Moorestown to Riverton.)

Middlesex County, Saturday, April 23.—Vegetable Farm, New Jersey Agricultural Experiment Station, New Brunswick. (One mile from New Brunswick on Ryder's Lane.)

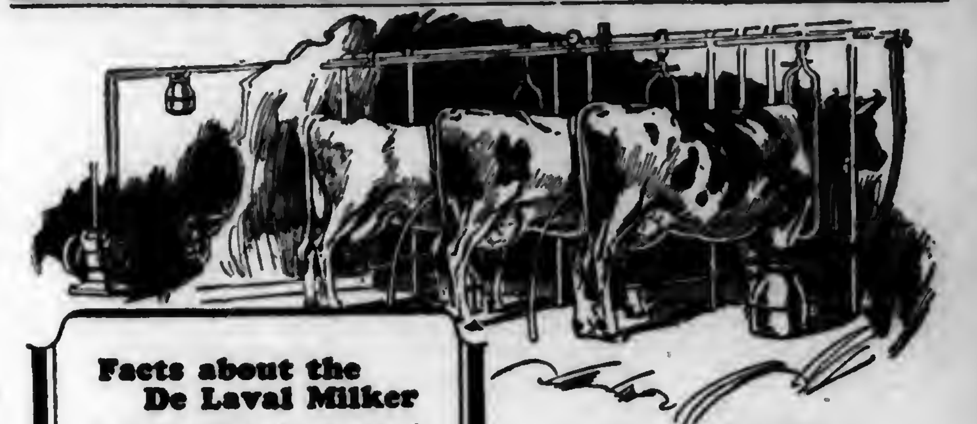
One feature of special interest to all farmers will be the working exhibits of various kinds of garden tractors. There will be other vegetable machinery, too,—transplanters, fertilizer distributors, washers for vegetables, dusting and spraying outfits.

For fruit growers there will be power sprayers and dusters of the latest design, cultivating machinery and packages.

More than 3000 growers attended a similar series of demonstrations held in the spring of 1924. Six meetings were held that year on consecutive days. This year there is a day between meetings so that all-day demonstrations can be held, with plenty of time for moving the machinery to the scene of the next meeting.

Labor usually constitutes 40 to 50 per cent of the cost of growing vegetable crops, a fact which shows why New Jersey vegetable growers are interested in these demonstrations of machines that save man labor and time.—W.

Don't eat raw or partly cooked pork, warns the U. S. D. A. A painful and frequently fatal disease called trichinosis, often results from eating uncooked pork. People have died from sampling sausage while making it. Trichinosis resembles typhoid fever. It is caused by minute parasites, great numbers of which are found sometimes in the flesh of perfectly healthy appearing swine.



Facts about the De Laval Milker

1. **650,000** cows now milked the De Laval Way.
2. De Laval Milkers now in their eleventh year of use.
3. **83.27%** of the users report average saving of 2 hrs., 12 mins. per day.*
4. **97.13%** of the users say it agrees with their cows.*
5. **99.4%** of the users say they get as much or more milk as by hand milking.*
6. **9.49%** average increase in production per cow reported by those who have records.*
7. **94.80%** of users say their De Laval is easy to keep in a clean and sanitary condition.*
8. Average bacteria count of all reporting, **14,542**—**62%** report counts of 10,000 and less.*
9. **96.45%** of De Laval users say their milker is "the best," "one of the best," or a "good" investment.*

*Based on reports from 1844 De Laval Milker users in all parts of the U. S. and Canada.

TIME SAVED is MONEY EARNED

HAND milking is at best a slow, costly and tedious operation, exacting in its demands on your time. Time that might be profitably spent by yourself or the hired man in doing other work is consumed on the milk stool under a cow. Result? Either the other work must suffer or extra hours must be spent in finishing it. YOUR time is worth money and you are paying your hired man well for his time.

Of more than 1800 users who answered a recent questionnaire, 83.27 per cent state that the De Laval Milker saves them an average of over two hours per day—saves half the time in milking. Two hours per day, figured over the period of a year, represents a tremendous saving when translated into terms of either cash, labor or time. Keep in mind also that saving in time is only part of the advantage of a De Laval Milker—it milks better and produces more and cleaner milk.

The Big Four of a Perfect Silo

The *Unadilla* Silo provides convenience, safety, efficiency, profits, and satisfaction to its owners.

Silage Keeping Qualities

Air-tight—water-tight staves and doors. Feed settles compactly and cures evenly. Heating and fermenting processes aided by air-tight wood construction.

Strength

Sound, close grained, tight-jointed wood. Silo is firmly anchored to ground. Truly called a tower of strength.

Safety

Ladder formed by door fasteners—a great silo convenience and safety device. Hoops *start* and *end* at front. You can easily take up every hoop 12 inches at front.

Fine Appearance

Straight, graceful, outstanding—the Unadilla silo is an addition to any farm, however fine.

You'll never know real silo comfort until you have a Unadilla. It can be bought on easy terms if you like. There is a saving for you on early shipment orders with liberal discount for cash.

Send for our handsome, big, illustrated catalog telling you of all Unadilla advantages—also describing Unadilla storage tanks, water tubs and vats.

THE PENNSYLVANIA FARMER PHILADELPHIA, PA.

Judith of Blue Lake Ranch

By JACKSON GREGORY

Copyright Charles Scribner's Sons

The Story Thus Far

JUDITH SANFORD, part owner in Blue Lake Ranch since the death of her father, Luke Sanford, fired Bayne Trevors, general manager, because he wasn't square. The men grumbled. Trevors made trouble in every way possible. Bud Lee, horse foreman, and old Carson promised to stay. Judith could depend on them and on "Doc" Tripp, veterinarian and a friend of her father.

Busy days followed. Mrs. Simpson took up her duties caring for the ranch house and Pollock Hampton, part owner of the ranch, arrived with his guests—Major and Mrs. Langworthy and Marcia, their daughter; Marshal Rogers, lawyer, and Frank Farris, artist.

The night of Marcia's farewell party, just after Lee had kissed Judith and cursed himself immediately for doing it, he and Carson rode into Rocky Bend. Quinnion, the man Judith believed responsible for the death of her father, had been talking, not only about Lee but about Judith. In a back room of the "Jailbird" Lee found his man and in the fight which followed injured him, forced him to say he'd been lying and to leave town without delay.

Months passed and then suddenly one day Carson and Lee were ordered by Hampton to have 500 cattle and 100 horses ready for immediate sale to Doan, Rockwell & Haight. Judith hadn't consulted either of them. Carson was angry, Lee deeply hurt. That evening Lee, still loyal in spite of Judith's decision to sell the stock at a ridiculously low figure, went to the ranch-house to talk it over and to tell her that he would guarantee an enormous gain if she gave him time. To his surprise he learned from Marcia, recently returned, that Judith was in San Francisco, had been since Saturday! Hampton when giving his order hadn't mentioned the fact. Lee was puzzled and after talking with Hampton, fearful for Judith. He believed Bayne Trevors was making a last desperate play to ruin the Blue Lake Ranch. Bud went for Carson and together they searched Judith's room. A fake note from Dr. Tripp was found there and Lee knew that Trevors and his gang had her in their power.

Continued from last week

"YOU fellows have butted in all I'll stand for!" Hampton cried at them. "I tell you I'm running this outfit and what I say goes. I don't believe that Trevors or any man living would do a trick like that. I tell you it's ridiculous. And, no matter where Judith is, when she is not here I run the ranch. I need money; she needs money; we've got a fair chance to sell; I've passed my word we are going to sell; and by gosh, we are going to sell."

In another mood, Hampton would not have spoken this way. In another mood and with time for arguments, Bud Lee would have expostulated with him. Now, however, Lee said tersely:

"Carson, it's up to you and me. Get the boys out, to the last man of them. Turn over every hoof of cattle and horses back into the Upper End. We've got to do it tonight. Get them into the little valley above the plateau. We can hold them there, even if they try to force our hands, which will be like them. I take this to be Trevors's last big play. And, by thunder, he has mighty near gotten away with it!"

"Don't you dare do it!" blazed out young Hampton. "Carson, you take orders from me. Get out of this house and leave the stock where they are. In the morning—"

"Go ahead, Carson," cut in Lee's hard voice. "I'll take care of Hampton here."

"You will, will you?" cried Hampton.

With one bound he was at the table, jerking open a drawer. As his hand sought the weapon lying there, Bud Lee was on him, throwing him back. Carson looked at them a moment, then went to the door.

"You're right, Bud," he said calmly as he went out.

LEE, forcing himself to show a calmness like Carson's, said gently to Hampton:

"Can't you see the play? It's up to you to kick in and stop it. There's a telephone; call up the buyers in Rocky Bend. They're there now, or at least their drivers are, if they're coming out here in the morning. Tell them the deal is [illegible]"

"Can't I see?" said Hampton, writhing out of Lee's hands, on his way to the door. "You bet I can see! If you and Carson think that you can run me—"

Then, for good and all, Lee gave over trying to reason with Hampton. There was too much to be done to waste time. He drew Hampton back, forcing him against the wall. As he tried to call out, Lee's hand over his mouth smothered his words.

"You're coming with me," he said sharply. "Right now."

Tho he struggled, Hampton was little more than a baby in the horse foreman's muscular grip. Tripped, with a heel behind his calf, he fell heavily, Lee upon him. Both arms were pinioned behind him, and Lee's neckerchief thrust into his mouth. He writhed in impotent rage. His outcries died in his throat, the loudest of them not reaching Marcia's ears above the creaking of her rocking-chair. Lee still held Hampton's tied hands gripped in his own. So the two men went out the back door, down toward the corrals.

Seeing men hurrying from the bunk-house to the stables under Carson's snapping orders, Lee called out for Tommy Burkitt. And in a moment, with bulging eyes, Burkitt came running.

"Bring out three horses, Tommy," Lee commanded, giving no explanation. "Hurry, and keep your mouth shut."

Burkitt obeyed Lee as he always did, silently and unquestioningly. Very soon he returned, riding, leading two saddled horses.

"Get into the saddle, Hampton," said Lee sternly. "There's no time for nonsense. Get up or I'll put you up."

"Curse you," Hampton said in smothered anger, his tone making clear the meaning of the indistinct mutter. But he climbed into the saddle.

"Come on, Tommy." Lee, too, was up, his hand on Hampton's reins. "We're going up to the old cabin. You're going to ride herd on Hampton while I do something else. I'll tell you everything when we get there."

So they rode into the night, headed toward the narrow passes of the Upper End, Hampton and Lee side by side, Tommy Burkitt staring after them as he followed. No longer were Bud Lee's thoughts with his captive, nor with the herds Carson's men were driving back to the higher pastures. They were entirely for Judith, and they were filled with fear. She had been gone for three full days; she was somewhere in the clutch of Trevors or of one of his cutthroats. He thought of her, of Quinnion's red-rimmed, evil eyes, and as he had not prayed in all the years of his life Bud Lee prayed that night.

Lee left Hampton securely bound and under Tommy Burkitt's watchful eyes in the old cabin, and rode straight back to the ranch-house. Marcia was not yet in bed and he made his first call upon her. Marcia was delighted, then vaguely perturbed, as he made known his errand without giving any reason. He wanted to see the note from Judith. Marcia brought it, wondering. He carried it with him to Judith's office and compared it carefully with scraps of her handwriting which he found there. The result of his study was what he had expected: the writing of the note to Marcia was sufficiently like Judith's to pass muster to an uncritical eye, looking, in fact, what it purported to be, a very hasty scrawl. But Lee decided that Judith had not written it. He slipped it into his pocket.

Tripp was waiting for him, impatient and worried, when he came back from the Upper End. From Tripp he learned that one of the men, a fellow the boys called Yellow-jacket, had unexpectedly asked for his time Saturday afternoon and had left the ranch, saying that he was sick.

"He's the chap who brought the fake note from you," said Lee. "It's open and shut, Doc. Another one of Trevors's men that we ought to have fired long ago. The one thing I can't get, is why he didn't do a finished job of it and hang around until Miss Sanford left, then get away with the note. It would have left no evidence behind him."

"She must have locked her door and windows when she went out," was Tripp's solution. "And probably he didn't hang around wasting time and taking chances."

Tripp's boyish face had lost its youthful look. His eyes, meeting Lee's steadily, had in them an expression like Lee's.

"If it's Quinnion—" Tripp began. Then he stopped abruptly.

LEE and Tripp were in the office not above fifteen minutes. Then Tripp left to return to the Lower End, to get the rest of the men out, to help in the big drive of cattle and horses which must be returned to the shut-in valleys of the Upper End. Lee went to the bunk-house, slipped revolver and cartridges into his pockets, took a rifle and rode again to the old cabin.

"It's Trevors's big, last play," he told himself gravely, over and over. "He'll be backing it up strong, playing his hand for all that there's in it, and he'll have taken time and care to fill in his hand so that we're bucking a royal flush. And there's only one way to beat a royal flush, and that's with a gun. But I can't quite see the whole play, Trevors; I can't quite see it."

There were enough men to do the night's work without him and Tommy Burkitt, and Lee gave no thought now to Carson, swearing in the darkness of some shadow-filled gorge. He did not know what the morrow's work would be for him, but he made his preparations none the less, eager for the coming dawn. He fried many slices of bacon while Hampton glared at him and Tommy watched him interestedly; he made a light, compact lunch, such as best "sticks to a man's ribs," wrapped it in heavy paper and slipped the package into the bosom of his shirt. He completed his equipment with a fresh bag of tobacco and many matches. He loaded his rifle, added a plentiful supply of ammunition to his outfit from the box on the shelf. Then he went outside to be alone, to frown at the black wall of the night, to think, to await the dawn.

"I'm coming to you, Judith girl," he whispered over and over to himself. "Somehow."

DAWN trembled over the mountain-tops, grew pale rose and warm pink and glorious red in the eastern sky, and Bud Lee, throwing down the coiled rope which had been put into service a dozen times during the night, said shortly:

"Here we camp, boys. I'll leave you my fried bacon, Tommy, and take the raw with me. You're not even to light a fire. And you're to stick here until I come for you."

They had traveled deeper and deeper into the fastnesses of the mountains, mounting higher and higher until now, in a nest of crags and cliffs, on a flank of Devil's Mountain, they could look far to the westward and catch brief glimpses of the river from Blue Lake slipping out of the shadows. They had gone a way which Lee knew intimately, traveling a trail which brought them again and again under broken cliffs, where they must use hands and feet manfully, and now and then make service of a loop of rope cast up over an outjutting crag.

"They'll never follow us here, Tommy," he said confidently. "If they do, you've got the drop on them, and you've got a rifle. You know what to do, Tommy, old man."

"I know, Bud," said Tommy, his eyes shining. For never before had Bud Lee called him that—"old man."

Long ago the gag had been removed from Hampton's mouth. Long ago, consequently, Hampton had said his say, had made his promises. When he got out of this—glory to be! wouldn't he square the deal, tho! Did Lee know what kidnapping was? That there were such things as laws, such places as prisons?

"Here," said Lee not unkindly, "I'll loosen the rope about your wrists. That's all the chances we're going to take with you. Come, be a sport, my boy. You're the right sort inside; just as soon as this fracas is over, when you know that we were right and that all this is a put-up job on you, your friend Trevors playing you for a sucker and getting Miss Sanford out of the way, you'll say we were right and I know it."

"That so?" snapped Hampton. "You just start now and keep going, Bud Lee, if you don't want to do time in the jug."

MUTILATED TEXT

Tommy Burkitt, staring back across the broken miles of mountain, canyon and forest, his eyes frowning, was muttering:

"Look at that, Bud. What do you make of it?"

For a little Lee did not answer. He and Tommy and Hampton, standing among the rocks, turned their eyes together toward the hills rimming in the northern side of Blue Lake ranch.

"I make out," said Lee slowly, "that Trevors means business and that Carson has got his work cut out for him this morning, Tommy."

THE thing which had caught the boy's eyes was a blaze on the ridge, its flames leaping and licking at the thinning darkness, its smoke a black smudge on the horizon, staining the glow of the dawn. And farther along the same ridge was a second blaze, smaller with distance, but growing as it licked at the dry brush. Still farther a third.

"If that fire ever gets a good start," muttered Lee heavily, "it's going to sweep the ranch. God knows where it will stop. And just how Carson is going to fight fire with one hand and hold his stock with the other, I don't know."

But even then he turned his eyes away from the ranch, sweeping the ragged jumble of mountains about him. Judith was gone. Judith needed him and he did not dare try to estimate the soreness of her need. What did it matter that Carson and Tripp and the rest had their problems to face back there? There was only one thing in all of the wide world that mattered. And he did not even know where she was, north, south, east or west! Somewhere in these mountains, no doubt. But where, when a man might ride a hundred miles this way or that and have no sign if he passed within calling distance of her?

In his heart Bud Lee prayed, as he had prayed last night, asking God that he might come to Judith. And it seemed to him, standing close to God on the rocky heights, that his prayer had been heard and answered. For, far off to the east, still farther in the solitude of the mountains, rising from a rugged peak, a thin line of smoke rose into the paling sky.

It might be that Judith was there. It might be that she was scores of miles from the beckoning smoke. But Lee had asked a sign and there, like a slender finger pointing to the brightening sky, was a sign.

He stooped swiftly for rifle and rope and packet of bacon.

"Where you goin', Bud?" asked Tommy.

"To Judith," answered Bud Lee gently.

For in his heart was that faith which is born of love.

TO JUDITH life had changed from a pleasant game in the sunshine to a hideous nightmare. In a few dragging hours she had come to know incredulity, anxiety, misery, black hopelessness and icy terror. She had come to look thru a man's eyes at that which lay in his heart, to feel for the first time in her fearless life that the fortitude was slipping out of her bosom, that the strength was melting in her.

She lay on a rude bed of fir-boughs, an utter, impenetrable blackness like a palpable weight on her eyeballs. When it was silent about her, and for the most part silence reigned with the oppressive gloom, she yearned so for a little sound that she moved her foot along the rock floor under her or snapped a dry twig between her fingers or even listened eagerly for the coming of the terrible woman who was her jailer.

Gropingly, again and again she went over in her thoughts the long journey here, seeking fruitlessly to know whether she had come north, south, or east from the ranch-house. It was one of these three directions, for there were no such mountains as these to the west, no such monster cliffs, no deep cavern reaching into the bowels of the earth. The sense that, even were she freed, she had no slightest idea where she was, which way she must go, stunned her.

"Will I go mad after a while?" she wondered miserably. "Am I already going mad? Oh, God, have mercy on me—"

From the instant when, Saturday night, she had been gripped suddenly in a man's strong arms, when another man had smothered her outcry, she had known in her heart that Bayne Trevors was taking his desperate chance in the game. But in the darkness she had had only the two vague blurs of their bodies to guess at. They had been masked; her own eyes were covered, a bandage brought tightly over them, her mouth gagged, her hands tied behind her, her body lifted into the saddle—all in a moment. Neither man had spoken. Then, tied in the saddle, she only knew that she was riding, that one man rode in front of her, leading her horse, the other following close behind. The sense of direction which she had lost in those first five minute she had never been given opportunity to regain. She might, even now, be a gunshot from her own ranch; she might be twenty miles from it.

For the greater part of that Saturday night they had ridden; and when trails died under them and rocks rose steeply, they walked, she and one man. The other stayed with the horses. Not once did she hear a man's voice; she did not know whether it was Trevors himself, or Quinnion, or some utter stranger who forced her into this hiding.

They had climbed cliffs, now going down into chasms, now following roaring creeks or making their way along the spine of some rocky ridge. The one man with her was masked, his eyes rather guessed at than seen thru the slits of his bandanna handkerchief. He had jerked the bandage from her eyes, since blindfolded she would make such poor progress. But still he guarded his tongue.

"He would speak," she thought, "but that I would recognize his voice. Trevors or Quinnion? Which?"

Feeling the first quick spurt of hope when she saw that there was but one man to deal with, she was aquiver to seize the first opportunity for flight. But that hope died swiftly as she recognized that no such opportunity was to be granted her. Once she paused, looking to a possible leap over a low ledge and escape in a thick bit of timber. But the two eyes thru the slits in the improvised mask had been keen and quick, a heavy hand was laid on her arm, she felt the fingers bite into her flesh as he sought to drive into her a full comprehension of his grim determination that she should not escape.

IT WAS when they had clambered high upon a mass of tumbled boulders, topping a ridge, that Judith had seen the man's face. Docilely she had obeyed his gestures for an hour; now, suddenly maddened at the silence and the mask over his face, she sprang unexpectedly upon him, shoving him from the rock on which he had stepped, snatching off his mask as she did so. For the first time she heard his voice, cursing her coolly as he gripped and held her.

It was Bayne Trevors, at last come out into the open, his eyes hard on hers.

"It's just as well that you know whom you are up against," he said as he held her with his hand heavy on her shrinking shoulder.

Summoning all of the reckless fearlessness which was her birthright, she laughed at him coolly, laughed as the two stood against the sky-line, upon the barren breast of a lonesome land.

"So you are a fool, after all, Bayne Trevors!" she jeered at him. "Fool enough to mix first-hand in a dangerous undertaking."

Trevors shrugged.

"Yes?" He slipped the handkerchief into his pocket and stared at her with a glint of anger in the blue-gray of his eyes. He lifted his broad shoulders. "Or wise man enough to do my own work when needs be, and when I'd have no bungling? I'm going to square with you, girl. Square with you for meddling, for a bullet-hole in each shoulder. If there's a fool in our little junketing party, it's a girl who thought she could handle a man's-size job."

THEY went on, over the ridge and down. Judith made no second attempt to surprise him, for always his eyes watched her. Nor did she seek to hold back or in any way hamper him now. For, swiftly adjusting herself to the new conditions, she made her first decision: Trevors did think her a "fool of a girl," Trevors did sneer at her helplessness in that man's way of his. Let him think her a little fool; let him hold her in his contempt; let him grow to think her cowed and afraid and helpless. Then, when the time came—

Again she had been blindfolded; seeing the look in Trevors's eyes, she offered no objection. Again she had followed him in a darkness made at sunrise by a bandage across her eyes. Again, the bandage removed, she winked at the sunlight. Again they climbed ridges, dropped down into tiny valleys, fought their way along thunderous ravines where the water was lashed into white foam. Again blindfolded, again trudging on, her whole body beginning to tremble with fatigue, the weakness of hunger upon her. And at length, out of a canyon, making a perilous way up the steep walls of rock, they came to the mouth of the black cavern in which she lay now waiting for the sound of a stirring foot.

Only an instant had Judith stood upon the ledge outside the cave before she was thrust into the black interior. But in that instant her eager eyes had made out, upon a tiny bit of table-land across the chasm of the gorge, a cabin, sending aloft a plume of smoke.

Then, after an hour, the terrible woman had come to whom Trevors had intrusted her, bringing food and water in her hard, blackened hands, carrying the flickering fires of madness in her unfathomable eyes. A lantern set on the floor made rude shadows, and out of them crept this woman, leering at Trevors, peering at Judith, licking her thin lips, and chuckling to herself.

(To be continued next week)

Three Thousand Dollars an Acre

If crooked rows will grow more stuff as some farm gardeners like to console themselves, you would think Thomas F. Biddle would have wiggled the celery rows a little on his Bustleton market garden. It is within the city limits of Philadelphia and the land is assessed for tax-paying purposes at $3000 an acre. The woods in the background skirt Pennypacker Creek and the city bought thirty-five acres of it a short time ago from the original 65-acre Biddle holding to make a park.—T. H. W.

Did you ever hear this one?—

Fair Warning

Sam, while walking in the woods late one afternoon, was surprised by a wildcat which proceeded to chase him to the top limbs of a large oak, on [illegible] edge of a deep canyon.

The wildcat was climbing as fast as Sam, and soon had forced him perilously near the decaying end of a long limb extending beyond the edge of the precipice. Sam decided it was time to remonstrate.

"Wilecat," he said impressively, "wilecat, does yo' make me go one inch furdah, yo' is gwine to have to jump a long ways fo' yo' suppah!"—American Legion Weekly.

Needed a Clue

A well-known minister, famous for absent-mindedness, once met an old friend in the street and stopped to talk with him. When about to separate, the minister's face suddenly assumed a puzzled expression.

"Tom," he said, "when we met was I going up or down the street?"

"Down," replied Tom.

The minister's face cleared. "It's all right, then. I had been home to lunch."—New Outlook.

Buck Up and Boost

Give a little, live a little, try a little mirth; sing a little, bring a little happiness to earth. Pray a little, play a little, be a little glad; rest a little, jest a little if the heart is sad. Spend a little, send a little to another's door; give a little, live a little, love a little more.—A. Nutt in Ottawa Citizen.

The Gates of Eden

Little Town Girl (who has spent day in country for first time, having hitherto played only in parks)—"Daddy, what time do they shut the country up?"—Pele Mele (Paris).

Enlarged Usefulness

Austin, Texas, Jan. 11 (Sp).—The champion hog-caller of East Texas and one of the ranking callers of the United States has been elected assistant reading clerk of the House of Representatives.—Dallas Morning News.

The Old and the New

"I wonder," said the old lady at the dance, "I wonder what has become of the girl who used to drop her eyes, raise her face, and say: 'You must ask my papa.'"

"She's got a daughter," answered the girl, "who says, 'Shove her into high, kid! The old man's gaining on us!'"

Misunderstood

Teacher (to boy sitting idly in school during writing time)—Henry, why are you not writing?

Henry—I ain't got no pen.

Teacher—Where's your grammar?

Henry—She's dead.—Dry Goods Economist.

You Can't Fool a Horsefly

"Are you sure, now?" inquired a restaurant diner. "Are you positive that this is a beefsteak?"

"Sure it's beefsteak," replied the belligerent waiter. "Wossa matter?"

"Well—when I find a fly buzzing around a steak I think nothing of it, but when I find a horsefly—darned if I don't get suspicious!"

Mistress—Mary, were you entertaining a man in the kitchen last night?

Mary—That's for him to say, ma'am. I was doing my best.

OUR YOUNG PEOPLE'S FORUM.

From Forum Members and Friends

Dear Cousin Ruth:—The people have opened their sugar camps around here. We have no camp but have many sugar and maple trees. I think it would be fun to tend a camp. We were at our neighbors one evening and spent most of the time at the camp.

During these long winter nights our neighbors come to our place. We spend the evening playing games. I was at a birthday party, we had music and played lively games.

I go to Factory School. I have seven studies and like Civics best. During some of the coldest days I had to stay at home. I sewed most of the time and have a quilt pieced.

I have two cats for pets. Their names are Tabby and Trixie. When I milk they come and stand on their hind feet and want me to feed them milk.

During the summer barn swallows came to our barn where they have three nests built in our storm shed. We like to watch them carry feathers and feed their little ones. They come real close to our house and sometimes fly under thru the porch roof. They are very pretty birds and never sit on green trees but on the roofs of buildings and on dead trees. They eat insects of the air.—Naomi Lepley, (X), Somerset County, Pa.

Dear Cousin Ruth:—I have a little brother five years old. He does not go to school yet. He stays home with mother. He gets naughty sometimes.

We live on a little farm about fifteen acres. Daddy works in York and mother and I and the maid do a little trucking and tend market.

MY COUSINS AND I
Edith L. Myers, (X), York County, Pa.

I take music lessons on the piano. I had a nice vacation last summer. I visited Niagara Falls, Watkins Glen, Chicago, and lots of other places. We went by machine. We camped all the way. We had a fine time. I am sending a picture. Two of my cousins and myself. I am the one on the left.—Edith L. Myers, (X), York County, Pa.

Dear Cousin Ruth:—I help mother milk when I come home from school and help her do the milking before I go to school in the morning. I have a dog called Jumbo, and a cat named Tommy and five little peeps about one week old. One of the peeps is white and he is so noisy that I call him Buzzy. I love to play in the snow. When the snow was real deep out here I would take my dog, Jumbo, and dip him down in the snow, then I would run and hide. When he gets out he tries to find me.—Ruby Vucelic, (X), Washington County, Pa.

Dear Cousin Ruth and Forum Friends:—I am sending you a picture of my baby sister and her first pet, a little white rabbit. She is feeding it some leaves. She is about nine months old. Her name is Ada May.

MY BABY SISTER
Luella E. Hendershot, Warren Co., N. J.

I go to Quaker Grove School. We have two rooms and two teachers and there are about 60 scholars.—Luella E. Hendershot, Warren Co., N. J.

Dear Cousin Ruth and Forum Friends:—I received my membership pin a few days ago and was glad to get it.

In last week's issue Ruth E. Throckmorton told of her trip to Yellowstone National Park so I'm going to tell of mine thru the Catskills and down the Hudson River to Poughkeepsie.

Tuesday morning we started. Monday morning we had taken my sister to camp and then we came home and stayed for the night. We stayed in Delhi the first night. The next day we saw our first high mountains. They seemed to reach the sky. (I live at the foothills of the Catskills but the mountains are not nearly so high). That night we stayed in Roxbury, the home of John Burroughs. That night we went to see Rin-tin-tin, the movie dog at one of the theaters.

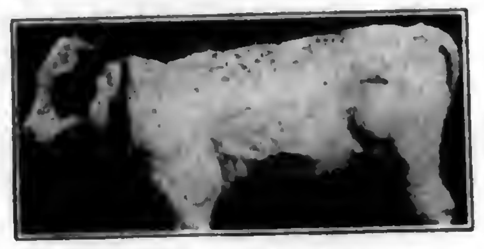
The next day we headed for the Hudson. About noon it began raining so hard we had to stop by the side of the road. The rain stopped so we went to Hunter. Here papa got us something to eat. We went on to Kingston that night. The next morning we motored to Highland, sixteen miles south, and ferried over to Poughkeepsie, eating our breakfast. We went north sixteen miles to some place (I can't remember the name) and ferried back. Then we went back north and west to home.—E. Webster Haight, (X), Delaware County, N. Y.

I've ferried across the river at Poughkeepsie, too. My brother and I took a picture of one of the ferry boats while we were crossing and it turned out quite well.

COUSIN RUTH.

Dear Cousin Ruth and Forum Friends:—I have a dog for a pet. He likes to run and play with me. I had a calf and I could not think of a name for her till I went to feed her, and she bunted my pail so I called her Bunts. But she died and my father buried her.—Eloise Case, (X), Bradford Co., Pa.

Dear Cousin Ruth:—I received my pin and I want to thank you for it. I was certainly proud to get it. I will try and get my chum to write to the Forum.



ONE OF MY PETS
Edward Williams, (X), Luzerne Co., Pa.

For pets I have a dog named Fannie, a kitten named Skeezix and a little calf. My kitten is full of tricks.—Edward R. Williams, (X), Luzerne County, Pa.

Dear Cousin Ruth and Forum Friends:—I was plowing today until it started to rain. I just love to work. I do all the work for father at nights. I water five horses and feed them and give them their bedding. I watch the cows on horseback. I love to ride horseback.

I have two little Bantam hens and one rooster. They are just so sweet, Cousin Ruth, I wish you could see them. One laid a little white egg.

My mother is raising canary birds. One laid three little eggs and hatched two little birds. The little birds were so tiny they could lie in a teaspoon and they did not have their eyes open.

I went to Atlantic City last summer and I had a very good time. A man made my picture on the sand which was very good. It was so cool on the boardwalk along the ocean I had to wear my coat all the time. I did not go in swimming for I did not have any suit but there were hundreds in swimming.—Frances Dennis, (X), Salem County, N. J.

Dear Cousin Ruth:—When summer comes I will be glad for the birdies come and build their nests. Last summer there was a robin built her nest on our plum tree. When the birdies were about one day old a strong wind came and blew the nest down. Two of the birdies were dead and the other one was not hurt any. So we put it up in the nest and buried the other two. A couple of days later the little one got strong and flew away.—Olive Pearl Hummel (X), Perry County, Pa.

I've Gone Into Partnership with Noah

NOAH WEBSTER'S Dictionary and I are becoming fast friends. Nearly every day now we can be seen with heads together pouring over contest papers, yet in spite of all our efforts we aren't sure who all the winners are going to be! Isn't that hard-hearted of us to keep you in suspense? Keep up your faltering courage—Noah and I are doing our best.

Letters continue to come in asking questions. If my answers are delayed remember I can't correct word lists, write letters and return pictures all at the same time.

Some of you are still forgetting to sign your names and addresses to your letters. What's a letter without a name?

COUSIN RUTH.

OUR LITTLE FOLKS' PUZZLE CORNER

DEAR LITTLE FOLKS:—Most of you live in the country and come to the city once in a while, and I live in the city and go to the country whenever I can. So, of course, we often do different things, and you have very good things to eat which, by the time they reach the city, are maybe not quite so good. But you can find out the answer to this question if you will take out of the little square below those letters under which numbers are placed. Arrange the letters in the order of the numbers, beginning, of course, with "1" which you will find on the second row with a little circle around it. When you have found out what I ate this morning, send me your answer on a postcard or in a letter so that it reaches me by April 16, which, by the way, was my father's birthday. I hope by that time to be used to my new glasses and able to enjoy all your answers even more than I have in the past—and that means a very great deal, indeed.

BE SURE TO SAY HOW OLD YOU ARE, and please tell me the name of your county (not country—I can usually guess that), and when your birthday comes. You'd be surprised how often some of these things are left out. Why, there are times when some Little Folks tell me when their birthdays come but do not tell me their names, or maybe it is the addresses that are left out. It's a lot to remember, I know, but it helps me a lot at this end if you put those things in your answer. The prizes go to the ten children, sending in the correct answer, whose cards or letters are the best in grammar, spelling, punctuation, penmanship and general appearance. Address all puzzle answers to The Puzzle Editor, Pennsylvania Farmer, 261 South Third Street, Philadelphia, Pa.

The answer to the arithmetic puzzle (the magic square, published March 19) is: first line 1, 5, 1, 3 equals 10; second line 3, 2, 3, 2 equals 10; third line 4, 2, 3, 1 equals ten; fourth line 2, 1, 3, 4 equals 10. Of course, if you arrange these numbers in the square as I had them each line will equal ten whether you count across or down.

The prize winners are: Phyllis Amster, age 9, Anselma, Pa.; Howard M. Anspach, age 9, Annville, Pa.; Luella Berk, age 8, New Ringgold, Pa.; Mary Bryant, age 9, Bridgeton, N. J.; Philander Fleming, age 11, Granville Summit, Pa.; Walter Goff, Jr., age 7, Eldora, N. J.; John Irvin Grimm, age 12, Smithfield, Pa.; Kenneth B. Hill, age 13, Hughesville, Pa.; Thelma Keene, age 10, Glen Moore, Pa.; Helen Leonbacher, age 13, Erie, Pa.

WHAT DID I EAT THIS MORNING!

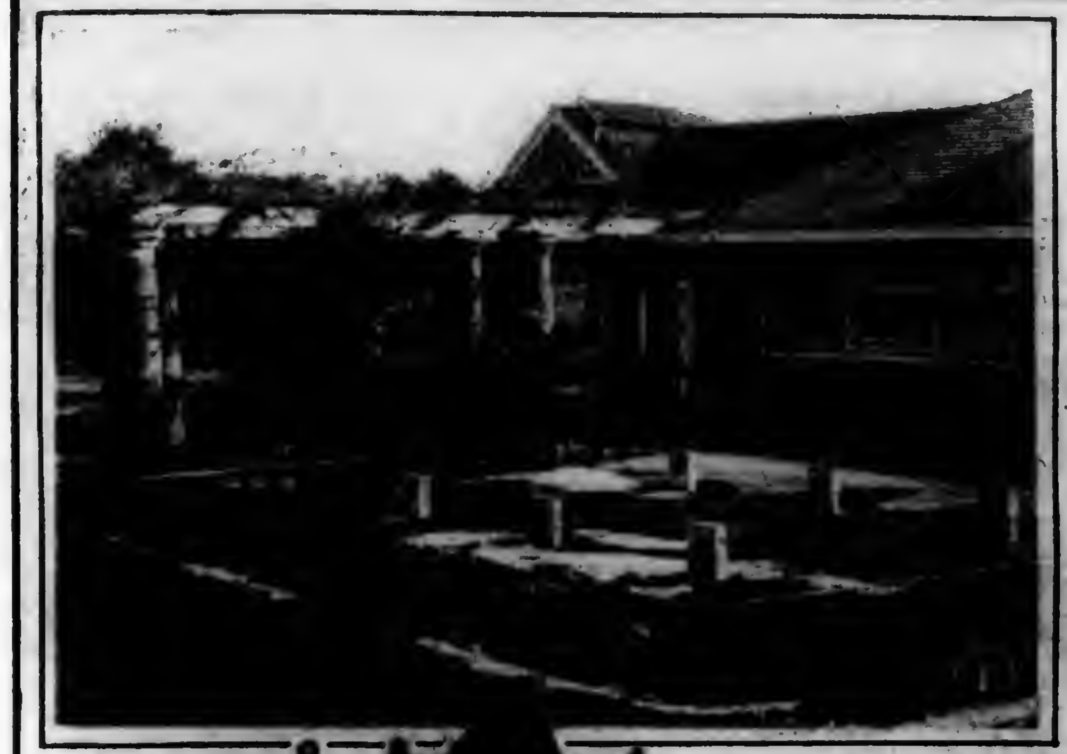
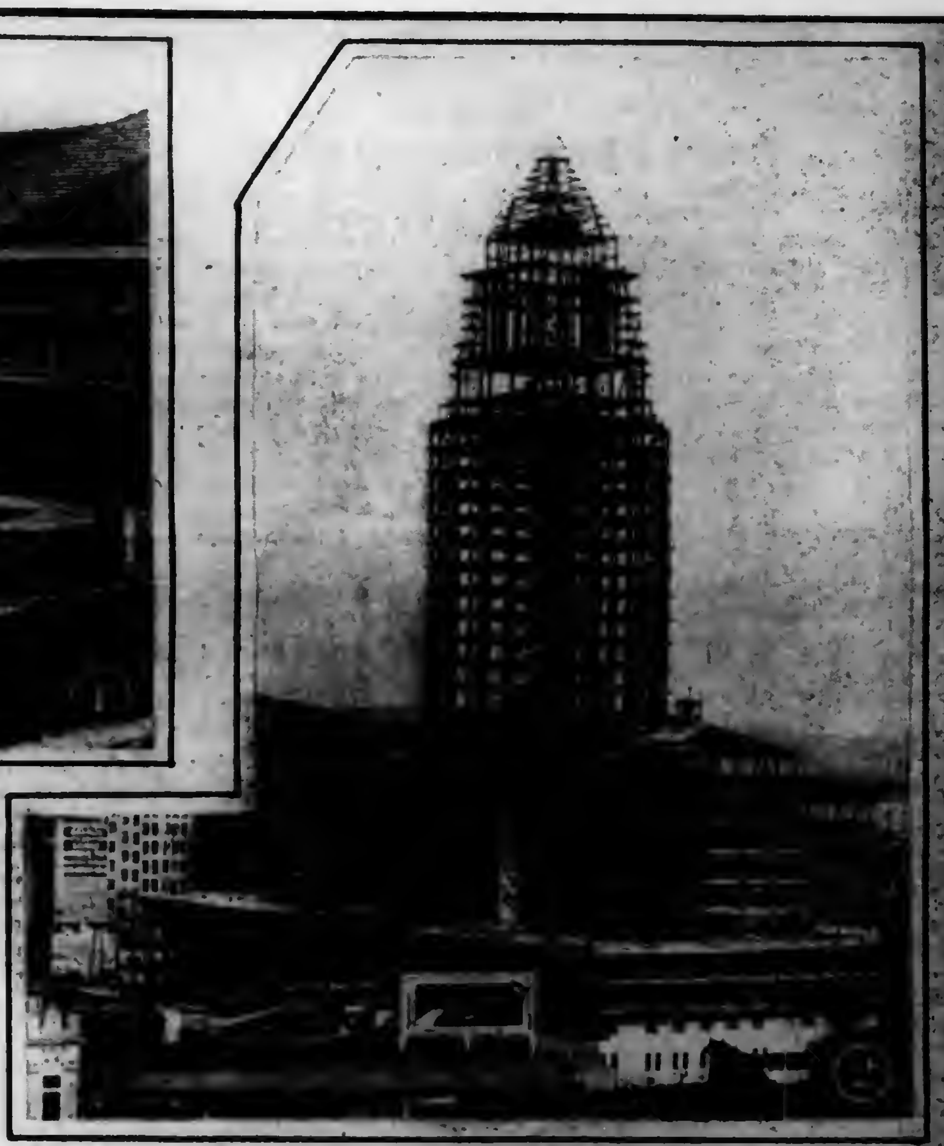
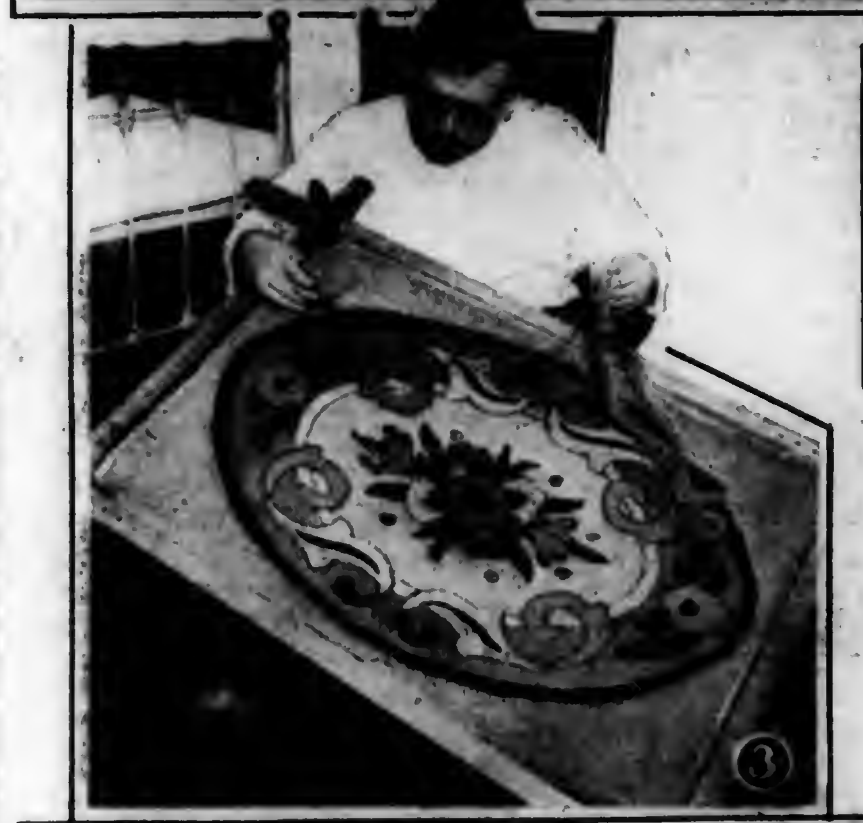
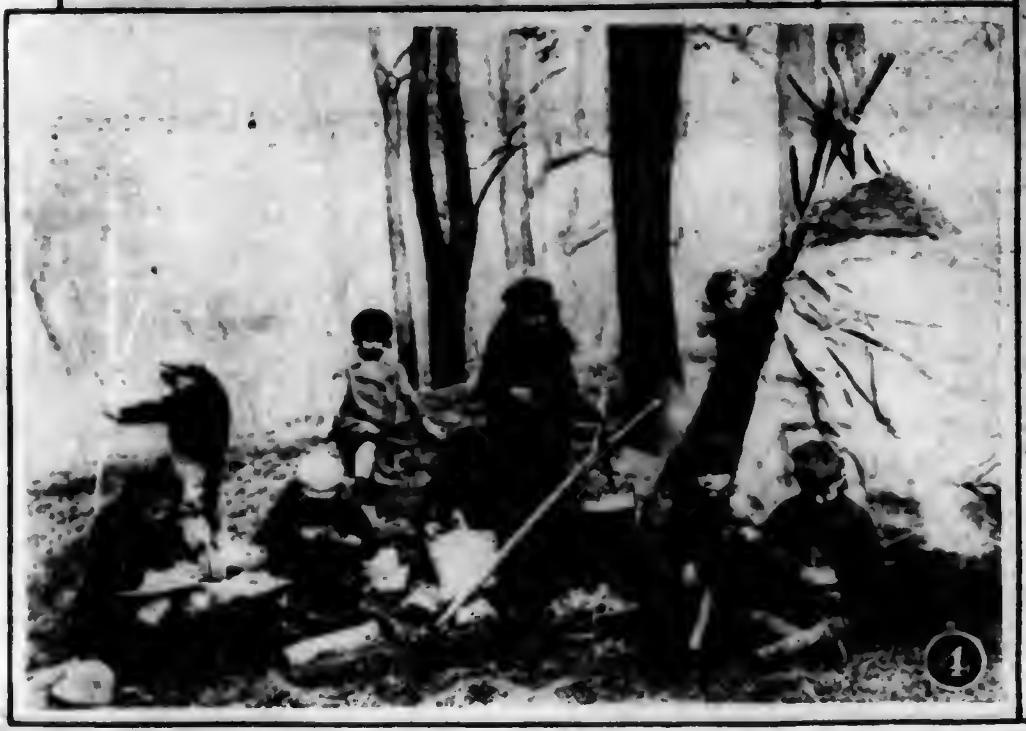
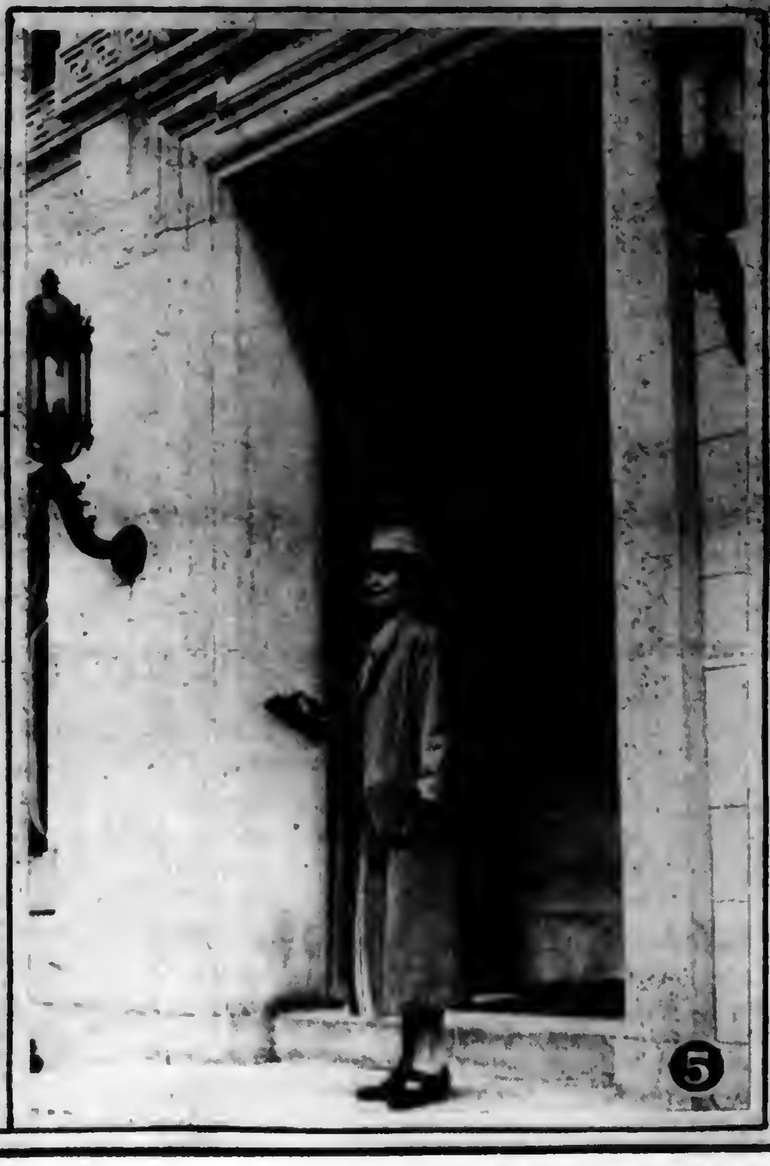
PASSING EVENTS IN PICTURES











(Copyright by Underwood and Underwood)

1.—On Langwater Farm near North Easton, Massachusetts, where many prize cattle have spent their lives, is a unique graveyard, the last resting place of several prize animals. The tablet on the extreme left in the front row bears the name of "Langwater Warrior," a famous sire.

2.—The new skyscraper City Hall of Los Angeles, California, towers above the other buildings of the city. When completed it will be one of the tallest structures on the Pacific Coast.

3.—Occupational therapy is one of the greatest developments in the treatment of those patients who must be confined to hospitals or other institutions for long periods. Basketmaking, weaving or other work done by the hands is under the supervision of an expert occupational therapist under direction of the physician in charge. The man shown making a rug is a patient in a Chicago hospital.

4.—City children learn first-hand the secrets of making maple sugar.

5.—Mrs. Coolidge at the door of the house on Dupont Circle, Washington, which is being used as a temporary White House.

Mother Needn't Dread Those Sharpened Appetites the Family Brings Home from Church on Sunday

THERE are three courses open to the home-maker who goes to church: she may prepare Sunday's dinner on Saturday, if not too busy otherwise on that day; she may serve a quick-cooked meal an hour after her return from church; or she may compromise and prepare a dish or two on Saturday and accomplish the remainder after the Sunday morning service.

Following are a few suggestions that may prove helpful:

I

Dinners requiring Saturday's hours are the easiest to plan.

1—Stewed chicken with dumplings and gravy
  Mashed potatoes
  Mashed turnips
  Celery
  Grape jelly
  Mince pie
2—Pot roast with gravy
  Carrots and onions cooked with roast
  Potatoes steamed at top of roast kettle
  Graham pudding
  Lemon sauce
3—"Jiggs" dinner of corned beef and cabbage
  Oak Hill potatoes
  Apple pie
  Cheese

II

Quick-cooked meals call for rapid manipulation and a can or two from the shelves.

1—Pan-broiled ham
  Sweet potatoes boiled in their jackets
  Canned peas
  Chili sauce
  Applesauce
  Dumplings
2—Scalloped oysters
  Imitation French-fried potatoes (baked)
  Succotash (canned)
  Hot biscuit
  Honey
3—Pork steak, milk gravy
  Boiled rice
  Stewed tomatoes
  Canned peaches
  Corn flake kisses

III

When we compromise we lean toward the one-dish meal.

1—Spare ribs and sauerkraut
  Half-shell potatoes
  Spoon corn bread
  Currant jelly
  Ice cream
2—Ham and scalloped potatoes (baked in one casserole)
  Baked squash
  Fruit gelatine, whipped cream
3—Veal birds
  Buttered beets
  O'Brien potatoes
  Cole slaw
  Date pudding

The dinners given in the first list are possible because on Saturday one can clean and cut up chicken; pare vegetables; make pies or steamed pudding; set a pot roast or Jiggs dinner into the fireless cooker or on the back of the range; or make a baking dish full of creamed potatoes between layers of soft bread crumbs and slices of hard-boiled eggs for the Oak Hill potatoes.

Rice Substituted for Potatoes

But when Saturday's hours are crowded we must hustle the potatoes on to cook, the minute we enter the house from church. Scalloped oysters do not require long baking and a skilful person can make hot biscuits in a hurry. Rice is the handiest substitute for potatoes because we have it on cooking in the twinkling of an eye. Corn flake kisses are quickly prepared for dessert.

The half-shell potatoes suggested in the "compromise" meals, may be prepared from potatoes baked with those for Saturday's dinner. Only on Saturday they must be removed from the shell, mashed, mixed with milk and seasonings and replaced in shells, while still hot. Then Sunday they require just the reheating. (Of course, they are better if prepared the same day they are to be eaten but that isn't always possible).

Ice cream and sherberts may be frozen out-of-doors in the winter, provided they are stirred occasionally. Either ice cream or fruit gelatine would have to be made at breakfast time. Beets should be left cooking during church. Date pudding might be prepared Saturday evening. Squash may be left baking in the oven during service; also the scalloped potatoes and ham. Veal birds, once seared, should simmer for several hours in their creamy gravy.

Below are recipes for a few of the dishes suggested:

GRAHAM PUDDING

½ cup butter
1 cup mild molasses
1 cup milk
2 eggs
3 cups graham flour
1 teaspoon soda
2 cups raisins
1-3 cup citron, cut finely

Melt the shortening; add molasses, milk, egg, and dry ingredients sifted, and raisins. Turn into oiled mold, cover and steam two and one-half hours.

DATE PUDDING

1 pound dates, stoned and cut in halves
1 cup nut meats
1 cup sugar
1 cup flour
1 teaspoon baking powder

The beauty of this pudding is the ease with which it can be made.

Put all ingredients in a bowl and mix together. Do not beat any longer than necessary to combine ingredients. Pour it on to oiled paper in an oiled shallow pan. Put the pan into a dripping pan of water. Bake 30 minutes. Have oven hot at first to brown top, then finish baking at moderate heat.

Cut in squares and serve with whipped cream. Garnish with a cherry or cranberry.

This pudding keeps well, if kept covered and cold, and may be made weeks ahead of time.

BAKED HAM WITH SCALLOPED POTATOES

Brush the sides and bottom of a baking dish with melted fat, put in sliced raw potatoes, sprinkle with flour, salt and pepper, dot with butter and cover with milk. On the potatoes place a thick slice of ham. Put on the cover and bake until the ham is tender and the potatoes done. Remove cover for browning.

SPOON CORN BREAD

½ cup corn meal
1 pint milk (scalded)
½ teaspoon salt
1 teaspoon baking powder
3 eggs

Sift corn meal into hot milk, stirring constantly. Cook until thick. Add baking powder, salt, and beaten egg yolks. Mix well. Fold in stiffly beaten egg whites and pour mixture into a buttered baking dish. Bake in slow oven for twenty minutes. Serve hot with spoon.—Floris C. Thompson, Mich.

It's Never Too Soon to Play the Pied Piper

ALL the farmers around here (and their wives, too,) are up in arms against rats. What a pest they are! Thru the winter they had too many nibbles of sweet potatoes and nuts, as well as pop corn. Now they are feasting on fresh eggs and building homes quite handy to where they seem to think we will put out our baby chicks. You see there are some animals besides men who enjoy "spring chicken."

Arbor Day—A Chance for All

Few of us can plant a forest but most of us can plant trees and bushes which will beautify the home grounds.

Last year one of our neighbors set several hundred fine eggs. He had a fair hatch and was justly proud of his little brood. A few days later, he had twenty-eight chicks left, and he promptly moved them into safe quarters. Was such a risk worth while? Why not safeguard your little flocks by giving them a home free from rats?

There are a great many dopes and poisons to be had and remember today is none too soon to play the Pied Piper.—G. S. S.

Alarm Clock Works Overtime

AS SPRING advances the uses for my little alarm clock increase. When I work in distant parts of the house, at housecleaning or sewing, or when I go outside, tending chickens or gardening, I set my clock at the time I need to return to the kitchen and then go serenely about my business until I am called. This means dinner on time without rush or worry.

As the busy season advances my little afternoon rest becomes necessary if I keep up with my duties. I used to lie down and worry; now I set my clock for an hour in advance, place the clock within reach, and drop asleep at once sure that I will not over-sleep. In this way I do twice the work I do when I keep on until exhausted.

In summer I like to take my work or my reading to the porch or lawn as much as possible and here again I use the alarm. Children often think it fine to have the clock set for them and are much more willing to come at the right time than when mother calls.

Try using the alarm during the day and I am sure you will find it well worth while.—Alice Margaret Ashton, N. Y.

Easter Festivals Spread Good Cheer

SOMEONE has said that "Far pastures are always greenest." This does not hold true regarding the Easter festivities in our town. When I read in farm papers and magazines what people are doing in other places, it seems as if we have the very best times folks could have anywhere.

One of the very pleasantest of all our annual functions is the Easter dinner given by the Ladies' Aid. This year the color scheme is white and yellow. The decorating committee is one group, the food committee, another, and both will use these two colors in their plans for food and decoration.

Eggs Instead of Meat

For dinner the usual meat will be replaced by eggs served in several ways. There will be fluffy mashed potato; lettuce and egg salad; brown and white bread, with butter; choice of custard, lemon or cream pie; cheese; lemon gelatine, with golden fruits, and plenty of golden coffee.

Here the Easter dinners, luncheons, etc., are second only to the great Christmas celebrations, and we consider that the community failing to observe them misses much in sociability and good cheer.—Mrs. E. M. Anderson, N. Y.

Butterfly Salad Is Different

Note.—Your committee on "eats" might enjoy the beauty and originality of a very decorative salad served at an Easter party last year. It will help to offset that extra protein which the egg salad suggested in the above story provides. It is called Butterfly Salad, and is made with sliced pineapple as the basis.

Shape the pineapple slices to represent the butterfly wings. Arrange these slices on lettuce leaves. With each set of wings use one stick of asparagus for the dainty creature's body. Use cooked carrot and cut long, slender antennae, curving it as you fit it on. The salad dressing is used on the leaves beneath the pineapple and passed again at the table. This salad is so very pretty, folks exclaim, "Oh! Oh! Oh!" and even the men folks nibble it all, including the lettuce.—Home Page Editor.

"Mainstays" Start Boys and Girls on the Royal Road to Health

THE average school child six to ten years old gains in weight and height steadily if enough of the right kind of food is eaten to supply the body with growth and energy material. The food for the child between these ages is best when simple and easy to digest. The New Jersey extension specialist in foods says that breakfast and dinner should be the heavier meals with a light supper before going to bed.

After boys and girls reach the age of ten, growth becomes very rapid and a great amount of food is necessary to supply them with sufficient nourishment. Boys beyond ten are especially active and are likely to need more food than their fathers.

The choice of food for these growing boys and girls is important. Milk is still essential and a quart a day, if possible, should be drunk. It is best to limit the amount of liquids taken with meals to allow more space in the stomach for solid foods. Cooked cereals are more nourishing than the ready-to-serve varieties. A little thin cream added to the milk used on cereals adds more food value in a concentrated form.

Vegetables Build Bones and Teeth

Cheese for the noon meal is another rich food, but should be combined with others. Vegetables and fruits are essential for the minerals and vitamins they contain; without them the bones and teeth cannot grow as they should. Fruits are generally liked, but vegetables are often not such favorites. Salads are popular with girls and may be served with a simple dressing. Boys will generally eat vegetables if they are told how necessary the minerals are to build a strong bony framework for their bod.

Eggs and fish are excellent; meat is also, but the tendency is to eat too much of it. Meat once a day is enough. Cereal puddings, custards, one crust pies made of fruit, and milk and egg combinations may be given on occasions.

A lunch between meals of fruit, sandwiches, or milk is often required by growing boys and girls. The time will depend upon the school hours, but it should be kept regular from day to day. Sweets may be given at the end of meal, but the munching of candy between meals should not be encouraged.

English Hot Cross Buns

THIS recipe has come down thru generations as the favorite of "Good Queen Bess."

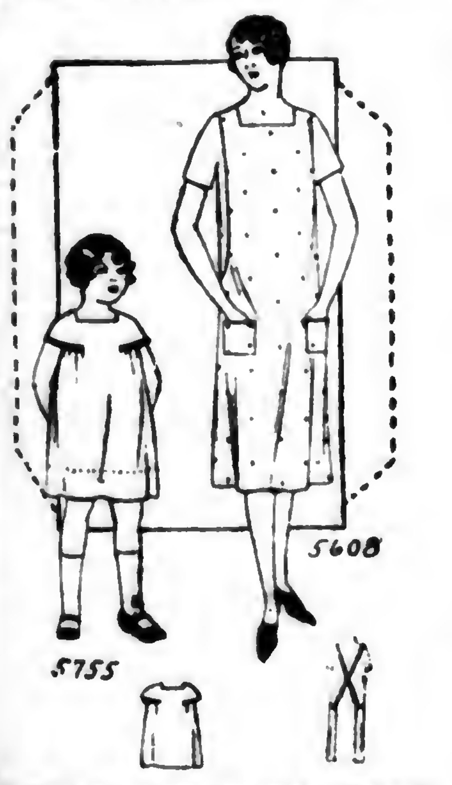
½ yeast cake
3 tablespoons butter
1 cup milk
2 tablespoons sugar
½ teaspoon salt
Flour
1 egg
½ cup raisins
½ cup currants
¼ cup shredded citron
4 tablespoons minced candied orange peel

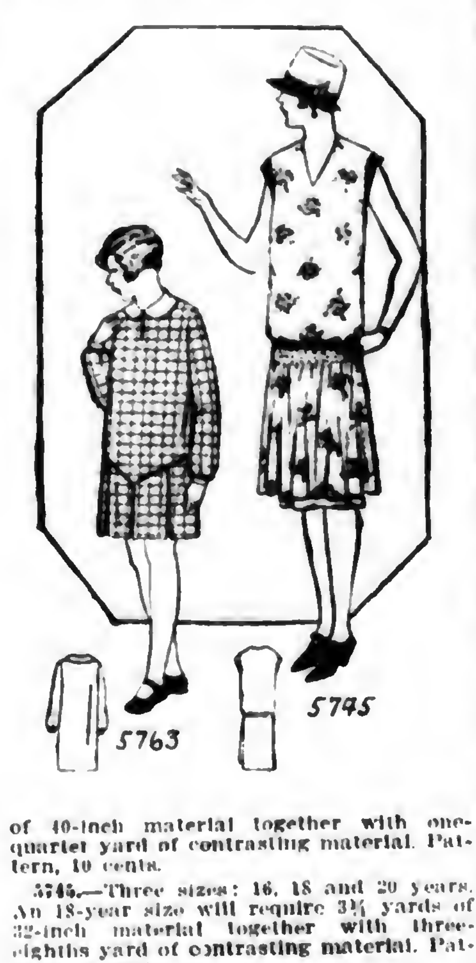
Melt the butter in the scalded milk, then add the sugar and salt. When lukewarm add the yeast which has been dissolved in one-fourth cup of tepid water. Beat into this mixture one and one-half cups flour that has been sifted. Let rise all night.

Next morning, beat down well and add one egg, slightly beaten, the raisins, currants, citron and orange peel. Use sufficient more flour to form a nice soft, kneadable dough. Knead lightly, then roll out, and cut with round cutter. Place them in greased pans and let rise in warm place. When they have doubled in size, make a deep cross in the center of each, and bake for a half hour in quick oven. When nearly done, further decorate the cross with lightly beaten egg-white and confectioner's sugar.—Gertrude S. Stewart, N. J.

Summer Days Are Coming

Directions for Ordering.—Give figure or figures of each pattern exactly as printed at beginning of each description. Give bust measure when ordering waist patterns, waist measure for skirt, and age for children's patterns. Address Pennsylvania Farmer, 261 S. Third Street, Philadelphia, Pa.





5755.—China silk, crepe de chine or batiste may be used. Four sizes: 2, 4, 6 and 8 years. A 4-year size will require 1⅜ yard of 32-inch material. Pattern, 10 cents.

5608.—Unbleached muslin, percale, linen, gingham and chintz are attractive for this apron. Four sizes: small medium, large and extra large. A medium size will require 2¾ yards of 27-inch material. Pattern, 10 cents.

5763.—Cotton or silk prints, linen, rep or crepe can be used. Four sizes: 4, 6, 8 and 10 years. An 8-year size requires 2 yards of 40-inch material together with one-quarter yard of contrasting material. Pattern, 10 cents.

5745.—Three sizes: 16, 18 and 20 years. An 18-year size will require 3⅜ yards of 32-inch material together with three-eighths yard of contrasting material. Pattern, 10 cents.

Cooks a meal *for five in* 40 *minutes*

WHAT one woman said about her Nesco is typical of thousands of others. "During harvest and at other times when I'm in a hurry, I can prepare a complete meal for my family of five in 40 minutes"!

Wouldn't such quick, convenient cooking service be a blessing in your kitchen? The intense, blue flame of the Nesco quickly reaches its full capacity, spreads over the bottom of the utensil and gives a hot, clean cooking heat that has heretofore been thought of only with city gas service. There is no soot, smoke or odor. Cook any recipe on a Nesco. You are not limited—whether it be frying, boiling, roasting, baking or toasting. The perfect results will amaze you.

See the Nesco at your dealer's. Send for our beautiful free booklet, showing many sizes and models.

Socials for Cash and Socials for Fun—One and the Same

SO MANY people have asked for suggestions for money-making socials that it looks as if the churches and clubs were out to collect all they could while having a good time. This is surely a much better way to raise necessary money than to beg it outright. Rather than hold one large affair at which the class or group plans to make a large sum of money, why not have a series of social evenings, one every two weeks or once a month, making them jolly good times as well as money getters and charging a small admission fee?

Always word the announcements for such entertainment so that when read from the pulpit or from the bulletin board, it will immediately arouse curiosity. People will come if an entertainment is advertised cleverly and much of the later success depends upon this. Never let the social seem obviously a plan to make money—announce the admission fee, but emphasize the pleasure everyone will have and never suggest that it is a duty to attend.

A very interesting series of evenings embodies the old district school idea. A spelling bee is old but always interesting if the words are chosen carefully. Announce that no word will be more than ten letters long and as each spells down, he must pay as many pennies as the letters of the word. A short program of songs or an old-fashioned square dance makes an enjoyable evening. Simple refreshments of doughnuts and coffee or if it is warm weather, an iced drink and ginger cookies, are enough.

Everybody Likes a Sing

Every community should encourage singing. This can be started at the second of the district school socials. It will be effective to have the leader use an old-time tuning fork at first but this can be discarded later and perhaps an orchestra formed. There should be an admission fee and each one should pay for his song book, but the leader should give his services. It will be surprising how many will want to join this very informal gathering and how many will be glad to pay admission just to come and hear the old time songs. Always remember something to eat—sandwiches and a drink of fresh fruit and little cakes to close the good time.

The last social might well be a debate. A funny subject is always best. Charge admission and offer a prize for the winning side.

A mite party—an afternoon affair for mothers and little children—proved very successful for one church. Tea and little cakes were served, the admission being "whatever mite one wished to give." This was put in an envelope so that no one would be embarrassed. A story teller charmed the children while tableaux amused the mothers.

Games Liven Up the Oldest

Another community used the "Backward, turn backward, Oh! Time in thy flight" idea, making children of everyone, dividing the large hall floor into four sections, numbered, one for marbles, one for checker tables, one for table croquet and the last for the old-fashioned game of authors. Ten cents admission was charged, then the losing couple at each section had to pay ten cents. There was a whistling contest, and a jumping rope contest, in which everyone, old, young, fat and thin, took part!

This idea proved so successful that the committee soon arranged a "Looking forward party!" Games and charades depicted life fifty years from now. A prize was offered for the most necessary invention, entered by a small boy and won by him—"to keep the car on the right road home, when big brother falls asleep." The women told what they wished the next fifty years would supply and the older men took off their masks and showed the world what they were thinking, too.

Several short ten-minute playlets were enacted, using people well known in the audience, carrying them fifty years forward. A clever poem, "Fifty years from now!" was recited in a costume which showed ingenuity and forethought.

Make all the money you can but make it in a happy way—sending people home with the idea that the entertainment was worth more than the admission fee.—Effie M. Paige.

Another of Our Family Greets You

MY LIFE to date has had a half dozen epochs which mark the periods of study and work which I have done and continue to enjoy. The early years of childhood were spent on a beautiful farm in Ohio where my parents and seven brothers and sisters helped me grow in grace and wisdom, as only country life provides.

At the early age of eleven we moved to the city, and there lived thru my grade and high school study, and here also I took up teacher's training and taught my first few years in the primary grades. I then had the wonderful experience of living and teaching in the Great Northwest, where hospitality abounds.

During the beginning of the World War I was a student in New York. Soon I took up special work that I might help in the reconstruction that inevitably follows war. In 1919 I was sent to Washington, D. C. where for five years I did bedside and class-room teaching in connection with Walter Reed Hospital. Much of my work was among young men wishing to become citizens, and many nationalities have been numbered among my students in English.

Today I am on a few acres in the lovely hills of Maryland. It is here I read and enjoy Pennsylvania Farmer. I have always enjoyed making tasty bites of food, and have kept house in every sort of place from a modern kitchenette apartment with an "in-a-door-bed" to a big country farmhouse. I enjoy the great out-of-doors, and spend many happy hours among the flowers.

My husband manages a garage and service station but together we arrange to have our own garden of good things and our own fruit supply. Community life and the rural church and Sunday school are my chief outside interests. I greet all you fellow readers and want to tell you who write for this department how thoroly I appreciate your timely messages.—Betsey Ford (Mabel S. Ford), Md.

Mrs. Mabel S. Ford.

RADIO DEPARTMENT

The Man Behind the Voice

NORMAN BROKENSHIRE, star radio announcer, formerly of stations WJZ, WRC, WGY and WPCH, recently joined the staff of WPG at Atlantic City, N. J., "The World's Play Ground."

Mr. Brokenshire was born in northern Ontario, Canada, June 10, 1892, the son of a missionary. During the World War he served in the infantry and later was a Y. M. C. A. Hut Secretary. His service in the International Church World Movement carried him many times over the United States and to Europe. Even tho Mr. Brokenshire was then the youngest field secretary this influential organization had ever engaged, he occupied the pulpits of every denomination where he was permitted and spoke regularly from the floor of other churches.

City Zoning Claims His Attention

The World War over he became associated with the Technical Advisory Corporation of New York, with which he instituted the present system of city zoning in the metropolis.

A boy's camp engaged his interests the following summer at Syracuse—as manager—after which he engaged in the activities of the Association for the Improvement of the Poor in New York.

A course in liberal arts attracted him to Syracuse University and while there he operated a very successful printing business between classes. College days over he tried his skill as a log hustler in a flourishing Maine lumber camp. From the "great open spaces" his insatiable curiosity found him answering present to "shoe factory inspector" in a large plant.

Norman Brokenshire, radio announcer WPG.

A year and a half as field worker in the Near East Relief Corporation found him supervising the work of six older men in Florida. Here he turned his New York business methods on southern folk and raised the largest sum known in the history of the welfare work in an equal time—$85,000!

Finds Himself a Radio Announcer

That "experiment" past, real business called him back to New York where he soon was holding a responsible position as director of advertising for the Air Reduction Sales Company.

This occupation outgrown, he indulged in a vacation to "find himself." Casually passing the door of a then little known concern on the sixth floor of the Aeolian Building in New York City he found interest in the placard on the glass window, "Broadcast Control." Poking his head into the room he called to the telephone operator, "Miss, how's chances of being an announcer?"

Engrossed in her duties she snapped, "One in a thousand."

"Thanks," glibly responded Mr. Brokenshire, "I'll be back for that one chance next week." Shortly after this he located an advertisement in the New York Times, "Wanted: College graduate with knowledge of musical terminology to act as announcer for leading New York station."

A month following his application he was told to appear for examination. Thru that same door in the Aeolian Building he informed the peppy telephone operator that he was there to begin!

Three hundred and fifty applicants were listed in that hearing and Norman Brokenshire, of the resonant voice, was the winner. Then began the development of one of the world's newest professions, "Ambassador to Radio."

Delving into radio reporting he painted word pictures of important events to distant millions right from the scene of action,—the round-the-world flier's reception, National Democratic Convention, Bryan's funeral, Coolidge's inauguration.

Never has Mr. Brokenshire had difficulty in securing the cooperation of his artists. From a blind fiddler to President Coolidge—all respond to his affability and give their best efforts. That is because he has an ideal. He feels he is the ambassador of the radio audience, and he asks of the artists for whom he announces their best—not for himself—but for the radio audience.

On the ocean end of the Steel Pier at Atlantic City visitors may listen to Mr. Brokenshire thru the loud speaker in the sun-parlor and watch him at work before the WPG microphone, thru the glass windows of the summer studio.—E. R. F.

From the Week's News

The average price of females with yearly Advanced Registry records was $444 at 51 Holstein-Friesian sales held thruout the country in 1926. Animals without A. R. records and out of untested dams brought $273 less.

* * *

Germany ranked second only to Great Britain as a buyer of American grown apples last year. The total exports of apples from the United States during 1926 were 3,082,000 barrels and 6,922,000 boxes.

* * *

The average Canadian ate 337 eggs in 1926, while the average citizen of the United States ate only 204. According to Canadian Government statistics the per capita consumption of eggs is increasing rapidly in Canada, but is falling off in the United States.

* * *

The 69th Congress which recently adjourned enacted no less than 6948 laws. This number includes the bills that were passed by wholesale methods as parts of the omnibus bills. The total number of bills introduced for the consideration of the 69th Congress was 18,312.

* * *

Representatives of every branch of the dairy industry will attend the meetings of the American Dairy Federation which opens in Washington, D. C., on April 26. Two days will be spent studying the dairy activities of the U. S. Department of Agriculture.

Hay, Number 2 timothy, baled (Phila.)	21.75	22.00	22.50	24.00
Wheat, No. 2 red winter (Philadelphia)	1.42	1.41	1.45	1.67
Oats, Number 2 white (Philadelphia)	.56½	.56½	.58¾	.51½

Many Eggs Go Into Storage

Review of the Week Ending April 2

POTATOES—The old potato market showed some improvement during the week but trading was rather slow on all except the best stock. Supplies at the eastern markets were moderate and prices held about steady. Pennsylvania potatoes continued to show a wide range in quality. In Philadelphia most of this stock sold at $2.50 per 120-pound sack compared with $3.00 to $3.25 for Maine's.

BUTTER—The market opened firm and made daily advances up until Wednesday when it weakened and dropped sharply. Supplies were only moderate but there was a general lack of confidence. Holdings of butter in storage were about 9,000,000 pounds below comparative holdings last year and on this account the future trend of the market depends chiefly on the quantity of fresh butter available.

EGGS—Receipts of eggs in New York were heavy and large amounts were moving into storage. The lower grades of western eggs showed a weaker tendency. Supplies of nearby white eggs were liberal but at the close of the week trading became more active. The majority of the receipts of nearby eggs sold within the range of 26@29c per dozen. There were some lots of extra fancy stock that sold at higher prices.

POULTRY—The live poultry market in New York was irregular. Toward the close of the week cooler weather stimulated the demand. The supply of broilers increased but the demand was fairly active.

LIVESTOCK—The Chicago hog market was weak with prices around 50c lower than last week. Heavy steers closed about 25c lower than last week with lower grades steady. Vealers and heavy calves were generally steady. Fat lambs advanced while yearling wethers, fat ewes and feeding lambs were 10@50c higher.

GRAIN—The grain market was practically steady with wheat prices about the same as a week ago. Corn was firmer altho eastern markets were dull. Oats closed higher than last week.

FEEDS—The feed market showed a weaker tendency with the approach of the pasturage season. Wheat feeds were slightly lower and trading was limited. Linseed meal was higher due to limited offerings. Corn feeds were quiet.

HAY—The hay markets were quiet. Shipping inquiry was light and local demand generally dull. Arrivals on the city markets were fully ample for the demand. New crop alfalfa arrived in quantity in Los Angeles.

County News and Comment

BUTLER COUNTY, PA.—March has been rather mild with a great deal of rain. Farmers in general are interested in cleaning up to combat the corn borer but weather conditions have hindered. Quite a lot of old corn in the fields yet. No rabid dogs reported in this section but many dogs running loose. Wheat came thru the winter better than expected but it still looks scarce. Very little plowing done. Eggs are plentiful and cheap. Baby chicks very much in evidence. Hatcheries running over but much improvement in the standard of chicks. A few sales but not much farm land changing hands. More vacant land thru this section than that which is occupied and tilled. Good seed oats and seed corn scarce. Fruit buds are starting with no indication that the weather has injured them.—F. E. P., March 29.

COLUMBIA COUNTY, PA.—Weather spring-like the forepart of March but have had cold rains and wind lately. Roads in bad condition until past few days, dragging and filling in with slate improving them a great deal. Many public sales of farm equipment and livestock and everything bringing good prices. Cattle and hogs selling unusually high. Retest of 20 townships for T. B. will begin on Monday, with twelve veterinarians on hand to do work. Eggs have been lower in price this winter than for several years. Heavy breeds being sold and poultrymen getting ready for baby chicks. Market prices: chickens, 28@31c; eggs, 24c; wheat, $1.40; pork, 17c; potatoes, $1.25.—J. H. I., March 30.

CLARION COUNTY, PA.—The mild weather of March has been broken by a snow storm. Dirt roads almost impassable, plowing being done on high ground. Buds on pear and plum trees almost out. Few farm sales this spring. Fat hogs about all on the market. Cow buyers plentiful. Fresh cows scarce. Spring pigs hard to find and high in price. Early sown wheat looking fine. The later sown fields almost bare. Corn testing on the go. Some find no germination at all, while others test 85 to 90 per cent. Markets: creamery butter, 60c; eggs, 18c; cash potatoes, $1@1.50; wheat, $1.25; chickens, live, 22c.—C. R., March 28.

FULTON COUNTY, PA.—February and March have both been ideal spring weather. Farmers are busy plowing. Very little clover seed sown yet as the ground has not been in condition. Early sown wheat looking fine but that sown later is short and thin. About one-half the gardens have been made. The clover that survived the drought of last summer wintered well and is growing nicely. Many farmers are buying incubator chicks. Market quotations: eggs, 20c; butter, 35c; meat, 18c; lard, 14c; wheat, $1.10.—T. H. T., March 29.

LAWRENCE COUNTY, PA.—We enjoyed almost two weeks of fine weather during the early part of the month. Grass started growing and buds to swell. But we have also had a season of wet, dark weather. Bad roads and outside work progressing slowly. In many cases there are whole fields of fodder to dispose of. Every man will do his part to destroy the corn borer. Some fields of wheat over the county are picking up, while many others will be plowed up. More and more farmers, as the years go by, realize the necessity of ditching. Hard work but results are paying. Fresh cows, especially Holsteins, are in great demand. The reasonably good price for milk and high price of veal are causing this condition. A great mistake to veal the calves and raise no cows. Wheat is selling at $1.30; oats, 50c; ear corn, 88c; clover hay, $24; timothy, $19; wheat straw, $14; oat straw, $15; good country butter, 50c; eggs, 35c.—M. L. V., March 29.

LEBANON COUNTY, PA.—Our county agent inspected over a dozen cribs of new corn. He finds none fit for planting. He also found that ten cribs of 1925 corn which he is testing looks all right. The first woodlot planting demonstration ever held in our county was held on the farm of Amos C. Himmelberger near Oho. F. T. Murphey, State College forestry extension specialist, was in charge. We have had a week of summer weather. Temperature reached 80 degrees. Snow is gone. Normal weather with nights reaching 26 degrees was had last week. Wheat turned green and little heaving in grass fields. Plowing began the 15th. Sales mostly over. Some movings to be made. Some vacant farms again. Late stubble sown wheat has to be sown to oats. Grafting and tree planting had to be done early on account of heat. Official arbor days come too late for our section. Clover seed mostly sown. New bridges must be built in the county on account of the large trucks. Several barns with much stock burned lately. Seed oats, like corn, must be brought in or old stock used to sow. Digging post holes is easy at present in wet, loose earth. Eggs, 20c; hay, $22; oats, 55c; butter, 55c up; coal prices in confusion; dealers are wary in buying wheat and oats because of the bearish city markets.—R. I. W., March 28.

Shortage of Domestic Butter

DEVELOPMENTS in butter markets are the prominent features in the dairy situation this month. The whole situation can be briefly summed up as an acute shortage of domestic supplies on the one hand, and an uncertain supply of foreign butter on the other. Price changes toward the middle of the month were first sharp declines and then sharp advances, with current prices at this writing (March 26) higher even than in 1923, in which year March averaged 49c, the highest record since 1920.

A further factor to note in connection with current butter prices, is that there is now a very narrow range between top grades and lower grades. Reports from wholesale markets advise that there are only occasional sales of undergrades, which may be taken partly to mean that on account of the general scarcity buyers are less critical of quality. Where there were differences a month ago of 3c in price on account of quality these differences now have narrowed down to as close as 1c. This condition verifies the existence of a real shortage.

The shortage of supplies is further revealed by reference to market receipts and storage stocks. Receipts at wholesale markets continue to run less than last year, about 3 per cent less for the month, but 4 per cent less for the past 3 months. Reports and estimates on current production differ somewhat, indicating on the whole, however, that slight increases during recent weeks have not been sufficient to bring total production this year much beyond that of 1926. Storage stocks are definitely known to be at record low levels. On March 1 stocks of butter in storage were 8,000,000 pounds, and since then further withdrawals have reduced holdings to an amount which is unimportant from the supply standpoint.

Coming now to the unsettling factor in the situation, foreign butter, the influence results both from actual and anticipated arrivals, and from offerings. Imports during the month have come in from Argentina, New Zealand and Denmark, mostly from the two former.

Foreign markets will continue to exert an unusual influence upon domestic prices until domestic production increases sufficiently to relieve the existing shortage.—U. S. Bureau of Agricultural Economics.

Dead or Alive?
It's up to you, Mr. Poultryman

Chick losses are due to wrong feeding and lack of proper care at the start. Stop the losses—save the baby chicks by feeding Blatchford's Chick Mash. Contains exactly the ingredients chicks need to keep them healthy and make them grow big quicker. Easy to feed and most economical.

125 years experience in preparing feeds and the Blatchford reputation is your guarantee of highest quality and maximum efficiency. Recommended and used by leading poultrymen everywhere. Means better results and more profit to you. Try a bag and see the chicks and money you save.

PROTECTION From Insect Pests and Fungus Diseases

The SPRA-MOR effectively protects truck gardens from those busy destroyers which—if unchecked—cut so deeply into your profits. To secure the maximum returns from careful cultivation, you must spray.

The SPRA-MOR power traction sprayer is the most sensible and efficient plant sprayer ever designed. One dependable motor drives two stage compressors and propels machine—at high, medium, or low speed. Air, forced into the chemical tank at the pressure needed produces a fog-like mist completely coating the plants without waste of material. Reaches top and both sides of row. Absolutely dependable. Saves its cost many times over for growers of cucumbers, onions, celery, melons, beans, tomatoes, potatoes and other crops.

Built in three sizes. Write today for descriptive folder and prices.

THE HELD TRACTOR CO.
600 N. 4th St. COLUMBUS, OHIO.

SPRAY FOR $

Better work at less cost makes "Friend" Traction Sprayers Better Profit Producers.

They work at 300 lbs. pressure spraying 4 rows with a 3 nozzle to the row boom. Built to last a lifetime.

Easy draft. Anyone can adjust packing, remove valves, etc.

The only Potato Sprayer made that Produces Power Sprayer Pressure.

NEST BOX NOTES

It is a great temptation to let the hens that have been confined all winter out on range these nice days. If the houses are what they should be, this is not altogether a good thing. Layers get their egg material out of the mash hopper: what they get on range is more of the nature of a sauce and a tonic. When the weather gets settled, it is a good thing to let the birds out on nice range, but not all day.

A poultryman told me that as the result of 30 years' experience he has found it best to keep his birds in the houses until the middle of the afternoon, by which time they are done laying and are also full of feed.

* * *

Baby chicks should have nothing to eat for at least two days after they are hatched. During this time they should have sour skimmilk or condensed buttermilk diluted with seven parts of water to drink. It is best to take the chill off.

* * *

Folks who have not yet bought their chicks should do so without delay. Late chicks are not as profitable as early ones.

* * *

A great many farmers who grind cob-meal for their cows also feed it in the mash ration for their hens. This is a serious mistake. Hens are not fitted to take care of such bulky materials, so the corn should always be shelled before grinding.

* * *

Where only a small flock is kept, the best plan is to buy a good commercial laying mash instead of trying to make a home made mixture. Home-grown grains can be fed with this for scratch feed.—R. L. Scharring-Hausen.

Bees in the Spring

Reports continue to come in indicating that bees generally are in good condition. In a few localities the food supply is short and starvation is likely unless feeding is done soon. Spring feeding has no place in modern beekeeping practice and should not be done except as corrective management. If colonies were not provided with ample stores last fall then spring feeding will be necessary. Only honey that is known to be free from American foulbrood, or granulated sugar, should be used but combs of good honey placed in the brood-nest near the cluster of bees make the best food.

If there is any doubt about the source of the honey it should not be used. Many beekeepers have lost hundreds of dollars by feeding infected honey unknowingly. For early spring feeding a syrup of about equal parts of water and granulated sugar is best. Later, as the weather becomes warmer a thinner syrup may be used. Some beekeepers make the syrup as thin as seventy-five per cent water for late spring feeding.

Inside Feeders Prevent Robbing

In cool weather the bees may not be able to take syrup from an outside feeder or even from an entrance feeder. To prevent robbing it is best to feed inside the hive. Any of the feeders provided by the bee-supply dealers will do or good feeders may be made out of baking pans or friction-top pails. The ordinary honey pail with a few very small nail holes in the top makes one of the best feeders. The pail is filled with the syrup and inverted on top of the frames, right over the cluster of bees.

It is essential to prevent excessive loss of heat from the bees. To do this an empty super is placed on the colony and the space around the pail containing the food is packed with warm material like cloth bags or carpet. Generous feeding must be kept up until the bees can obtain plenty from the field. A surplus of food, honey or syrup, of about fifteen pounds, should be constantly available to a normal colony during the spring in order to insure maximum brood-rearing.

Since bees require a temperature of about 93 degrees in order to develop brood and expand the brood-nest, insulation of the hive during the cool spring weather will help them to build up. The regular winter packing case may be built for them this spring, and then kept for future use. Even to wrap the hives with roofing paper and place a super full of sawdust or chaff on top will be a great help to brood-rearing.—Geo. H. Rea.

Fifty Dollars a Bite!

A good big bite of white meat from the turkey shown in the accompanying picture would cost you about fifty dollars!

The bird is a White Holland and was sold at the conclusion of the All-American Turkey Show at Grand Forks, N. D., for $1000 cash. The big gobbler was raised by Blair Chapman, of Minnewaukan.

Sold for $1000

The All-American Turkey Show at Grand Forks is said to be the largest exclusive turkey show in the United States. Several hundred birds were on exhibition this year coming from points as far away as Maryland. The show was held during the first week in February.—J. Edw. Tufft.

Be on the Lookout

This is the time of year when prolapsis of the oviduct makes its appearance in poultry flocks and may result in serious losses. The symptoms are bleeding and protrusion of reddish membranes from the vent. If not discovered at once the other fowls will pick at the protruding parts and cause the death of the affected bird. If seen in time the prolapsed bird should be removed and kept by herself for a few days.

The protrusion should be washed off with a solution of boric acid and thrust back into the body cavity with the finger. However, if the case is serious the bird is not likely to recover fully, and the best plan is to kill her for meat at once, before any fever or infection sets in. Prolapsis in its initial stage is merely an injury.

Heavy Laying Causes Trouble

The cause of this trouble is the strain due to heavy laying. Some cases are bound to occur in flocks where the production is high. If many cases occur, it is an indication that the management of the flock is faulty and that the birds are not in condition to withstand the strain of heavy laying.

At this time of year heavy laying flocks should be getting plenty of grain in order to keep up the body weight. Many poultrymen give a fattening mash at noon, composed of 1 lb. rolled oats, 1 lb. cornmeal, and 1 lb. condensed buttermilk per 100 birds. Greenstuff, milk, and cod liver oil also help to keep the birds in good shape.

Where prolapsis is very bad it is necessary to let the birds out of the houses, which cuts down production and with it, prolapsis.—R. L. S-H.

Walhalla Bankrupt

It is reported that the Walhalla Poultry farm, located at Noblesville, Indiana, an advertiser of baby chicks, has been thrown into bankruptcy in the United States Court at Indianapolis.

Get busy with your SPRINKLING CAN

SPRING is the time to clean up and disinfect.

Time to get busy with the sprinkling can charged with a solution of Dr. Hess Dip and Disinfectant.

Sprinkle it in the poultry-house—in the nests, roosts, floors. Spray it in the cracks and crevices to kill the mites.

Sprinkle it in the cow barns, in the pig-pens, sinks, drains and closets—wherever there is filth or a foul odor. It kills the disease germs, keeps everything, everywhere, healthful and clean-smelling.

DR. HESS & CLARK, Inc.
Ashland, Ohio

Objects to Jersey Crow Shoots

DEAR EDITOR:—I was born and raised on the farm. The American farm, it seems to me more each day, is the real cradle of patriotism in our great country. Anything that tends to destroy the farm, strikes the root of real freedom. However, there are various forms of propaganda and it often surprises me to see how we fall for it.

Take for instance these crow shoots that have been held in New Jersey during the past winter. For the sake of a little excitement and so-called fun the farmer and the public is helping to destroy our bird life for the sake of helping the powder manufacturer.

He's a Friendly American

I have watched the crow all my life and have long since come to a positive conclusion that he is our friend and a real American bird. Even if he is a thief it is after all only a small amount that he takes compared with the vast losses sustained by his absence. He is one of our best grub destroyers, also caterpillers, locusts, etc. To destroy the balance given us in bird life is costing millions in money and effort.

I beg of you and of your great paper not to encourage this great lie. Instead, help build up our American bird life. In New Jersey our greatest pest as far as real damage is concerned is the ringneck pheasant. This imported bird pulls corn, eats tomatoes and yet is protected simply to make hunting for the hunter and burn powder.

The game commission of New Jersey had better find something else to do than destroy our bird life. Find out who is behind this move.—Edgar L. Smith, New Jersey.

Answer Didn't Answer

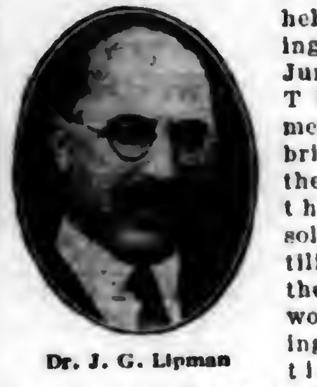
MR. EDITOR:—The two letters in your March 19 issue under Neshaminy Garden Notes in regard to the young man who would like to start in the poultry business are about the best I have read in regard to present farm conditions and I think the Editor has failed in answering them.

Take the paragraph in your answer where you say: "The average young man of today is not willing to work as hard nor as long, nor practice the economy necessary to get a start as did his father and his grandfather." Now, Mr. Editor, I do not think that there is anyone with nerve enough to ask the young man to start where his father and grandfather started. Do young men of the industrial centers and different trades work as long or practice the economy their fathers and grandfathers practiced?

And as to the farmer coming into his own I have heard this preached by farm papers and writers ever since I was a boy and I am now nearing my fifty-third milestone, but these good times that are just around the corner seem for the most part to stay there and from the present indications they will remain there for some years to come.—A Reader.

Soil Scientists of World Invited to Washington

ACTING on special invitations from President Coolidge, nearly all the civilized nations of the world are sending delegates to the First International Congress of Soil Science to be held in Washington, D. C., June 13 to 22. This great meeting will bring together the leading authorities on soils and fertilizers from the whole world, including the scientists from American colleges and experiment stations.



Dr. J. G. Lipman

The president of the International Congress of Soil Science is Dr. J. G. Lipman, Soils and Fertilizers Editor of Pennsylvania Farmer, Dean of the New Jersey State College of Agriculture and Director of the New Jersey Agricultural Experiment Station. A. G. McCall, professor of soils and geology at the University of Maryland is executive secretary of the Congress.

There will be several delegates from India and other Oriental countries, besides 20 from Russia and a large number from other European nations. Dr. Asher Hobson, permanent representative of the United States at the International Institute of Agriculture in Rome, is bringing 25 European farmers who will attend the Congress and tour the country to learn how American farmers do things.

The delegates from western European countries are expected to arrive at New York on June 5th. Another group will arrive on the steamship, George Washington, from Bremen, Cherbourg and Southampton on June 10th. They will be met at the docks in New York by representatives of the Congress and escorted to New Brunswick where they will be entertained at lunch by Rutgers University and a local manufacturer. They will spend the night of the 10th in Philadelphia and on the 11th will be the guests of the Philadelphia Agricultural Society, going on to Washington that evening.

After the meetings in Washington the official delegates will be taken on a tour of the United States as guests of American industrial concerns. In special trains they will go to the Pacific Coast by a southern route, returning thru the Northwest and the Corn Belt.

Printed in Three Languages

About 300 papers and reports will be presented at the meetings of the International Congress of Soil Science. Abstracts of all these manuscripts will be printed in English, French and German, and the papers will be reproduced in full in the language in which they were presented. Five large volumes will be required to print the proceedings of the Congress.

Those interested in securing information about the International Soil Congress meetings should write to Dr. J. G. Lipman, New Jersey State College of Agriculture, New Brunswick, New Jersey.—W.

Wherever you see this sign . . . a complimentary "Las-Stik Casing Plaster"

WHEREVER you see this sign purchase a can of Las-Stik Tube Patch at the regular price and receive a No. 1 size Las-Stik Casing Plaster Free.

Experience for yourself at first hand the absolute dependability of the new Las-Stik Balloon Tire Casing Plaster.

Stick it in an old casing and see how easily you can make your own tire repairs. Ride on the newly repaired tire and count the hundreds of additional miles you have built into it. After a few weeks examine it and notice how the heat of the road has welded and vulcanized the plaster into place so that it is every bit as good as a built up job.

If there's no dealer near you, write, enclosing the 50c and we'll see that you are supplied immediately with both the patch and the complimentary plaster.

LAS-STIK PATCH MFG. CO.
Hamilton, Ohio

Las-Stik Casing Plaster
The secret of the Las-Stik Balloon Tire Casing Plaster lies in the thick wad of uncured gum which closes up the hole and binds the cords of the tire together again; and the three-ply reinforcement which strengthens the tire around the break.

Las-Stik Tube Patch
Made of three-ply rubber, Las-Stik Tube Patch is strong. It stretches with the tube. Won't creep or come loose. Vulcanized by the heat of the road. Needs no heat, special tools or equipment.

Las-Stik PATCHES TIRE REPAIRS

TELL the advertiser you saw adv. in Pennsylvania Farmer

Veterinary

Conducted by Dr. J. F. Shigley
Associate Professor of Veterinary Science, Pennsylvania State College, and Veterinarian in charge of College Livestock.

Advice thru this department is free to our subscribers. Each communication should state history and symptoms of the case in full; also the name and address of writer. Initials only will be published. We invite readers to make use of this service. Clippings from the column when properly preserved and classified, make one of the most valuable medical symposiums a farmer-stockman can obtain.

SPAVIN.—Have a horse that has spavin about as big as a walnut. What can I do to cure him?—J. S., Elizabethtown, Pa. It is doubtful whether a cure can be effected in such an advanced case. However, you could get your veterinarian to use the hot cautery iron first and follow by the application of a blister. It is possible that the application of a blistering ointment may secure relief.

TONIC FOR HORSE.—I have a horse which is not fleshing up as he should. He also has a habit of quitting on the pull when you don't look for him to quit.—F. N., Mt. Jewitt, Pa. You might try a tonic in the feed. The following mixture may be used in tablespoonful doses three times daily: Glaubers salts, 1 lb.; soda, ½ lb.; powdered nux vomica, 2 oz.; powdered gentian, 2 oz. Would suggest that the teeth be examined and any irregularities corrected. It is possible that the use of the tonic may correct his failure to pull consistently.

FOUL FOOT.—My cattle have foul foot. Is it catching and what causes it?—A. E. R., Portville, N. Y. Clean the feet thoroly, using a strip of burlap between the toes. Put in a clean dry stall and keep quarters dry at all times. Apply a 10 per cent solution of formaldehyde to the part affected. Equal parts of vinegar and water may be used. However, cleanliness is the big factor. The disease may spread from one animal to another because the runways are infected. Keep affected animals separate from the herd. Drain the exercise yard and keep it as dry as possible.

SOW DOES NOT COME IN HEAT.—Please tell me what to do for my one-year-old Berkshire sow which fails to come in heat.—H. T. H., **Cherry Valley, Pa.** If the animal is overly fat, cut down the ration, increase the exercise and allow access to green feed if possible. Some report good results thru using gland extracts. These are administered hypodermically, and are apparently effective in many cases.

STATEMENT OF THE OWNERSHIP, MANAGEMENT, CIRCULATION, ETC., REQUIRED BY THE ACT OF CONGRESS OF AUG. 24, 1912.

Of PENNSYLVANIA FARMER, published weekly at Philadelphia, Pa., April 1, 1927.
County of Philadelphia,
State of Pennsylvania, ss.

Before me, a Notary Public in and for the State and county aforesaid, personally appeared Neff Laing, who, having been duly sworn according to law, deposes and says that he is the Business Manager of PENNSYLVANIA FARMER, and that the following is, to the best of his knowledge and belief, a true statement of the ownership, management (and if a daily paper, the circulation), etc., of the aforesaid publication for the date shown in the above caption, required by the Act of August 24, 1912, embodied in section 443, Postal Laws and Regulations, printed on the reverse of this form, to wit:

1. That the names and addresses of the publisher, editor, managing editor, and business managers are: Publisher, The Lawrence Publishing Company, Philadelphia, Pa.
Editor, R. P. Kester.......Newtown, Pa.
Managing Editor, C. L. White.......Philadelphia, Pa.
Business Manager, Neff Laing.......Philadelphia, Pa.

2. That the owners are: (Give names and addresses of individual owners or, if a corporation, give its name and the names and addresses of stockholders owning or holding 1 per cent or more of the total amount of stock.)
The Lawrence Publishing Company...Cleveland, Ohio
Arthur Capper.......Topeka, Kan.
Paul T. Lawrence.......Cleveland, Ohio
The Union Trust Company, Administrator
Estate of Mrs. C. B. Rogers.......Cleveland, O.
The Union Trust Company, Administrator
Estate of Lillian Cotton.......Cleveland, Ohio
Kate E. Munsell.......Detroit, Mich.
F. H. Nance.......Lakewood, O.
Neff Laing.......Philadelphia, Pa.
I. R. Waterbury.......Detroit, Mich.

3. That the known bondholders, mortgagees, and other security holders owning or holding 1 per cent or more of total amount of bonds, mortgages, or other securities are: (If there are none, so state.) The American Life Ins. Co., Detroit, Mich.

4. That the two paragraphs next above, giving the names of the owners, stockholders and security holders, if any, contain not only the list of stock holders and security holders as they appear upon the books of the company but also, in cases where the stockholder or security holder appears upon the books of the company as trustee or in any other fiduciary relation, the name of the person or corporation for whom such trustee is acting, is given; also that the said two paragraphs contain statements embracing affiant's full knowledge and belief as to the circumstances and conditions under which stockholders and security holders who do not appear upon the books of the company as trustees, hold stock and securities in a capacity other than that of a bona fide owner; and this affiant has no reason to believe that any other person, association, or corporation has any interest direct or indirect in the said stock, bonds, or other securities than as so stated by him.

Neff Laing, Business Manager.

Sworn to and subscribed before me this 18th day March, 1927.

Horace B. Meiningzer, Notary Public
(My commission expires April 1, 1927.)

Our Readers' Classified Advertising Department

A market place to buy or sell at little expense. Over 100,000 farm families read Pennsylvania Farmer every week. Rate 6 cents a word each for one, two or three consecutive weekly insertions; 5 cents a word each for four or more insertions. Count each number and initial and send cash with order. Orders, discontinuances or changes of copy must reach us by Wednesday of week preceding date of issue. All advertisements set in uniform style, no display type or illustrations. Poultry advertising may run here, but if displayed or illustrations used must run in display advertising columns at commercial advertising rate (65 cents per agate line). Livestock advertising not accepted in this department. Minimum, ten words.

Send All Orders To
PENNSYLVANIA FARMER 261 S. Third St., Philadelphia

The MAYTAG Saves many precious hours for the FARM WIFE

Choose Your Power
Gasoline or Electricity

For homes without electricity, the Maytag is equipped with the gasoline Maytag Multi-Motor, a sturdy, compact, quiet, inbuilt gasoline engine; so simple that the housewife can start it and operate it without the help of the menfolks. No other washer has it.

FREE TRIAL for a whole week's washing

That's the way Maytags are sold. Write or telephone any Maytag dealer. Wash with a Maytag in your own home.

If it doesn't sell itself, don't keep it.

For homes with electricity, the Maytag is available with electric motor

THE bigger the washing, the more time the Maytag saves. It positively surprises you with its speed—washes twice as fast as ordinary washers yet it washes clean without hand-rubbing a single garment, even grimy overalls.

This remarkable washing speed is due to many time and labor-saving features possessed only by the Maytag.

The Maytag is the only washer with the one-piece, seamless, lifetime cast-aluminum tub—the tub that cleans itself, empties itself and keeps the water hot throughout a big washing.

The compact, all-metal wringer swings and locks into seven positions—adjusts its tension automatically for a thin handkerchief or a bulky blanket, and wrings both dry.

Learn all about the many advantages of this better-built washer by a Free Trial Washing in your own home.

The famous Goodyear [illegible] Car owners have [illegible] nearly 5,000,000 of these low-priced standard quality [illegible]

Right in Your Home Town

You can buy tires through the mail of course, but one of the biggest factors in low-cost mileage you cannot buy that way.

It is the valuable *service* performed for you by your local Goodyear dealer.

He sells the world's finest tires. His prices are low. He has in stock the right size and type of tire for you.

He will mount your new tire on the rim, fill it with air, and long after the sale help you care for it so that it will deliver you its maximum performance.

The benefits of this helpful service are not listed in any catalogue. But they are available to you *now* in the store of your home-town Goodyear dealer.

They are the worthwhile fruit of the Goodyear policy: *to build the greatest possible value into Goodyear products,* and *to provide facilities so that users can get all this inbuilt value out.*

Goodyear makes a tire to suit *you*—whether you want the incomparable All-Weather Tread Goodyear, the most famous tire in the world, or the lower-priced Goodyear standard quality Pathfinder

Farms and Farmers in China

Observations of a Native Pennsylvanian on Agriculture in the Orient

R. L. Watts

By R. L. WATTS

Dean of the School of Agriculture
Pennsylvania State College

CHINA! The land of wonder and mystery, teeming with a population four times that of the United States on an area two-fifths the size; a country with an advanced type of civilization two thousand years before Columbus discovered America; a country constantly menaced by pirates and bandits and yet containing thousands of gentle, well educated people determined to establish a government which will command the respect of all civilized nations.

It was our privilege to spend about a month in this great country, and I am pleased to comply with the request of Editor Kester in writing a short article for Pennsylvania Farmer.

The most important statement I can make is that I met and became quite well acquainted with a considerable number of educated Chinese men and women, and I have no hesitancy in saying that finer people cannot be found anywhere. Not only are they well educated but they are exceedingly kind, gentle and courteous, and possess the splendid human qualifications which are so essential to helpful and agreeable social relations. We met such people in conferences, in their homes, and at public meetings, and, in every instance, they won our highest esteem and admiration.

The hope of China is in her educated classes. Many of the people, thanks to our missionaries, have accepted Christianity, and the antagonism, which apparently is quite general thruout the Republic, is not so much anti-Christian as anti-foreign. Nearly all the Chinese gentlemen and the Chinese lady who were chosen for membership of the new Board of Directors of Lingnan University are Christians.

For centuries, the ambition of perhaps every family in China has been to have the maximum number of sons. At any rate, boys have been prized and honored far more than girls. However, a great change is taking place in this respect. For example, the second person nominated by a Chinese gentleman for membership on the Board of Directors of Lingnan University was a Chinese lady.

Labor is very cheap in China. At Shanghai and Canton farm laborers may be employed at 25 to 30 cents a day in United States money, which is about one-tenth the cost of farm labor in the U. S. The cost of living is very much less than in America but the standards of living are also very much lower. I can hardly conceive of a Chinese laborer or even a farmer being able to own an automobile.

Nearly All Farm Work Done by Hand

Near Canton the average size of a farm is about two acres, and some families are able to make a living on even less land. The most intensive methods are followed, and all the work is done by hand, except that sometimes the land is plowed with the buffalo cow. In America we can have practically no conception of the enormous amount of hand work that is done both in the cities and thruout the country of China. Rice is sown in beds and the plants set about 10x12 inches apart in small plots. When the crop is ready to harvest, it is cut with small sickles, threshed by hand, winnowed by hand, and the chaff and hulls removed by the most laborious hand processes.

An enormous quantity and a great diversity of vegetables are grown in southern China. Eighty inches or more of rain may fall in a year and a foot or more in 24 hours. For these reasons the vegetables are grown in beds 5 to 7 feet wide and generally several rods long. They are raised from a foot to 18 inches above the bottom of the ditches that run between them. The ditches usually contain water which is splashed over the growing crops once or twice a day during the three rainless months of the winter season.

In many instances water must be carried a considerable distance from the canals or ponds to be sprinkled over the plants. The water is usually carried in two large wooden buckets suspended from the ends of a bamboo pole balanced over the shoulders. This makes a very heavy load and I do not believe any American laborer would consent to act as such a beast of burden.

The Chinese vegetable gardener is very thoro and very skilful, but he knows practically nothing about the science of horticulture or of agriculture. In other words, he knows how but doesn't know why. I saw many of the most perfect plantings of lettuce, Chinese cabbage, and many other crops, all fertilized with night soil in liquid form.

Occasionally the Chinese farmer buys fertilizer by color and he knows nothing about its composition. However, night soil from the villages and cities is practically the only fertilizing material used in South China.

(to page 17)

Farmers Rally To Fight the Borer

County Meetings Being Held To Prepare for Wind-up of Spring Campaign

"WE MUST get the borer before the borer gets us." That is the thought that is driving farmers and government officials of the areas infested by the European corn borer in their great spring clean-up campaign.

In a few weeks this greatest menace to the king of crops will be active. There is no stopping it then. The only thing to do is to get it before it finishes the winter's sleep.

Uncle Sam decided not to let the borer put the United States corn grower out of business, as it has farmers in sections of Canada, just a few miles across Lake Erie from Pennsylvania. That is the reason for the $10,000,000 campaign to destroy all corn crop remnants, thereby killing every hibernating borer in the worst infested areas of Pennsylvania, New York, Ohio, Indiana and Michigan. Eight counties of northwestern Pennsylvania are involved in the spring clean-up campaign. They are: Beaver, Butler, Crawford, Erie, Lawrence, Mercer, Venango, Warren.

Altho the clean-up is of greatest importance and seriousness,—as anyone knows who has seen what borers can do to a corn field,—the strict rules and regulations really call for nothing but good farming practice.

There is nothing radical about the idea of clean plowing. Neither is there anything revolutionary about a barn and barnyard free from the litter of cornstalks and cobs. The regulations require only what is good farm "housekeeping," with the provision that the spring clean-up be thoro and that it be completed before May 1st.

The clean-up in Pennsylvania is being done under the supervision of the United States and the State Departments of Agriculture, while the State College Extension Service men are aiding by showing farmers the best methods to use and explaining the regulations.

The two-row stubble pulverizer, designed especially to fight the corn borer. It is operated by a tractor with a power-take-off.

Mr. R. G. Bressler, Deputy State Secretary of Agriculture, has been in the northwestern part of the state for some time, as active head of the work being done under the supervision of the State Department. Secretary Jordan has also been keeping in close touch with the work.

Schedule Announced

During the week beginning April 18 a series of county-wide meetings will be held in the counties in the corn borer war zone. Secretary Jordan, Deputy Secretary Bressler, State College representatives, and other prominent speakers will explain the seriousness of the situation, and tell of the resources of the government that will be available to farmers who are unable, without assistance, to complete the clean-up before May first.

It is the purpose of these meetings to bring together the farmers of each county together with local business men and all others affected by the corn borer clean-up regulations. The schedule of meetings follows:

Erie, Erie County	Monday, April 18
Warren, Warren County	Tuesday, April 19
Franklin, Venango County	Wednesday, April 20
Mercer, Mercer County	Thursday, April 21
New Castle, Lawrence Co.	Friday, April 22
Butler, Butler County	Monday, April 25

(Continued on page 17)

Kellys don't cost more

BECAUSE the Kelly-Springfield tire has so long been known as a quality product, and because it is natural to associate high quality with a high price, many people have an idea that Kellys are more expensive than other tires.

They're not. Not only do they cost no more to buy, but their long, uninterrupted mileage makes them cost less to own.

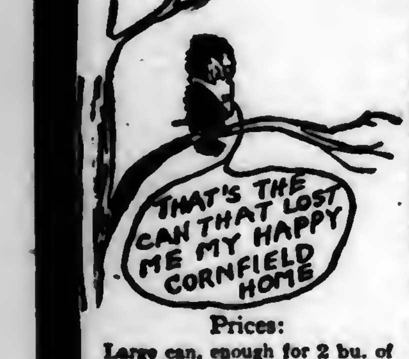
Try one Kelly-Springfield and see for yourself if it's not so.

"Kelly dealers everywhere— there must be one in your town"

KELLY-SPRINGFIELD TIRE CO.
GENERAL MOTORS BLDG. NEW YORK

KELLY SPRINGFIELD BALLOON TIRES

1/3 of a silo of Corn for $1.50



THAT'S THE CAN THAT LOST ME MY HAPPY CORNFIELD HOME

Up in Remsen, N. Y., Webb A. Browne & Son plant about 7 acres of corn, to fill a 30 x 18 ft. silo. They were troubled with crows, and looked around for something that would rid them of the loss they suffered each year from crows and other pests. So they tried Stanley's Crow Repellent. And this is what they write us:—"No more touble with crows. Would not plant corn without it. The crows never light on the field after they have tried it. Saves us from 1/3 to 1/2 of the crop. Stanley's Crow Repellent banishes the bugbear of replanting. And if a certain acreage will fill your silo, you don't have to plant from 1/3 to 1/2 more to cover the loss by crows."

Think of it! From 1/3 to 1/2 of your corn crop saved by expending only $1.50 for a can of

Stanley's Crow Repellent!

Further, they save the time they formerly wasted in having to plant over again. And a farmer's time at planting season is worth MONEY! Mr. Browne further says:—"It is my personal opinion that seed corn treated with Stanley's Crow Repellent showed a higher per cent germination."

Prices:

Large can, enough for 2 bu. of seed, $1.50. Half size can, $1.00. If your hardware, seed or drug store does not have it in stock, order direct from us.

STANLEY'S CROW REPELLENT SAVES REPLANTING

Your Money Back!

We know just how Stanley's Crow Repellent will rid you of the crow nuisance. But, if you are not willing to take our word for it, or if you doubt the truth of Mr. Browne's and hundreds of other unsolicited letters we have from corn-raisers who have tried it out and know, then we are willing to back up our faith in it by as liberal guarantee as was ever made by any concern. If Stanley's Crow Repellent does not do exactly what we claim it will do, then we will gladly refund you what you paid for it. You are to be the sole judge! Could any concern be fairer than that?

CEDAR HILL FORMULAE CO.

NESHAMINY GARDENS

WHERE AN EDITOR WORKS AND THINKS.

BY R. P. KESTER

A READER in Washington County asks what to do for "blight on blackberry bushes." The word blight doesn't tell very much. In fact there is no disease of blackberries known as "blight." There is the crown borer, and the cane borer, both of which cause plants to die. Crown gall, a disease causing lumps and bunches on roots and lower part of stem, is also a fatal trouble. Never set plants showing signs of this latter disease. For any of the above, the only remedy is to dig out and burn all infected plants.

◆ ◆ ◆

THE most common of the leaf diseases of blackberries are leaf spot and orange rust. Leaf spot is a fungous disease and is indicated by small circular spots having a whitish center with purplish border. This is not usually a serious disease and can be controlled by spraying with Bordeaux mixture before the leaves have reached full size. Orange rust breaks out in spring or early summer as dusty masses of bright orange colored spores, covering the under side of leaves. Since the disease lives on the underground parts the only remedy is to dig and burn all plants showing this disease.

◆ ◆ ◆

TWO of the old-time items of weather lore were smashed into smithereens this year. First, the hoary legend about the groundhog was discredited by the mild temperature and absence of snow since the second of February. Then March came in like a lamb, gamboled thru the thirty-one days, and skipped out as harmlessly as it entered. Both and all of which have happened before, but I know full-well that the old sayings will bob up again next year. An old saw never wears out. In spite of education and experience, the human race holds on to its childhood superstitions. Only the other day I heard a highly respectable farmer say that he POSITIVELY knew that success with potatoes depended more upon planting them when the sign was right than on any other thing.

◆ ◆ ◆

THE perpetuation of error as well as truth is a never-ending process. It has been said that no man (or woman) ever learns anything new after he is forty. After that it is merely a rearrangement of what was learned in youth. The child imbibes error as well as truth from his elders, and in turn passes both on to his children. Few people make radical changes in their habits or beliefs in the latter half of life, unless there is a reason causing personal resentment. I once knew a man who all his life had been a rabid Republican to change over night to a Socialist, but it was because he failed to be appointed postmaster when he thought it was his turn.

◆ ◆ ◆

A GREAT many of our troubles in life are due to this inability to change our habits and beliefs. Most people are not by nature students,—always openminded and receptive to new knowledge. They paraphrase the old motto by thinking, "I am sure I am right and will go ahead." People fail to learn as much from each other as they might if each party to a conversation were honestly seeking information instead of trying to impart or defend his own ideas.

◆ ◆ ◆

BUT if what I have been writing is true, it is, by the same token, of no value. Yet these thoughts are the result of my observations as I have been traveling thru life, and I suppose they apply to myself as well as to others. I, years ago when a teacher, made a few rules for myself which I have tried to keep in mind at all times. Some of them are:

Prove all things and hold fast to that which is true.

Everyone can teach me something.

As I grow older, try to keep from becoming crabbed and pessimistic.

Take truth for authority, not authority for truth.

◆ ◆ ◆

NOW you would have been spared this preachment if that farmer had not declared that no man could raise potatoes who ignored the moon's phases!

The Cheerful Plowman

The Talkative Barber

THAT barber's all right, I presume, in his way, but he drove me to chronic distraction today! I went to his place for a haircut, I thought, but, oh, the free lectures and records I got! "Just cut off an inch," I remarked at the start, "and whittle the back in the shape of a heart!" "Yes, yes," he replied, "and by crackle, I say, it's looking like rain or a cloudburst today! And how are the fields, are you seeding your oats? I've heard that some farmers were seeding from boats. Jack Dempsey, I see by the paper today, would like to fight Tunney the seventh of May. I see some are kicking because of the fact there's not enough punch in the radio act!

"Do you keep many chickens and how do they pay? Are you feeding oat bundles, or bundles and hay? I notice in China the war is still on, and some are denying the writings of John! Babe Ruth has signed up for the season, I see; I wish half his money were coming to me! The people in France—" But I cannot relate one-half that he said while he sheared at my pate! He talked everything from the moon to the sun, and every transaction since time was begun. I bought a haircut, but before I was thru some ninety free lectures were given me, too.—J. Edw. Tufft.

Friendly Talks

By EDGAR L. VINCENT

IT IS a stormy morning. The skies hang heavy all about us. We had to have the lights turned on when we ate breakfast. The wind blew the rain against the east window till the big drops ran down like little rivers. Every tree and bush and stalk of flower dripped as if crying because the day was beginning in a storm.

And it was the same last night. We went to bed with the rain beating the earth and the wind lashing the trees. But who thought it would last till morning? "It will be over tomorrow." So we thought, for that is often the way with our storms. They rain themselves out and drift away to some other clime.

We hoped it would be so today for we have many things we would like to do. Our plans had been made. The first thing after breakfast we would do this; a little later another job would take our attention, and so on thru the day. Often we have compared our life on the farm to the run of a fast railway train across the country. We must reach our stations on time; when we fail to keep up to our schedule it throws everything out of gear, and we must work harder to catch up. Making up lost time is always difficult, and we may not be able to do it at all.

Present Loss Turns to Future Gain

Middle of the forenoon. Dinner time. Three o'clock, and still no sign of the storm abating; and now we begin to lose patience. "Must be it is going to rain forever! Another flood, it looks like. This is the worst country to live in anyhow! Always a storm or something to make life hard for us!" Our day has been spoiled. We have accomplished nothing except the chores. Too bad! Why did it have to be so?

And yet, out on the bank of the house crocuses are coming thru their bed of leaves; and how green the grass out on the lawn looks! The lilac buds have swelled more than half their size since the storm began. The wells are full now, ready for summer. The creeks, too, are running banks full. They will stand dry weather for a long time.

And see! Away off yonder, low in the sky a bright strip begins to show! The clouds are beginning to lift; already the big banks of dun and grey are hurrying away like the broken ranks of a defeated army. We shall see the sun before it sinks under the horizon. Won't it look good! How glad we shall be! It is a good old world after all!

It Is the Common Lot of Man

Is it not always so? Life has its shadows and its storms. Our plans get upset; we lose our patience and scold about it, and, it may be, make it uncomfortable for everybody else, just as if this were something personal sent to worry us and not the common lot of man. We are all pilgrims and sojourners together, if we would only look at it in the right light.

And after the storms roll by, cannot we see what a lot of good they have done? If we have given them their proper estimate, we know that they have left us stronger than we were before. But it takes all the manhood there is in us to do this. To hold still and not fret and fume, to keep cheery while the storm is passing and to be sure that soon everything will change and we shall go on again, bound for the land of the best there is, that is no boy's play; but we can do it!

Let's look inside

Outside—all tires look very much alike. Their real worth is told only by the "road" or by looking inside.

QUALITY is seldom visible—more often it is told only by use. The quality of a tire is known by the number of miles it has traveled. And the quality can easily be cut down to fit a selling price.

Riverside tires are made with a heaping measure of quality, without regard to what the price will be.

They are sold at the lowest possible price for equal quality. We do not believe any power can produce for less money a tire that is the equal of Riversides.

Ward's High Quality Is Always Maintained

Ward's is a low priced house. To always offer you a saving is our work—is our duty to you. But we regard it a greater duty to always safeguard your satisfaction. We do not offer you goods that will disappoint you in service, *goods made to sell but not to serve.* We place your friendship, your confidence in us, absolutely first.

Quality First—Then Low Price

At Ward's we make low prices by expert buying in all the markets of the world. We use 60 Million Dollars in Cash to secure low prices for you. We buy in the largest quantities, by the car load, by the thousand dozen, to secure lower-than-market prices.

No merchandising power in the world can buy for you cheaper than Montgomery Ward & Co. *No one can sell equal quality at a lower price.*

For Fifty-five Years, Ward's has dealt with every customer in the full spirit of the Golden Rule. To give you the largest savings, and the utmost in satisfaction and service.

But we never sacrifice Quality to make a seemingly low price.

A Price too low—makes the Cost too great!

OUR JOB is to serve our readers. Whenever you are puzzled write to us and we will help you if we can.

The end of birth is death; the end of death is life; and wherefore mournest thou?—Inscription on "The Peace of God," by St. Gaudens.

"Liberals" Make Slow Progress

THE class of people who talk so loudly and persistently about liberalizing restrictive laws seem to be making very little progress, either in congress or the state legislatures. If one took seriously all the assertions and prophesies which have been made recently he would naturally think that the bars were about to be let down in all directions. The net result of all legislation leaves laws relating to social and moral questions about where they were; if there is any difference it is in the direction of greater restriction. Even if the moral sense of the public is misplaced at times, it is a safer guide for humanity than the demands of the "liberals" who would sacrifice all safeguards for mercenary reasons.

Prices Tend Downward

ONE of the significant tendencies of the past year has been the slow but certain downward movement in commodity prices. Almost the entire list of things which people buy sells somewhat lower than the same items did one year ago. But the manufacturing and commercial industries are making no complaint, nor are they making any special effort to hold prices. Financial reports show that the business world in America has enjoyed an unusually profitable year. Dividends and returns have been high, in the main. The reason for the anomaly of big returns during a falling market has been the introduction of more economical methods of production. Here is where farmers may well stop and ponder. There is little ground for hoping that farm prices will be appreciably higher than they have been, providing a normal season and a normal yield ensues. The opportunity for increasing farm profits is limited to introducing greater economy in producing a crop, and in marketing it in a less expensive manner.

It must not be inferred from this that farmers have been slower than others in adopting better methods. In fact, they have led the world in increasing the output per man. In fifty years the production per man has been increased by five times measured in dollars and cents. But most of the improvement has been in the elimination of human energy by the substitution of machinery. While there are still great possibilities in this direction, the next field of opportunity is more intellectual than physical. The adaptation of crops to soil, the selection of breeds and varieties, the intelligent fertilizing of soils, the avoidance of loss by diseases and pests, the production of articles and the preparation of them according to the demands of the market, —all these call for a greater skill and intelligence than is often exercised, and it is here that the greatest opportunity lies. Have you ever stopped to consider that in fifty years the increase in products per man, per cow and per hen, has increased many times more than the increase per acre?

Let's Stop the Nuisance

THE farmer who, for the sake of a few dollars, a few bottles of patent medicine, or a few tickets to a show, will sell his esthetic sense and allow the beauty of his landscape to be marred by glaring advertising is a proper subject for a reform society. Either the craze to sell, or the esthetic sense of Americans is so low, that the beauty of the great out-of-doors is in danger of being shut from view entirely. Many of the most beautiful vistas along our splendid but costly highways are obliterated by glaring, unsightly billboards. Many a good farm with fine surroundings and good buildings is made to look like a slattern tabloid newspaper by the advertisements painted on roof and sides of the buildings. Many a patriarchal tree whose age is greater than that of our government is degraded by having a nondescript array of advertising boards nailed to it. Let us stop cluttering up our landscapes and our premises with appeals to buy something such as now meet the eye at every turn. Property owners could stop it if they would.

Ten Years Ago U. S. Entered War

TEN years ago on the sixth of April the United States officially entered the World War. The war had been in progress nearly three years at that time and events had so shaped themselves that this country could no longer remain neutral. In the nineteen months following, the United States was practically made over. Every man and woman in every nook and corner, every business and every institution was changed from a care-free peace-time condition into parts of a great war machine. Billions of dollars and millions of men were mobilized. It seemed before that it was impossible to do so much, spend so much and waste so much in a year and a half. Not only were the business and the physical sides of life converted into new channels, but man's mental and moral natures were changed beyond recognition. We live in a new world today,—a world still reaping the harvest sown ten years ago. While it could not have been helped, every sane man and woman is praying that it may never be repeated.

Modern Banditry

THE boys of one and two generations ago were thrilled in their surreptitious reading of forbidden books reciting imaginary stories of the "Wild West." Older people read more legitimate books and accounts of bold, bad men such as the James Boys and Frank Brothers. These real or imaginary bandits were considered the ultimate in banditry and outlawry. So bad, brave and bold were they thought to be that they came within an ace of being heroes, especially in the minds of the boys.

But we know now that the whole outfit of men who gave that section the name of the Wild and Woolly West were mere pikers when compared with modern city daylight bandits. So extensive has banditry and robbery become that there is evidence that city politics and city government are affected by underworld organizations. The legal profession has men who not only disgrace their profession, but who also thwart justice and make a travesty of law by lending their aid and efforts to free criminals. The old-time bandit stood on his own feet. In no way was he linked with lawyers or politicians. No "authority" ever laid a tax upon him and compelled him to "come across" or be pulled. He expected to die in his tracks, and he usually did.

Lime Question Should Be Revived

IN THE interest of economy of production we want to revive the question of using lime on soils. A few years ago every institute lecturer and farm paper writer talked in season and out of season on the necessity of lime. It was all true and all needed, but the need is equally as great today as then. For some unknown reason, the subject is not so popular just now. Yet, when one sees farm after farm gradually going down in the production of and quality of hay, we feel the question should be revived and emphasized.

But the production of hay is not the primary question. In addition to the service lime performs in getting the clovers to grow for stock feeding, the question of adding the needed and expensive nitrogen thru legume crops is often solved by adding lime. No farmer can afford to purchase in commercial form all the nitrogen his crops require, and none of the nitrogenous plants will succeed without sufficient lime, therefore, lime is an important factor in farm economy.

Editorial Sidelights

THE TOWN glimpsed thru the arch in this week's cover picture is called Sebustieh in these modern days. Some 1900 years ago it was known as Samaria. Near the town was Jacob's Well, the place where Jesus set forth to the woman of Samaria some ideas worth remembering at this Easter season. If your memory is rusty, the fourth chapter of the Book of John will recall the details of the immortal story.

Samaria was founded about 925 B. C. and at one time was the capital of the Kingdom of Israel. It lies about 36 miles from Jerusalem between the River Jordan and the Mediterranean Sea.

MANY PEOPLE tell us how much they are enjoying Doctor Fletcher's travels. To read his articles is almost as good as going along on the trip. What he tells this week (Page 10) about a North Carolina fruit grower reminds us of a statement frequently made about Pennsylvania orchardists.

It is said, and probably quite truthfully, that in the mining and industrial sections of Pennsylvania where there is a large foreign population it doesn't pay fruit growers to grade their products for the local markets. The buyers aren't particular. The result is the growers haven't learned to grade and pack to suit the high-class trade in the larger city markets.

The further result is that we have never been able to buy a Pennsylvania apple from the fruit dealer we frequently patronize because his stand is convenient. We have been telling him for years about the superior qualities of Pennsylvania apples, all in vain. He was "stung" once on locally grown fruit. Ever since he has bought only the beautiful apples that come in boxes, as uniform as so many china nest eggs,—and some of them with about as much flavor, to our prejudiced taste.

MOMENTOUS DECISION

Ruling Important to Farmers —Agricultural Census Meets Favor—New Prohibition Law In Effect.

Washington, D. C.

THE decision of the Interstate Commerce Commission that the value of the property of a railroad for rate-making purposes shall be based on the reasonable and necessary investment and not on the cost of reproduction, under the recapture clause of the act of 1920, is held to be of vast importance, not only to the railroads but to the farming interests and the public generally.

The recapture clause provides for payment to the federal government of one-half of the net railroad operating income of a railway system in excess of 6 per cent on its value for any year following the passage of the act.

According to Senator Norris, of Nebraska, chairman of the National Conference on Valuation of American Railroads. "This decision is of vast importance to farmers, shippers, wage earners and consumers. Excessive transportation charges based upon the inflated valuation sought by the railroads would paralyze the productive activities of the nation and bring upon all the people the suffering now experienced by agriculture. The railroads will unquestionably attack the decision in the courts."

State Reorganization of Loan Board

The proposed reorganization of the Federal Farm Loan system is fast developing into a certainty. It has started with the resignation of Elmer S. Landes. Former Commissioner Robert A. Cooper and Edward E. Jones are also slated to go. The American Farm Bureau Federation, National Grange and other farm organizations admit that the present Farm Loan Board is not functioning perfectly and that there is some disagreement among the members, but they want the reform made by strengthening the board, not destroying it, or making it a rubber-stamp adjunct to the Treasury. They are resisting the removal of any of its functions to the Treasury and every move that is being made to weaken or destroy the Joint Stock Land Banks.

Not Worried About Coal Strike

Assurances are given in reports to President Coolidge that there will be little, if any, suffering on the part of the public as a result of the suspension of operations of the union miners of bituminous coal. It is estimated that there are about 110,000,000 tons of soft coal in storage, and the non-union mines are capable of producing 50,000,000 tons of coal monthly.

World Farm Census Being Planned

The countries of the world so far visited are indicating a willingness to cooperate with the International Institute of Agriculture at Rome in the work of taking the world census of agriculture in 1930, according to L. M. Estabrook, director of the world census. Mr. Estabrook has visited nearly all the countries of Europe, western Asia and Egypt, and is now on a trip to practically every country in the Western Hemisphere and eastern Asia. Each country agrees to pay for its own census and to issue its own report, which will be utilized in preparing the world report on each product by the Institute of Agriculture. If this census is favorably received the Institute hopes to obtain funds for its continuation covering every ten-year period.

Tastes Like Bad Varnish

The new prohibition law is now in effect with Roy A. Haynes as acting prohibition commissioner. It is understood, however, that General Andrews is still the real head of the bureau, with Secretary of the Treasury Mellon over all.

Beginning April 1 the government requires that all industrial alcohol be denatured with "adlehol," a new denaturant that is said to smell like burning oil and tastes like badly flavored varnish, and there is no way of removing the taste or the smell from the liquor. It is believed that this will limit the bootleggers' supply of intoxicants to the vile, death-dealing product of the illicit still.—E. E. R.

HOUSES RUN WILD

Governor's Desk Piled with Bills —Farmers Aid Campaign Against Borer—T. B. Testing Speeds Up.

Harrisburg, Pa.

IN SPITE of the fact the Legislature, billed to adjourn the week of April 11, was warned to hold down the number of its enactments the two houses appeared to run wild in the closing fortnight and a large list of bills was piled up for Governor Fisher. Many of these, it is true, are repealers of laws declared unconstitutional, styled obsolete or repealed without being stricken off the books and to that extent will relieve the body of the law. But there are others designed to correct local conditions at expense of codes and to meet specific cases, which go by the term of "lawyers' bills," and are not likely to get very far. The bills are being gone over by the attorney general and his staff as rapidly as received and the Governor has thirty days after the session in which to dispose of them. Passage of the gasoline tax bills will, in the opinion of administration people, enable a fair construction program to be launched by the Highway Department.

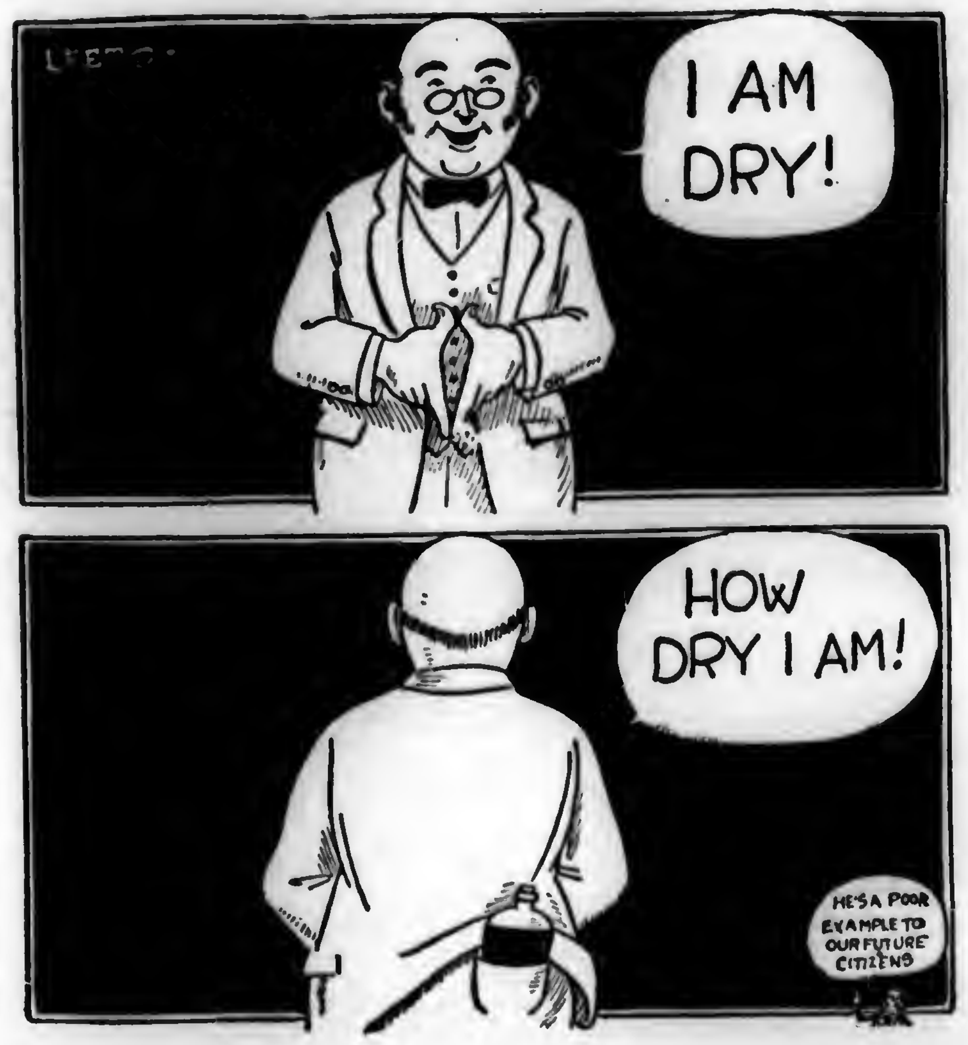
Voluntary Work Booms

According to what is being heard here, farmers in counties affected by the corn borer quarantine are aiding materially in the campaign against this menace to one of the most valuable of Pennsylvania's crops by voluntary clean-ups. It is not thought there will have to be much late enforcement by the federal and state authorities. The rest of the state is watching with interest how this most extensive fight against a pest is conducted because of fear the borer may spread and other communities be involved. The Japanese beetle quarantine is now in operation and people are being posted on the transportation features of the regulations. It is not anticipated there will be any trouble over stopping of vehicles such as occurred a few years ago.

Dog Legislation

Wind-up of the Legislature has been enlivened by considerable controversy over proposed laws dealing with dogs. These were aimed to reduce rabies, but aroused criticisms of humane societies, some of which have been coming to Harrisburg with protests against the measures adopted in western Pennsylvania. State officials have asked for cooperation of the public as the best means of reducing rabies.

TWO VIEWS OF A WELL-KNOWN TYPE OF CITIZEN



I AM DRY!
HOW DRY I AM!
HE'S A POOR EXAMPLE TO OUR FUTURE CITIZENS

More Sign Up

The Bureau of Animal Industry has received notices of more signing up for tuberculosis tests in the central and southern counties, where the interest in the inspection was slow at the beginning of the present movement. Plans are being made for rapid pushing of the work as soon as the new state appropriation becomes available.

Snow Fence Law

Among the bills to become laws the last few days is that permitting erection of snow fences on November 1 instead of a month later. This law is due to the fact people in northern counties found December 1 occasionally too late.

State Makes Inquiry

Delaware state authorities have been asked for information as to the manner in which there will be enforced the proposed law restricting in great measure the stall rights in markets in that state to residents of Delaware. Many Pennsylvania farmers living in southern counties are interested.—T. C.

CONTESTS CONTINUED

Rules Governing Potato Contests Modified—Trenton Co-operating with Farmers—Lettuce Diseases Must Go.

Trenton, N. J.

THE state-wide potato yield contest as started in New Jersey last year will be conducted again this season with some modifications of rules. The goal of last year's contest was for a production of 300 bushels of U. S. No. 1 potatoes per acre on a five-acre area. This year the rule has been modified so that the area upon which the yield is to be determined will be three instead of five acres. Any grower who raises three acres of potatoes is eligible to compete and the details of the contest, method of checking production and other regulations may be obtained at the county agent's office in any county. A small entry fee is asked from each entrant to cover the cost of measurement and inspection. The contest last year was started so late that many farmers did not take advantage of it. Interest appears to be very keen this season.

Market Growers Meet

The Trenton Market Growers' Association met recently to discuss plans for the coming season, with 75 growers present. Both the State Department of Agriculture and the College Extension Service sent representatives to discuss the practical function of marketing, the question of proper package and varieties to meet local demands at the Trenton markets. Several of the speakers expressed the opinion that the biggest problem before the growers was the standardization of varieties to meet the local trade and the procuring of good seed which would insure a substantial production with minimum labor requirements. The city of Trenton is giving considerable cooperation to the farmers and the market plan is on a permanent footing.

Will Rotate Crops

Lettuce growers in Cumberland County will follow a practice of crop rotation in order to eliminate various diseases affecting lettuce which in recent years have gotten a uniformly firm hold in southern New Jersey trucking areas. The Cumberland County Vegetable Growers' Association brought this matter to the attention of their membership in late March and further suggested the rogueing of fields when lettuce "drop" first puts in its appearance. The sweet potato membership of the association met at Vineland on April 7, which is the final meeting of the association for the year. During the summer several field and marketing tours will be made by the growers. —B.

MILK BARRED

U. S. Places Embargo to Prevent Infection—Attempt to Acquaint Women with Selling Opportunities.

Ithaca, N. Y.

AN EMBARGO on all shipments of milk from Canada produced within 200 miles of Montreal, where an epidemic of typhoid is raging, has been placed by the United States Government. This will shut out about 160,000 quarts of milk daily, says the director of the New York City Bureau of Foods and Drugs. This is not expected to bring about any shortage of milk in New York, as the period of flush production is about to begin.

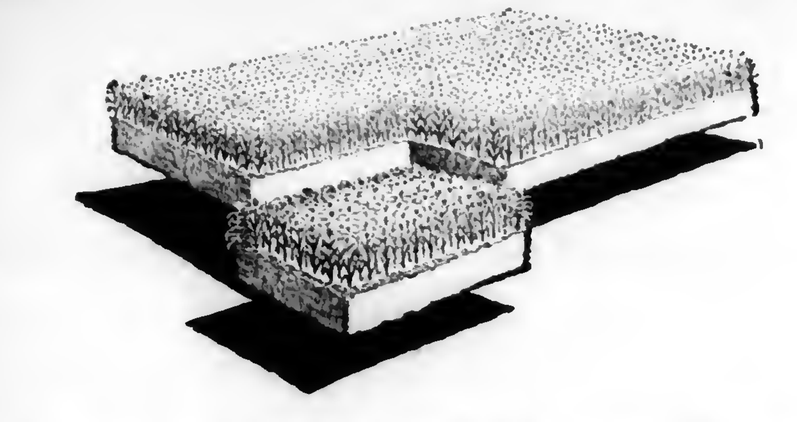
Canada has asked that the embargo be modified, as there are many producers within the 200-mile zone that have never shipped milk to Montreal, and that are not typhoid suspects. American consumers are assured that no chances of infection will be taken.

Roadside Marketing Stressed

Recognizing the fact that little is being done to help the individual farmer or the farmer's wife to sell the products of the farm or its owners, two distinct movements are under way to give assistance to farm girls or women who wish to realize on the products of their hands and brains. A survey of rural women's occupations is being undertaken by a research worker at the state college. The subjects of roadside marketing and other forms of individual marketing are being stressed by the series of four district meetings of the New York State Federation of Home Bureaus now being held in the state.

Blood Wins

The leading cow in the cow testing associations of the state last month was Edytha of Munroholm, famous purebred Guernsey cow owned by T. H. Munro, of Camillus. She was first in production and second in her class at the state fair last fall, and was tenth in production and eleventh in class at the Sesqui-Centennial show. Her record for the month of February was 1358.7 pounds of milk testing 5.88 per cent butterfat, and 79.84 pounds of butterfat.—M. G. F.



Save a Fifth of Your Corn

Crop Insurance at Only 4c an Acre

EXPERIENCE has taught you to expect a 20 per cent to 30 per cent loss of your corn due to root, stalk, and ear rots. How much is a fifth to a third of your corn crop worth to you? You can save it at the insignificant cost of only 4 cents an acre. Three ounces of Semesan will treat a whole bushel of corn, sufficient for planting eight acres. Semesan will give you the same yield with fewer planted acres—save land, save seed, save planting, cultivating and harvesting labor. And your corn will be finer quality.

SEMESAN JR.

For the Prevention and Cure of Field and Sweet Corn Diseases

Simple to apply in dust form. No bulky solutions to handle. No skill, no elaborate equipment. Harmless to seed germs, deadly to all fungus. Ask your county agent to tell you about the Government tests of Semesan treatments on corn and other crops.

Prove it to your own satisfaction: Stokely Brothers and Company, of Newport, Tenn., did. They wrote a while ago: "We tested twelve different lots of seed corn, in boxes filled with earth that was well contaminated with bacteria of all kinds. On some of our seed corn which, through accident, was permitted to mold and heat slightly in the sacks, the Semesan treatment proved decidedly effective. The untreated, damaged seed corn germinated 30% weak while the Semesan-treated germinated 66% strong. We are positive that Semesan will greatly increase the germination percentage of corn."

Send this coupon for booklet that tells how to make more money out of corn.

Seed Corn

Sound Germination

HERE is *Good Seed Corn.* Rare quality for such a year as this. We are fortunate in having a stock of sound seed, that is germinating 90% to 95%. Varieties that have proved their worth time and time again.

"Lancaster County Sure Crop"—

A splendid all-around variety for Eastern United States. A great silo corn and a good husking corn as well. Not a show corn, but a variety of solid merit. Grows quite tall, very leafy, matures early, withstands drought, husks easy, makes an ensilage rich in grain. Matures good solid ears well to the north.

Other Varieties:

For the Silo or for Husking. "Early Leaming", "Improved Leaming", "White Cap Yellow Dent", "Longs Champion Yellow Dent", "Red Cob White Ensilage", "Eureka Ensilage". All in good quality seed.

Garden and Truck Crops

GILBERT S. WATTS, Staff Contributor and Adviser

Logan Spring Farm

Garden Practices Good in the Long Run

BOTH home gardeners and those producing for market should provide for a continuous supply of spinach thru the spring and early summer months. Three to six sowings at intervals of 5 to 8 days are in order. The Savoy types are popular for the earlier sowings with Long Standing or King of Denmark suitable later. Too heavy seeding is a common fault. One plant every 2 or 3 inches is an ideal stand.

Gilbert S. Watts

This vegetable is rapidly increasing in popularity and has great health-giving properties, being rich in vitamins and iron. There is no doubt that many who profess a dislike for spinach have been turned against this truly delicious vegetable thru eating it when cooked too long or in too much water. (See the account of a waterless cooker on page 24.—Editors.)

With care freshly washed spinach may be cooked without any water in addition to that adhering to the leaves. Fifteen to twenty minutes is sufficient cooking. In this manner flavor, color and vitamins are conserved. At our table we are very fond of spinach served without seasoning, each one adding salt and butter to taste as with baked potato.

More Could Be Grown at Home

Each year New York State ships an enormous tonnage of late cabbage into Pennsylvania, much of which could be profitably grown nearer points of consumption. This crop does not rank with the more intensive market garden crops in possible returns but affords a fair return to those who grow it year in and year out on land that is not too high priced.

Late cabbage prices fluctuate greatly from year to year. The Department of Agricultural Economics of the New York State College of Agriculture has studied the causes of this fluctuation and has found that plantings are usually increased in years following a season of high prices. Yet this tendency accounts for only one-third of the price variations, the more important factor being weather, rainfall in particular.

The late cabbage grower who regularly manages to secure high yields and sticks to a nearly constant acreage year after year very rarely will produce at a loss and in seasons of especially remunerative prices will net a nice profit. Good seed, conservation of moisture and liberal feeding pave the way.

During the latter weeks of our plant growing operations it is very easy to get into trouble thru misjudging the power of the sun or as a result of a slight lapse of memory as we become engrossed with plantings and the urgency of work in the field. When the sash are left tightly closed too long in the mornings, or when heavy clouds give way to bright sunlight, temperatures under glass will rise dangerously high in a surprisingly short time. Moreover, drying out proceeds at an astounding rate as the sun mounts higher. On windy days it pays to be especially watchful for dry spots.

Adapted to Smaller Garden Tracts

The practice of inter-cropping, double-cropping or companion-cropping, as it is variously called, appeals more to the home gardener and market grower with limited land than to those with larger areas. The old combination, cabbage plants set 18 inches apart in rows 30 inches apart with a lettuce plant between each two cabbage plants in the row and a row or two of button radishes drilled between the cabbage rows, utilizes the land to the limit and is a good example. Set onions to bunch or spinach may be substituted for the radishes. All sorts of combinations of these and other crops are possible.

Returns per acre or square rod may be increased but costs of weeding, cultivating and harvesting will mount higher. It takes about four times as long to cut a given quantity of lettuce from all over a cabbage field than from a solid, closely planted block. When the button radishes are by themselves little or no tillage will be required.

On all but sandy soils it is also a disadvantage to tramp over the soil on rainy days as one often is forced to do while harvesting the earlier maturing crops from among those that will finally occupy the land. Two or three rows of peas or beans between widely spaced rows of squashes call for no additional hand work.

Horse power is always cheaper than man power, or woman power. In the farm garden or market garden beets, carrots, parsnips, turnips, rutabagas, lettuce and onions, if planted in 24-inch rows may all be worked with a horse-drawn, fine-tooth cultivator. Some animals may even be used where rows are as close as 18 inches.—Gilbert S. Watts.

How many varieties of pears can you name? . . . Not so good. Horticulturists of the New York Agricultural Experiment Station at Geneva name and describe 2929 varieties of pears, of which 91 are called major varieties. They also describe about 1700 varieties of plums, 1300 of peaches, 1100 of cherries, 1500 of grapes, and 650 kinds of apples.

Western States Sell Us Potatoes

SOME 34 states, including Oregon, Washington, Idaho, Colorado and many others far distant, and Canada, shipped potatoes to Pennsylvania markets in 1926. The 15 larger markets of the state received during the year a total of 14,927 carloads of potatoes. Of these 3367 cars came from Maine, 1791 from Virginia, 1673 from points within Pennsylvania and 1478 from New York.

In 1925 Pennsylvania was the largest source of carlot shipments, with New York second and Virginia third. It was the relatively high prices that brought potatoes in from the far-away states, according to the Bureau of Markets.

The high prices also reduced consumption, and increasing use of motor trucks for short hauls cut railroad shipments from local points. These two factors are responsible for the 1926 carlot figures being the lowest in the past six years.

Produces the Berries

Which would be better for strawberry dressing, hen manure or high priced fertilizer?—M. W., Wayne County, Pa.

I have never heard of anyone using hen manure to top dress a bearing strawberry patch but it might be possible to do this with satisfactory results provided the material is perfectly dry and can be worked into the fine condition necessary to spread evenly. Burning may result if it is lumpy or goes on unevenly.

Where the berries are being produced for local market and can be marketed soon after picking 150 to 200 pounds per acre of nitrate of soda may be broadcasted over the plants. An increased yield may usually be expected unless the soil is very fertile and the quality will be higher. Scatter broadcast like clover seed early in the spring when the foliage is small and dry.—Gilbert S. Watts.

No Failures Experienced Any More

I HAVE recently heard several complaints concerning failures in growing spinach, one of our most valuable green foods. I formerly had bad results raising spinach, especially the New Zealand variety. Last year I was told by an expert grower how to grow it successfully, and I wish to pass along his helpful hints that I followed and which resulted in such splendid success.

The seed germinates and comes up far more readily if soaked 12 hours in lukewarm water. Before planting the seed, if the soil is heavy, it should be lightened with soot, lime or any good material that lightens heavy soil. Spinach refuses to come up if the soil is heavy. After it is well up, one should thin the plants to four inches apart, instead of crowding them. Another important point is to see that the spinach is cut frequently, or it will quickly run to seed, thus causing the loss of a continuous crop.—E. M. L. B.

Collects Old Account

JUST today, after a number of attempts and a considerable expenditure of time and energy, I succeeded in collecting not quite half of a sizable account due for vegetables sold last summer. It is very easy for some of us to lapse and rate much poorer as business men than we do as gardeners and in this case I blame myself almost as much as I blame the delinquent.

It pays to render bills promptly and regularly and to follow up with personal efforts at collection when necessary. Now before we become too busy is a good time to think out and institute a simple plan to keep accounts receivable accurate and up-to-date. A hundred dollars lost thru bad accounts may represent the profit from many hundreds of dollars sales.—Gilbert S. Watts.

Control of Water Extremely Important

AS THE weather grows warmer and days with high temperatures arrive careful control of water becomes a factor of paramount importance in advancing or retarding growth of the plants in our hotbeds or coldframes. Moreover, it has been demonstrated that with water kept down to the absolute minimum plants can be hardened much the same as thru exposure to cold.

Care should be taken not to check cauliflower too severely or the plants may "button," that is, form miniature, worthless heads an inch or two in diameter. The same treatment may result in serious premature seeding in celery.—Gilbert S. Watts.

Spraying with mixtures containing copper sulphate actually increases the yield

The commercial growers of vegetables, citrous and other fruits, cannot afford the risk of not spraying, because copper sulphate not only controls fungous diseases, but actually increases the yield regardless of the presence of fungus. Time and again the Experimental Stations have shown conclusively the difference in yield between sprayed and unsprayed plots of equal size.

Spray with Pyrox—the sure way to big, healthy money crops

You take no chances with Pyrox—it has produced truly amazing results wherever it has been used. There's nothing else like it for enabling plants to do their best.

Pyrox gives them a real opportunity. It fights off their natural enemies. Kills bugs, worms and insects, controls fungus diseases and prevents blights that turn leaves brown or black. Pyrox lengthens the growing period. Pyrox improves foliage.

Pyrox is easier to use too. Five minutes and you are ready to spray. No fuss, no mess. And once sprayed on, Pyrox *sticks*—making frequent sprayings unnecessary.

Use Pyrox for potatoes, tomatoes, cucumbers and other vegetables; grapes, small fruit, roses, shrubs and flowers.

One pound jars; 5 and 10 pound cans; 25 and 50 pound drums; and barrels. Costs much less per pound in the larger containers. For sale everywhere.

Rambles of a Pennsylvania Fruit Grower

V. A North Carolina Apple Storage

THE prevailing type of apple storage in Pennsylvania is the bank cellar. The ground temperature usually is low enough at harvest time, perhaps about forty-five degrees, to keep the cellar cool, since the temperature of a bank cellar, especially if it has a dirt floor, is controlled more by the temperature of the ground than by ventilation. The above-ground insulated storage, while successful in Pennsylvania, is not as practicable as the bank cellar for most growers. The bank cellar has the advantage of a more durable and fireproof construction. As a matter of fact most Pennsylvania storages are a combination of the two types, being mainly below ground but with the end and perhaps part of the walls exposed.

The prevailing type of storage in western North Carolina is the above-ground insulated storage. This is largely because the ground temperature at harvest time in this southern apple district is too high to keep fruit well in a bank cellar; usually it is around fifty-five degrees. A well insulated above-ground storage can be ventilated during the frosty nights of harvest time, closed during the day, and thus kept at a temperature several degrees lower than that of the ground-controlled bank cellar.

Sub-floor ventilators which are opened in cold weather. The air passes up to the apples thru the slatted floor.

Peddlers Serve Mill Towns

The storage of C. A. Black, of Waynesville, N. C., is typical of this district. He sells his 100,000-bushel crop of apples to peddlers who come to the farm thruout the winter and carry the fruit to the mill towns of the Carolinas. A packing house was converted into a storage by closing the windows on the first floor, building two large ventilators, about five feet square, with shafts reaching down into the storage room, and by insulating the ceiling and walls of the room with ten inches of packed shavings.

The floor is slatted so as to permit the free movement of the air that enters thru the sub-floor ventilators. The floor is about three feet above the ground. The ventilators are three feet long and eighteen inches wide and are spaced about five feet apart. Both the ridge and the sub-floor ventilators are opened only when the weather is cool but there is no attempt to secure continuous ventilation, even when weather conditions are favorable. The fall temperature of the storage is forty-five to fifty and the winter temperature thirty-four to forty.

Whole Crop Sold in Bulk

The apples are stored in open bins, not in crates or baskets. A 100,000-bushel crop is sold without using any packages; all the sales are bulk. The bins are eight feet wide and six feet deep. It is certain that apples will not keep as well under these conditions as when stored in ventilated bushel packages, especially varieties that scald easily, as the York and Stayman, yet Mr. Black seems to be getting fair results and has little waste. His trade, however, is not very critical.

His Staymans were still crisp, plump and bright colored tho at this date (Feb. 10) this variety is nearing the end of its safe period in common storage. There is very little shriveling, even in Grimes, since moisture is supplied from the soil beneath the slatted floor. The storage season closes about March 15, after which the temperature rises rapidly.

This storage has been satisfactory for all varieties that are picked after October 1, such as Stayman, Rome, Winesap, Black Twig, Ben Davis and Gano. Varieties that need to be harvested earlier, as Grimes, York and Delicious, need a lower temperature for three or four weeks in the fall than can be secured by ventilation. Mr. Black plans to install supplemental refrigeration in one of his houses to carry these varieties.

(Continued on next page)

This above-ground air-cooled apple storage of Mr. C. A. Black, was formerly a packing house. It is insulated with shavings.

This storage interested me as indicating the practicability of the extension of common storage into the highlands of the South. Some have had the impression that the usefulness of common storage is restricted to those northern districts that can maintain a temperature of around forty degrees at harvest time. The experiments at the Marble Laboratory, which showed that some varieties of apples will keep as well at fifty degrees as at forty, provided ventilation and humidity are favorable, are confirmed by the experience of these North Carolina growers.—S. W. Fletcher.

Full-Bloom Spraying Kills the Bees

SOME fruit growers pay as much as $5 a colony to have bees moved into their orchards during blossom time. One commercial grower in Indiana claims an increase in one year of 14,000 barrels due to his use of bees. He arrived at that figure by comparing his yields per acre with those of his neighbors who made no particular effort to have their blossoms pollinated.

"One thing at a time, and that done well," seems to be the motto of the honey bee, for bees not only work hard during blossoming time, but they work on only one kind of flower at a time. They don't flit from apples to pears and from pears to dandelions. When they are working on apples their fuzzy bodies carry only apple pollen, which, of course, is just what the apple grower wants.

Bees Hustle Between Showers

The calyx spray is most effective when at least 80 per cent of the petals have fallen, say Purdue orchard specialists. Growers should avoid spraying when orchards are in full bloom,—not only because the spray is more effective a little later, but because full-bloom spraying kills immense numbers of bees.

The bee is especially important when the blooming period comes when the weather is cool and rainy. For it gets out and hustles between showers when other pollinizing insects remain under shelter.—C.

Cions Must Be Dormant

When should we graft grape vines?—H. W., Franklin County, Pa.

Grape vines should be grafted at the time most suitable for grafting apples, which is from the first of March until the buds burst, or even until the trees are in bloom. If late grafting is done it is particularly important to have cions that are perfectly dormant, however far advanced the stock may be.

We presume you refer to topworking an established vine, not to multiplying nursery vines. This is done by cleft grafting as with the apple. The stock is cut off square several inches below the surface of the ground and two cions inserted in the cleft. No wax is used but earth is banked over the graft, leaving the top bud of each cion exposed.—S. W. Fletcher.

There are fewer forced sales of farms in Pennsylvania, New Jersey and New York than in any other section of the country. In some of the "one-crop" states from 60 to 70 farms in each 1000 change hands in a year on account of mortgage foreclosure, bankruptcy, delinquent tax sales, etc. This is more than five times the number of forced sales per 1000 farms in the Middle Atlantic States named above.

Avicol
For White Diarrhea

In few hours, disease is stopped and sick chicks full of pep.

It's easy to stop chicks dying from white diarrhea. All you need do is drop an Avicol tablet in the drinking water. Thousands of poultry raisers, year after year, raise nealy every chick by this simple precaution. Mrs. E. E. Franks, Ramsdell, Tex., writes: "I was losing 10 to 15 chicks a day before I received the Avicol. I haven't lost one since.

A free test of Avicol will show how easily white diarrhea is prevented and stopped. The way it makes sick chicks lively and healthy, in just a few hours, is positively amazing. If you have never tried Avicol, write for a free sample, or send 50c for a full-sized package, to **Burrell-Dugger Co., 847 Postal Station Bldg., Indianapolis, Ind.** It costs nothing to try the 50c package, because Avicol is guaranteed to do the work or money refunded. But if you prefer, try the free sample first.

for Fighting The Corn Borer

Authorities have agreed that when disc harrows are used to fight the corn borer the discs should be sharp. A suggested method for fighting the corn borer efficiently is: (1) Cut stalks within 2 inches of the ground; (2) burn stalks or shred and feed them; (3) disc with SHARP discs; (4) plow stubble under cleanly.

The HARROSHARP will keep a knife edge on your discs. The HARROSHARP is a universal tool, fitting all makes of disc harrows. It is simple to attach and operate, is efficient and automatic and lasts a lifetime. Write today for a descriptive folder.

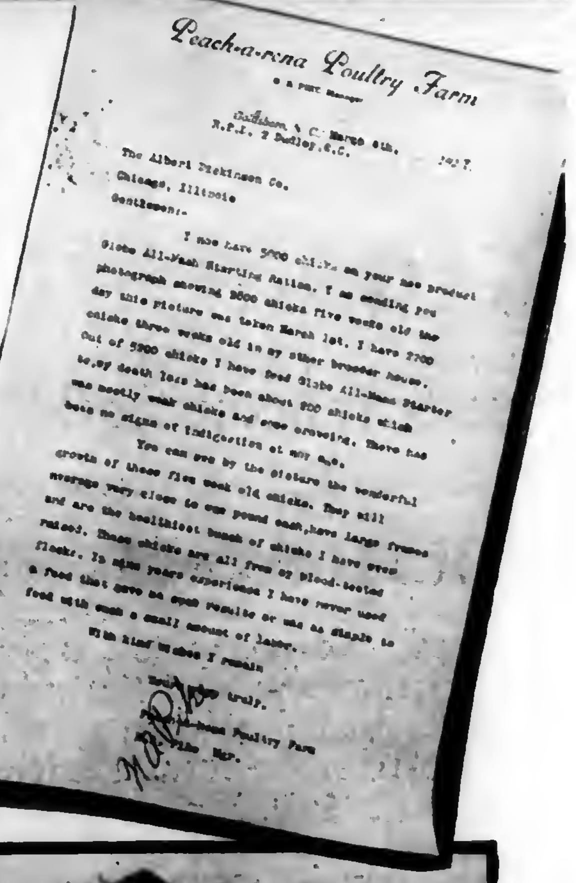
GLOBE ALL-MASH
Is Already A Proven Success

"Never Had a Feed Give Such Good Results"



Peach-a-rena Poultry Farm

Mr. Pike brings out in his letter several points of interest to those who keep poultry for profit:

1. Exceptionally low mortality.
2. Rapid growth.
3. Unusual health and vigor.
4. Simple to feed—less labor.
5. *Best results in nine years.*

This is only one of the hundreds of letters that are now coming in from poultrymen who have already tested Dickinson's Globe "All-Mash" Rations. However, you don't have to take anyone's word for it. Try Globe "All-Mash" Rations yourself and judge by your own results. A Booklet on Chick Raising free on request.

POULTRY

R. L. SCHARRING-HAUSEN
Staff Contributor and Adviser
Glenview Farm

May Have Been Chilled

I raised 35 fine turkeys in 1925. In 1926 I had same gobbler and same hens (not related to each other) and had over 100 hatched. They seemed all right when hatched but did not grow any, seemed to get smaller and die. Some lived to be five or six weeks old. I never fed them till about three or four days old Fed and tended them as other years.—Mrs. A. H. R., Chester County, Pa.

The condition you describe in young turkeys is very peculiar and it is hard to say just what might have been the cause. Do you think the newly-hatched turkeys might have been chilled in any way? I have had baby chicks act as your turkeys did because they had been chilled. Chilling seems to upset the digestion.

You do not say whether any diarrhea was present. I would advise giving a newly hatched turkey several drops of sour skimmilk with a medicine dropper before it has anything else to eat or drink.—R. L. Scharring-Hausen.

Probably Not Cholera

I have been losing some hens. I opened three and found one liver three times its normal size; it was soft and black. One other had gray spots. Found a white worm six inches long.—J. H. S., Venango County, Pa.

The ailing hens were suffering from some form of liver trouble which is usually the result of an intestinal disturbance. The one with the gray spots on the liver may also have had tuberculosis, especially if she seemed emaciated. I don't think that your trouble is cholera, because that is very contagious and fatal, and once it gets in a flock is liable to wipe it out very quickly.

My recommendation is to give the birds a dose of Epsom salts in the morning drinking water at the rate of one pound per 100 birds, followed by fresh water in the afternoon. Then give five pounds of green feed per 100 birds per day. Probably a mixture of two parts cracked corn and one part wheat would be more desirable than the present scratch you are feeding. Also be sure that the mash is a good, regular poultry mash. The salts may be given once a month.

The worm was a poultry tapeworm. To remove these give each bird a dose of one gram of kamala. This drug should be put up in capsule form by your druggist.—R. L. Scharring-Hausen.

Nodules Indicate T.B.

Would you please tell me what is wrong with chickens that have hard yellow lumps in their lungs? Sometimes the lungs are dark red and other times light red. The chickens seem healthy and lay well.—Mrs. H. G. B., Lehigh County, Pa.

I am inclined to think that the nodules in the lungs are the result of tuberculosis. There is no cure for this disease and no means of telling it is present except in its advanced stages when it causes emaciation or going light. The older birds are more liable to have the disease than the pullets, and the best method of control is to sell off all stock more than one year old except hens used for breeders, keeping mainly pullets. These are more profitable anyway.

I would advise you to go over your flock and remove any hens that seem light, and also to separate the hens from the pullets with the idea of selling the former as soon as they stop laying. It would also pay to be particularly clean about the poultry buildings and use some sort of disinfectant once in a while.—R. L. Scharring-Hausen.

Looking at Mill Feeds from the Nutrition Standpoint

I RECENTLY listened to a discussion of the special virtues of certain mill feeds from the nutrition standpoint which I thought was interesting. The discussion had to do primarily with a chick ration; and it pointed out that wheat bran, while a valuable feed in promoting growth, could be fed in excess because of its bulk. Some chick formulas have contained high percentages of bran, and it has even been advised to feed it clear for a time.

Several years ago I found out for myself that this advice was not good, when a lot of chicks that had been getting an excess of bran in their mash ration went back on me. Twenty per cent of bran by weight in the ration seems to be about right.

The next feed taken up was middlings. As a rule, standard middlings are meant, but this by-product is of several different grades, and in some cases is little more than fine-ground bran. Flour middlings, or Red Dog are better to use in the mash for this reason than the standard middlings.

White Corn Lacks Vitamin A

The discussion then turned to corn, and it was brought out that yellow corn contained a yellow oil rich in vitamin A, the growth vitamin, and that this oil was lacking in white corn and present only to a limited extent in the white-cap corns. Accordingly, whole yellow corn ground, without kiln-drying or de-germinating, was recommended for the corn part of the mash, and the same material finely cracked, for the corresponding part of the scratch feed.

It has been found that feeds high in fiber cause enteritis or irritation of the intestines in chickens. This is especially true of ground whole oats. The hulls of oats pass thru the digestive tract without being changed, and not only take the space that should be occupied by digestible feed, but cause the irritation mentioned as well.

Various Ingredients Discussed

Sometime ago I replaced the ground oats in my laying ration with flour middlings because the grade of oats I could get was largely hulls, but it appears that ground oats are a wonderful flesh builder and that nothing can take their place. However, ground hulled oats or oat flour can be had, and is recommended, especially for chick rations. Our feed dealer quotes oat flour a dollar higher a hundred than flour middlings, and I am not certain that it is worth the difference in the laying ration.

Another product mentioned was ground alfalfa. Where alfalfa leaf meal can be secured, a small amount can be used in the ration to advantage, but the ordinary ground alfalfa is largely ground stems, and is too high in fiber for poultry feeding.—R. L. Scharring-Hausen.

Nest Box Notes

EGGS with thin shells, rough shells, or mottled shells are much less liable to hatch than eggs with normal shells. Extra large eggs also do not hatch well and small eggs produce small chicks which grow up to be small adults. Normal, regular eggs of average size should be chosen for setting.

• • •

The other day at a farmers' meeting, I described my method of feeding "straight" condensed buttermilk to baby chicks to prevent toe picking, and got snickered at. However, I am feeding this and so far have had no toe picking. The buttermilk is fed just as it comes from the barrel by smearing a lump on a piece of board which is leaned up against the side of the coop so that the chicks can pick off the buttermilk without getting their feet in it.

I start in when the chicks are a week or so old with a small quantity and increase the amount to what will be eaten in 20 minutes. This is fed once a day in the morning. I wish that those of my readers who try this plan would write in and tell me how they find it works.

• • •

Records obtained by the New Jersey Experiment Station showed that pullets hatched before May 15 laid 7 eggs more apiece during the months of November, December and January, than did pullets hatched after that date. Counting the eggs worth a nickel each, this would mean a difference for these three months of $175 in favor of a flock of 500 early hatched pullets.

• • •

Baby chicks make an exceedingly rapid growth. If a human infant grew as fast as a Leghorn chick it would weigh 80 lbs. at ten weeks of age. To develop rapidly chicks should have all they can eat and drink of the proper feeds and water, and should have ample space at hopper and drinking fountain so that they can get what they want when they want it.

• • •

It is surprising how much baby chicks will drink. I have one lot of 1000 Leghorns divided into three pens. During the second week they drank over 40 quarts of water a day—a large milk can full. They started the third week by drinking 72 quarts. Lack of sufficient water will stunt growth, so plenty of clean water should be provided at all times.

• • •

When chicks get about three weeks of age they begin to get very independent and sometimes do not sleep under the hover if the weather is warm. From then on, look out for crowding and piling up in the corners. The chicks get chilled during the night and huddle together for warmth, with the result that severe losses from smothering are liable to occur. If all corners are rounded off that will reduce the danger.

• • •

Eight-inch boards leaned up against the sides of the house and nailed in position so that the edge of the board is six inches out from the wall will prevent crowding at the angle made by the floor and wall. It will be necessary to cut pieces to fit in the corners.

Some poultrymen take a bundle of straw and divide it into three parts and tie up the small bundles tightly. These bundles can be laid in the angles instead of the boards and answer the same purpose. The idea is to block off all angles and corners so that the chicks cannot crowd into them and be crushed or smothered by other chicks trying to push in.—R. L. Scharring-Hausen.

Penna. Legislators Eager to Adjourn on Time

WITH only one more week to go, the Legislature is handling bills at a rapid rate and everything looks bright for an adjournment on scheduled time.

Both House and Senate voted on the three-cent gasoline tax bills this week, passing them with more than two-thirds of the legislators voting affirmatively.

DEER DAMAGE BILLS RETURNED TO COMMITTEE TO SAVE DEFEAT.—Latest reports indicate that the Haines bills which provide a way for paying farmers the loss suffered from deer ravages in their orchards, will not pass at this session. The bills have been up for consideration in the House and sponsors of the bills assert that favorable action could be secured but due to the few days remaining for the consideration of bills, it was thought best to have the bills returned to the committee, rather than risk a defeat.

WEEK MARKED BY SEVERAL HEARINGS.—Hearings were held last week on a number of bills of interest. As a result of these hearings, it is said that the bill to establish a State Milk Control Board which would supervise the issuance of permits to milk dealers, etc., will not be reported from the Senate Committee on Health and Sanitation.

The oleomargarine bill, designed to eliminate the $100 retail license fee, was debated in committee. Time will not permit its passage even tho the committee may make a favorable report which is doubtful.

A bill to permit the use of skim-milk powder in sausage will likely pass both House and Senate even tho opposed by state pure food officials who contend that it is an "entering wedge" for the adulteration of sausage.

GIVES DEPARTMENT OF AGRICULTURE MORE AUTHORITY.—An amendment to the State Markets Law has been approved by both House and Senate. This amendment gives the State Department of Agriculture full authority to investigate marketing practices and to make public the findings when approved by the Secretary of Agriculture.

YOUNGER DOGS WILL REQUIRE LICENSE NOW.—The bill amending the State Dog Law, reducing the age at which dogs must be licensed from six to four months, has passed the Senate. Specific provisions are also made in these amendments for the procedure in enforcing quarantines against rabies. The bill providing for the extending of the dog law to include Philadelphia, Pittsburgh and Scranton will remain in committee.

HOUSE MEMBERS DON'T ALL FAVOR THE TULIP.—The bill making the tulip tree and flower the state tree and flower for Pennsylvania passed the Senate without a single objection but ran into difficulty in the House. It has been bounced around in the Committee on Agriculture with a few of its members objecting to the selection of the tulip. As a result, the bill will either not be reported from the committee or will come out in amended form.

WILL STATE COLLEGE GET FULL AMOUNT?—The House Committee on Appropriations restored the $700,000, cut from the appropriation for Pennsylvania State College by the Senate committee, but the Senate has not agreed to the amendment at this writing. The general appropriations for the state departments have been approved by the House but final action has not been taken by the Senate at this time.

(Continued on next page)

MAY COST MORE TO FISH.—After defeating a bill increasing the fishing license from $1.00 to $2.00, the vote was reconsidered and an amendment introduced which calls for an increase to $1.50.

COUNTY FAIRS GET STATE AID.—The Stark bill appropriating $123,490 for state aid to county fairs has been approved and signed by Governor Fisher. This money is for the past two years, a bill appropriating the money two years ago being vetoed by Governor Pinchot because no provision was made concerning gambling and immoral shows at the fairs.—J.

Adults Transmit Disease to Their Offspring

We have trouble in starting our young chicks every year. Our principal trouble is white diarrhea. Also, what do you consider the best balanced ration for baby chicks from the time they are 72 hours old till they are grown?—W. W. B., Cumberland County, Pa.

True white diarrhea is a germ disease which is carried over in the ovaries of the hen and transmitted to the egg from which it affects the chick. Chicks can also become infected from the droppings of other chicks that have the disease. It is possible to tell which adult birds have the disease by a blood test which is made at the experiment stations. I would advise you to write the Pennsylvania State College at State College, Pa., stating your trouble and asking for information.

The best way to control the disease is by getting rid of the diseased breeders, or by buying chicks from flocks that are state certified to be free from this disease, and rearing them in disinfected quarters out of contact with infected birds.

Lactic Acid Acts As Antiseptic

It helps the chicks to get a drink of sour milk before they have anything else as the lactic acid which it contains acts as an intestinal antiseptic. Chicks should have plenty of sour milk or buttermilk in their subsequent diet for the same reason. I feed mine condensed buttermilk as it comes from the barrel in quantities that they will eat in 20 minutes once a day after they are a week old.

There is also a form of diarrhea caused by feeding before the yolk is absorbed. Chicks that have this form will be found to contain the unabsorbed yolk if cut open. They should never be fed until at least 72 hours old, and sparingly then. However, they should have the sour milk as soon as they are taken off or put in the brooder.

I am using the new 1927 chick raising method outlined by the New Jersey Experiment Station with great success. I note that Mr. Kester is using it, too. This method was given on page 14 of the Reference Number of Pennsylvania Farmer, February 19, and also on page 13, March 26th.—R. L. Scharring-Hausen.

Colleges Supply Plans

Where could I get blue prints of poultry houses, together with complete data for building? Which is a better poultry house, a half-monitor type or a shed-roof type?—G. M., Lackawanna County, Pa.

You can secure plans for poultry buildings from: Pennsylvania State College, State College, Pa.; Cornell University, Ithaca, N. Y., and Rutgers University, New Brunswick, N. J. Address the Poultry Department in writing.

Personally I prefer the shed roof type of laying house which is easy to build and gets plenty of light if the window spacing is right. I have windows in the rear of my houses under the roosts.—R. L. Scharring-Hausen.

R4113
Cattleman's and Ranchman's Knife. Three blades—a large clip blade for hard use, a sheepfoot or tobacco blade, and a correctly shaped surgical blade for altering, etc. Stag handle. Nickel Silver linings, bolsters and shield. Length, closed, 3⅜ inches. Price $2.50.

KNIVES THAT BELONG ON EVERY FARM

THE FARMER and stockman puts his pocket knife to daily use, and often to hard use. He needs a knife with the finest steel in the blades of sturdy construction; and designed especially to suit his needs. That's why he needs a Remington.

Remington Knives are scientifically designed for cattlemen, stockmen, farmers, ranchers, sheepmen and hog raisers. Each has a correctly shaped blade for farm surgery, docking, dewlapping, marking or altering that make clean, quick-healing incisions. Other blades for general use. The blade steel is scientifically and uniformly hardened and tempered. The cutting edges are keen, strong and durable.

Knives with linings, bolsters and shields of nickel silver will not rust or corrode—preventing blood poisoning—a strong feature of the Remington Line.

Remington Stockmen's Knives are made in many styles, sizes and blade combinations, at prices that please.

Four Cows Weren't Worth Supporting

DOES membership in a cow testing association pay? Mr. John Wirt of McVeytown, Penna., says it does.

He joined the Mifflin County Association in 1924. The milk production of the twelve cows in his herd for the first year averaged 5500 lbs. per cow. Mr. Wirt was a careful observer of the work of each individual cow during that first year and was impressed by the great differences in amounts of milk produced by different cows in the herd under the same general conditions. At the close of the year when the final results were at hand he concluded that the milk production of four of his cows was so small that he could not afford to support them longer and they were sold.

The second year from the eight remaining cows the average milk production was 7300 pounds per cow, an increase of 1800 pounds over the average of the previous year. During both the first and second years he was carefully studying the question of feeds and methods of feeding and herd management, drawing lessons from the experiences of other members of the association and picking up information and ideas from the tester and from other sources.

Higher Goal Achieved

At the beginning of the third year Mr. Wirt set for himself a still higher goal in average production and determined if possible to win a place for his herd in the honor roll and earn a prize ribbon offered by the Pennsylvania Dairymen's Association. Two of the poorest cows were sold during this year and two added, one a heifer from the herd and one purchased.

As this is written the third year is not quite complete but the average yield will equal or exceed 9000 pounds per cow. The total production of milk from the eight cows for the year will exceed, by 6000 pounds, the total produced by the twelve cows in his original herd. The value of this ADDITIONAL milk at $3.00 per hundred is $180.00. To this sum should be added the cost of the keep of the four additional cows in the original herd if we are to make a fair comparison. A very conservative estimate of this cost would be $300.00, a total of $480.00 increased income. Mr. Wirt mentions other benefits such as increased value of his cows and better prices realized for calves sold. The cost of association membership is less than $50 per year.—E. B. Fitts.

To Represent Keystone State's Black and Whites

THE Holstein breeders of Pennsylvania will be represented at the 38th Annual Convention of the Holstein-Friesian Association of America by twelve delegates. This year's convention is to be held in Springfield, Massachusetts, May 27 to June 2nd.

The following breeders of Black and Whites in Pennsylvania are the nominees from whom the twelve delegates will be selected to represent the state at the Springfield meeting:

W. A. Woods, Huntsdale; John A. Bell, Jr., Coraopolis; Dr. L. M. Thompson, Montrose; Ivo V. Otto, Carlisle; H. E. Robertson, York; John H. Shirk, Lancaster; Abner S. Deysher, Reading; Albert B. Craig, Sewickley; James M. Paxton, Houston; J. W. Hunter, Grove City; Frank A. Keen, West Chester; Charles B. Dayton, South Montrose; J. B. Henderson, Hickory; Raymond B. Arnold, Milan; Isaac S. Gross, Plumsteadville; G. A. Boger, Bethlehem; F. W. Gorham, Wysox; H. R. Paulhamus, Hepburnville; W. C. Dale, Grove City; H. W. Montgomery, Grove City; L. C. Tomkins, Ellenton; W. G. McDougall, Grove City.

Jellybean—Old man, I understand you are courting a widow. Has she given you any encouragement?

Sheik—I'll say she has! Last night she asked me if I snored.

It Is the Most Versatile Machine

The small electric power plant brings modern conveniences to farms beyond the reach of power transmission lines. It milks the cows, pumps the water, washes the clothes and does many other tiresome tasks, besides furnishing plenty of safe, clean light just where it is needed. The plant pictured above furnishes power to run the cream separator, among other things. The portable motor on a tripod is easily moved from place to place.

Farmers in China

(Continued from page 3)

The droppings from swine are collected, dried and pulverized for fertilizer, but the amount of plant food material thus obtained is very small.

The Chinese farmer is greatly in need of scientific assistance. Tho he has a thoro understanding of practical methods, he has very little knowledge relating to insects and diseases, plant breeding, and the breeding of better livestock.

It is difficult to understand how any people can get along and have good health without the use of milk. There are only a few herds in China, and we saw no good cows in the Philippine Islands, the Malay States, or in Ceylon. Water buffaloes are used for work in South China, and occasionally the small quantity of milk, which contains 10 to 12 per cent of butterfat, is used for food.

At Lingnan University there are several herds of milking Chinese water buffaloes, Indian water buffaloes, and a few Holsteins. The American breeds of cattle are much more subject to disease than the buffaloes and they do not thrive on rice straw.

Hogs Good but Can Be Improved

The Chinese hogs are very good, tho one cannot understand why it is necessary for them to have stomachs of such enormous size. An improved type of animal is obtained when crossed with American breeds.

Undoubtedly, China is one of the most fascinating countries in the world. It contains so many things that are beautiful and lovely. For ges the people have been taught to ove the beautiful, and this intense ve is expressed in innumerable ays. The lines of the best residences are nearly always pleasing, pecially the curved tile roofs. Trees, vines and flowers are used in he most charming arrangements.

In the home of a very wealthy genleman, we saw thousands of Chinese ictures, pieces of porcelain and potry, some of which were more than 0 years old. Chinese art for centuries has been noted for the exuisite taste and ability displayed by he masters. All of the educated lasses, and the poorer people to a onsiderable extent, have been aught to see and love the beautiful hings of life, especially as they are ortrayed by nature. This, it seems me, is one of the great lessons at we can learn from the Chinese.

Rally to Fight Borer

(Continued from page 3)

Great numbers of machines were rdered by the U. S. Department of griculture as soon as Congress proided funds for this spring's campaign,—tractors, stubble pulverizers, ll burning equipment, trucks, wide ottom plows, etc. Most of this quipment is now ready for use. The tubble pulverizers will be used to estroy stubble standing in the field nd in last year's cornfields already eeded to other crops. The burning pparatus consists of a heavy truck ith fuel-pressure tank and pump nd burning carriage with nozzles enerating heat of 1400 degrees hrenheit.

While the condition of the fields n many sections will not permit the e of special machines early enough his spring the ordinary tools owned y every farmer will be sufficient in ost cases. Where extra work is ecessary to comply with the cleanregulations farmers will be comnsated at the rate of $2.00 per acre r field corn and sweet corn.

The corn borer control work of e United States Department of Agculture is under the supervision of gional supervisors. The area in ennsylvania and New York is uner H. N. Bartley, whose headquarrs are at 716 Commerce Building, de, Pa.

HAVE A CAMEL

Camel's friends know and demand choice tobaccos

THERE is not another body of smokers in the world like the friends of Camel. That is because Camel is unlike any other cigarette. Through experience, Camel smokers have learned the taste and fragrance of choice tobaccos and they'll have no other. They know the mildness and the mellowness that only choice tobaccos can give and they find in Camel those satisfying qualities the trained taste demands.

Tobacco enjoyment will take on a new meaning for you when you become a Camel smoker. There's a reason why Camel leads the world: it's the only cigarette in which there is so much genuine goodness.

We cordially invite you to compare Camel with any other cigarette made, regardless of price. Let your taste be the judge.

"Have a Camel!"

Cows on pasture need Union Grains

DON'T make the common mistake of robbing Peter to pay Paul when you turn your cows out to pasture. Of course, the milk flow will increase—for a short time. But, unless the pasture is backed up with about four pounds of Union Grains per day per cow, the number of cans you deliver to the platform will fall off rather sharply when hot weather and fly-time come. Every dairyman knows that under these conditions the cows lose weight and never come back in milk yield.

It has been definitely proved by carefully conducted experiments that cows fed Union Grains while on pasture, not only hold up in their milk flow better, but produce much more milk during the next lactation period.

No better concentrates have ever been mixed for pasture feeding during the hot-weather months than Union Grains. It is cooling in its effect, is easily digested, very palatable and a great milk producer. Its base is dried distillers' grains, the most valuable milk-producing concentrate known. Other grains are added in balanced proportion to produce the ideal protein percentage of maximum digestibility.

When you put your herd on pasture, buy Union Grains and feed it. Increased production is assured.

In Denmark They Cooperate!

DENMARK is about as large as Maryland and Delaware combined. In Denmark there are 22 counties as against 26 in Maryland and Delaware. Try to interpret the following staggering facts in terms of conditions in Maryland and Delaware.

In Denmark in 1925 there were 7794 cooperative organizations, an average of 363 per county.

In Denmark the farmer on an average belongs to 4½ cooperatives. In some instances he belongs to as many as 15 and 20.

In Denmark there were 830 cow testing associations or 38 to the county; 1274 bull associations or 58 per county; 370 horse breeding associations or 17 per county.

Imagine the transformation that would take place in the dairy situation of any county in the United States if there were in it 38 cow testing associations and 58 cooperative bull associations! Is it any wonder that in 40 years the Danes have doubled the production of their dairy cows?

Thru cooperation in one generation, the Danes transformed their agriculture from a grain crop, soil exhausting system to a livestock, soil restoring system. While they have rejuvenated their soils, they have captured and maintained the best market in Europe—the British market—for butter, eggs and bacon.

By the strictest kind of standardization, inspection and supervision, they are producing and marketing quality that finds little competition. Thru an intelligent system of investigation, they are constantly striving to improve quality and lower cost of production, and they do it all thru cooperation. Cooperation is the soul of Danish Agriculture.—Dr. F. B. Bomberger, Maryland State Department of Markets.

Bucks C. T. A. Ends Fourth Year

Five Cows Boast Over 500 Pounds of Butterfat

Editors' Note.—This is one of a series of annual reports of Pennsylvania cow testing associations. As each association completes its fiscal year a summary of its records is published in this department. The owners of herds with a 300-pound butterfat average, whose names appear at the end of the report, will be awarded prize ribbons by the Pennsylvania Dairymen's Association at the 1928 State Farm Products Show.

THE Bucks County Cow Testing Association finished its fourth year March 1, 1927, with 24 whole-year members. In addition three members were in the association part of the year. The total number of cows for all or part of the year was 519.

There was an increase of 142 pounds of milk and 20.5 pounds of butterfat above the previous year's results.

The summary for the whole-year members is as follows:

Total average number of cows in the association	366.07
Avge. per cow: lbs. of milk	7696
Pounds of butterfat	301.6
Percentage butterfat	3.9
Value of product	$274.6
Cost of pasture	15.2
Cost of roughage	44.8
Cost of grain	60.6
Total cost of feed	120.8
Value of product above feed cost	153.8
Returns for $1.00 expended for feed	2.2

Five cows in this association produced over 500 pounds of butterfat, 24 produced between 400 and 500 pounds, and 120 between 300 and 400 pounds. Thus, 29 produced over 400 pounds of butterfat and 149 over 300 pounds.

Cow Tester in charge, Mervis We ler; County Agent, W. F. Greenawalt; summary compiled by I. O. Sidelmann.

Twelve herds with an average of 5 or more cows exceeded an average production of 300 pounds of butterfat. The records of these herds follow:

Owner	Avge. No. Cows	Breed	Pounds Milk	Pounds Fat
J. E. Ivins, Feasterville	12.58	R. H.	10,077	376.1
W. M. Hunsberger, Plumsteadville	12.08	R. H.	11,053	366.6

Plans for the Rat Campaign

THE time was, and it is not so long ago, that the house fly was considered merely an unavoidable nuisance. In fact, there was a prevailing notion that they performed some useful service in the way of removing filth from about the premises. But now the fly is known for what it is,—a purveyor of filth and a spreader of disease and death. This knowledge has led to the exclusion of the fly and the modern housewife is as much perturbed over the presence of a few chance flies in her house as her grandmother was over the finding of bedbugs in the beds.

All this is but a prelude to another subject which needs the same kind of intelligent and energetic treatment, namely, the destruction and exclusion of rats. It would seem from the indifference exhibited towards these pests that most people have calmly settled into the conviction that they have always been with us and always will be. But if everybody could be aroused to know the rat for the dirty, destructive, thieving, disease-breeding pest that he is, and could realize that it is possible to get rid of him, it would not be long before an aroused and active public would drive him from our homes and premises.

Like most of our worst pests,—insects and plant diseases,—rats have been brought here from foreign countries, mostly as stowaways on ships from which some would leave the vessels when docked at our ports. The most common specie of rat found on the farms is the brown rat, altho the larger and more destructive Norwegian rat, found usually around wharves and cities, has gone out a considerable distance and may be found on farms also.

Free Trial of Proved Swedish Abortion Treatment

Famous Foreign Formula quickly relieves badly infested herds. Gives amazing results in cases believed hopeless.

Thousands of American Farmers say the Frobers Swedish Abortion Treatment has saved their herds from destruction. This remarkable treatment has been used with complete success in the big dairy herds of Sweden for many years, and has cleaned up whole districts over there literally rotting with contagious abortion.

It was only after great expense of time and money that this secret formula was made available to American Farmers. During the past nine years the treatment in American herds has given all the amazing results that made it so famous abroad. Herd after herd has been rid of this disease. Even cows considered hopeless by veterinarians have yielded to its healing qualities and been restored to health and produced fine vigorous calves.

SAVED HIS HERD

David Mohr, Jenison, Michigan, says: "Last year I raised only one good calf out of 14 cows bred, all other calves were aborted. I was desperate. I used your C.C.C. treatment. This year with the same herd I have not lost a single calf. It's wonderful. My neighbor lost 3 calves in a few days—I gave him some C.C.C. and it stopped the trouble right there."

The fame of Cow Calf Control (C.C.C.) the name of this treatment has spread from breeder to breeder. Today it is put out only on an absolute binding guarantee that it will stop every case of abortion; that every cow treated will deliver a normal calf, or the treatment cost is refunded. Two reliable banks stand behind our guarantee. You can't lose. C.C.C. is practically 100% successful.

SEND NO MONEY

Mr. John W. Frobers, a native of Sweden and a large dairy owner, is responsible for introducing C.C.C. into this country. He has made the treatment easy to give, and at a cost per animal that every farmer will gladly pay.

Write today for full details explaining our free trial offer. Just send your name and address without further obligation to Frobers Remedy Co., 10 Lincoln St., Valparaiso, Ind.

Harder Silos

"The Bulwark of the Paying Dairy"

SILAGE is the best possible feed for cattle. If the corn crop disappoints you, fill your silo with ANY crop you have—clover, alfalfa, etc. And let your Silo be a Harder—

Built to Endure

of selected White Spruce and Oregon Douglas Fir, extra-thick and doweled at every joint. Anchored to breast the storms. So simple that you can put it up without skilled help.

Be sure to get Harder prices and attractive payment proposition before you decide on a silo. Write for details. Give number of cows or size of silo desired.

Since rats migrate from place to place quickly and easily it is best to organize a whole community for rat extermination if best results are to be obtained. Where this is not possible, it is necessary for individuals to maintain a constant warfare against them. Spasmodic efforts will not rid a place of rats.

Three Fundamentals in Warfare

There are three principal things to keep in mind when once a determination to fight rats is reached. First is the construction of rat-proof buildings when new ones are erected. Second, the reconstruction of floors, posts, walls, etc., making them of rat-proof material, such as cement. Stone and ordinary mortar are not proof against rats when they want to go thru or under such a wall. Third the continual use of traps and poisons.

Corncribs, granaries and other storage places of grain and food should be made rat-proof by a liberal use of cement. This means that the foundations must be deep enough, usually eighteen to twenty-four inches, so that they will not burrow under, and the sides made rat-proof high enough to prevent their gnawing their way thru. One thing to guard against is the laying of sills or the construction of floors close to the ground, as such a place is the favorite harbor of rats.

Tidbits Tempt Rat's Appetite

There are several effective traps on the market which, if properly handled, are of great value in keeping down the number of rats. Traps should not be handled any more than is necessary, and should be deodorized from time to time. The kind of bait is an important matter. Usually, bait made of material which rats like but which they do not find in their foraging, is most attractive. For example, if their food supply is grain, salt meat, cheese or a piece of apple is attractive.

One of the easiest to use and at the same time most effective agencies in rat extermination is poison. Of course, care and intelligence must be used with many of these, altho there are some on the market that are safe, especially if placed only where rats are likely to get it. In using any kind of poison it is best to use a slow-acting material rather than a quick-acting kind which causes the rats to die on the premises.

Where the holes can be located, rats may be gassed with the same material that is used so effectively in destroying groundhogs. The manufacturers of the poison gas materials supply equipment which makes it very easy to use.—K.

Going West Cow Meets Hen Coming East

THE dairy cow has been gradually drifting westward while the hen has been strengthening her position in the East. New Jersey leads all other states with over 100 per cent gain in the number of eggs produced since 1919 while milk production has gained less than 10 per cent in that time.

Up in New Hampshire, usually considered a big dairy state, milk production has dropped 20 per cent and eggs have gained 65 per cent. In the big milk states of New York and Pennsylvania milk production has held steady while egg production shows outstanding gains of 25 to 30 per cent.—A. K.

The tough job that tests your mettle and spirit is like the grain of sand that gives an oyster a stomach ache. After a time it becomes a pearl.

A Recent Checkup

This morning I have been having a long talk with Prof. Lantz, our Nutrition Expert, who has just returned to the office after a trip on which he checked up a number of large dairies.

Two of the dairies visited had been experimenting on different feeds to determine which would give best results. At one dairy the feeder was very definitely prejudiced in favor of his own home mixture, but was willing to be shown.

He has now given Tioga Dairy Feed a fair trial for two months and the entire herd of 144 cows has gained a daily average of 9.075 pounds of milk per cow. The other herd had gained an average of 4.66 pounds.

These results are very gratifying to us, not only because they make enthusiastic users of Tioga Dairy Feeds but because with our success we have helped those dairymen make more profit.

It is the policy of our company to build up its business by helping the users of Tioga Feeds to make more profit.

The two dairies referred to above are specific examples of results that are obtained as any dairyman who has used Tioga Dairy Feeds as intended can testify.

BULL BRAND DAIRY RATION

A Pennsylvania Feeder's Experience

GENTLEMEN: You probably will be interested to know of the following result which I secured by using BULL BRAND DAIRY RATION. The cow gave 85 pounds of milk the first day and totalled 553 pounds for the following seven days. This is 112 pounds more than the same cow gave when on an official test for seven days and another brand of feed was used. This is certainly a most satisfactory test and you may use these figures to boost BULL BRAND DAIRY RATION—*J. E. Slyder, Seven Valleys, Penn.*

Judith of Blue Lake Ranch

By JACKSON GREGORY

Copyright Charles Scribner's Sons

The Story Thus Fa

JUDITH SANFORD, part owner in Blue Lake Ranch since the death of her father, Luke Sanford, fired Bayne Trevors, general manager, because he wasn't square. The men grumbled. Trevors made trouble in every way possible. Bud Lee, horse foreman, and old Carson promised to stay. Judith could depend on them and on "Doc" Tripp, veterinarian and a friend of her father.

Busy days followed. Mrs. Simpson took up her duties caring for the ranch house and Pollock Hampton, part owner of the ranch, arrived with Major and Mrs. Langworthy and Marcia, their daughter.

Months passed and then suddenly one day Carson and Lee were ordered by Hampton to have 500 cattle and 100 horses ready for immediate sale to Doan, Rockwell & Haight. Judith hadn't consulted either of them. Carson was angry, Lee deeply hurt. That evening Lee, still loyal in spite of Judith's decision to sell the stock at a ridiculously low figure, went to the ranch-house to talk it over and to tell her that he would guarantee an enormous gain if she gave him time. To his surprise he learned from Marcia, recently returned, that Judith was in San Francisco, had been since Saturday! Lee was puzzled and afte rtalking with Hampton fearful for Judith. He believed Bayne Trevors was making a last desperate play to ruin the Blue Lake Ranch. Hamptor wouldn't believe anything against Trevors so Lee left him guarded by Tommy Burkitt when he went in search of Judith.

To Judith life had become a nightmare. Again and again she went over in her thoughts all that had happened since she had been made prisoner by Trevors and taken to the cave of Mad Ruth. She could still hear Trevors' words to the old woman ringing in her ears.

Continued from last week

"I HAVE brought her back to you, Ruth," Trevors said, speaking softly, more softly than Judith had thought the man could speak. "You will know what to do with her. And you will not let her escape you again."

The mad woman, for only too plainly was her reason strangely misshapen, stood in silence, her great muscular body looming high above Judith's, a giant of a woman, bigger than Trevors even, broad and heavy, her forearms thick and corded, her bare throat like the bull neck of a prize-fighter.

"I will know, I will know," she said, her eyes filled with cunning, her voice a strange singsong oddly at variance with the coarse bigness of her body. "Oh, no, she will never escape from me again."

"I will have a man on the ledge outside night and day," went on Trevors. "But we cannot be so sure of others as we are of ourselves, Ruth. You know that, don't you?"

"Oh, yes, I know," she answered quickly. As she spoke she suddenly shot out her long arm so that her great, bony hand fastened like a big claw on the girl's shoulder. "I have got her again! She is mine, all mine. Oh, I will keep her well."

In a little while Trevors left. He had not returned. Mad Ruth, still gripping Judith's shoulder, half led her, half thrust her farther back in the cavern. Judith made no resistance. Always even when terror was uppermost she held one thought in mind: "If I can make them think me a little fool and a weakling, my chance may come after a while."

As the two women passed around a bend in the sinuous tunnel-like cave, the faint rays of the lantern they had left behind them died out, and heavy darkness shut them in. Judith could barely make out the huge form towering over her. But Ruth, whether her eyes were like a cat's and accustomed to this sombre place, or whether a hand on a rock wall or a foot on the uneven floor under her told her which way to go moved on without hesitation. Judith estimated roughly that they had come fifty yards from the outside ledge in front of the cave when she was pushed down and felt the rude bed of fir-boughs under her.

"So," grunted the woman, for the first time removing her hard hand from the girl's shoulder, "I've got you again, my pretty. And this time you don't play any more little tricks on your old mother."

She was gone swiftly, all but silently, thru the gloom, her form vaguely outlined against the lantern's glimmer, to bring the food and water which she had set down when she came in. Judith drank and ate.

It was only little by little, in fragments which she obtained during the slow days which followed, that she came to understand Trevors's scheme. And the scheme was in keeping with the man; so far as it was possible, Bayne Trevors was still playing safe.

Mad Ruth was an odd mixture of crazed suspicion, shrewd cunning, cruelty and madness. Perhaps very long ago—Judith came to believe that it had occurred at the time when she had gone mad, for God knows what reason—Mad Ruth had had a little daughter. The girl had been lost to her, whether thru death when an infant, or some tragic accident when a young girl, Judith never knew. But Ruth's heart had been bound up in that baby of hers; when madness came, it centered and turned upon the return of her child, "Who had run away from her, but who would come back some time." Trevors, having learned of her mad passion, had shaped it to his purpose.

BUT that was not all. Judith had been brought to the cave early Sunday morning. Sunday afternoon there came to the cave a well-dressed man carrying a little black bag in his hand. He talked with Ruth; he took up the lantern and came to look at Judith.

"So I'll know you again," he laughed.

Then he went away. In fragments which thru long, empty hours her busy mind pieced together, bridging the gaps, she grasped the rest of Trevor's plan. This man was a physician, sent here from some one of the many mining towns in the mountains, probably from a camp twenty or thirty miles away. He, too, was a Trevors hireling. Should Judith ever accuse Trevors of having brought her here, there was another story to be told. And this man would tell it: How he had been summoned here to attend a girl who had had a fall, who had wandered delirious thru the mountains until Ruth had found her; whom he had treated here, not daring at first to move her for fear of permanent shock to her reason; who could give them no help to establish her identity; who had a thousand absurd fears and fancies and accusations to make; who in her babbling had at one time accused Bayne Trevors of having forcibly abducted her; who at another had cried that it was a man named Carson, a man named Lee, who had brought her here.

JUDITH spent many a long hour exploring her prison, hoping to find a way out. So far as she knew she had but one person to reckon with, Mad Ruth. True, Trevors had said that he'd have a man on the ledge outside day and night; Judith had never seen such a person, had never heard his voice, and began to believe that it was a bit of bluff on Trevors's part. But she had never again been where she could look out of the cave's mouth, since Mad Ruth had her own pallet on the floor at the narrowest part of the cave where it was like the neck of a monster bottle, and always at the first sound of the girl's approach, was on her feet to thrust her back. Clearly there was no way out of this place of shadows except that thru which she had come.

Judith sought an explanation of her imprisonment, and after long groping she came very near the truth: Trevors would work his will with Hampton thru Hampton's faith in him and admiration for him. And, in her absence, Hampton was the head of Blue Lake ranch.

Sunday night, hearing Mad Ruth moving cautiously, Judith raised herself on her elbow, listening. She was confident that the woman was moving toward the cave's mouth; she hoped wildly that Mad Ruth was tricked into believing her asleep and was going out. Her shoes in her hands, her stockinged feet falling lightly, Judith moved toward the mad woman's couch.

Ruth was going out; was in fact even now slipping out of the narrow throat of the cave and to the ledge. But Judith could not see her. For a new, unexpected obstacle was in her way. Her outthrust hands touched not rock walls but heavy wooden panels; she knew then that the narrow neck of the cave was fitted with a heavy door and that it had been drawn shut, fastened from without. In a sudden access of fury and despair she beat at it with her two hands, crying out bitterly.

It was so dark, so inky black, and as still, save for her own outcry, as a tomb sealed and forgotten. Such darkness, smothering hope, suddenly was filled with vague terrors; for one worn-out and nervous as Judith was, the darkness seemed to harbor a thousand ugly things which watched her and mocked at her despair and reached out vile hands toward her. She called loudly, and for answer had the crazed laugh of Mad Ruth which floated in to her from without, but which seemed to drop down from the void above.

"Judith, Judith," the girl whispered after the first outburst, when she found that she was shaking pitifully. "You've got to do better than this; I'm ashamed of you."

She went back to her couch, where she sat down seeking to hold her jangling nerves in check. But, despite her intention, she sat shaking, listening, listening—praying for even the footfall of her jailer.

When Ruth was with her she attempted in a hundred ways to gauge the woman's warped brain, to seek some way to get the better of her, to gain her trust and so to slip away. But she found that here was the usual cunning born of madness, and that Ruth's one idea was to keep the girl who had escaped her once but who must never escape her again. There were times when suspicion awakened in Ruth's mind, and she broke into violent rage, so that her big body shook and her eyes in the lantern-light were cruel and murderous, when Judith shrank back, and tried to change the woman's thoughts. For more than once had Mad Ruth cried out:

"I'll kill you! Kill you with my own hands to keep you here. To keep you mine, mine, mine!"

The woman carried no weapon, but after her two hands had once gripped the girl's shoulders, shaking her, Judith knew that Ruth needed no weapon. Hers was a strength greater than Trevors's, greater than two men's. If Mad Ruth saw fit to kill Judith with her two hands, she could do it.

SUNDAY passed and Sunday night; Monday and Monday night. Judith knew that she had accomplished nothing, except perhaps to make Ruth believe that she was very much of a coward. In Ruth's mad brain that was little enough, since this did not allay her cunning watchfulness. Then Judith began to do something else, something actively. Just to be occupied, was something. Her fingers selected the largest, thickest branch from her bed of fir-boughs. It was perhaps a couple of inches in diameter and heavy, because it was green. Silently, cautious of a twig snapped, she began with her fingers to strip the branch, tough and pliable. Then the limb must be cut into a length which would make it a club to be used in a cramped space. She found a bit of stone, hard granite, which had scaled from the walls, and which had a rough edge. With this, working many a quiet hour, she at last cut in two the fir-bough. She lifted it in her hands, to feel the weight of it, before she thrust it under her bed to lie hidden there against possible need. Poor thing as it was, she felt no longer utterly defenseless.

Once Mad Ruth, lighting the lantern, had dropped a good match. When she had gone, Judith secured it hastily, hiding it as if it were gold. She knew that now and then Mad Ruth went down the cliffs and to the cabin across the chasm. Always at night and at the darkest hour. When she heard her go, Judith rose swiftly and went to the heavy door. Always she found it locked; her shaking at it hardly budged the heavy timbers. But tho she could not see it, she studied it with her fingers until she had a picture of it in her mind. A picture that only increased her hopelessness. Barehanded she could never hope to break it down or push it aside. And above it and below, and

on each side, were the solid walls of stone.

She no longer knew what day it was. She scarcely knew if it were day or night. But, setting herself something to do so that she would not go mad, mad as Mad Ruth, she secured for herself another weapon. Another bit of stone which her groping fingers had found and hidden with her club; a jagged, ugly rock half the size of a man's head. Some little scraps of bread and meat, hoarded from her scanty meals, she hid in her blouse.

"If I could stun her, just stun her," she got into the way of whispering to herself. "Not kill her outright—just stun her—"

AT LAST, seeing that she must work her own salvation with the crude weapons given her, Judith told herself she could wait no longer. Another day and another and she would be weak from the confinement and poor food and nervous, wakeful hours. She must act while the strength was in her. And, if Trevors had spoken the truth, if there were a man to deal with outside—well, she must shut her mind to that until she came to it.

Mad Ruth was gone again, and Judith stood by the thick door, her heart beating furiously while she waited. It seemed to her eager impatience that Ruth would never come back. Then after a long, long time she heard a little scraping sound upon the rock ledge outside, the sound of a quick step. And then, before she heard the snarling, ugly voice which she had heard once and had never forgotten, she knew that this time she had waited too long, that it was not Ruth coming.

One man—and there might be others. She stepped back to her bed, hid the two weapons and waited. She must make no mistakes now.

The door was flung open. Outside it was dark, pitch-dark. But evidently the man entering had no fear of being seen. He threw down a bundle of dry faggots, and set fire to them. The blaze, leaping up, casting wavering gleams to where Judith stood, showed her plainly the twisted ugly face of Quinnion, his red-rimmed eyes peering at her, filled with evil light.

"The better to see you by, my dear!" was Quinnion's word of greeting. Judith made no answer. She drew a little farther back into the shadows, a little closer to the things she had hidden among the fir-branches.

"Ho," sneered Quinnion, his mood from the first plain enough to read in the glimpses of his face and in the added harshness of his voice. "Timid little fawn, huh? A man would say from the bluff you put up that it was all a dream about finding you an' the han'some Lee in the cabin together! Stan' off all you darn please; I've come to tame you, you little beauty of the big innocent eyes!"

Not drunk; no, Quinnion was never drunk. But, as he came a step closer, the heavy air of the cave grew heavier with the whisky he carried, whiskey enough to stimulate the evil within him, not to quench it.

"STAND back!" cried Judith, with a sharp intake of breath. "I want to talk with you, Chris Quinnion."

"So you know who I am, do you? Well, much good it'll do you."

"I know who you are and what you are," she told him defiantly, suddenly sick of her long hours of playing baby, knowing at the moment less fear than hatred and loathing. "Listen to me: Bayne Trevors has come out in the open at last; he has made his big play and is going to lose out on it. Your one chance now is to let me go and to go yourself. Go fast and far, Chris Quinnion. For when the law knows the sort Bayne Trevors is and how you have worked hand and glove with him, it will know just how much his word was worth when he swore you were with him when father was killed! Coward and cur and murderer!"

Quinnion laughed at her.

"Little pussy-cat," he jeered. "You've got claws, have you? And you spit and growl, do you? Want me to let you go back to that swaggering lover of yours, do you? Back to Lee—"

"That's enough, Quinnion," she said sharply.

"Is it?" He laughed at her again, and again came on toward her, the red-rimmed evil of his eyes driving quick fear at last into her. "Enough? Why curse you and curse him, I haven't begun yet! When I'm thru with you I'll go fast enough. And he can have you then an' d—— welcome to him!"

His laughter did not reach her ears now, but as he kicked the fire at his foot and the flames leaped up and showed his face, she read the laughter in his soul; read it thru the gleaming eyes, the twisted mouth which showed the teeth at one side in a horrible leer. His long arms thrust out before him, he came on.

"Oh, my God!" cried Judith. "My God!"

Then suddenly she was silent. She thought that she had known the uttermost of fear and now for the first time did she fully know what terror was. His strength was many times her strength, his brutality was unbounded, she was alone with him. There was no one to call to, not even Ruth, the mad woman.

She was shaking now, shaking so that she could barely stand. Quinnion came on, his long arms out. . .

She felt the strength die out of her body, grew for a moment blind and dizzy and sick. She tried again to call out to him, to plead with him. But her voice stuck in her throat.

He was gloating over her, a look strangely like Mad Ruth's in his eyes. Good God! He was like Mad Ruth; the same eyes, the same long, powerful arms, the same look of cunning! In a flash there came to her a suspicion which was near certainty: this man was blood of Mad Ruth's blood, bone of her bone; her son, and, like her, tainted with madness.

He shot out a long arm, his hand barely brushing her shoulder. She shrank back. He stood, content to pause a moment, to gloat further over her.

"You little beauty," he said, panting. "You little white and pink and brown beauty!"

Judith had shuddered when he touched her. But a strange thing had happened to her. His touch had angered her so that she almost forgot to be afraid, angered her so that the loathing was gone in white hot hatred, giving her back her old strength.

(To be continued next week)

OUR YOUNG PEOPLE'S FORUM.

Winners in the Word Contest

WORDS, words everywhere. Even in my dreams I go over those long lists of yours trying to remember whether I've ever seen this or that spelling before. We've had quite a job here in the office finding out who the three are in each group who found the most correct words in "PENNSYLVANIA FARMER." At last we can tell you the winners. Congratulations to the following:

Group I—Over Twelve

	Number of words
Esther L. Bell, Greene County, Pa.	1289
Susanna Ryder, Franklin County, Pa.	946
Mary Napp, Berks County, Pa.	894

Group II—Twelve and Under

Clyde Myer, Lancaster County, Pa.	993
Pauline Shirley, Franklin County, Pa.	856
Ralph K. Bell, Greene County, Pa.	833

I expect some of you will say as soon as you see these figures: "Why, I had more words than that." Yes, several had more to begin with but many mistakes pulled down your totals. Some Forum cousins duplicated words (put the same word in twice), some used proper names, others misspelled and still others didn't number their words correctly. Oh, there are lots of reasons why some of the high papers became lower than these winning ones, but wasn't the contest fun just the same?

COUSIN RUTH.

The Longest List

THE following list of words was sent in by Esther L. Bell, Greene County, Pa. As Esther's list is the longest, I thought you'd like to see it. Of course, many of the words which others had she did not have but in the end, after all corrections had been made, Esther found the most words in PENNSYLVANIA FARMER.

A, aam, aemia, aerial, aerie, aery, aes, afar, afear, afire, aflame, ail, ails, aim, aims, air, aire, ala, alamire, alar, alarm, alarms, alary, alas, ale, ales, alee, alem, alevin, alfa, alias, alien, alim, alima, alinasal, aline, alive, alms, alp, amain, ama, amani, amarine, ameer, amen, amine, amnesia, ampere, ample, air-plane, amplify, amvis, amyl, amylene, ana, anaemia, anemia, anear, ani, anil, anile, anima, animal, animals, anime, anise, anisyl, ann, anna, annaline, annals, anneal, anniversary, ansa, anserine, anvil, anvils, any, apar, apara, ape, apes, apery, apian, apiary, aplasia, apse, are, area, arear, arena, aria, ariel, aril, arise, aries, arm, arms, armil, army, armies, arna, arnee, arpen, arras, arrasene, array, arrays, arrayal, arrayan, arris, arrival, arrive, arrivals, arrives, arse, arsenal, aryl, a-sea, asem, asemia, asleep, asp, aspen, asper, aspermia, aspire, avail, aval, ave, avel, aveler, avener, avens, aver, averse, aversely, aye.

Ean, ear, ears, earl, earls, earlap, earlaps, early, earn, earns, easel, easer, easily, easy, easier, eaves, eel, eels, eery, elemi, elf, elves, elfin, elm, elms, elmy, else, elvan, emery, emir, empery, empire, empires, emprise, enamel, enarme, enema, enemy, enisle, enliven, ensample, ensile, enslave, ensnare, envy, envies, epi, era, eras, erase, eraser, ere, erepsin, erl, eria, ermine, ermines, ern, erne, err, espalier, espiral, espy, eve, eves, even, evenly, ever, every, evil, eyas, eye, eyes, eyra, eyre.

Faery, fail, fails, fain, fair, fairs, fairly, fairy, fala, false, fame, family, famine, fan, fans, fane, fanes, fanner, far, fare, fares, farer, farina, farm, farms, farmer, farmers, farmery, farse, favel, fay, feal, fear, fears, fee, feel, feels, feline, female, females, feme, feminal, fen, fens, fennel, fenny, feral, fere, feria, ferial, ferine, ferinely, fermail, fermery, fern, ferns, fernery, ferny, ferry, ferries, fey, fiar, fiars, fie, fier, fiery, filar, filars, file, files, film, filma, filmy, fin, fins, finale, fine, finery, finny, fir, firs, fire, fireman, firemen, firm, firms, firman, firmen, firmer, firry, five, fivepenny, fives, flair, flairs, flam, flame, flames, flamen, flamens, flamy, flan, flap, flaps, flaven, flay, flays, flea, fleas, flee, flees, fleer, fleers, flense, fley, flier, fliers, flimsy, flip, flips, fly, flies, flyer, flyers, flyman, flyrail, fra, frail, fraise, frame, frames, framer, frap, fray, frays, frees, free, freely, freeman, freer, friar, friary, fry, fries.

Imp, imps, impale, impaler, impanel, imparl, imparls, impearl, impel, impels, imply, impress, inane, inarm, infame, infamy, infare, infer, infernal, inflame, inflames, inlay, inly, inn, inns, inner, innerly, innerve, inrem, insane, insnare, invar, inverse, inversely, ipse, ire, islay, isle, iva, ivy.

Lair, lama, lame, lamin, lamina, lamp, lamps, lampas, lamprey, lane, lanes, lania, lanner, lap, laps, lapel, lapis, lapse, larine, larva, larval, larve, laser, lava, lave, laves, laver, lay, lays, layer, layfee, layman, lea, leas, leaf, leaves, leafminer, leafspine, leafy, lean, leans, leap, leaps, learns, learn, lease, leave, leaven, lee, leer, lees, leman, lene, lenify, lens, leper, lepra, lerp, laap, laarp, lev, lever, levers, levin, levir, levy, levies, liana, lie, lies, liens, lien, lier, liers, lierne, life, lives, lime, limes, limn, limner, limp, limps, limy, line, lines, linear, lineman, linemen, linn, linns, lip, lips, lipa, lipse, liptern, lira, lisp, live, liver, livers, livery, liveryman, liverymen, livre, lye, lyra, lyre, lyres, lyric, lyrics, lyrism, lysin, lysine.

Mail, mails, mailer, mailers, main, mains, mainly, maire, mala, malaise, malar, malaria, male, males, malvasia, man, men, mane, manes, mania, maniple, manly, manna, manner, manners, mannerly, mannie, manse, manslayer, many, manyplies, map, maps, maple, maples, mar, mars, marai, mare, mares, marine, marines, marl, marll, marline, marlines, marly, marry, marries, marvel, marvels, maslin, may, maya, meal, meals, mealies, mealy, mean, means, meaner, meanly, measly, meiny, melaena, melena, melanin, menial, mensa, mensal, meraline, mere, meri, meris, merle, merles, merry, merries, mesa, mesenna, mesne, mein, mil, milk, milles, mina, mine, miner, miners, mineral, minerals, miny, mir, mirs, mire, mires, miry, mise, miserly, misery, misfire, misplay, myelin, myna.

Naif, nails, nail, nailer, nais, naive, name, names, namely, nanism, nap, naps, nape, napes, naperer, napery, nare, nares, narial, narra, nasal, naval, nave, naves, navel, navels, navy, navies, nay, nays, neap, neaps, nears, near, nearly, nearer, nee, nep, neps, nerve, nerves, nervine, nerry, neve, never, nieps, nil, nine, ninny, nip, nips, nipa.

Paean, pail, pails, pain, pains, pair, pairs, pal, pals, palaver, palavers, palay, pale, pales, palea, palfrey, palm, palms, palmar, palmary, palmer, palmers, palmfern, palmy, palmyra, palsy, paly, pam, pams, pan, pans, pane, panes, panel, panels, panne, pannier, pannierman, par, param, paramenia, paravail, pare, pares, parel, paries, parley, parleys, parr, parrel, parry, parries, parser, parsley, parsnip, pas, pavan, pave, paves, pavis, pay, pays, payee, payees, payer, paynim, pea, peas, peal, peals, pear, pears, pearl, pearls, pearly, pease, peavey, peel, peels, peen, peer, peers, peine, pelf, pelvis, pen, pens, penal, penna, penner, penners, penny, pennies, penny-a-liner, pensile, pensive, per, pere, perennials, perennial, perier, peril, perineal, perry, persalane, perse, pes, pie, pies, pia, pier, piers, piles, pile, pin, pins, pina, pine, pines, pineal, pinene, piner, piners, pinery, piney, pinna, pinny, piny, pinyl, pirl, pirn, pise, plain, plains, plan, plans, planar, plane, planes, planer, planers, planner, planners, plasm, plasma, play, plays, playa, player, players, plea, pleas, please, plenary, plenism, plier, pliers, plies, ply, plyer, plyers, praan, praise, praiser, praline, prase, prays, pray, prava, prayer, premier, premiers, premise, press, preseminal, prevail, prevails, previse, prey, preys, prier, prim, primal, primary, prime, primely, primer, primers, prism, prismy, privy, pry, pries, psalm, pyaemia, pyemia, pyin, pyr, pyral, pyre, pyrene.

Rail, rails, rain, rains, rainy, raise, rale, rales, ram, rams, ramie, ramp, rampire, ranine, rap, rape, rape, rapier, rapine, rare, rase, rasp, rasper, raspy, rave, raves, ravel, ravels, ravelin, raven, ravens, ravine, ravines, ray, rays, real, realm, realms, ream, reams, reamer, reamy, reap, reaps, reaper, rear, reapers, rears, rearm, reave, reaves, reaver, reavers, reef, reel, reels, refer, refers, refine, refines, refiner, refiners, refinery, refrain, refrains, rel, relfy, rein, reins, reins, reis, relapse, relay, relays, relief, relies, rely, reman, remise, renal, rename, renames, renain, rep, repair, repairs, repay, repays, repeal, repeals, repel, repels, repine, repines, replevin, replevy, reply, replies, reprisal, resail, resale, resile, resin, respire, reveal, reveals, revel, revels, revelry, revers, reversal, reversl, revile, reviles, reviler, revilers, revise, reviser, ria, rial, rife, rifles, rifle, rifleman, riflemen, rim, rims, rima, rime, rimes, rimer, rimers, rimery, rimple, rine, rinse, rip,

rips, ripe, ripen, ripens, ripely, rise, riser, rival, rivals, rive, river, rivers, rivery, ryal, ryals, rye.

Safe, safranine, sal, sail, sailer, sal, salaam, salary, sales, saleens, salep, salin, saline, saline, saliva, salivary, salve, salver, samara, same, samp, sampan, sample, sampler, sane, saner, sap, sari, savanna, save, say, sea, seafan, seafarer, seal, sealer, seam, seaman, seamen, seamer, seamy, seapen, sear, sere, searaven, see, seel, seem, seemly, seep, seepy, seer, seine, self, seme, semen, seminal, seminar, seminary, senile, senna, sepal, sepia, ser, seral, serape, serein, serf, serial, seriema, serif, serin, serine, serra, serran, serrana, serval, servaline, serve, server, servery, servile, seven, sever, several, severy, sienna, sierra, sieve, silva, sylva, silvan, sylvan, silver, silverer, silvern, silvery, simar, simper, simple, simpler, simply, sin, sine, sinner, sip, sir, sire, siren, slam, slap, slave, slaver, slavever, slavery, slay, slayer, sleave, sleep, sleeps, slim, slime, slimy, slip, slive, sliver, sly, slype, smear, smeary, smile, small, snap, snape, snare, snarer, snarl, snarly, sneer, snip, snipe, sniper, snivel, spa, span, spaniel, spanner, spar, spare, sparry, sparin, spay, spear, spearman, spearmen, spere, sperm, spermine, spile, spin, spina, spinal, spine, spinel, spinner, spinney, spiny, spiral, spire, spiry, splay, splayer, spleen, spleeny, spline, sprain, spray, sprayer, spree, spry, spy, synepy.

Vail, vails, vain, vair, vairs, vale, vales, valerian, valise, vamp, vamps, van, vans, vane, vanes, vanner, vansire, vara, vary, varies, vase, vaseline, vaselin, veal, veals, veer, veery, veil, veils, vein, veins, veiner, veiny, velamen, velar, vena, venal, venery, venial, venire, verify, verily, vermeil, vermin, vernal, vernier, vernile, verse, versify, very, vesper, vespiary, via, vial, vie, vile, vim, vimana, vimen, vina, vine, vines, vinemaple, vinemaples, viner, vinery, viny, vinyl, viper, vipers, vire, vise, viel.

Yam, yamen, yap, yarn, year, years, yearn, yearns, yelp, yelps, yen, yes.

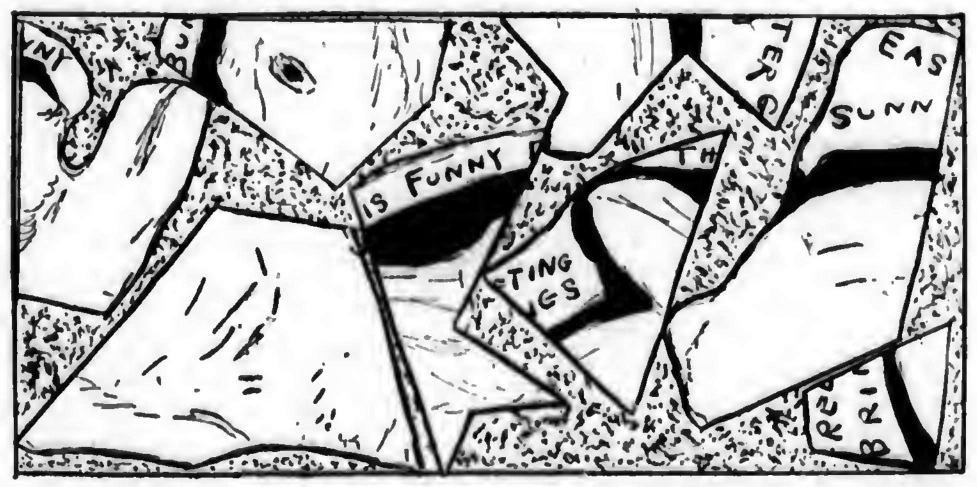
OUR LITTLE FOLKS' PUZZLE CORNER

DEAR LITTLE FOLKS:—Of course, we're all glad it's Easter time, and, of course, we're all going to celebrate, so here's a celebration that we can have in Our Little Folks' Puzzle Corner. Just cut the eight pieces containing the black marks and letters out from the dotted spaces in the picture below and arrange them so that they will fit together and make something I think you can all understand. When you have the answer, send it to me on a postal card or in a letter so that it reaches me by April 23rd. BE SURE TO SAY HOW OLD YOU ARE, and remember that I want to know the name of the county in which you live and when your birthday comes. Maybe I'll tell you something about somebody whose birthday comes next week. The prizes will go to the ten children, sending in the correct answer, whose cards or letters are the best in grammar, spelling, punctuation, penmanship and general appearance. Address all puzzle answers to The Puzzle Editor, Pennsylvania Farmer, 261 South Third Street, Philadelphia, Pa.

The five words which grew in the Puzzle Corner on March 26 are: A, AM, HAM, HARM, CHARM, and they help make the little story we had that week.

The prize winners are: Lillian Cook, age 9, Shippensville, Pa.; Robert Ellenberger, age 7, Tyrone, Pa.; Henry Hasson, age 12, New Castle, Pa.; Eugene A. Hoover, age 12, Newville, Pa.; Chester R. Leaman, age 10, Bird-in-Hand, Pa.; Edna E. McVey, age 10, Nottingham, Pa.; H. Harold Miller, age 9, Safe Harbor, Pa.; M. Mildred Scheidy, age 9, Bernville, Pa.; Viola Schwenk, age 11, McKeansburg, Pa.; Victoria Zingle, age 11, Orient, Pa.

Sometime ago I sent prizes to Melvin C. Chronister, Joe Cwynar and Harry Pierce. The prizes came back to the office because, for some unknown reason, the addresses were not correct. Please let me have your correct addresses, boys, so I can send your prizes to you.



Letters from Forum Members and Friends

Dear Cousin Ruth:—We have 30 chickens, they are laying very well now. We are getting 20 eggs a day. We killed our pig last fall. She was only 6 months old and weighed 226 lbs. Last year we set out 300 raspberry plants, we hope to have a lot of berries this year. I helped my father keep the weeds out of the raspberry patch.—George Simpson (X), Wayne Co., Pa.

Dear Cousin Ruth:—We have a western pony that is very gentle, we can do anything with him, that we want to. If you bring him near the porch he wants to come on to see if he can get something to eat. If you are riding him and rattle paper he will stop and look around. His name is "Foxy." I like to sled ride, but there is no snow here now, for it is all melted off. It is just like spring. I used to live in Ohio. My girl friend and I have just the same number of headmarks. We have the highest. We have about eighty. We are going to take the examinations in the spring. At present we have church in our school house.—Frances Bauman (X), Bradford County, Pa.

Dear Cousin Ruth:—I live in town. We moved this week. My uncle moved us with his truck. He lives on a farm.

I stay with him in the summer. I drive the horses, go after the cows, carry in the wood and water. I go to school, this is my second winter. I am in the third reader.—Victor Hess (X), nine, Fulton County, Pa.

Dear Cousin Ruth:—We had to write a poem about spring. This is what I wrote:

Springtime is here,
It brings us good cheer;
Buds are coming,
Bees are humming;
Farmers are plowing,
Birds simply howling—
To tell us springtime is here.

—Dorothy Ellen Butler, ten, Caroline County, Md.

Dear Cousin Ruth:—We have over 100 chickens and about twelve guinea hens. They pick out their mates and hide their nests. They only lay in the summer. It is hard to find their nests. When they see that you are following them they do not go to their nests.—Dorothy Laub, thirteen (X), Wayne County, Pa.

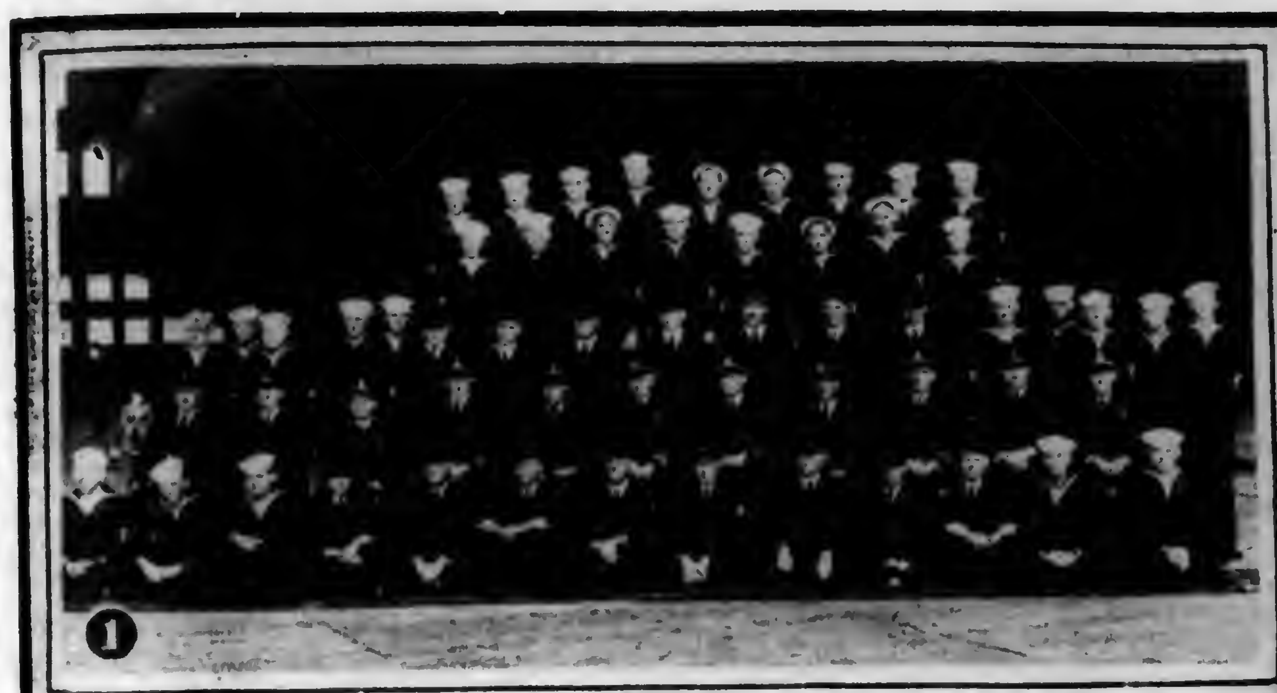
PASSING EVENTS IN PICTURES



(Copyright by Underwood and Underwood)

1.—The officers and enlisted crew of the Los Angeles. As soon as weather conditions permit the dirigible will attempt to establish an altitude record for a helium ship, flying from Lakehurst, New Jersey.

2.—Madame Lipa, wife of M. Jaroslav Lipa, counselor of the Czechoslovakian Legation in Washington, posing in the national costume of Czechoslovakia. The dress belonged to her grandmother.

3.—A drill outfit of eleven machines in battle formation sowing grain on an Oregon ranch.

4.—Patricia Avery, a third cousin of John D. Rockefeller, painted Easter eggs for the movie children of Hollywood, California.

5.—The climate of Bermuda, one of a small group of islands east of Cape Hatteras, attracts many vacationists. In the spring great quantities of Easter lilies, early potatoes and onions are shipped to New York from Bermuda. This British island also is an important naval base with a well equipped dockyard. The main street of Hamilton, the capital, is pictured.

6.—Here's a basket full of baby chicks ready to say "Happy Easter!" to their owner.

Mrs. GERTRUDE S. STEWART

"Let's Decorate Easter Eggs"

And, Presto—White Shells Became Clowns, Flowers, Baskets and Bunnies in a Twinkling

THE Saturday before Easter was stormy, and the girls were kept indoors, wondering what they could do, when Mary cried, "Let's decorate our Easter eggs!" There followed a scampering, and from various hiding places materials were brought out, while in the kitchen mother proceeded to get some egg shells ready for coloring. For several weeks she had been saving all the egg shells. She had pierced a tiny hole in one end of the egg and emptied it into a dish. Using glue, paints, ribbon and paper, the girls were soon busy making Easter gifts.

Easter Greetings

MAY the return of our birds,
The coloring of the grass,
The bursting of flower buds,
The awakening of little seeds,
The magic color of spring,
Whisper the power of unseen love
And inspire you with Hope
This Eastertide.—Gertrude S. Stewart.

On some of the egg shells which had a small hole in the end, faces were drawn. The eyes were painted blue or brown, lips and nostrils red and cheeks pink. Jack's clown was quite jolly with his triangular patches of red, and his painted fool's cap, made of white paper and glued on. Low paper cones were made and the eggs glued on to them. The point of the cone was fitted into the hole in the shell.

Mary made a quaint little Jap by pasting a little round mat of black wool for hair on the top of a slant-eyed, Oriental-faced egg. A bit of gay wall paper made a stiff little kimono, which was folded and pasted round the white paper cone on which the egg was set.

Other egg shells were painted to represent purple or yellow crocuses and pink tulips, the petals pointing up from the hole at the small end, and the cone concealed by green crepe paper leaves.

Gifts Distributed to Shut-ins

Mother broke some of the egg shells in half, striking them quickly with the blade of a knife. These were painted in colors or left white with an Easter greeting painted in gilt. A narrow ribbon tied around the cracked sections served to hang them up. A touch of mucilage made the ribbon secure.

The afternoon wore away before the young people were aware of its passing, so interested had they become in their work. Again, the next afternoon—Easter—they were busy distributing these little holiday reminders of the Easter-time to the shut-ins and sick of the section.

For the Easter party, or for the home table, it is easy to make many beautiful Easter decorations, and these are surely much more prized than any we could purchase.

Those who raise geese and have large eggs, or turkey eggs, are able to make larger Easter egg-shell decorations. The egg may be broken on one side and the broken place covered, or left irregular, and when the shell is filled with cotton it makes an exceptional decoration. Pale rose ribbons may be tied about each end, and again tied together to make a hanging vase, which, when filled with fragrant blossoms, makes a most beautiful center decoration for the table, or to hang over the table or in the center of the room.

If you have some tiny candy eggs, make a little basket by pasting a strip of gay paper or ribbon across a small box from side to side for a handle, and fasten it down with another strip pasted around the edge. Cut yellow paper into fine shreds for straws, and line the nest with these before putting in the candies.

Some girls made quaint Easter bunnies by pasting long white ears and legs on egg shells they had blown. A tuft of white cotton batting gave them conical tails, and a bit of narrow ribbon was tied around their necks to hide where they were pasted on.

And then there are the boiled eggs dipped in gay colors for Easter week, but be sure you use only harmless vegetable coloring instead of the poisonous chemical colors. — Earle W. Gage, N. Y.

Kernels Hold Together

PLEASE publish a popcorn recipe that will hold the kernels together and keep for awhile without growing sticky.—Mrs. F. L. M., N. J.

MOLASSES POPCORN BALLS

With 3 quarts of popped corn you will need 1 cup molasses, ½ cup sugar, 1 tablespoon butter and ½ teaspoon salt. Discard all hard, imperfect kernels and place good corn in a large kettle, and sprinkle with the salt. Melt the butter in sauce pan, then add molasses and sugar. Boil slowly until a little becomes brittle when tried in cold water. Then pour immediately but slowly over the corn stirring constantly. Shape into balls without too much pressure.

WHITE POPCORN BALLS.

With 4 quarts salted corn, use 2 cups sugar, and 2-3 cup water. Boil sugar and water without stirring until syrup spins a thread. Pour over the corn, stirring as you pour, and be sure to cover all the corn. Wait about a minute, then using both hands, press the corn to form balls. A few pecan or walnut meats added to each ball makes the goody all the more tasty.—Betsey Ford, Md.

Note: Moisten hands with butter if using either recipe.

Paper Won't Crack

IN 1883 we remodeled our house and divided one large room into two nice sized bedrooms. We made the partitions of thick pine boards, well grooved and matched. I pasted new cloth over every matching and then papered. The paper cracked, and since this did not happen until after cold weather, we decided that the freezing and thawing, and general heaving and settling of the house was responsible.

After fussing over this cracking for three or four paperings, a wise woman told me to cover the entire side of the room with cheesecloth. I should not paste it on, but sew a piece to fit the entire space, then tack it on the four edges, being careful to stretch it as much as possible. I did as she directed and thirty years of entire satisfaction have followed. Never since this method was adopted has a crack appeared on those walls. —Clarice Raymond, N. Y.

No Water, Yet It Cooks Meat and Vegetables Like a Charm

IN THESE days when folks are learning of the necessary good value of garden leaves, along comes just the right cooking utensil to preserve the qualities needed by the body. But do not let me give the impression that this cooker, planned to cook without water, is useful for only one thing. I have used mine for roasting rabbit and chicken with delicious results. Roasts of pork and beef have an added flavor when done entirely without the addition of water. The tight-fitting cover retains all the natural juices and no added moisture is necessary. No tedious pans to wash either, for scorching is unknown.

The photo will show you the tight fitting cover which does not allow a particle of goody to escape: guests never even suspect what is being prepared for dinner. You will notice the base, too, on which the cooker rests. This is an asset to any kitchen, for when any delicate milk pudding or cereal is cooked this serves the same purpose as a double boiler.

There is an inset pan fitting into the top of the cooker where sauces, steamed fruits, puddings and many desserts can be cooked. That makes it possible to cook an entire meal over one burner of the oil range, the gas burner, or the coal or wood stove—meat, potatoes, and possibly another vegetable, as carrots, cooked in the bottom; dessert in the inset pan. You can then go outside and plant in the flower or vegetable garden and return when dinner is ready. I cooked forty-two dinners for four people in that fashion during January and February this year. Often I wonder how I could have managed without my new waterless cooker.

Would you like to hear more about this cooker, like to see a folder explaining its merits; like to know its name and learn of its possibilities? If so, send a stamped, self-addressed envelope to Home Page Editor, care of Pennsylvania Farmer, 261 S. 3rd St., Phila., Pa.

The Kitchen Cabinet

CREAMED LIMA BEANS

3 cups dried lima beans
2 tablespoons sugar
1 tablespoon butter (scant)
Two-thirds cup milk
Salt and pepper to taste

Wash and pick the beans over and soak over night. In the morning drain, cover with cold water to which has been added a pinch of soda. Let boil 15 minutes; drain and cover with boiling water, adding the sugar. Cook slowly until the beans are soft and tender, then add the butter, milk, salt and pepper. Cream may be used instead of milk and butter.

Stir the beans only when they may stick to the bottom of the kettle, and allow the water to boil away as closely as possible before adding the milk or cream.

• • •

LIMA BEANS AND MUSHROOMS

Use the cooked beans that have been seasoned only with the sugar, salt, pepper and butter. Put one tablespoon butter in sauce pan, and beans and 2 cups of mushrooms and one-quarter cup cream; let simmer for about ten minutes and serve hot. —Jane M. Bush, Pa.

• • •

BACON AND APPLES

5 slices of bacon
4 apples
1½ tablespoon brown sugar
¼ cup water

Put bacon cut into small pieces in frying pan. Brown bacon on both sides, add apples sliced and cored but not peeled. Let apples brown slightly and stir. Now add water and sprinkle with brown sugar. Cover and cook until apples are tender.

• • •

FIG PIE

½ pound figs chopped fine
¼ cupful lemon juice
Sweeten (if the figs need it)
¾ cup water
Yolk of one egg

Beat the yolk; mix with the other ingredients. Turn into a pastry-lined pan. Make a meringue and spread this over the top after the crust has been thoroly baked, and brown in a moderate oven.—Olga Clark.

Woolly Aphis Dislikes Kerosene

DEAR EDITOR:—I would like to have you advise me what to do for the foliage plants and geraniums that are affected with a cobweb-like substance on stalks and leaf stems.—Mrs. B. J.

I suspect this disease is the woolly aphis, and kerosene emulsion can be used. If your foliage plants are coleus, you may apply a tiny bit of kerosene directly by using a small brush. But do not try this on geraniums.

Make kerosene emulsion as follows: Use yellow laundry soap or whale-oil soap and make a very thick suds. To each pint of suds add two tablespoons of kerosene and mix thoroly. It can be well mixed by shaking it in a fruit jar. To apply, you may use a small sprinkling pot, a hand syringe or a small brush.

All insects breathe thru openings along the sides of the abdomen so any oily or dusty spray which clogs up these pores will be sure to kill. It is just possible that the geraniums are bothered with a form of mildew. For that a liberal dusting with "flowers of sulphur" might help.

When making inquiries of this sort always send a part of the diseased plant.—Orra Parker Phelps,

---

Flower Gardens Exert Lasting Influence on Children

"SAY it with flowers" that you desire your children to become strong, God-fearing citizens by giving them, boys or girls, a flower garden. It may be a plot of pansies, a row of dahlias or a clump of roses. Rural folks usually have soil and space aplenty. Even a corner of the woodpile responds wonderfully when planted to hollyhocks and purple violets—or just wild "Johnny-jump-ups"—as one fresh-faced youngster has found.

Flower gardens in childhood days, lend directly to the fulfilment of parents' desires and wishes. The boy with the sprinkler watering daffodils as a mere tad was the proud, happy planter of the bulbs he now waters. Never once did he wilfully neglect or mistreat flowers. Moments that otherwise might have been spent outside the home-yard were spent tending and watching flowers. Numerous pleasures spring beauties brought him. These were proudly shown to friends, little and big. Twenty choicest blossoms cheered lonely old ladies at the County Home.

Watering the daffies he planted himself.

Planting seed, bulbs or plants; hoeing; weeding and observing regular plant habits never prove irksome to children properly interested. Fundamentals right there: Interest, amusement, work of an inspiring, clean nature.

No man is quite a brute who loves flowers and he who loves flowers will care for and love woman and what makes more towards happy homes filled with contented folk? What men really care for is never neglected. Neglect spells ruin. The daily laborer with his sunny marigolds, the millionaire with his exquisite sunken gardens prove this daily.

This blessed Easter-tide—symbolic of resurrection, light, life, joy—is a fitting season to "say it with flowers." "Say it with flowers" to your child,—to the world,—by teaching self reliance, self-esteem, method, thrift, kindness and love for the beautiful thru your children's flower gardens. There's bound to be a clinging good experienced from childhood flower gardens.—Gertrude Shockey, Ohio.

Will some one who remembers the old-fashioned Shoo-Fly Pie please send the recipe in complete detail to the Home Page Editor, care of Pennsylvania Farmer, 261 S. 3rd St., Philadelphia, Pa.? One of our readers recalls its merits and thinks we all would benefit by using it again.

THE RED STAR OIL STOVE BURNS OIL OR GASOLINE

Cooks as fast as gas

This is the famous Red Star "Lively Heat" Burner that burns oil or gasoline with equally good results

"With the Red Star ... my health was restored"
—says Mrs. L. A. Pfleger, Lafayette, Indiana

Dear Sirs: "Two years ago, I was sickly and had two small babes to care for. My husband was away all day, and an oil stove proved a necessity.

"It was really a godsend as every movement counted with my depleted energy. With it, there was no heavy coal or ashes to lift. There was no extra dirt to clean.

"My wonderful three burner Red Star gave almost instant heat for the babies' milk, and the light noon lunch. It was real Lively Heat, too —a wonderful cooking and baking heat, steadier and more dependable than city gas, especially at hours of heavy use. My wash water and irons heated quickly in a cool kitchen.

"The summer was intensely hot, the babes exacting. I did all the work for five, except heavy laundry, with no conveniences except my Red Star Oil Stove, with its wonderful Lively Heat burners.

"Yet with the country air and my Red Star I was enabled not only to carry on, but I found my health restored by the first snow."

(Signed) MRS. L. A. PFLEGER.

Thousands of women, like Mrs. Pfleger, will tell you the Red Star Oil Stove, with its wonderful, wickless "Lively Heat" Burners, is a godsend.

Go to the nearest Red Star dealer. See a demonstration and be convinced. Made in two to six burner sizes and at a price for every purse. In smaller sizes cost no more than the ordinary oil stove. Most dealers sell on easy terms. If your dealer is not listed below, write us. We will send name and copy of the Red Star book, free.

THE DETROIT VAPOR STOVE COMPANY, Dept. 111, Detroit, Michigan; makers of famous Red Star Oil Stoves and White Star Gas Ranges.

Please Mention PENNSYLVANIA FARMER When Writing to Advertisers

Many farm women, too, now have electric laundries.

Rural electrification
—a fact on more than 260,000 farms

AS the result of cooperative investigation carried on in twenty states, electric light and power companies are now building rural lines as fast as circumstances will permit.

On 260,000 farms rural electric service is in successful operation today.

The same force which has done so much for industry will soon be available to an increasing number of farms. The resources and experience of more than forty years of successful city service are back of this movement to bring the farmer the greatest practical help he has ever had.

With the desire to make full use of all the benefits of electric service, and with the development of new equipment, rural electrification will open a new era on the farm.

Rural lines cannot be built everywhere at once, but the light and power companies are ready to extend service to groups of farmers, which together, can use sufficient power to justify the building and maintaining of rural lines.

Rural electrification can come quickly—where farmers and the light and power companies work together for the same good end. Ask your power company for information and cooperation.

The Committee on Relation of Electricity to Agriculture is composed of economists and engineers representing the U. S. Departments of Agriculture, Commerce and the Interior, American Farm Bureau Federation, National Grange, American Society of Agricultural Engineers, Individual Plant Manufacturers, General Federation of Women's Clubs, American Home Economics Association, National Association of Farm Equipment Manufacturers, and the National Electric Light Association.

Directions for Ordering.—Give figure or figures of each pattern exactly as printed at beginning of each description. Give bust measure when ordering waist patterns, waist measure for skirt, and age for children's patterns. Address Pennsylvania Farmer, 261 S. Third Street, Philadelphia, Pa.

5514.—Seven sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. A 38-inch size requires 4⅛ yards of figured material 36 inches wide with five-eighths yard of plain. Price 10c.

5744.—Three sizes: 16, 18 and 20 years. An 18-year size requires five-eighths yard of lining, 1¾ yard of plaid material, and 1½ yard of plain material 40 inches wide. Price 10c.

5747.—Six sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. A 38-inch size requires 4¾ yards of 40-inch material with one-quarter yard of contrasting material. Price 10c.

5751.—Six sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. A 38-inch size requires 3⅛ yards of 40-inch material with 1⅛ yard of contrasting material. Price 10c.

5757.—Three sizes: 6 months, 1 and 2 years. A 1-year size requires 1⅝ yard of 36-inch material. Price 10c.

5619.—Four sizes: 6, 8, 10 and 12 years. A 10-year size requires 2⅜ yards of 40-inch material with one-quarter yard of contrasting material. Price 10c.

5761.—Five sizes: 4, 6, 8, 10 and 12 years. A 10-year size requires 1½ yard of 36-inch material. Price 10c.

5583.—Four sizes: small, 34-36; medium, 38-40; large, 42-44; extra large, 46-48 inches bust measure. A medium size requires 2⅞ yards of 36-inch material. If made as illustrated 9¼ yards of bias binding will be required for trimming. Price 10c.

5760.—Four sizes: 6, 8, 10 and 12 years. A 10-year size requires 2¼ yards of 40-inch material. Price 10c.

5309.—Four sizes: small, 34-36; medium, 38-40; large, 42-44; extra large, 46-48 inches bust measure. A medium size requires 3¼ yards of 36-inch material. Price 10c.

5756.—Three sizes: 2, 4 and 6 years. If made with long sleeves, for a 4-year size, 1¾ yard of 44-inch material will be required. Price 10c.

5596.—Four sizes: 8, 10, 12 and 14 years. A 12-year size requires 3 yards of 40-inch material with one-quarter yard of 54-inch contrasting material. Price 10c.

Send 10c in silver or stamps for our up-to-date spring and summer 1927 Book of Fashions.

Reasons Why Some Farm Women Seem to Lack Interest

DEAR MRS. STEWART:—I would like to give my viewpoints as to why more women do not attend home economics meetings. I have lived here on a farm for six years, and if there has ever been such a meeting I have not heard of it. Of course, it would not matter for I could not have gone. I cannot walk and take small children with me. I could not leave little ones at home uncared for, and my husband has "no time to fool away running to women's meetings."

No doubt this will explain for many the "lack of interest" we are blamed for. In that other community where the men's meetings are so well attended, if a little of the value of our boys and girls was emphasized, as well as well-kept pigs and cows, the men might be aroused to give women more opportunities for bettering home conditions.—A Pennsylvania Wife and Mother.

Editor's Note:—Does your community want helpful meetings enough to ask for them?

Do communities where they are started aim to spread the good among their sister townships and counties?

Do you women who have cars drive past the less fortunate, or do you fill every seat when you attend meetings that benefit you?

So Anxious Mothers Needn't Worry

Are you planning to have a nursery in connection with your meetings so that the anxious mother may bring her children and leave them in good care while she improves the hours of attendance, and can give undisturbed attention to the meeting?

Are you patient and tactful, kind and loving in your own attempts to win your husband over to the cause you feel will help your home? He might begin to see your point if you keep his vision clear and free from rasping.

Women are daily coming into their own, and at no time am I more happy to be a woman than at Eastertime. It was a woman to whom our risen Savior spoke first on that glad day. It was a woman to whom He delivered the first mission of spreading the tidings of the Resurrection. Ours is a great and noble work and loving service and thoughtfulness for others are the keynotes of our happiness.

Tomatoes Fill the Bill

WHEN oranges and grapefruit are out of season or too high turn to a can of tomatoes. They supply the same necessary vitamins as the citrus fruits and help to keep the body working well. The simplest way to serve them is stewed, and their bright color makes any meal more attractive; but stewing isn't the only way to prepare them. Try a dish of scalloped tomatoes with buttered bread crumbs now and then and as a surprise add some grated cheese.

Then, for a change, put the tomatoes thru a sieve and make cream-of-tomato soup or tomato sauce to serve with meat. Tomato sauce, made with milk, thickened, and seasoned with salt, pepper, a few cloves, and an onion makes a good lunch dish when poured over cooked rice or macaroni. Here again cheese may be added and left-over vegetables may be put in the sauce.

A Welsh rarebit is a "tomato rarebit" when made with strained tomato instead of milk, and, served on toast. For special occasions, tomato jelly makes a tasty salad and the recipes can be found in most cook books. With all these ways of using tomatoes, no one need get tired of them and no one need lack their vitamin.—New York State College of Agriculture.

Ribbon hats are delightful and can be made easily if a simple model is chosen. Belting ribbon may be purchased in various widths, and there is a wide color range to choose from. There is a belting silk, too, 18 inches wide, which may be cut in two, lengthwise, and used for the side crown. This has the appearance of wide ribbon.

"Something Smells Good," Chorused the Whole Family

"UM—SOMETHING smells good," is the chorus sung by hungry Daddy-of-the-family, and two hungry children-of-the-family coming in from work and school.

Clean hands and faces, eager eyes and appetites, too, appear at the luncheon table attractively set with a glass of milk at each plate, plenty of whole wheat bread and butter, a salad of pear stuffed with cottage cheese, and a covered dish of—ah! hot vegetable chowder. Just the thing for a spring day. Mother-of-the-family smiles.

There is no exact recipe for a vegetable chowder because it is really a leftover dish, and any bit of vegetable can be used, even spinach or cabbage. But today, Mother-of-the-family had made her vegetable chowder this way:

2 cups diced (leftover) potatoes
1 cup diced (leftover) carrots
2 stalks (leftover) celery
1 cup (leftover) peas
1 thin slice onion
1 quart milk

Seasoned with salt and pepper to taste. Just the celery and onion were cooked in very little water until tender, then the vegetables and milk were added and all heated to the boiling point.

Potatoes contain starch and slightly thicken the liquid. When potatoes are not used and a thickened chowder is desired, a cup of leftover cooked cereal, or 1 cup of thick white sauce, may be added to the liquid. There is no dish which lends to greater variety than a vegetable chowder, where milk is used as a base.

The chowder is nourishing because it contains milk and vegetables. It cultivates a liking for vegetables (or some vegetable in particular) or milk which probably would not be relished if served in a single portion. It is easily digested. It is "filling" and "stands by." It is easily prepared and easily served. It is economical.

It is a dish for the whole family; children, parents and grandparents.

Prevention the Cure

MANY readers inquired last year how to keep rose bushes free from black spot and mildew. The only method worth while is prevention. As soon as the leaves are well grown, you should start dusting. Procure a mixture of 9 parts dusting sulphur and 1 part of arsenate of lead. Be sure it is thoroly mixed, then dust the leaves early in the morning while moist with dew. Continue doing this about once a week for the next spring weeks and during early summer. In late summer, once every three weeks is sufficient. —G. S. S.

The De Laval Milker is Easy to Wash and Clean

THE simple design of the De Laval Milker makes it extremely easy to wash and to keep clean. With a brush, some hot water and a few minutes' time, the entire machine can be thoroughly washed. The few parts requiring any washing at all are illustrated above. There are no seams in which dirt can accumulate, or crevices to harbor and provide breeding places for bacteria.

Hundreds of producers of Grade A and Certified Milk in every section of the country declare the De Laval Milker an invaluable aid in the production of clean milk, and an assurance of regular premium money.

This is but one of the advantages to be had with a De Laval for it soon saves enough time to pay for itself and will milk your cows better.

Facts about the De Laval Milker

1. 650,000 cows now milked the De Laval Way.
2. De Laval Milkers now in their eleventh year of use.
3. 83.27% of the users report average saving of 2 hrs., 12 mins. per day.*
4. 97.13% of the users say it agrees with their cows.*
5. 99.4% of the users say they get as much or more milk as by hand milking.*
6. 9.49% average increase in production per cow reported by those who have records.*
7. 94.80% of users say their De Laval is easy to keep in a clean and sanitary condition.*
8. Average bacteria count of all reporting, 14,542—62% report counts of 10,000 and less.*
9. 96.45% of De Laval users say their milker is "the best," "one of the best," or a "good" investment.*

*Based on reports from 1844 De Laval Milker users in all parts of the U. S. and Canada.

Bigger Farm Profits from "LIMOID"

EXPERIMENTS by State and Federal Agricultural Stations over many years show increases in crop values of from $5.33 to $9.53 per acre because of liming the soil.

Sour acid soil cannot produce profitable crops. 75% to 90% of all soils need lime. Liming corrects soil acidity and gives you three kinds of profits: (1) annual crop profit; (2) value of increased future productiveness of the soil; (3) increased land value.

Warner's "LIMOID" is the most effective and economical form in which lime is furnished. "LIMOID" is pure hydrated lime, and because of its extreme fineness it more thoroughly soaks into the soil and thus goes farther than other forms of lime. It comes in 50-lb. strong paper bags, is easy to handle and apply; can be stored with no fire risk. It may be used also for whitewash, feeds and building.

Send the coupon TODAY for your free copy of *"Lime for Bigger Farm Profits."* It tells you in language and figures easy to understand what you should know about the farm use of lime.

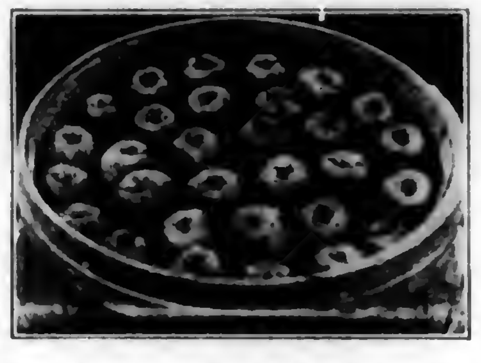
Three Years Mark Progress

Shipping Point Inspection Spreads in Pennsylvania

REAL prograss in the standardization of fruit packed and shipped by the carload in Pennsylvania has been made during the past three years. The use of standard grades has become more extensive thruout the commercial fruit belt of the state and increasing interest is being shown in the leading potato producing counties, as is evidenced by the state-federal shipping point inspection work during the past six months.

Shipping point inspection, as the name indicates, is the work done by authorities to determine the actual grade and to make sure that the product packed under a designated federal grade actually meets all the requirements of that grade. The inspectors keep a careful watch over the packing operations and thoroly inspect the packaged product for color, size, condition, freedom from disease, etc. When the carload satisfies the requirements a certificate is issued to that effect.



A Barrel of U. S. No. 1 Grade Jonathans.

The shipping point inspection work started in 1923 at eight shipping points in four counties—Adams, Cumberland, Franklin, and Potter. During that year 234 cars of apples and four of potatoes were inspected. During the past season the work was carried on at 55 shipping points in 12 counties—Adams, Bedford, Berks, Cumberland, Dauphin, Franklin, Lancaster, Lehigh, Northampton, Potter, Tioga and York. The total number of carloads of peaches, apples and potatoes inspected this year will be approximately 1500, or more than six times the number inspected three years ago and more than four times the number inspected last year.

Careful Records Are Kept

Whenever a car of apples fails to grade U. S. No. 1 or U. S. Fancy the reason for this failure is recorded. Of the 207 cars which failed in 1926, the chief reasons were given as follows: 187, insufficient color; worm injury, 91; scars, 57; mechanical injury, 39; hail injury, 22; russetting, 14; sooty blotch, 10; other factors, 20.

In the peach inspection work, a total of 135 cars failed to grade No. 1 or U. S. Fancy in 1926. In this case the chief contributing factors in the lower grading were: Soft peaches, 124; worm injury, 41; scab, 35; mechanical injury, 30; misshapen peaches, 10; split pits, 10; hail injury, 5; growth cracks, 5; brown rot, 3; other factors, 5.

Why Some Failed to Meet Grade

It is evident that the chief contributing factor in the failure of apples to meet grade requirements was lack of color, while in peaches it was softness. The latter was due in part to the continued rain which caused the peaches to soften prematurely and at the same time retarded picking. Approximately 75 per cent of the cars of peaches and apples inspected met the requirements of the U. S. No. 1 grade which shows that the requirements are reasonable.

D. M. James of the State Bureau of Markets, was in charge of the inspection work this year. A total of 38 inspectors was employed at different times during the season, depending upon the demand at the various shipping points. The work has been made largely self-sustaining by means of a fee charged each fruit grower or shipper who had cars inspected.

Everybody Receives Benefit

This activity is a service which aids producers, middlemen, and consumers alike. It aids producers in that it makes standard grades effective. It makes more certain the acceptance of f. o. b. sales by the buyer. It improves quality of products and reduces waste in marketing. It is an advantage to the carrier in that it makes possible a fairer adjustment of freight claims on shipments of fruits and vegetables. It gives the dealer an opportunity to buy a definite quality of the product, and to make sure that the product when received will bo of that quality.

It is particularly gratifying that the work of the inspectors has been of such a high character that in only one case during the period, 1923-1926, was the grade of a shipment reversed upon re-inspection at terminal markets.—Geo. F. Johnson.

The scenery is that green stuff you see between the billboards.

State-federal inspector determining grade of Adams County apples.

Tuberous Roots of Swamp Plant Are Dangerous Playthings

By Dr. E. M. GRESS, Penna. State Botanist

Editors' Note.—This is the second of a series of articles on poisonous plants commonly found in Pennsylvania and adjoining states.'

A FATAL case of poisoning by water hemlock occurred at Smithfield, Pa., on March 30, 1912. Willard Mulhollen, Chester Mulhollen and Harold Fun mistook the tuberous roots for artichokes. They ate the tubers and became violently ill in a few minutes. Chester died in a few hours. Vomiting was induced with the other boys and they recovered. Some of the symptoms were unconsciousness, protruding eyeballs with dilated pupils, rigid muscles, set jaws, and violent convulsions.

All farm livestock are susceptible to the poisoning but it is more likely to be fatal with ruminant animals such as cattle that cannot empty the stomach by vomiting.

If children are poisoned by eating the plant, an emetic should be given promptly and a physician called at once.

Like many wild plants, water hemlock is known locally by many other common names. Among these are musquash-root, beaver poison, children's bane, snakeweed, spotted parsley, muskrat weed, cowbane and death-of-man.

Low Lands Harbor Deadly Poison

From some of the common names one would infer that the plant is very poisonous. It is, indeed, one of the most poisonous plants in Pennsylvania. It is found commonly in meadows, particularly in swampy places.

The clustered roots are thick and fleshy and not very deep in the soil, hence they often become exposed and are picked up and eaten by mistake for parsnips, artichokes or some other edible root with quickly fatal results.

One of the best distinguishing features of the plant is the swollen part of the stem, commonly called the root stock. This is the portion just above the point where the clustered roots originate. If this root-stock is split open one will see partitions running crosswise which divide the rootstock into chambers. In the early spring these chambers are filled with a liquid but later they are empty. The stem of the plant which may grow to the height of eight feet is hollow except at the joint where the leaves are attached. It is usually streaked with purple lines. The color is usually more pronounced at the juncture of the stem and branches. The leaves are called bipinnate or tripinnate due to the fact that they are twice or thrice divided. The leaflets are narrow, pointed and rather coarsely toothed.

Flower Resembles Wild Carrot

The flowers are arranged in clusters called umbels, similar in appearance to the well-known wild carrot or Queen Anne's lace. Like all the Parsley Family the flowers are very small. There are five white petals and five stamens and a two-celled ovary with one seed in each cell. The fruit when mature is about an eighth of an inch long, striped with corky ribs.

On account of the great yearly loss caused by this poisonous weed, farmers should be careful to eradicate the plant. It grows only in the low lands and when the ground is wet and soft it can be pulled up quite easily. The plants should then be gathered together and burned. Take no chances in leaving them on the ground. The poisonous principle may soak out and poison pools of water which the cattle sometimes drink, which is said to be one of the chief methods of cattle poisoning by water hemlock.

There were 7724 more tenant farmers in the United States in 1925 than in 1920, but there were 56,756 fewer farm owners, according to the U. S. Bureau of Agricultural Economics. In Pennsylvania, and other states where there are many towns and cities, there is an increase in the number of owner-operated farms. In purely agricultural sections tenancy is increasing.

Water hemlock is known locally by many other names.

Concrete Dams Save Soil and PREVENT Gullying

Millions of acres of valuable land are rendered useless by erosion each year, according to the U. S. Department of Agriculture.

Dams, properly built at the right location, will save and restore much of this wasted land.

Build Your Own Dam Where Needed

"Gullying" of your land can be prevented permanently by building a concrete dam according to simple instructions clearly written and illustrated in our booklet "Soil Saving Dams." Plans are included.

Ask today for your copy of "Soil Saving Dams." It is free.

Concrete for Permanence

2 New Books ON THRESHING

"The Book of Successful Threshing" and "Another Great Advance in Threshing Machines," are new books for the farmer. They are something entirely new in that they present the advantages and problems of owning a threshing machine, of organization and management of threshing rings, of co-operative ownership, and of custom threshing, together with the essential data on the machines themselves.

NICHOLS & SHEPARD

However you thresh, you'll want a copy of each of them. We will gladly send both to anyone interested.

Nitrate of Soda The Standard Nitrogen

NOTHING in agriculture has contributed more to the profit of truck growers than the proper use of Nitrate of Soda in producing marketable crops.

Successful truckers have learned by experience that nitrate makes vegetables grow rapidly, mature quickly and yield heavily—the three essentials to real profit. They have learned that it pays to use Nitrate of Soda. If your gardens are backward side dressing with nitrate will speed them up and turn prospective losses into profit.

For Profitable Crops

Ask any one who uses it or let us send you our new pamphlets. *Cut out this advertisement,* write your address in the white space and mail to our nearest office.

Southern Potatoes Lower Prices

Review of the Week Ending April 9

POTATOES—The old potato market was generally dull during the week but more active trading occurred at some points. In Philadelphia supplies were lighter than they have been for sometime and the market showed some improvement. There were very few Pennsylvania potatoes offered and on most days there were too few sales of this stock to establish quotations. The movement of new potatoes from Florida increased and prices declined rapidly. Favorable weather has not only brought on the crop more rapidly but shipments are averaging around 100 cars a day. The second-early states such as New Jersey, Maryland and Virginia are planting larger acreages than last year. Plantings in the second-early states are estimated at 93,500 acres, compared with 86,000 last year.

APPLES—The season is approaching its end and has been the heaviest commercial crop on record. Up until April 1 there had been 124,000 cars shipped. The markets are now generally dull and only the best stock is wanted. A great deal of stock is showing poor condition and this is especially true with eastern barreled stock. British and German export markets broke about a month ago and have not yet fully recovered.

EGGS—The New York market improved due to the Easter trade. Fancy large eggs were in demand and prices advanced. Both brown and white eggs held steady. The average run of nearby white eggs was rather slow but fancy selected stock brought a premium.

POULTRY—The live poultry market was slow toward the close of the week. The cool weather stimulated the demand to some extent but supplies were more than ample for trade needs. Fresh killed broilers showed a wide range in quality and prices were irregular. Fowls held about steady.

BUTTER—The markets were very erratic and prices fluctuated rapidly. Buyers were very cautious and speculative demand was almost lacking. Storage holdings are much lighter than last year.

LIVESTOCK—Hog prices declined in Chicago while beef steers advanced. Heifers were higher and cows irregular. Heavy calves and vealers were stronger while stockers and feeders made moderate gains. Fat lambs closed 25c higher, yearling wethers, fat ewes and feeding lambs also advanced.

FEED—The market was generally steady altho wheat feeds showed more strength. Bran was more active in the northeastern section. Linseed meal was steady while cottonseed showed a weaker tendency. Gluten prices were lower. Hominy feeds were steady to firm in the eastern markets.

GRAIN—The markets were generally firm with wheat prices fractionally higher than a week ago. At the close there was a weaker tone due to heavier shipments from the Southern Hemisphere. Corn was about 1c higher and oats practically steady.

HAY—The markets were quiet but prices held firm under the light offerings. Timothy hay was rather draggy in the eastern markets. Alfalfa was generally firm with the bulk of offerings from Oklahoma.

County News and Comment

Armstrong County, Pa.—Plowing has been held up. Manure hauling, spraying and clover seeding are being held over to later dates on account of unfavorable soil conditions. Early fall seeded wheat and rye are looking encouraging, while late seeded not very promising. Practically all one- and two-year-old alfalfa plats "winter killed." About one-third of the clover seeding has been done. Peach and apple trees ordered for spring planting are coming forward and being set. Miles of new and replacement fences have been erected. Some baled hay and straw are steadily going to market, the former at $17 to $20 the ton, the latter at $14. Farmers paying up to $30 per bu. for domestic clover seed. The hog market for home butchers is about over and closed out on a lower basis. Good light carcasses sold at 15@17c per lb. Beef is in better demand and prices for 1000- to 1200-pound steers are strong. Butter is bringing 45@50c; white eggs have dropped to 20c.—W. M. P., April 6.

Bradford County, Pa.—Grass and buds were starting well—now we have two inches of snow. Maple sugar makers are expecting a small year; nights are not cold enough. Price is from $2 to $2.50 per gallon. Winter grains looking fair. Considerable hay still on hand. Baby chick business is now booming.—G. E. E., April 3.

Clearfield County, Pa.—This morning there is two inches of snow and the temperature is near the freezing point. Roads have been unusually bad and motor travel is about suspended. Marketing of produce is slow, a little hay is drawn to local market and some loaded for shipment. Price for straight timothy is around $25. Potatoes move slowly at $1.25@1.50; apples, $1@1.50; eggs, 30@35c; butter, in prints, 50@60c; dressed pork, 18c; old fowls, 30c; dressed beef irregular, at about 12c. Has been some plowing done.—D. H. W., April 3.

Frederick County, Md.—First of March ground frozen and farmers hauled manure. Quite a lot of corn husked this spring. It is practically all finished now. Some plowing has been done and early garden crops planted. Grass and most grain looking good. Farm sales practically all over. In most instances prices paid for stock and implements were high, especially good dairy cows, which, if tested, frequently brought $150. Eggs and pork took a decided drop. Beef cattle slightly off. Potatoes high, around $2 per bu. for old crop and $3.50 for southern-grown new crop.—R. J. W., April 4.

Lancaster County, Pa.—A number of farmers have plowed cornstalk fields and sod. Wheat fields are coming along fine. Milk production has dropped off in many sections. Prices: eggs, 23c; chickens, 25c; butter, 50c; milk, $2.70 cwt.—R. C. R., April 4.

Lebanon County, Pa.—Quite a lot of plowing has been done, some clover seed sown. Daily shipments of little chicks are being received at the local post office. Farm stock sales practically all held and good prices were realized. Orchardists spraying fruit trees. Early-sown wheat looks good. Some later-sown is picking up, while some is in a poor condition. Farm help more plentiful than a few years ago. The usual acreage of potatoes will be planted this spring. Good seed corn is somewhat scarce, but the county agent got in touch with several farmers having corn of the 1925 crop which germinates well. Bankers are again distributing seed corn to the farmers, allowing one-half bushel to each customer. Prices: wheat, $1.35; corn, 70c; hay, $20; straw, $14; butter, 58c; eggs, 25c; milk, $2.45 cwt.—P. L. M., March 31.

Montgomery County, Pa.—Some plowing has been done and a few have sown oats but majority are busy hauling manure. There was quite a lot of corn and stover to move off the fields. Wheat does not look so good yet but it may come later. The acreage of oats will probably be much larger than last year as some didn't get their wheat sown. Clover seed has been sown. The farm sales are about over, good prices were realized. Poultrymen are in the height of their busy season hatching and delivering chicks. Prices: wheat, $1.30; seed oats, 80c; corn, 75c; eggs, 25c.—C. N. D., April 2.

Sullivan County, Pa.—Farmers have practically all winter manure hauled and many are commencing spring plowing. Winter wheat looks fair. A few farmers are seriously considering putting out spring wheat, since they had so much bad luck with winter wheat. We are still doubtful whether heavy frosts of past two weeks injured apple crop. Practically all stock wintered exceptionally well. Farmers fed more grain this winter than ever before because hay has been scarce. M. G., April 1.

Union County, Pa.—The sale season closes with the month and stock and implements brought good prices, generally. Horses sold much higher than a year ago. Cows sold recently at average of $140 for grades. Shoats sold very well but not so high as last year as they are more plentiful. Some sod has been turned on high ground and manure has been hauled to sod for corn. Some clover seed has been sown. Trees being trimmed in apple orchards and spraying is being done. Calf club work carried on in many townships. The county banks are furnishing the money to buy these heifers. More acres of potatoes will be planted in the county notwithstanding the high price of seed potatoes, $3 a bushel. Good germinating seed corn is scarce and is in good demand.—J. N. G., March 30.

York County, Pa.—The first of March was warm, consequently a lot of spring plowing has been done and some early potatoes planted. Early-sown wheat making good start. Late wheat not looking so well. Clover seed very high this year. Public sales about all over. Farm help still very scarce with good wages being offered. Perhaps an apology to the readers of the county notes is due for the error that unintentionally crept into the notes published March 12 giving the price of fishmeal at $2.75 instead of $3.75, the correct price. Wheat, $1.20; corn, 73c; rye, 90c; oats, 45c; bran, $2; fishmeal, $3.75; cottonseed, $2; oil meal, $2.75; 4 per cent milk, $2.60; hogs, $11, live weight; chickens, 26c; eggs, 20@25c.—W. K., April 4.

For your property's sake use plenty of paint. For your pocketbook's sake make it long-wearing lead paint, made of Dutch Boy white-lead

WHAT paint shall I use for my farm buildings? How should it be used on wood, concrete, stone, plaster, stucco? What colors are best inside my house and out? Our booklets—"Handbook on Painting" and "Decorating the Home"—will help you answer these questions. Write to our nearest branch for the booklets. With them you get a decorator's data form to use if you desire the help of our Department of Decoration on any special painting problem.

From the Week's News

W. H. LANDIS, of the Montgomery County Cow Testing Association, owns the registered Holstein cow that led all Pennsylvania C. T. A. cows in milk production during February. She produced 2881 pounds of milk. Another registered Holstein owned by William Steigerwalt of Carbon-Lehigh Association led in butterfat production with a record of 125.4 pounds of fat. The Carbon-Lehigh Association had the highest 10-cow average in butterfat—73.9 pounds.

§ § §

THE OLDEST STUDENT at the Pennsylvania State College is a sophomore 47 years old. The youngest is a freshman aged 16. Among the 3300 students of the College, more of the freshmen are 19 than any other age, more of the sophomores are 20, more of the juniors are 21; and more of the seniors are 22.

§ § §

NEARLY $1000 was contributed toward a program of public education by each of the 55 county farm bureau associations of New York State in 1926. This money was spent, along with county, state and federal funds, to improve methods of producing and marketing farm products in each county.

§ § §

ILLINOIS, IOWA, INDIANA—each shipped to the Philadelphia market during March about six times as much dressed poultry as Pennsylvania. Missouri shipped 32,451 cases of eggs to the "City of Brotherly Love" in the same month, as against Pennsylvania's 13,659 cases; and Minnesota shipped 3,643,301 pounds of butter, as against Pennsylvania's 81,811 pounds.

§ § §

OVER 250 TONS, or, to be exact, 503,000 pounds, of wool were sold in wool pools in Pennsylvania during the year just closed according to W. B. Connell, sheep and wool extension specialist of the Pennsylvania State College. This represents the wool crop of more than 2800 growers.

VISCOLIZED MILK is a fraud. That contention of the Pennsylvania Department of Agriculture has been upheld by a decision of the Dauphin County Court. The recently introduced process of viscolizing milk, which must no longer be used in Pennsylvania, broke up the fat globules so that there appeared to be about twice as much cream in the consumer's milk bottle as there really was by actual test.

§ § §

PIKE COUNTY, which in the old days was noted for its Democrats and rattlesnakes, and more recently has attracted attention as the Pennsylvania home of former Governor Pinchot, is going to have one of the largest boys' and girls' potato clubs in the state this year. County Agent Davis received 62 applications for membership in one week. The Port Jervis Kiwanis Club will furnish the seed potatoes.

§ § §

A "NAME THE FARM" campaign, sponsored by County Agent McDougall, is getting results in Elk County. More than 50 farms have been named and "labeled" with attractive roadside signs.

§ § §

MORE THAN 1000 cases of typhoid fever have been reported in and near Montreal, Canada. The disease has been traced to a large milk distributor who draws his supply from nearby sections. To protect consumers in the United States the Bureau of Chemistry of the U. S. D. A. has ordered an absolute embargo against milk and cream originating within a radius of 200 miles of Montreal.

§ § §

SECRETARY JARDINE has approved an amendment to the corn borer control regulations which will provide a maximum compensation of $2.00 per acre for extra work necessary in cleaning up sweet corn fields to comply with the rules in effect in the corn borer area. The regulations originally provided $2.00 an acre for field corn, but only $1.00 for sweet corn.

RADIO DEPARTMENT

The Function of a Lightning Arrester

THERE is no additional lightning hazard involved thru the installation of an antenna, or aerial, and radio receiver. If anything, a properly installed antenna functions much after the manner of a lightning rod, by reducing the accumulation of atmospheric electricity in the immediate vicinity before it can gain the strength for a destructive bolt.

Any outdoor antenna should be provided with a so-called lightning arrester. In fact, this measure is required by the regulations of the National Board of Fire Underwriters.

Carries Off the Heavy Surges

The purpose of the lightning arrester is to provide a direct path to ground for heavy surges of electricity induced into the antenna system by nearby lightning discharges. The usual lightning arrester comprises a small spark gap either in air or in vacuum, placed between antenna and ground, generally at the point where the lead-in enters the house. The lightning arrester may be placed indoors or outdoors. No lightning arrester is necessary or required, however, for indoor antenna or loop.

The best practice is to place the lightning arrester outdoors. The ground lead should be as direct as possible, supported some 6 to 12 inches away from the walls. It should be made up of heavy wire, say No. 12 B. & S. Gauge, connecting with the outside ground in the form of a water pipe or a metal plate or screen buried in damp soil. While such a ground connection might not do for radio reception purposes, it will be entirely satisfactory for the lightning arrester.

In localities subject to frequent and heavy lightning storms, it may be well to provide an excellent outside ground, as well as a heavy grounding switch outside the building, as an extra precaution. This is in addition to the usual lightning arrester.

Sometimes, altho rarely, a defective lightning arrester may be the cause of poor reception. The tiny spark gap becomes bridged, which short circuits the radio receiver and cuts down signals even to the vanishing point. Such condition may be detected by disconnecting the lightning arrester from the lead-in and noting the operation of the radio receiver.

Eastern States Farmers' Exchange

Eastern States Feeds Make Fine Showing

Thomas Wood's herd which has been on Eastern States feeds for 4 years led the New London County (Conn.) Association its first year which closed March 1st, his 10 Holsteins producing 12,548 lbs. milk, 414.76 lbs. fat. His best cow, Creamella Carlotta Johanna produced 21,436.8 lbs. milk, 693.26 lbs. fat.

Thomas Wood, Waterford, Conn., is a farmer dependent for his living on the success of his farming operations. To secure profits from milk production he has set about controlling the factors which he can control. He knows that without records of production and cost of production he can neither stop leaks nor follow up his most profitable practices. He therefore was ready to join the cow test association when it was organized in the winter of 1926. He knows that he cannot afford to feed low producing cows. He has reduced his costs by building up a herd of high, economical producers. From his records he knows what his cows can earn for him and he calculates the value of the cows not by what they cost but by what profits each can earn for him. He does not sell his best cows simply because buyers offer more for them than they do for his poorer ones.

He selects feed on the same principle. He does not buy feed just because it can be bought for less but watches what his feed earns for him. He has standardized on Eastern States feeds, using Fulpail for his milkers and Fitting Ration for the young stock and dry cows. Each year he buys his requirements on contract. Does it pay him to turn over the selection of his feed and feed ingredients to his cooperative Exchange?

One year's complete cow testing association records say "Yes" emphatically. With no silage because of an accident to his silo, the herd this year produced on mixed hay, beet pulp, and Eastern States grain an average of 12,548 lbs. milk, 414.76 lbs. fat at a total feed cost of $189.31. His best cow produced 21,436.8 lbs. milk, 693.26 lbs. fat. Note carefully her ration—1 lb. Eastern States Fulpail to 4 lbs. of milk, and for roughage, mixed hay and beet pulp. The total net cost amounted to $234.95 and Eastern States grain accounted for $128.50 of this. For every dollar's worth of Fulpail received, the cow returned 166 lbs. of 3.2% milk, or nearly 5½ lbs. of butterfat or 6½ lbs. of butter. She produced 100 lbs. milk at a total feed cost (grain and roughage) of $1.10 per hundred, made 693.26 lbs. butterfat at a feed cost of 34c a pound, or 847.96 lbs. butter at a feed cost of less than 28c a pound.

Where records are kept Eastern State Open Formula Feeds prove their worth.

For information on the Eastern States feed service, a cooperative service which should not be confused with car door service offered by private manufacturers through dealers or groups of farmers, write the office.

Eastern States Farmers' Exchange

A non-stock, non-profit organization, owned and controlled by the farmers it serves.

SPRINGFIELD, MASSACHUSETTS

A vertisement.

W. H. TOMHAVE
Staff Contributor and Adviser
Head of the Department of Animal Husbandry, Pennsylvania State College

Feeding Practices Probably at Fault

Editors' Note:—A reader gives in detail the feeding practices which she has been following. Mr. Tomhave's answer may be of interest to others.

THERE are several reasons why your pigs are not doing well. The ration which is being fed is not properly balanced and the pigs are, no doubt, troubled with internal parasites, especially if they are kept on the same premises where the pigs have been kept in previous years. The sweet corn, wheat middlings and milk would make a fair combination if the milk had been supplied daily. The combination of corn and middlings is not a very satisfactory combination because it is low in protein.

As Pigs Grow Increase Corn

I would suggest that you feed these 150-pound pigs a ration made up of 6 parts of corn, 3 parts of wheat middlings and 1 part of high grade digester tankage or fish meal. As soon as the pigs seem to be doing well and weigh over 200 pounds the amount of corn in the ration for the pigs that you plan to fatten can be increased up to 10 parts to one of tankage or fish meal and the middlings entirely eliminated.

If you have skimmilk or buttermilk that you can feed daily it can be used equally as well as the tankage or fish meal. It should be fed at the rate of 3 pounds of milk to one pound of the corn and middlings combination.

Liberal use of pasture would aid in developing these pigs. If you have some blue grass clover or alfalfa pasture to put the hogs on as soon as there is sufficient growth to justify pasturing, it will give them a new start. If you do not have the permanent pasture, seed a small area to oats and dwarf essex rape which will give you a field for pasture in about six weeks after seeding.

Before these pigs will do well on any feed combination, it will be well to treat them for intestinal worms. The following is a simple treatment. Withhold the feed for twenty-four hours; then give each pig 30 drops of oil of chenopodium and one-half ounce of castor oil for each 50 pounds of body weight. This should be given by means of a dose syringe or bottle. Repeat the treatment in two weeks, after which the pigs should be put on new ground on which pigs have not been kept.

The pigs have also been too closely confined during the winter months. This can easily be overcome by allowing them free range of the barnyard or some other paddock.

A simple mineral mixture might also be fed to advantage. It should consist of five pounds of salt, ten pounds of steam bone meal and ten pounds of ground limestone. This combination should be put in a box or some place where the pigs can eat as much as they care for. Your feed dealer can get the ground limestone and steam bone meal for you. —W. H. Tomhave.

Mixture That Will Fatten

I have two baby calves. How can I fatten them?—Mrs. H. W. G., Lehigh County, Pa.

The two calves can be fattened by feeding them a grain mixture of 4 parts of ground corn or barley, 2 parts of crushed or ground oats and 1 part of oil meal or cottonseed meal. This grain should be fed in addition to the milk which I presume will be skimmilk. Also let the calves have access to good pasture during the summer and good clover hay in the fall.—W. H. Tomhave.

Grownups Must Hustle to Keep Ahead of Club Members

LAST year approximately 2900 boys and girls were enrolled in the boys' and girls' agricultural clubs of Pennsylvania and nearly 3000 girls were engaged in home economics club work for girls. During the last year or two several have made outstanding records.

POTATO CLUBS: Merritt Bardo, Lycoming County, produced 432 bushels on a measured acre and Bruce Cooper, Jefferson County, 412 bushels, an increase of 57 bushels per acre over local seed in favor of disease-free seed plus spraying. Wilbert Lance, Beaver County, with his 401 bushels per acre is the only individual in Beaver County, young or old, to have passed the 400 mark.

PIG CLUBS: A year ago Donald Smith, Jefferson County had the heaviest ton litter of pigs in the state.

DAIRY CLUBS: Norman McDowell, Mercer County, recently completed a 10 months' record with his purebred Holstein cow, which he raised himself, making 9210 pounds of milk and 330 pounds of fat, returning $128.53 above feed costs. This is more than double the production of the average Pennsylvania cow.

BABY BEEF CLUBS: The top steer at the round-up and sale held at Harrisburg in January was fed by Ralph Williams, Adams County. It sold for 45c per pound.

FRUIT CLUBS: Two outstanding members in strawberry clubs are Elsie Artz, Schuylkill County, and Anna Wehr, Carbon County. The former produced 812 quarts on one-twentieth of an acre in her first year of work, while Anna Wehr holds the record to date with 1060 quarts on the same area last year. So far only one club has been thru the two-year cycle necessary for the harvesting of a raspberry crop. This club is in the vicinity of Klingerstown, Schuylkill County.

SHEEP CLUBS: The top pen shown at the State Farm Products Show was owned by Sherry McDowell, Mercer County. It sold for 20c per pound.—A. L. B.

"When members of a family consume 18 pounds of beef they have, in effect, eaten 100 pounds of corn and considerable pasturage, roughage and hay. When they eat 7½ pounds of pork they have eaten 100 pounds of corn and some pasture. Reducing meat consumption, therefore, slows up use of farm products more rapidly than corresponding curtailment of consumption of cereals, bread, potatoes or vegetables."—The Horse Association of America.

Clean Fast Threshing MAKES BIG PROFITS

The Farquhar "Junior" Thresher is designed for the individual farmer and Community Threshing. Built on same principles as large threshers which have made big money for thousands of threshermen. Equipped with every modern facility to save labor and do fast, clean threshing of any kind of grain. Light in Weight, Perfect Running Balance, Quiver Shaking Shoe, Long Life, High Efficiency and Large Capacity. Operated by Tractor.

Let us show you how you too can thresh your own crops cheaper and make big money threshing for your neighbors. Many have paid for the Farquhar "Junior" out of the profits for the first year.

We also build Engines, Boilers, Sawmills, Hay Balers, Cider Presses and Farm Implements. Write today for catalogs.

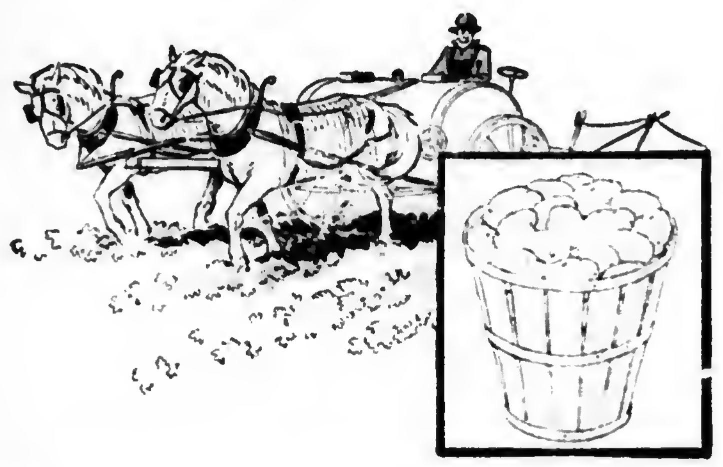
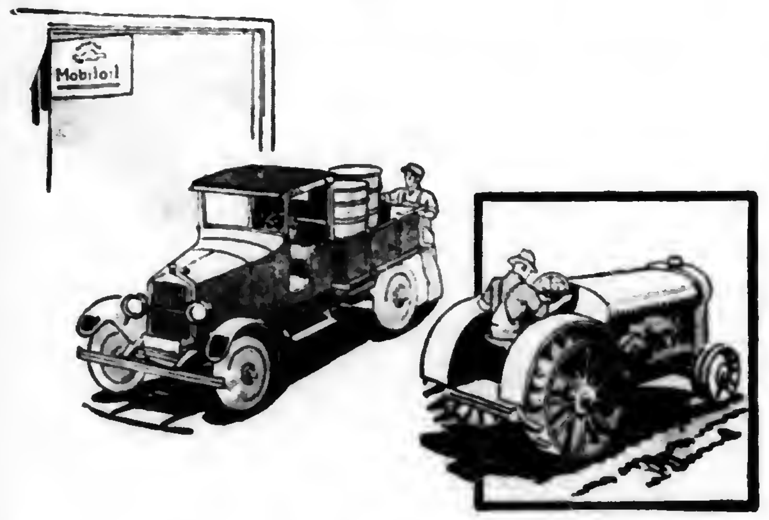
What experiment stations report on potato spraying



In 323 tests during the past nine years, a Pennsylvania experiment station has compared the yield of sprayed and unsprayed potatoes. The sprayed vines have produced an average of 67 bushels of potatoes more per acre than those not sprayed.

In North Carolina 10-year tests show an average increase from spraying of 53.3 bushels per acre. Ohio demonstrations during the past 3 years have averaged an increase of 70 bushels per acre for the sprayed vines.

Mobiloil gives this same marked economy



Buying low-priced oil is like trying to save money by not spraying potatoes. To be sure, you pay a few cents extra for Gargoyle Mobiloil. But you get an engineering margin of safety in lubrication which is worth many dollars in a year's running.

In tractors, Mobiloil users frequently report that Mobiloil lasts twice as long as ordinary oil. And the costly delays from overheating and breakdowns are materially cut. In cars and trucks Mobiloil's economy is equally striking.

If you think any oil will do, consider this fact:

THE correct grades of Gargoyle Mobiloil for engine lubrication of prominent passenger cars are specified below.

The grades of Gargoyle Mobiloil, indicated below, are Mobiloil "E," Mobiloil Arctic ("Arc"), Mobiloil "A," Mobiloil "BB," and Mobiloil "B."

Follow winter recommendations when temperatures from 32° F (freezing) to 0° F (zero) prevail. Below zero use Gargoyle Mobiloil Arctic (except Ford Cars, use Gargoyle Mobiloil "E").

If your car is not listed below see any Mobiloil dealer for the complete Chart. It recommends the correct grades for all cars, trucks and tractors.

GARGOYLE
Mobiloil
Make the chart your guide

50% of all engine troubles are directly caused by faulty lubrication. The oil you pour into the crankcase today determines the size of tomorrow's repair bills. The added margin of safety in Mobiloil is important, both in postponing expense and increasing the usefulness of your engines.

When necessary, many farmers find that Mobiloil is well worth a special trip to town. Let the nearby dealer supply you with a season's supply of Mobiloil, now. In barrel and half-barrel lots Mobiloil can be purchased at a substantial saving.

Be sure to secure the right grade of Mobiloil to use in your tractor, truck and car. For Mobiloil is recommended with scientific accuracy for all engines. The 42 Mobiloil engineers have painstakingly studied each make and model of engine that you drive. The recommendations are in the complete Chart at all dealers.

Start using Mobiloil today. Before the year is out you will find that the extra margin of safety in Mobiloil has substantially reduced the cost of operation of your car, truck or tractor.

The Great EMPIRE Milking Machine

more MONEY from your cows

BECAUSE the calf-sucking action of the Empire Milking Machines gets more milk per day for more days than hand-milking.

BECAUSE one person with an Empire easily does more milking than any two hand milkers.

BECAUSE you can save the wages and keep of a hired man whose work the Empire does—an Empire Milking Machine gives you more milk from your cows—makes dairying a better, more profitable business. Sold on easy payment plan. Send for Empire booklet "How to Milk for Bigger Profits"—mail the coupon today.

B B MARVEL CREAM SEPARATORS

More Cream from Every Can of Milk

The permanently balanced, ball-bearing Marvel Bowl assures "all the cream all the time." No neck springs or bushings to wear loose or cause vibration. When you re-run skim milk from your separator through a B B Marvel, you will want the extra cream from every can of milk. Sold on easy payment plan. Write for Empire booklet: "The Latest Development in Cream Separators."

B B MARVEL HAND DRIVEN

EMPIRE WATER SYSTEM

All the Water You Need for a Nickel a Day

More water for cows means more milk from them. Plenty of water for hogs means faster growth and heavier hogs. An Empire Water System provides all the water you need for the barn, for laundry, dairy and kitchen work, for a bathroom—*for a nickel a day*. Complete Empire motor, pump and tank equipment for supplying 300 gallons per hour costs about what you pay for a top quality radio set—saves work and provides comfort and convenience 365 days in the year. Sold on easy payment plan. Write for "The Empire Book of Better Water Systems."

America's Menace in China

We Must Not Adopt the "Me Too" Policy

THE menace to America in the present turmoil in China is not in the possibility of attack upon our citizens or their property in that ancient nation. The real danger is here at home, in the likelihood of an unwarranted change in our traditional, long-established policy of sincere friendship with nations struggling for the right of self government.

Danger lies not so much in acts of aggression by Chinese citizens and soldiers, as in the possibility of a change of policy by our own State Department that would align us with the exploiting nations. We must not have the good results of our long years of unselfish relationship with China destroyed either by lack of constructive diplomacy in our State Department or by failure to exercise proper supervision over the armed forces we have sent to the Far East.

Remember the Balkans

As a member of this government's foreign relations committee I have studied affairs in China. Any one who will do that will find, I think, the conviction forced upon him that there should be no change of policy by our State Department which would align us with foreign interests that have been exploiting the Chinese people.

The situation has possibilities of incalculable benefit or harm to America, which are not yet fully realized by the American people. China, virtually, is no more remote than the Balkans which inevitably drew us into a conflict that saturated the soil of Europe with American blood and laid upon us and our children's children a 24-billion-dollar war debt.

Nearly 30 years ago, our great Secretary of State, John Hay, saw a similar situation developing in the exploitation of China, and promulgated the "open door policy." This was in effect, a notice to the great powers of Europe, and to Japan, that the United States in the exercise of its own sovereignty and in the interest of world peace, was determined that China should not be partitioned among the commercial nations.

Secretary Hay announced the principle that it was our duty and likewise to our benefit to aid in the economic development of China and strengthen its existence as an independent nation.

Only by firm and unyielding adherence to that principle can we avert another armed conflict—many years hence, perhaps—which will involve America as deeply and as relentlessly as the assassination in 1914 of an Austrian archduke.

China Is Waking Up

We shall not go far wrong in our understanding of the troubles of China if we look upon the struggle there as the rebirth of its ancient civilization, a great revolution necessary to bring China into step with modern progress. China is working out its political salvation by working toward nationalism. The best thing that could happen for China or the world is the triumph of the Cantonese, or Southern-China faction.

It is true that Soviet Russia has been giving the Chinese nationalists aid and encouragement. So did France aid this country in its war for independence. But China is no more likely to adopt bolshevism than we were to adopt the monarchism and extravagance of the French court. No race on the globe is as materialistic as the Chinese; none more devoted to its family life. The bolshevist's common-property theories and loose family ties would be as abhorrent to the Chinese people as they would be to us.

The Chinese nationalists have been accepting soviet help as a means to an end. The Russian propagandists will eventually find China's face set against them with granite hardness.

Altho this country has taken no aggressive part in the interference by foreign powers in China's reorganization, it has lost rather than gained prestige by following the China-exploiting European governments in asserting rights instead of recognizing China's right to independence.

While the American policy has prevented the actual division of China among the powers, foreigners holding special concessions and treaty rights grow rich thru ruthless exploitation of the Chinese people, and China is prevented from making any material progress on her own account. It is the future, therefore, with which our policy should be concerned, and that policy should rest on sound morals and justice.

On February 21, the House of Representatives passed a resolution requesting the President to negotiate a new treaty with China in place of those we now have which limit China's rights to raise her own revenue, govern her own territory and administer justice in her own courts. No action was taken on this resolution by the Senate before final adjournment March 4, but there is nothing to deter the State Department from proceeding to actually negotiate the new treaty contemplated by the resolution.

Should Set a Good Example

Our government, doubtless, was justified in sending troops to China to protect American lives and to aid Americans to get out of China, some of whom, with timely warning, had stayed too long on the order of their going. When a country is in the throes of a revolution, all foreigners will do well to keep out as they kept out of Europe when the German legions began to march in 1914. It would now be the part of wisdom for our missionaries and our armed forces to withdraw from China, ceasing any sort of interference, while China works out its salvation. If we act with all our traditional fairness toward China that will do more to promote good faith and friendship than all the armament we could assemble and we should be setting the other powers an excellent example. The best protection we can give Americans and our own interests in China, now and hereafter, is to abandon the "me too" policy which gradually has been superseding the open-door policy of mutual good will announced by John Hay.

We cannot, without peril of involvement in another world war, permit the nations of Europe, as well as Japan, to partition and further exploit China. The United States should take the lead, not only in adjusting its own treaty relations with China, but in calling a conference of other nations for the purpose of replacing antagonistic and conflicting commercial interests with a policy of constructive cooperation and friendly help. The time for action is here.

When That Produce Goes to Market

It Pays the Grower To Know the Ins and Outs of the Big City Receiving Centers

By W. R. WHITACRE

A KNOWLEDGE of how, when and where farm products are sold in the country's great market centers is interesting and it also may be profitable to the farmer. For instance, a few weeks ago a group of farmers visited the Philadelphia market. They were particularly interested in potatoes and were anxious to see just where they were handled. They talked to several dealers and visited all parts of the market. A number of them after this trip completely changed their marketing methods and as a result are netting a larger profit. (According to the county agent of the county from which these men came they received 30 to 35 cents more per bushel as a result of the trip.—Editors.)

New York, Philadelphia and Pittsburgh are three of the largest markets in the East. In most cases the fruit and vegetable business has grown more rapidly than its accommodations. As a result the market is generally scattered and is not centralized for efficient handling. Improvements are being made and gradually conditions are being relieved.

In spite of all of this the three markets are much alike. That is, there are three chief methods of handling produce. In all there is a "street" market sometimes termed a jobbing market. Then there is a carlot market and an auction.

The street market is, perhaps, of greatest interest to farmers in Pennsylvania and nearby states. It is here that the commission houses are located where farmers haul their produce by motor truck or wagon. These houses sell the produce and generally charge a commission of ten per cent for handling. In addition there are stores that buy on the carlot market and resell on the "street."

Where Jobbing Centers Are to Be Found

In general the unit of sale or the number of packages sold to a customer is smaller on the jobbing market than it is on the carlot market. In Philadelphia, Callowhill and Dock Streets are the sites of this jobbing market, altho it branches out to some of the smaller adjoining streets. This jobbing center is located on Washington Street in New York. In Pittsburgh, where the markets are more centralized, it is on the streets adjoining the railroad yards.

The carlot market is also important to farmers shipping their products by rail. Methods of doing business and locations vary in the different cities but in general the goods are either sold at the car door or unloaded in a shed adjoining the tracks. In New York most potatoes are sold at the car door at the Bronx Yards. Practically the same method is used in Pittsburgh, but in Philadelphia the greatest percentage of the receipts is unloaded at the Market House, now located at 30th and Market Streets.

The auction is not of as great interest to eastern farmers as the other methods of selling, but it is likely to become more important in the future. The greatest factor necessary for successful auction business is a uniform product. For this reason the chief commodities handled are citrus fruits, such as oranges, lemons and grapefruit, western grapes and boxed apples.

The auction buyers, as a rule, do not have an opportunity to inspect the entire car but just the samples that are displayed. The piles or "lines," as they are called, are numbered and catalogs are issued with the line numbers printed on them. The buyer inspects the samples, notes the fruit that suits his needs and bids on it when it comes up for auction. There appears to be a trend toward packing eastern apples in boxes and when this becomes more common it is likely that a larger amount will be sold in this way.

Altho there are three chief methods of handling fruits and vegetables there are smaller divisions. The carlot business may be (to page 7)

Nut Trees Aren't Hard to Grow

Eventually Walnut and Hickory Plantings Will Produce Cash Crops

By F. T. MURPHEY

Forestry Extension Specialist, Pennsylvania State College

JUST a few years back the nuts from the shellbark hickory as well as from the black walnut on account of their abundance were considered of very little value. It was then the custom for organized parties to go nutting and gather their winter supply of chestnuts, hickory nuts and walnuts from Jim, John and Jake's woodlot. Today these parties are taboo, for there is a price tag affixed to the nuts. Now they are as much of a crop in certain localities as Christmas trees, fruit or chickens.

Demand for the wood for both hickory and walnut trees has diminished the supply of good nut producing trees. In some sections there is a decided scarcity. Many trees which are growing naturally produce nuts of low quality. It is necessary then for many who would grow nuts to plant and grow their own trees.

Cultivation Isn't Exacting

Trees of both the shellbark hickory and the black walnut can be easily and cheaply planted. It, of course, takes considerable time to produce trees large enough to bear heavy crops of seed. Walnut trees are the first to bear. Sometimes trees 15 to 20 years old give good yields of nuts. Ordinarily shellbark hickory trees require at least ten years longer.

The advantage of planting nut trees is that the cost of establishing and caring for a plantation of isolated trees is practically nothing, whereas, fruit trees of other kinds are expensive to plant and expensive to cultivate.

At Last! A Power Take-Off for the Horse

LOVERS of horses recently have been worried by the increasing competition of the farm tractor due to its ability thru the power take-off to operate small combines, corn pickers, tractor binders, etc. But now an ingenious artist has designed a power take-off for the horse. With the aid of a grindstone he transforms animal reciprocating power into rotary motion. Unfortunately, he did not devise a satisfactory hitch; that's what is worrying the men in this picture. Doubtless they will solve the problem.

The new invention has countless possibilities. Soon we may see farmers improving their time by grinding scythes as they ride backward to market. An extra cutterbar for the mowing machine may be sharpened in the field while the other is being used. If Dobbin can be taught to mark time with his front feet farmers will be running corn shellers, potato graders, etc., etc., with honest-to-goodness horse power.

Odd corners difficult to cultivate, pasture land or fence rows are suitable places to start a grove of hickories or walnuts. Moderately heavy soils, not too dry or too wet, such as limestone, loams and sandy loams are preferable. The presence of rocks in the soil is no deterring factor to either species.

Both trees are hard on crops if they grow along fence rows. The hickory will even kill out grass beneath its crown. Walnut, on account of its much thinner leaf canopy, permits of a fair growth of grass under it, but is toxic to many kinds of plants.

Both trees will grow satisfactorily in pastures, provided they are protected from stock until they become of good size.

Source of Seed Vital

Particular care should be exercised in getting seed from outstanding trees both from the standpoint of their vigor, hardiness and quality of nuts. A tree nearing maturity is preferable to a young one which has just started bearing nuts.

The seed may be successfully planted in either fall or spring, and either on the ground where they are to grow and develop or in nursery beds. Since both species are inclined to develop long tap roots, it is ordinarily most economical and satisfactory to plant directly on the piece of ground chosen. Where it is aimed to grow seedlings and then transplant, the trees should never be left over one year in the seed bed, but should be dug up and transplanted on the site where they are to grow.

Fall planting of seed should take place as soon after nuts ripen as possible and before the ground becomes frozen. Seed spots about (to page 30)

Winter Hard on Alfalfa

IF THE condition of alfalfa fields in southeastern Pennsylvania is typical of the country in general, alfalfa hay will be at a premium this year. Hundreds of acres are being plowed up because the plants have been heaved out of the ground so badly that it is sure to bring failure to the hay crop. The alternate freezing and thawing, and the absence of sufficient snow to protect it is believed the cause of the unusual failure of alfalfa to come thru the winter in good condition.

English Prefer Barrels

REPORTS show that the English people prefer to buy barreled apples rather than boxed apples. The shipment of apples in barrels has been unprecedented during the past season, while the sale of apples from the Northwest has been disappointing. It is altogether likely that the lower cost per pound of the barrel apples causes the English housewives to prefer them to the higher priced boxed fruit.

Old Age Pensions

THE effort to pass an old-age pension law failed by a wide margin in the legislature at Harrisburg last week. Senator-elect Vare used all his personal strength in behalf of the measure, but the vote showed that his following was confined chiefly to the members from his own bailiwick,—Philadelphia.

There are some good arguments in favor of a system of pensions to indigent people who are no longer able to provide for themselves, either wholly or in part. There are thousands of people who have given their lives to industry and the raising of families, but who were unable because of economic conditions in the past to lay up a competence, while the result of their combined labor has greatly increased the wealth of others. It is a perfectly legitimate question to ask whether management and ownership should receive all the benefits of accrued wealth.

On the other hand, once a system of doles or pensions is established, it at once and automatically decreases the interest of the individual in looking out for himself and providing for the future out of his present earnings. And this includes the procuring of a just wage or income. The human race has learned its most useful lessons by experience, and once the spur to the practice of industry and thrift is removed the inspiration to learn how to become independent and self-reliant would cease to operate. The cost of maintaining a pension system is not the greatest or best argument against it.

The Legislature Ends

THE Pennsylvania legislature adjourned as per schedule on April 14, making it one of the shortest regular sessions on record. Several bills are still in the hands of Governor Fisher so that the net result of the legislature's work cannot yet be told. Among the bills passed and signed, however, are some of the election bills sponsored by the Governor. While these were somewhat weakened by changes, still the new laws will make it more difficult for election crooks to tamper with people's votes. Another important measure signed was the gasoline tax bill which made the two-cent tax permanent, and added another one cent to be collected the next two years as an emergency road tax. Farmers, as well as a large part of the general public, opposed this additional tax. Since the Governor of New Jersey vetoed a gasoline tax bill in that state, it will still be possible for big firms in eastern Pennsylvania to evade the Pennsylvania tax law as now by getting their supply from across the river. If those who use gasoline in tractors and stationary engines are further burdened by the new law, it is certainly unfair.

The Never Ending Struggle

AS FAR back as we have any history we find that a part of the human family has been trying to enforce upon the rest its ideas of what is proper to say and think. Equally as long has the right of free speech been demanded. There is no important human interest but what has its would-be censors of public speech. They would dictate what everyone should say and believe in matters of religion, government and economics. They have not learned that "Genius can breathe freely only in the atmosphere of liberty." Neither have they learned that suppression breeds martyrs, and martyrs always attract followers, even in an unworthy cause. Individual conduct must of necessity be made to conform to social law and custom, but free speech is an inherent right. Our Constitution fixed that and it should settle it as far as America is concerned.

Why Don't We Solve It?

THE United States has on its hands the problem of providing a nitrogen supply independent of other countries. Our consumption of nitrogen in different forms is great and ever growing. In 1925 we purchased from Chile half her output and in so doing paid $15,000,000 in export taxes in addition to the price of the nitrate. We have the facilities for producing all the nitrogen and ammonia we can possibly use, yet because of our haggling over terms of water-power we drift along and depend upon foreign sources for this most necessary element. The war taught Germany a lesson in this respect and she set out to solve her problem and is now manufacturing all she uses and some for export. As long as the general public sits idly by while monopolists quarrel over the possession of natural power sites we shall continue to buy this vital necessity.

Let Well-Enough Alone

THERE are no doubt opportunities for improvement in the operation of the Federal Farm Loan Law, but we are sure that some of those who demand amendment and change want to cripple rather than improve the law. Some other farm mortgage institutions have been making every effort to weaken and defeat the purposes of this act ever since it was passed. Even some of our leading financiers, interested as they are in obtaining sole control of all money lending privileges, have been critical of its work. The Federal Farm Loan Law, altho it has been in operation only a few years, has proven its value and has no doubt prevented many thousands of farmers from bankruptcy during the last four or five bad years. We are not concerned with proposed reorganization as to personnel, but we do not want to see its management and control put into unsympathetic hands.

Make Them All Safe

WITHIN the last few weeks the public has been horrified by mine explosions entombing several hundred miners. At first it could not be known how many were killed, but fortunately in two of the largest explosions in Pennsylvania only a very few, those close to the blast, lost their lives. The greater part of the public did not know, however, that the lives of the rest were saved because the mines had been treated with rock dust, a process of blowing fine, powdered rock over the mine surfaces. The law in this state and a few others requires this, but twenty other bituminous states have not such a law and miners are subject any moment to instant death by the explosion of the fine coal dust which always accumulates in mines.

Editorial Sidelights

ON OUR desk there are some inquiries from readers which we never shall answer. We have the information the writers of those letters ask for, and they need that information badly, but we shall not send it. We would like to, but unfortunately the mail men cannot deliver letters addressed only to "A Farmer," or "Subscriber." These and similar signatures are the only marks of identification given.

The writers of those letters failed to realise that only a negligible number of the hundreds of inquiries we receive can possibly be answered in the paper. And even those which appear in print are usually answered weeks before by letter.

Frequently the writers of unsigned letters want information of interest to no one but themselves. Surely no one would ask us to send out more than 100,000 answers to his question when one would serve as well or better. Yet that is what we would be doing if we printed answers to the unanswered letters on our desk.

We take pride in the amount of help we are able to give our readers by mail. You are invited to take advantage of the offer that has appeared in the heading of this page for many years—WHENEVER YOU ARE PUZZLED WRITE TO US AND WE WILL HELP YOU IF WE CAN. If your modesty tempts you to use a pen name or to omit your address please remember that, to the best of our knowledge, we never published the name or address of anyone who requested that it be withheld.

WE CANNOT give a complete review of the work of the recently adjourned Pennsylvania Legislature until the Governor signs or refuses to sign the many bills that have been placed before him. His signature will make them laws. Bills that were killed in the final hours of the session and other legislative matters are discussed on page 30 of this issue.

RUNS AGAINST SNAGS

Middle West May Have to Decide Canal Issue—Broadcasting Stations Must Continue to Be Careful.

Washington, D. C.

THE St. Lawrence ship canal project is meeting with snags from several sources. Senator Copeland, of New York, is out with a statement opposing the St. Lawrence waterway under federal control. New York State is evincing a determination to fight for what she considers her rights in the matter. But this is only of minor importance compared with the probable requirements of the Canadian government in entering into any cooperative arrangement with the United States.

It is indicated by reports from the Canadian capital that Canada will insist on trade reciprocity, which means free trade in agricultural products in any arrangement with the United States for the construction of the proposed St. Lawrence ship canal. The Middle West may be called upon to decide the question as to whether it wants the St. Lawrence waterway more than it wants Canadian wheat, livestock, dairy products and potatoes barred from entry into this country by a tariff wall.

Misstatements Start Something

The first move to put a stop to the broadcasting of alleged false statements regarding a department of government was made by the Department of Agriculture, when a complaint was filed with the Federal Radio Commission against Station KTNT of Muscatine, Iowa, on account of alleged misstatements of facts released by the Bureau of Animal Industry. It is held by the department officials that under the law the commission has a right to put a stop to the transmission of misleading matter purporting to come from a government department, and that if found necessary the station may be refused a broadcasting license. Radio broadcasting so far has been comparatively free from the sending out of fraudulent, misleading or harmful information.

Department Brings Suit

The Department of Justice has begun an injunction suit under the anti-trust laws against the Potash Importing Corporation of America, commonly known as the German-French potash combine. The government alleges that the German and French producers of potash are now in New York City arranging with certain American distributing agencies to project a monopoly of potash, built up overseas, into the United States. It is alleged that the French and German companies since August, 1924, have been dividing sales of potash to be made in the United States and have been fixing the prices to be charged for potash sold within the United States.

Muscle Shoals Out-of-Date?

The daily papers are printing stories of new processes having been perfected for the extraction of nitrogen from the air which do not require electric power, and therefore make the Muscle Shoals proposition obsolete and useless. Nevertheless, an investigation of the facts in connection with these new discovery stories leads to the belief that the vast nitrogen fixation projects without the use of water power are as far up in the air as the nitrogen they propose to extract. They appear so far to be paper dreams.

Tariff Protection Asked

Frequent appeals for higher tariff protection on farm products are coming from the South and West. The peanut, soy bean and cottonseed oil producers have asked for duties on vegetable oils that will shut out the cheap oils from the Orient. A few days ago a group of truckers from Florida were in Washington asking President Coolidge for an increase in the tariff on tomatoes, peppers and other vegetables from Cuba and Mexico. Another effort is likely to be made to secure a reduction of the tariff on Cuban sugar.

Noted Scientist Dies

Dr. Edwin F. Smith, head of the laboratory of plant pathology in the Bureau of Plant Industry, Department of Agriculture, died in Washington April 6, aged 73 years. Dr. Smith was nationally known for his work in connection with the science of plant bacteriology, thru which light was shed on human cancer, and also in the development of knowledge relating to the various plant diseases.—E. E. R.

CHANGES NOT FAR OFF

State Government to Be Reorganized—Bills Become History—Farm Show Building Nearer Realization.

Harrisburg, Pa.

PLANS of the Fisher state administration for reorganization of the state government will begin to develop in about a month as the amendments to the administrative code have become law and authority is now at hand to carry out certain rearrangements, some of which are born of the experience of the Pinchot administration. Between the code amendments and the enactment of several laws relating to the Department of Agriculture the state officials will have abundant power to meet emergencies which could not be dealt with easily the last two years. The campaigns against the beetle and the borer are two illustrations.

There will also be changes in certain financial arrangements and the new gasoline tax will go into effect without delay. In the departments of the state government there will be considerable shifting about and some powers held by one branch will be transferred to others. There will also be changes in personnel.

Money for Cattle Available

Approval by the Governor of the bill carrying $355,000 will enable the work for eradication of diseases of cattle, and especially payment for tubercular cattle, to be carried on without interruption. In a number of instances the state authorities have been held up owing to lack of funds. Now state cash will be available and it is expected federal money will also be forthcoming.

Leave Mounds of Bills

The Governor's office is filled with bills left by the legislature adjourning a few days ago and indications are many of them will be useful only as examples of legislative history. The Governor's plans are to have a thoro check made of all bills, departmental heads being in contact with his office to give views, while the new budget officer will make a complete survey of the appropriation measures. The Governor will dispose of all bills by May 14th. Chances are the last fortnight will see most of the appropriation measures cleaned up. Extent of the cuts will depend on how closely the legislators followed the budget estimates.

New Road Law Passed

Among the numerous bills relating to highways to pass the legislature one dealing with private roads has become a law. It makes some changes in the provisions governing widths. It will have wide application and effect is being studied.

Up to the Governor

The measure providing money for a farm show building is now in the hands of the Governor for action. The idea is to make it a combination show and armory building, the city of Harrisburg and county of Dauphin to provide the site and furnish some financial consideration.—T. C.

GRANGERS GATHER

Representatives Discuss Packages—Picnic Grounds Selected—Scouts Take a Hand—Tomatoes Not Barred.

Trenton, N. J.

A LARGE conference of State Grange representatives meeting in Trenton in early April discussed better packages for New Jersey farm products. The point was raised that New Jersey farmers might profit by making their own packages of smaller size, rather than leaving such division of market packages to the retailer with resulting profit to the marketeer. The question of State Grange exhibits at the Trenton fair next fall was also discussed and the committee in charge of stimulating the Grange exhibitions was authorized to develop plans for a more extensive showing. Representatives from the State Fair Association attended the conference and pledged the support of the fair management.

Picnic Attracts Crowds

High Point Park in the upper end of Sussex County has been selected as the picnic grounds this year for the joint State Grange and Farm Bureau picnic. Two years ago the first state-wide farmers' picnic was held at Lake Hopatcong, followed last year by the largest summer turnout of farmers at Bridgeton. Last year at the picnic, the farmers held the first championship tournament for horseshoe pitching ever held in New Jersey. The event will probably be continued this year with substantial cash awards offered to the competing farmers.

A FEW KNOTS IN HIS BATHING SUIT WON'T STOP HIM

To Fight Tent Caterpillars

Boy Scout associations in central New Jersey are planning to make a determined drive on tent caterpillars this season. There is a movement around Trenton, N. J., to have the scout associations meet on certain days and attack the egg masses in an organized way. The Mercer County Board of Agriculture is cooperating in the movement and farmers have agreed to work closely with the boys in their efforts. Agricultural specialists claim that such determined effort in course of time can very largely minimize the tent caterpillar menace.

May Ship Tomatoes

Shipment of tomatoes by boat to Baltimore from the lower counties of New Jersey will not be prevented by the Japanese beetle quarantine, as earlier rumored. Certification of tomatoes is permitted in areas where no infestation of beetles now exists and this applies to the large tomato areas of Salem and Cumberland Counties. This report is encouraging more tomato acreage than earlier planned and South Jersey farmers are looking forward to a heavy crop this season. No restrictions are placed on the movement of white or sweet potatoes that are free from soil.

World Poultry Congress

The New Jersey State Poultry Association is planning for a special New Jersey delegation to attend the World's Poultry Congress to be held in Ottawa, Canada, from July 27 to August 4th. The New Jersey farmers will go by automobile starting from New Brunswick. Estimated time for the trip is two weeks and the costs about $6 per day per person in addition to the automobile expense.—W. H. B.

LECTURE LECTURERS

Special Course and Demonstrations Prove Big Drawing Card—Openings for College Trained Farmers.

Ithaca, N. Y.

FOLLOWING an example set in Pennsylvania last year Grange lecturers of New York State are being given a special course of lectures and demonstrations at the Cornell College of Agriculture this week. One hundred and seven are registered and are doing intensive work along lines of various community activities and problems.

Miss Jennie Buell, past lecturer of Michigan State Grange, discusses Grange history and present opportunities. Men of national note discuss leading public problems of the day. Experts teach the best methods in rural dramatics, public speaking and recreation. The discussions of community problems led by Dr. R. A. Felton are opening up many new avenues of thought and activity. Evenings are given to demonstrations of socials, lecturers' hours, debates and of dramatics. Enthusiasm over these practical helps runs so high that this is likely to be made an annual event.

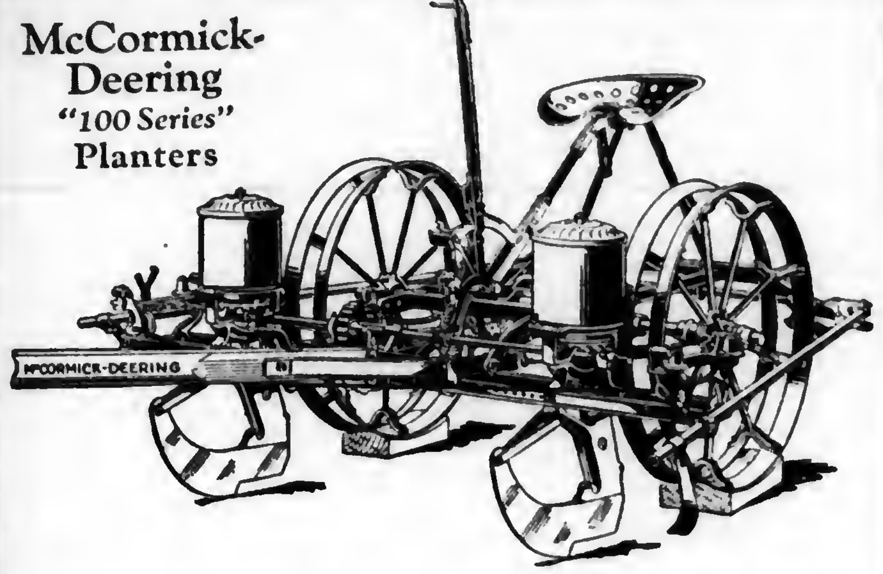
Maple Sugar Season Nears Close

After a poor start the maple season ends well with frequent freezes. It has overlapped on the spring plowing in central and southern counties so that makers of syrup were forced to take in their buckets while sap still flowed freely.

Farm Boys Needed

The State College points out that the demand for farm boys with college training increases with no increase in the supply. There never was a time when parents needed to consider educating their children, with the thought of their future service to agriculture, as well as to their added capacity to earn financially, so much as at present.—M. G. F.

McCormick-Deering
"100 Series"
Planters



A Great Combination of Time-Proved Features

THE McCormick-Deering "100 Series" planters combine old, time-proved principles with a simplified design which insures greater accuracy, a wider range of adaptability, and easier ways of adapting the planters to the different requirements. It has taken a number of years to perfect this combination. The result is a series of planters, which have no untried features. Their superiority lies in the manner in which these proved principles are combined and applied.

The McCormick-Deering "100 Series" planters are furnished both as check-row planters and drills. The check-row planter can be quickly set for drilling, and only a moment is required to change it to power hill-drop for bunch-drop drilling. Available with either 30 or 36-inch wheels.

The pea-and-bean and fertilizer attachments are of an improved design, and can be quickly installed both on planters and drills. If you are looking for a planter that will plant your crops accurately and that will require minimum attention, it will pay you to ask the local McCormick-Deering dealer to demonstrate a McCormick-Deering "100 Series" planter.

McCORMICK-DEERING
PLANTERS

"Help! Help!
not Caw! Caw!"

is the wail of the crows when once they light on a corn-field where the seed-corn has been coated with Stanley's Crow Repellent. One taste is enough. And every crow, every squirrel, every mole, every gopher, every pest of any kind, keeps off that field. It doesn't kill them, for it isn't poisonous, but it's worse than any other "white mule" in all crow-dom. And your crow worries are over. You won't have to replant hill after hill. Much of your valuable time is saved, besides all the extra cost of seed-corn to replant with. And for every $1.00 you spend for

Stanley's Crow Repellent

you will reap from 30 to 40 more bushels of corn at harvest time. It's easy to use—simply mix it with your seed-corn. You don't have to wait for it even to dry. And it never clogs the planter. If you have any doubts as to what Stanley's Crow Repellent will do for you, ask us to send you copies of hundreds of letters we have received and every one of these testimonials unsolicited. Large can, enough for 2 bu. of seed-corn (8 to 10 acres), $1.50. Half size can, $1.00. If your hardware, drug or seed store doesn't have it in stock, then order direct. "Money Back" guarantee. Address Cedar Hill Formulae Co., Box 500-R, New Britain, Conn.

NESHAMINY GARDENS

WHERE AN EDITOR WORKS AND THINKS

BY R. P. KESTER

WORK is starting slowly at Neshaminy Gardens because of cold weather. We have planted small amounts of a good many things, but it is not worth while to put much into the ground until the soil warms up. However, I know that every year the forepart of April breeds impatience because the weather is not what it seems to be or what we think it ought to be. I am trying to forget what the long-range weather forecaster said about the coming season. He tried to sell his prophesies to us to publish weekly, and pointed out how he had hit it in the past, and wound up by intimating that this year would be worse than last year. Heaven forbid! What makes me a little shaky is that he said last fall that March of this year would be unusually warm and pleasant.

◆ ◆ ◆

WE ARE planning to put in a septic tank at the new house. County Agent Greenawalt informs me that he has a set of forms for the cement work, and that he and Mr. Haswell of State College will gladly come and assist in the locating and planning. That is one of the good works which the Extension Service is doing. I understand that all the county agents have or can procure the forms for those who wish them. The charge is nominal, merely a two-dollar rental, a sum charged to replace them when worn out. The making of proper forms is something that most people would find the most difficult part of installing a septic tank, and besides the lumber would cost more than two dollars.

◆ ◆ ◆

THE new house is almost completed, and will be by the time this is read. We are all so well pleased with it that we may have to draw lots to see who will live in it, altho I guess that is finally settled. The Boys and their parents have their goods moved in already. The electric line is not yet built, nor is the water piped into the house but a few days' work will install these necessities.

I HAVE always received a good bit of pleasure in reading jokes and anecdotes appearing in newspapers, magazines, etc. Some of them are funny enough to bring a smile, and once in a thousand times one finds something which causes a laugh. But for real enjoyment and mirth-provoking entertainment one needs only to read some of the many analyses of the "farm situation" and the remedies as put out by "experts" and economists. Their conclusions remind me of the minister who, finding a passage of Scripture he did not understand, said, "Now, brethren, this is a knotty and perplexing question." We will look it squarely in the face and pass on."

◆ ◆ ◆

WHY do so many people seemingly ignore the beauty of the landscape as they pass thru it? There are certain seasons of the year (altho they are all beautiful) when I begrudge the time on the train it takes to glance thru the morning paper. I am thankful that I get more of a thrill out of the old, yet ever new, landscape than I can get out of reading of the latest holdup, the most lurid divorce case, or the most brutal murder trial. I am afraid a good many people are like the old man whose wife complained that he sat and read so much that he didn't know anything.

◆ ◆ ◆

THOSE who travel in their autos so fast that they cannot see, and those who keep their eyes glued to the printed page in the railway train are missing the really worth while things. Is it any wonder that we have so many soured pessimists and so many warped characters in the world? Those who fail to see and appreciate nature in her different moods fail to see and appreciate the Divine power back of her. Because of this lack of contact, many drift into the condition of those of whom it was said, "They forget God." And again, "They have eyes to see but see not, and ears to hear but they hear not."

The Cheerful Plowman

The Bird Bath

MY BACKYARD is the home of birds, they come in bevies, flocks and herds, they nest in every tree; they sing from sunrise thru till dark, I'm visited by wren and lark, by snipe and chick-a-dee; I'm visited by bobolink, by oriole and shrike, I think, by martin and by finch; my yard's the home of robin red, of flicker with his colored head, of catbird, that's a cinch! They're right at home I'll tell you that, they're not disturbed by prowling cat, they're not afraid of me! There's lots of room for them to play, to hop around in jolly way, to feel supremely free!

But what attracts them most, I swear, is that bird bath I built out there, it is the proper stuff! I keep it filled with water, cool, and just as wholesome as a pool it's not for show or bluff! It cost a trifle, small amount, so little one could hardly count, I built it all myself! The bowl on top, so trim and neat, I made of concrete, hard to beat, I found it on a shelf! The cover of the garbage can built on a quaint artistic plan, provided me the mold; I poured this full of rich cement, then scooped the center, made a dent, a half a pail 'twill hold!

The upright part is just a tile, I found it on the rubbish pile, 'twas just the checker, yes! I joined the parts together right, then gave it all a coat of white; it is a peach, I guess! My how they flutter, splash and drink! They're happy as can be, I think, those little birds of mine!—J. Edw. Tufft.

From the Week's News

YOUNG FARMERS' WEEK at the Pennsylvania State College will be held this year from June 15 to 18th. The second Leadership Training School will open June 13th. Those who attend the Training School will act as leaders when the main group of boys and girls arrive for Young Farmers' Week.

§ § §

OF 87 SAMPLES of soil tested recently in Franklin County, Pa., only five showed no need of lime. Fields from which some of the samples were taken needed three tons of burned lime or its equivalent per acre. The average lime requirement for the 87 farms was 1½ tons per acre.

§ § §

FARMERS of McKean County, Pa., working with the State College Agricultural Extension Service have started a better breeding campaign. One of the objectives is to eliminate every scrub bull in the county before the end of 1928.

§ § §

AT LEAST 50 new high pressure spraying outfits will be put to work in Lehigh County potato fields this summer, according to County Agent Hacker. Many of these machines will be used by farmers who never sprayed thoroly before.

§ § §

ABOUT $13,000 IN PRIZES will be distributed at leading fairs thruout the country during 1927 by the American Aberdeen-Angus Breeders' Association.

§ § §

NEW JERSEY has a larger acreage of fresh table asparagus than any other state, and produces about one-fourth of the country's entire crop. California and South Carolina are her principal competitors. Growers interested may obtain the new U. S. Standard Grades for asparagus from the U. S. Department of Agriculture, Washington, D. C. These grades apply to all producing sections.

§ § §

ONLY 92 per cent as many cattle were on feed for market in the eleven Corn Belt states on April 1, 1927, as a year ago, according to the U. S. D. A.

Produce Goes to Market

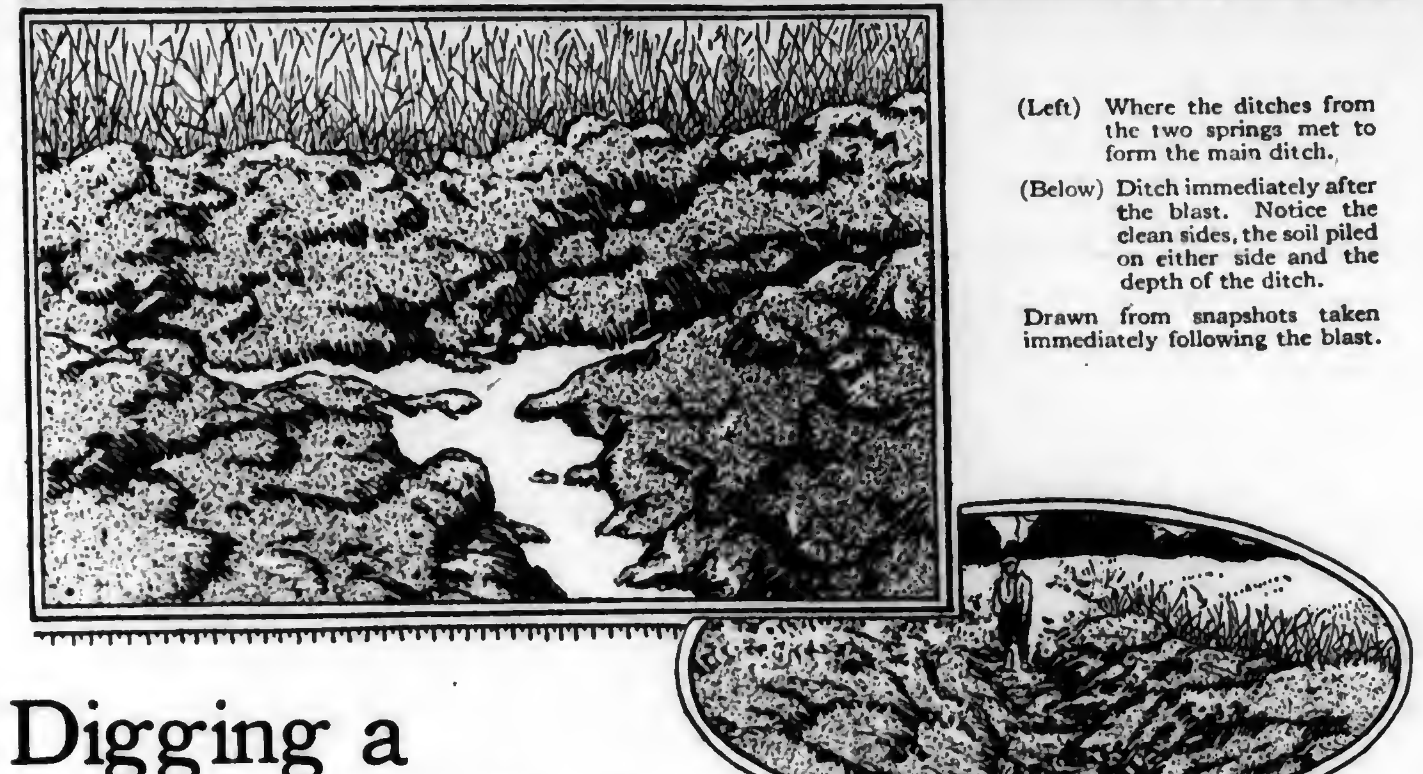
(Continued from page 3)

scattered over various sections of the city. The consignment or commission business may also be divided, and as a rule certain sections specialize on certain products or cater to different classes of trade. Certain railroad yards become known among buyers as the headquarters for cabbage business and a car coming to another yard may be hard to sell, since the buyers at that yard are chiefly interested in another commodity.

A certain section of market is patronized by Italian buyers and negroes who buy heavily of such commodities as turnip greens, broccoli and rape. Since there is not a general demand for these products the grower will find he can get more money by shipping to this section.

By this time it does not mean that the grower should ship his greens to one commission dealer, his turnips to another and his cabbage to a third, for this is very unsatisfactory. His best course is to choose a dealer who specializes in the general lines he is growing and who will work with him to build up a lasting demand for his products.

One of the best trips a farmer can make is to a big city market, for there he can see and understand more clearly than anyone can tell him the value of knowing his market.



(Left) Where the ditches from the two springs met to form the main ditch.

(Below) Ditch immediately after the blast. Notice the clean sides, the soil piled on either side and the depth of the ditch.

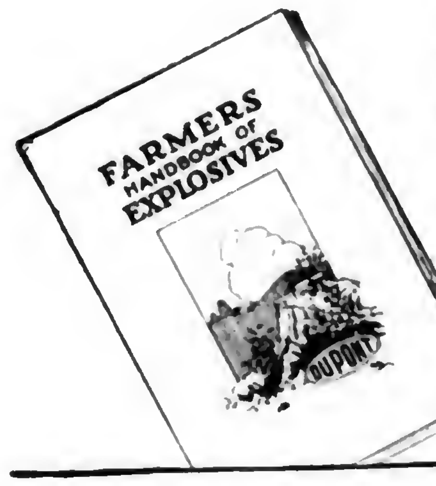
Drawn from snapshots taken immediately following the blast.

Digging a
1200-foot ditch
with one stroke

SEEPAGE from springs on the side of a hill on Dr. C. G. Cragg's farm at Spencertown, N. Y., had rendered acres of good land almost valueless. The Superintendent, Mr. J. W. Barford, after a careful study of the land, laid out the course of a drainage ditch. It would have to be 1200-feet long, from the two springs down the hill to a creek alongside the road.

Digging by hand would be too costly, he figured, so he called in a du Pont man to estimate on the cost of digging the ditch with dynamite. It was startlingly small. The entire ditch was dug with dynamite in one day, by two men. Digging by hand would have taken at least a week.

Dynamite is often the quickest, cheapest way to do a lot of farm jobs. The "Farmers' Handbook of Explosives" illustrates and describes just how this mighty farm hand works. Send now for a free copy.



Haven't you land to clear? ditching to improve your fields? trees to plant? Du Pont dynamite can do this work quickly, easily and safely when used as directed in the Farmers' Handbook of Explosives—your copy is ready on receipt of a postal request.

CONSULT YOUR LOCAL DEALER

DOES YOUR SPRAY *defy* THE WEATHER?

What happens when a rainstorm comes up just as you have finished spraying? Or when, night after night, your orchards are drenched with dew?

Does your spray run off, and go to waste on the ground?

But that's not the worst of it! The loss of the spray materials and your labor isn't nearly so important as the danger to your fruit and vegetables? With the spray gone, the trees and plants are no longer protected against insect pests and fungous diseases.

Kayso saves the spray and the fruit

Adding KAYSO to your spray is like taking out weather-insurance.

KAYSO is a calcium caseinate preparation which increases the efficiency of spraying in at least three important ways:

1—By keeping the spray mixture in uniform suspension it overcomes settling and clogging in the tank. The last gallon is as strong as the first. As a result the mixture covers more trees and plants than the same mixture without KAYSO.

2—A mixture containing KAYSO covers completely with an even, all-over coating. This assures better protection than a spray that dries in spots, leaving much of the surface unprotected.

3—KAYSO makes the spray *stick*. It overcomes much of the run-off in liquid spraying, and safeguards the spray against rain and dew.

The cost of adding KAYSO to your spray is so slight, and the advantages so great and so profitable, that you can't afford *not* to use KAYSO in all your spray mixtures, wet and dry.

Thousands of farmers all over the country are using it year after year. Editors and government experts recognize it as the ideal spreader and adhesive.

But prove it out to your own satisfaction. Order a trial quantity for use in your next spray. Ask your dealer or write us for particulars about your own spray problems.

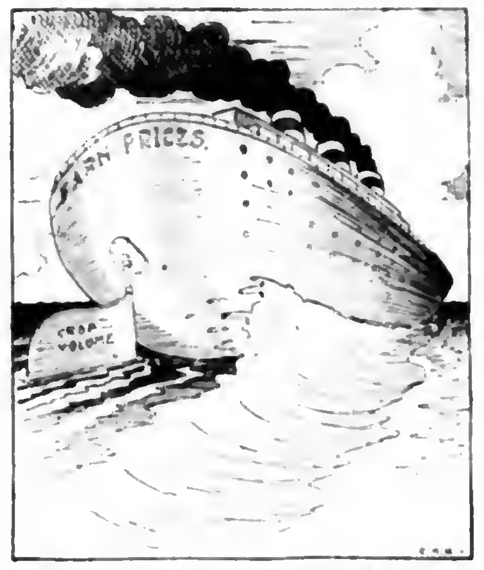
Logan Spring Farm

Gleanings from Letters of Roadside Market Operators in Many States

DURING the winter it has been my pleasure to correspond with perhaps a hundred successful roadside market operators located in more than twenty states. Altho the products sold, traffic served and other factors vary greatly a striking unanimity of opinion can be observed in regard to the more important considerations in running a roadside market.

Many express the thought that the future of roadside marketing will be determined entirely by the degree to which producers put into effect on their stands the tried and true principles and practices of successful retail merchandising. Books have been written about these subjects yet a few words will serve to stress some of the things which seem most important.



The rudder that controls the boat.

Honesty we might almost take for granted, still many of the correspondents take the trouble to discuss in detail this virtue as applied to roadside selling. It means much more than the taboo of such practices as short changing, short weighing and measuring and the dishonest facing of packages. It means that advertising must not exaggerate, that displays must be representative, that the sweet corn left from yesterday must be sold not at all or at a discount for just what it is, with the customer clearly understanding what he is buying. A fair price and one price to all, quality and service considered, are absolutely essential. If we sincerely apply the Golden Rule there will be few dissatisfied customers.

Crooks Must Be Crowded Out

Some of our New Jersey friends have been especially annoyed by the activities of unscrupulous dealers operating stands made to appear as farmer-owned stands, yet crooking the public in every conceivable manner. Now we have reports that this thing is going on in the vicinity of the larger cities all the way to the Pacific Coast. The general opinion prevails that the surest way to overcome this type of competition is to establish our bona fide farmer-owned stands on a very much higher plane of quality, service and attractiveness.

Any business which pleases its old customers so well that they habitually become repeat customers is bound to grow. The roadside marketer who thru good stuff, a dependable supply and fair dealing has convinced several hundreds or thousands of customers that his is the place to buy fears little how many "fly-by-nights" set up along his highway.

In several states organizations of roadside market men have done much to build confidence in farmer-owned stands. The success of this movement hinges on member sincerity in living up to the regulations of the association and a rigid inspection service to keep careless members in line. Mr. A. S. Phillips, president of the Massachusetts Farmers' Roadside Stand Association which originated the use of corn sign, writes that where proper assurances are given arrangements can be made for the use of this sign in other states as is now being done in New Jersey.

Sunday Selling Debated

In some of the letters the old Sunday selling controversy comes to light. One marketer writes, "I sell more on Sunday than the other six days combined." Another near Chicago says, "I sell all the produce from my fifty acres at the stand and I never sell on Sunday altho nearby stands are open seven days a week. Besides, I am on the wrong side of the road for home-going traffic." The majority seems to sell on Sunday. One said, "that it is the only day when it is worth while to put stuff out." On the other hand a stand making it a definite policy to get repeat customers sold last year nearly $15,000 on a six-day schedule. Personally, I believe I gain in the end by selling on week days only.

Many emphasize the importance of having specialties, of making a name in some particular line be it fruit, flowers, vegetables, dairy, poultry or apiary products.

Display is generally recognized as the most important factor in making sales. Nothing equals an attractive display in drawing customers. The world of fruits, vegetables and flowers, providing as it does such a great variety of form and color, gives wonderful opportunities to develop really artistic displays that will compel attention.

Price Tags Save Time

It takes time to make good displays yet I wonder if we fully realize that an effective display, together with price tags, may save time thru its service as a silent salesman. The living salesman then approaches a customer whose mind is made up, a matter of moments is required to complete the transaction, leaving time available to serve other customers, rearrange display or pack produce.

Conversely, a poor display or one that is old and wilted is worse than useless. It damages the prestige of the stand. Moreover, many buyers approach with doubt in their minds as to just what they want. An attractive pile of fresh, clean, young beets makes very easy the decision "Buttered beets for dinner." On the other hand, the least variation from perfection leads the customer who is doubtful about beets anyhow to drop the idea—if it ever takes shape at all.

"Never make a good-looking display then serve your customers from a reserve supply in a basket or box. It makes no difference that the quality is all the same, the action savors of sharp dealing." So writes one marketer.

After putting considerable time into a display it is a natural inclination to be reluctant about disturbing our work of art. Again the Golden Rule. I grow vegetables and buy my

(Continued on next page)

eggs. I come to your stand and won by your attractive display of fine eggs ask for two dozen when one would have done. Because you don't care to disturb the pretty pyramid you fill my basket from the crate beneath your counter. I don't say anything because I know you are absolutely honest. Yet I am human and I go away a little less happy than if I had received the eggs I looked at and liked so well. Childish? Maybe, but that is the way it works with lots of us. After all it is the utmost consideration for not only the desires but the whims, prejudices or peculiarities of customers which enable some to win in competition where others fail.

Artistic Surroundings Pay

There is a distinct tendency to emphasize the importance of an attractive, artistic atmosphere about the stand and its surroundings. This has little or nothing to do with expensiveness. Our wonderful highways running thru some of the most beautiful country in the world are famous for nondescript, ugly shacks, unsightly and unattractive in bare surroundings, out of harmony with otherwise pleasant situations. Each one must solve his own problems but it pays definite returns in cash to be artistic.

Whether the stand be a rustic bench or a neatly, unobtrusively painted table instead of any old box under a tree on the lawn or a building costing several thousands the principle is the same. One grower who specializes in cantaloupes built a booth from poles cut in the woods and covered it with boughs of trees, replacing them every few days as the leaves become brown.

Overweight As Bad As Short Weight

An interesting thought presented by an Illinois marketer is that overweighing and overmeasuring is nearly as bad as short dealing in that it leads all too often to dissatisfaction. Neighbors compare their purchases and one customer finds he has not received as large value as the other or the same customer buying two pounds of spinach today and receiving overweight is disappointed at the smaller amount she receives another day when the weighing is exact.

Another says, "If you sell cigars and pop for the convenience of your customers, don't plaster your place with advertisements of these things that you do not grow. Advertise the things you want to sell."

A number of letters emphasize the importance of making neat packages. Folks like to receive things in clean packages that are neither clumsy nor insecure. Paper bags in various sizes cost little more than wrapping paper and make for speedy service.

Dependability Instills Confidence

Finally, comes the matter of dependable supply. It is an extremely serious thing to disappoint folks who have been coming regularly to one's market or to turn away new customers. Confidence is lost, future visits will become more irregular or possibly cease. By all means we must keep up the supply. Excuses for shortage in season are rarely acceptable.

A man bought freshly-picked red raspberries yesterday afternoon and found them about the most delicious thing he had ever tasted. Today he calls again, finds none on the stand and is told a crate will be brought in from the patch in a quarter hour. He is in a hurry and cannot wait. Certainly the explanation is more aggravating than soothing as he drives away disappointed. A reputation as a dependable source of supply is one of the most sound footings on which any business can stand.—Gilbert S. Watts.

One single cord is made up of 15 small cords. These small cords are made up of millions of cotton fibers, all saturated in rubber by process of dipping cords in rubber solution.

FIRESTONE
Dips the Cords of the Carcass in a Rubber Solution

Here you see one of the cords pulled from a Firestone Gum-Dipped Balloon Tire carcass. It is untwisted to show how it is constructed of fifteen smaller cords composed of millions of cotton fibers. There are thousands of cords like this in each tire. Before building, Firestone dips these cords of the carcass in a rubber solution. Every fiber is saturated and insulated with rubber, adding great strength and enabling the cords to flex with minimum friction.

To build a tire with such light, flexible walls and such a flexible tread, required a much stronger and more durable carcass.

This important advantage and the scientifically-designed Firestone Balloon Tire Tread, are accountable for the remarkable performance of Firestone Balloons.

See your Firestone Dealer today to obtain the unheard-of safety, comfort and long mileage of Gum-Dipped Balloon Tires.

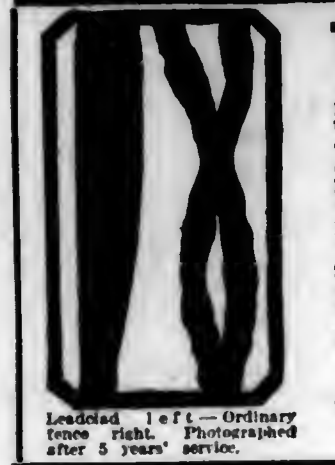
LEADCLAD FARM FENCE



Leadclad left — Ordinary fence right. Photographed after 5 years' service.

The Leadclad Wire Still Good

In many parts of the country wire fence rusts out pretty quickly. It's usually only a few years until they have to be patched.

The picture shows just what happens. The thin coating of ordinary fence soon wears off. That leaves the bare wire and bare wire won't last any time.

Leadclad Fence is different.

The thick, heavy coating of pure lead on Leadclad fence keeps rust out years longer. Put up a Leadclad Fence and it will last two or three times as long as ordinary fence. Only has to be put up once and saves two-thirds of your fence costs.

Write today for our new catalog and prices.

Rambles of a Pennsylvania Fruit Grower

IV. In East Tennessee

THE vicinity of Chattanooga is one of the important fruit districts of the South. In a good year Hamilton and Roane Counties ship 750 to 1000 cars of peaches and nearly as many strawberries. Elberta peaches come in normally about August 25, ten days after Fort Valley. Winter apples are grown for local consumption only but there is a considerable recent planting of early apples, mostly Transparent, for shipment to northern markets.

The fruit land is mainly on the chert ridges of dolomitic limestone at 700 to 800 feet elevation. Missionary Ridge, of Civil War fame, is splendid fruit land. The mountain orchards, 800 to 1500 feet higher, are more certain in cropping but less accessible. Good ridge land costs $75 to $150 an acre.

The chert soils are well drained and easy to work but low in fertility. Sometimes the large, whitish, flinty fragments almost completely cover the surface so that very little soil may be seen. This type is preferred for strawberries, which are commonly grown as an inter-crop during the first three or four years of the orchard. Aroma and Klondyke are grown chiefly, always in wide matted rows. The field is fruited two or three years, without renewal methods. The average yield is sixty 24-quart crates per acre but yields of 125 crates are not uncommon. Under favorable conditions the strawberries pay the expense of bringing the peach orchard into bearing.

Optimism Has Disappeared

The acreage in peaches has increased rapidly in recent years; the best posted men now agree that peach growing is "over done." I found very little optimism anywhere in this district; the growers have made little, if any, money for several years, and the outlook, as they see it, has very little promise of improvement. Last year some of the peach growers had half their crop get soft on the trees, during a prolonged rainy period, so that it could not be shipped. This has a sad and familiar sound.

J. E. List, of St. Elmo, is representative of this district. He has several widely scattered orchards, mainly peaches, aggregating 25,000 trees. Seventy per cent of the peaches are Elberta, with Hale, Belle of Georgia and Salway trailing. During the past eight years all varieties except the Elberta have steadily declined in value for shipping; now he would plant only Elberta and sorts that so closely resemble it as to pass for it on the market, such as Big Red and Shippers Late. The J. H. Hale is large and beautiful but softens on the trees quicker than Elberta.

Bearing Trees Look Stunted

Splendid nursery trees cost only five or six cents each. The long growing season makes it possible to produce a tree of planting size in half the time it takes in the North. It seems probable that eventually most northern nurserymen will buy trees in the South; some do now.

The bearing trees are small; some northern growers might consider them stunted. Even a twelve-year-old tree is rarely over six feet high. This is due, in part, to limited fertility. The soil is poor and the growers do not enrich it. The application of nitrate is seldom over two pounds per tree and most growers do not fertilize at all.

Mr. List relies almost wholly on good tillage and cover crops. He finds that if nitrate is used the least bit in excess it makes the peaches soft and poorly colored. His aim is to get just enough new growth to make a crop of buds, but no more. Winter and early spring plowing are followed by three or four harrowings, then the orchard is seeded to sorghum about June 1st. This makes a heavy growth of herbage to turn under the next spring.

Severe Pruning Favored in South

The pruning is distinctive. The trees are headed practically at the ground and are cut back severely every year. In Pennsylvania we have abandoned heavy cutting back of young trees because this checks growth thru the reduction in leaf surface. Here they think nothing of cutting off half of a three-year-old tree so that it is about half as large as we would expect it to be in the North. The loss of bearing surface is very heavy.

The Tennessee growers say that this heavy cutting back is essential to the production of new wood; that a lightly pruned young tree will make a weak growth. I can see the wisdom of the severe pruning that they give bearing trees, to keep them low and open, but am skeptical about the butcher pruning of young trees.

Spraying here, as everywhere, is the dirty part of fruit growing. A dormant spray of lime-sulphur controls the San Jose scale, which has taken on new life here recently, also the leaf-curl. Three or four summer sprays with self-boiled lime-sulphur and lead arsenate are necessary, beginning with the petal fall. Mr. List has found no satisfactory substitute for the self-boiled spray for brown rot. He has tried dusting but finds it expensive and will use it only in place of the late sprays, which stain the fruit.

The Yellows is not a problem here and borers are gassed successfully. The Oriental moth made its appearance two years ago and has the growers very much perturbed. The use of nicotine sprays seems to them impracticable; the added cost of production would not be justified. Unless an economical method of control is developed soon some of the growers in this district will go out of business.

Frost Threatens Loss of Crop

The greatest hazard, however, is the weather; not winter killing of the buds, as in Pennsylvania, but frost killing of the blossoms. Today (Feb. 23), East Tennessee peach growers are harrassed and nervous. They have a right to be, for many of their trees are in full bloom practically a month ahead of the normal season. February peach blooming has not been known here in a generation. The temperature dropped to 28 degrees on the twentieth and killed twenty to fifty per cent of the bloom. There is enough left for a crop provided they escape the gauntlet of perils the next four weeks. I hear that the Fort Valley growers are rather indifferent whether their bloom freezes or not; they had a big crop last year and got nothing for it.

East Tennessee peaches are packed mainly in bushels; Georgia carriers were discarded several years ago as too expensive to pack. Straight side bushels, which cost only fifteen cents a dozen more than round bottom

(Continued on next page)

bushels here, are preferred because of their greater rigidity and closer pack in the car.

The market for east Tennessee peaches is the North. Fifteen years ago the growers made money; their peaches came in after Fort Valley and had little competition. Now the Southern Pines district of North Carolina is pushing them hard, also the Ozark district. The ten- or twelve-day shipping season is a hectic period. The season is a success or failure according to when the crop hits the market, in comparison with the ripening of Elbertas in competing districts. Skill in production counts largely here, as elsewhere, but the chief factor in success is entirely beyond the control of the grower.

Peach Growing a Gamble

It is of no avail to seek varieties that ripen a few days earlier or later than Elberta, or to try to delay the ripening of Elberta a few days by severe pruning and heavy nitrating. There was a time when these expedients paid but not now, when there are other districts a little further north ready to carry on the Elberta season from the point where East Tennessee leaves it. The peach game here is a gamble; under present conditions the grower has no more than an even chance of drawing a winning hand.

There is a somewhat better outlook for apples. I see no reason why a considerable percentage of the winter apples consumed in the South should not be grown on the mountains and ridges of western North Carolina, eastern Tennessee, northeastern Georgia and the higher altitudes of Alabama. Habersham County, Georgia, has a million trees. Dayton, Tennessee; Cornelia, Georgia, and Gadsden, Alabama, are becoming important centers of production.

The Paragons and Staymans raised on the mountains around Chattanooga would be a credit to any apple district. The Paragons raised here are a glorified Black Twig which put to shame most of our Pennsylvania specimens. Blotch is exceedingly virulent, making necessary several summer sprays with Bordeaux. The cost of production is around eighty cents a bushel.

South Shoves Aside Northern Fruit

Some Pennsylvania growers have complained that the southern market has been only twenty-five per cent normal this year. They have assumed that this is due to low cotton and cheap oranges (which are ten cents a dozen here now); but I discover that it is also due to the largest crop of apples the South has ever had, with many young orchards coming into bearing. It looks as tho we may expect a steadily dwindling market for our Yorks and Bens in the South.

Middle Tennessee got an early apple craze a few years ago, mainly Transparent. These are shipped north during a ten-day period, usually about June 10 to 20th. They are picked when only two-thirds grown from one and three-quarters to two and a quarter inches. These unripe, sour apples have been bringing $1 to $1.50 a bushel net but the bottom will soon drop out for there has been heavy over-planting. Southern Illinois is the chief competitor and seems to have something of an edge on Tennessee as it produces a larger apple at the same date. Fire blight takes a heavy toll of Transparents and the trees are short lived.

The fruit-growing of the South is fiercely competitive by districts. Since the markets are mainly in the North, the relative season of ripening by districts is the factor that must be considered above all others. Each district has the center of the stage for a few days only; then it is ruthlessly crowded off by competitors a little further north. The game is to find the place in the market where there is the least competition and then to hope for good luck in the weather.—S. W. Fletcher.

8 acres short

But I learned how to save money on binder twine

BY A THRIFTY FARMER

I bought Plymouth Twine for years. Always was satisfied—never thought of switching. Then a friend told me I could save money on twine that was "just as good". I sure learned a lot of unpleasant things about twine that year.

You see, the season before with just as big a crop, I harvested 81 acres with 25 balls of Plymouth. So I figured 25 balls of the cheaper twine would be plenty. But that "just as good" twine bound only 73 acres. I was 8 acres short—had to go into town and get three extra balls. *You can bet they were Plymouth!*

Plymouth really cheaper

Then I saw it clearly—Plymouth always ran its full guaranteed length per pound. The other twine was *always* short—many balls were several hundred feet short. I was really losing money on the "so called" cheap twine.

Plymouth saves grief

Not only that—the cheaper twine would break every little while. That meant loose bundles—time spent in re-threading—and grain lost. Plymouth Twine has never given me the slightest grief. I've come back to Plymouth for keeps, and no more "just as good" stories will ever tempt me to try other twines.

**Plymouth Twine is spun 500, 550, 600 and 650 feet to the pound. Look for guaranteed length on tag.*

Plymouth—*more economical:*
the six-point binder twine

1. It's longer—full length to the pound as guaranteed on the tag;
2. It's stronger—less breaking, less wasted time, less wasted grain;
3. It's evener—no thick or thin spots —no "grief";
4. It's better wound—no tangling;
5. It's insect repelling—you can tell by its smell;
6. It's mistake-proof—printed ball—and instruction slip in every bale.

ASK YOUR DEALER ABOUT
"GOLD MEDAL"
PLYMOUTH TWINE
30% Longer Than Standard

You can easily test Plymouth's length per pound against any other twine. The experiment pictured at the left has been made frequently.

Take a ball of Plymouth and any twine of the same weight and tagged as being the same length per pound and unwind them down the road. Then measure the length. Plymouth Twine wins out—7% to 16% longer than cheaper twines.

PLYMOUTH
the six-point binder twine

Plymouth Binder Twine is made by the makers of Plymouth Rope.

Important To Employers!

The Workmen's Compensation Act became effective Jan. 1, 1920, but it seems some employers ignore their obligations, intentionally or through misunderstanding. Failure to provide protection to employes makes the employer liable to a heavy fine in addition to the paying of benefits in accordance with the Compensation schedule.

Our Policy furnishes complete protection as required by the Compensation Act, and if the employer wishes, we can protect him against accident, while engaged in his work, or at all times during the day and night.

Our policyholders are receiving a large return premium each year. (11½% was returned to them in 1924 and 1925) when their premiums were above the minimum.

STOP this pest!

The corn borer is a national menace. A suggested way of efficiently fighting this pest is: (1) Cut stalks within 2 inches of the ground. (2) Burn stalks or shred and feed them. (3) Disc with SHARP discs. (4) Plow stubble under cleanly.

Authorities have agreed that when disc harrows are used the discs should be sharp. Only a knife edge cuts stubble and trash properly. The HARROSHARP is a universal tool, fitting any disc harrow. It is easy to attach and operate, is automatic and efficient. A HARROSHARP lasts a lifetime. Write today for a folder.

get BIG STURDY litters with Quaker PIG-N-HOG meal

Give your brood sows a chance to farrow big, strong litters. Feed a ration that will enable them to build husky, lively pigs and at the same time provide a plentiful supply of good, nourishing milk.

Quaker Pig-N-Hog Meal is the feed that will do this job. It is a balanced ration, rich in protein (18%), minerals, and essential nutrients. It helps the sow to build strong pigs that have the capacity for big frames and quick, healthy growth. It contains Cod Liver Meal, to prevent rickets, and iodized salt to minimize goiter trouble.

And the other ingredients of this meal are just the things you know pigs and shotes should have to make them into prime market animals. Quaker Pig-N-Hog Meal contains *oatmeal;* it contains *alfalfa meal, tankage, barley, wheat flour, hominy, and minerals.*

No wonder this balanced feed produces better results than any combination of grains! And when you need a supplementary carbohydrate feed use Quaker Sugared Schumacher Feed.

Every dollar invested in Quaker Feeds means more profit from your hogs. Start right now. Get Quaker Pig-N-Hog Meal from your dealer.

Staff Contributor and Adviser
Glenview Farm

Drink Themselves to Death

I have about 85 White Leghorn pullets and lose as high as four in one day. Some drink themselves full of water, others just sit down and the water runs out of their nose and mouth. They seem to choke up.—J. E. G., York County, Pa.

It is difficult to say what may be the matter with your flock, but the symptoms read as if they had gotten hold of too much salt which is poisonous to poultry except in small quantities. If the birds are running out, make sure that there is no salt, nitrate of soda or fertilizer where they can get it.

Then if the trouble persists, better get a veterinarian or your county agricultural agent to look at the birds. Also, look out for bad meat scrap or any decayed carcass.—R. L. Scharring-Hausen.

Goose Eggs Failed to Hatch in Incubator

Can goose eggs be hatched in an incubator? If so, does it take any different care or different temperature than for chicken eggs.—Mrs. M. B. H., Bedford County, Pa.

Some years ago I was anxious to hatch out goose eggs in an incubator and wrote to several incubator companies for information. However, the replies were not satisfactory and I judge they had no knowledge on the hatching of goose eggs. I have tried it without success. Goose eggs require plenty of moisture and the lack of sufficient moisture may have been the cause of failure.

I have hatched goose eggs under Leghorn hens and also traded laying hens to neighbors for setting hens. If you have no setting hens or can get none, try running the incubator at 102 degrees and sprinkle the eggs twice a day with lukewarm water.—R. L. Scharring-Hausen.

Several Remedies Feasible

Is there a remedy to cure the habit of egg eating in a flock of pullets?—G. H., Columbia County, Pa.

Some years ago I was troubled by the egg-eating habit in a flock of pullets and helped matters by tacking a strip of burlap to the top of each tier of nest boxes so that it hung within two inches of the bottom. The hens could creep under this to get in the nests when they wanted to lay but the nests were dark and not attractive to idlers. I also provided plenty of nests and gathered the eggs frequently.

Hens have a habit of getting on the nest several at a time and the crowding, fighting and struggling result in broken eggs of which they are very fond. Once the habit is formed it is hard to break. Sometimes one individual does all the breaking of the eggs, and if she is removed the trouble stops.

Other remedies are to file the point of the beak down almost to the quick so that the fowl can eat but not break shells; also to blow an egg and fill it with a mixture of egg and red pepper, and let the flock try to eat that. Some people also put a china egg on the floor in order to discourage them from trying to break it.

If you can let the flock outdoors that will be a big help as the hens will have something else to occupy their attention.—R. L. Scharring-Hausen.

Egg Fertility

Can you advise me how long duck eggs remain fertile after the drake has been removed? Also, how soon after mating eggs become fertile?—E. C. S., Susquehanna County, Pa.

I cannot answer your question directly, but hen eggs are fertile about 10 days after the rooster is put with the flock and are said to remain so three weeks after he is removed. I should think this would serve as a guide with your duck matings.—R. L. Scharring-Hausen.

10 December Eggs Worth 20 Laid in April

TEN eggs laid in December are worth 20 laid in April or May, says Dr. M. A. Jull, poultry husbandman of the U. S. D. A. The average farm hen lays less than 60 eggs a year and lays them during the season of lowest prices.

A study of the trend in the average monthly farm prices from 1910 to 1924 shows that the lowest wholesale egg prices prevail in April, and that there is a slight increase in July and August, with a more perceptible increase beginning in September. The highest price is reached in December.

It takes fewer eggs from October to January to pay for a given quantity of feed than during any other time of the year.

Last season we put up some of the woven poultry fence such as is advertised in Pennsylvania Farmer and like it very much. It is more durable than the ordinary poultry netting, and put on steel posts, makes a nice appearance. It is also cheaper than ordinary two-inch mesh.—R. L. Scharring-Hausen.

It Does the Work Twice As Fast

Farmers who grow large acreages of row crops find the two-row cultivator profitable. It releases a man for other rush season work and makes possible more frequent cultivation when help is scarce.

DAIRY

A. A. BORLAND,
Staff Contributor and Adviser
Head of the Department of Dairy Husbandry
Pennsylvania State College

Boys and Girls Tell How to Make Money

SOME weeks ago the Pittsburgh District Dairy Council advertised an essay contest for the boys and girls living in the territory comprising its district. The winner in each of the twenty-eight districts is to receive as a reward a two-day trip to Pittsburgh at the expense of the Dairy Council. A large number of competitors entered the contest, showing that the boys and girls of that district are interested in dairying. The subject upon which they wrote their essays was, "How to Make Money on a Dairy Farm." The names of the winners are as follows:

The Winning Essayists

Louise Narhi, Ashtabula Co., Ohio; Mary Shook, Ohio Co., W. Va.; Laura Anna Sonda, Washington Co., Pa.; Bernice R. Cleland, Butler Co., Pa.; Lois E. Duncan, Beaver Co., Pa.; Rutheda Marie Rudibaugh, Columbiana Co., Ohio; Dorothy Gowday, Ashtabula Co., Ohio; Floe Henderson, Ashtabula Co., Ohio; Inez M. Allen, Ashtabula Co., Ohio; Ellen M. Walker, Belmont Co., Ohio; Ruth James, Trumbull Co., Ohio; Gorgeanna Partridge, Trumbull Co., Ohio; Ruth Dean, Mercer Co., Pa.; Maude Tanner, Westmoreland Co., Pa.; Mabel Bollard, Crawford Co., Pa.; Gladys Peterman, Crawford Co., Pa.; Elizabeth C. Bell, Crawford Co., Pa.; J. Alfred Schaal, Belmont Co., Ohio; Newel E. Williams, Ashtabula Co., Ohio; Gayle Gladding, Ashtabula Co., Ohio; Ronald Brothers, Guernsey Co., Ohio; Elwood Pierce, Trumbull Co., Ohio; Edward P. Kruse, Portage Co., Ohio; Frederick Taylor, Lawrence Co., Pa.; John J. Gordon, Crawford Co., Pa.; Harry Dorchester, Crawford County, Pa.; William E. Bell, Crawford Co., Pa.; Francis J. Linn, Crawford Co., Pa.

At the annual meeting of the Council in Pittsburgh, which the winners will attend on April 29-30, the grand champion essay writer will receive a scholarship price of $150 for either Ohio State University, Pennsylvania State College or University of West Virginia. In addition to this, a prize of $100 will be offered to the boy or girl writing the best report of the Pittsburgh trip.

Welcome Mr. and Mrs. Dairy Farmer

THE Pennsylvania Dairymen's Association will hold a meeting at State College, Pennsylvania, in the Old Chapel, Friday evening, May 6, beginning promptly at 7:00 o'clock.

The welcome will be given by Dr. R. D. Hetzel, president, Pennsylvania State College, and the response by M. T. Phillips, president, State Federation of Agricultural Organizations. Other speakers will be A. A. Borland, head of the Department of Dairy Husbandry, State College, Pa., and Staff Contributor and Adviser, Pennsylvania Farmer; R. W. Balderston, secretary, Interstate Milk Producers' Association; J. W. Warner, County Agent, Indiana County; R. H. Olmstead, dairy extension specialist, State College, Pa., and R. L. Watts, dean of the School of Agriculture, State College, Pa. A play, "Judge for Yourself," will be staged by the Philadelphia Dairy Council.

On the day following, Saturday, May 7, occurs the "Penn State Dairy Exposition," an annual event staged by the dairy students of the college. This will include a cattle show, judging contests, fitting and showing contests and other events.

In addition to the opportunity of seeing the show there will be a chance to join a tour of some of the college departments and field experimental plots. There will also be college athletic events in the latter part of the afternoon, including a baseball game between Penn State and Syracuse University.

Lehigh C. T. A. Ends Third Year

Organization Had Fifteen Whole-Year Members

> Editors' Note.—This is one of a series of annual reports of Pennsylvania cow testing associations. As each association completes its fiscal year a summary of its records is published in this department. The owners of herds with a 300-pound butterfat average, whose names appear at the end of the report, will be awarded prize ribbons by the Pennsylvania Dairymen's Association at the 1928 State Farm Products Show.

THE Lehigh County Cow Testing Association closed its third year March 1, 1927, with 15 whole-year members. The total number of cows during all or part of the year was 334.

The result for the three years is as follows:

Year	Lbs. milk	Lbs. butterfat
1924-25	8159	274.5
1925-26	8056	271.8
1926-27	8623	292.4
Increase for three years.	464	17.9

The summary for the whole-year members is as follows:

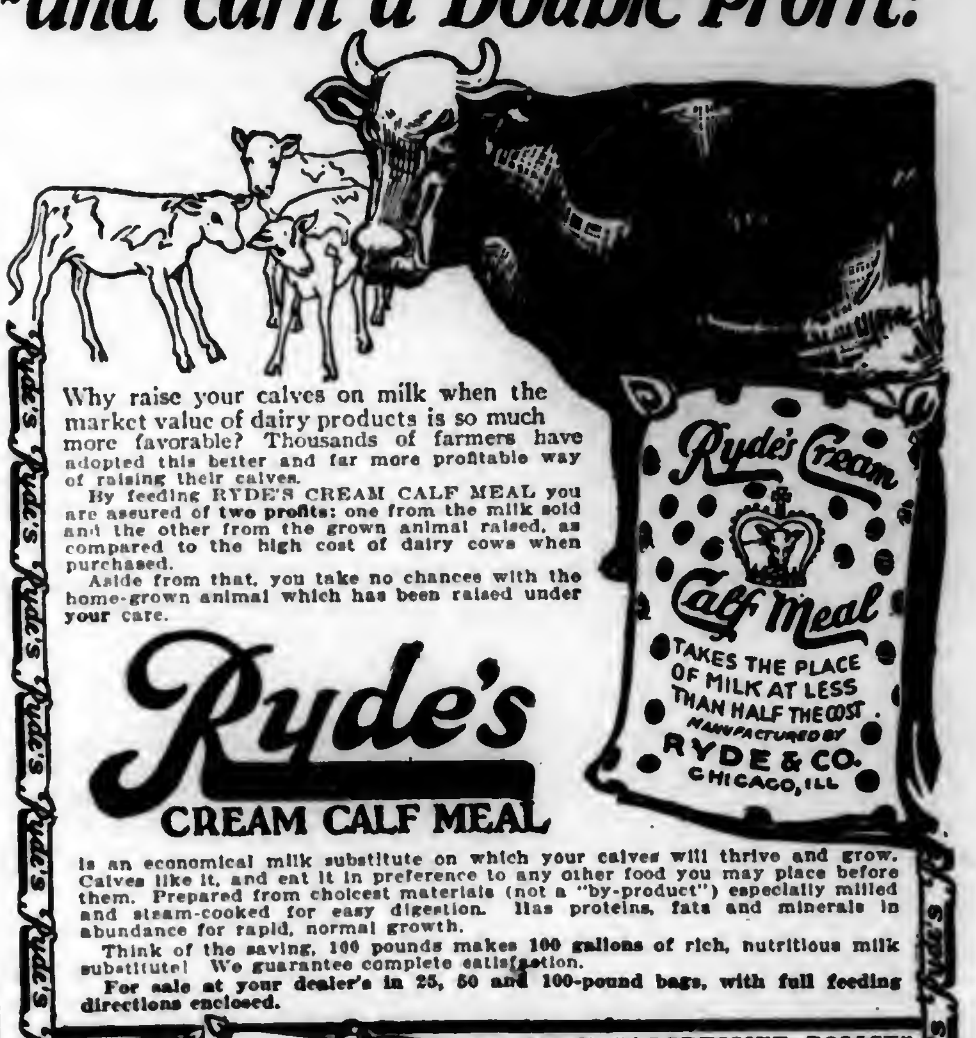
Average number of cows in the association	236.25
Avge. per cow: lbs. of milk	8623
Pounds of butterfat	292.4
Percentage of butterfat	3.4
Value of product	$377.15
Cost of pasture	4.09
Cost of roughage	36.02
Cost of grain	87.55
Total cost of feed	127.66
Value of product above feed cost	249.49
Returns for $1 expended for feed	2.95

Two cows in this association produced over 500 pounds of butterfat, 8 produced between 400 and 500 pounds, and 63 between 300 and 400 pounds. Thus, 73 produced over 300 pounds.

Cow Tester in Charge, Leo J. Coulter; County Agent, A. L. Hacker; summary compiled by I. O. Sidelmann.

Six herds exceeded an average of over 300 pounds of butterfat. The records of these herds follow:

Owner	Avge. No. Cows	Breed	Pounds Milk	Pounds Fat
M. A. Herber, Breinigsville, Pa.	5.92	R. & G. H.	11,072	389.3
Harold Ziegler, Wescoesville, Pa.	8.83	R. & G. H.	10,771	379.0
Wm. H. Rupp, Breinigsville, Pa.	10.17	R. H.	10,600	367.5
Dr. R. L. Schaeffer, Fogelsville, Pa.	20.00	R. & G. H.	10,873	348.9
Geo. S. Gehman, Coopersburg, Pa.	10.50	G. H., G. G. G. A., G. S.	9,121	327.9
M. B. C. Home Farm, Center Valley.	18.33	R. H.	9,134	301.3



SAVE MILK ~and earn a Double Profit!

Why raise your calves on milk when the market value of dairy products is so much more favorable? Thousands of farmers have adopted this better and far more profitable way of raising their calves.

By feeding RYDE'S CREAM CALF MEAL you are assured of two profits: one from the milk sold and the other from the grown animal raised, as compared to the high cost of dairy cows when purchased.

Aside from that, you take no chances with the home-grown animal which has been raised under your care.

Ryde's CREAM CALF MEAL is an economical milk substitute on which your calves will thrive and grow. Calves like it, and eat it in preference to any other food you may place before them. Prepared from choicest materials (not a "by-product") especially milled and steam-cooked for easy digestion. Has proteins, fats and minerals in abundance for rapid, normal growth.

Think of the saving. 100 pounds makes 100 gallons of rich, nutritious milk substitute! We guarantee complete satisfaction.

For sale at your dealer's in 25, 50 and 100-pound bags, with full feeding directions enclosed.

RYDE "AGGRESSIVE POLICY" POULTRY FEEDS. Push your poultry along, from newly hatched chick to laying hen. Give these well known feeds which contain elements adapted to every stage of growth—choicest granular grains, whole seeds with natural oil retained, fresh meat scraps and dried buttermilk. At your dealer's in 25, 50 and 100-pound bags, or write us. Satisfaction guaranteed. RYDE & CO., Mfrs., 5434 Roosevelt Rd., Chicago.

The Proven Silo

Year after year the Unadilla has been piling up silo satisfaction for its purchasers.

Year after year Unadilla owners have found that they have perfect silage, made and kept at the *lowest possible cost*—

that the air tight doors conserve *all* the valuable juices—

that the silo itself is *strong, durable, well built*—

that *above all* the Unadilla is *SAFE* and convenient to use. The permanent safety ladder, formed by the door fasteners, is *secure.*

The hoops are easily adjusted from this ladder—doing away with risk of adjusting from dangerously slipping ladders.

These features and the long life and storm-defying character of the Unadilla are some of the reasons *why* so many thousands of dairy owners in the East buy the Unadilla.

Write for information on this proven success. Ask us also about our water tube, vats and storage tanks.

Washing the Blue Out of Monday

Haven't You a Story of Your Own to Tell?

DAD is approaching the house at eight o'clock this sunshiny Monday morning, his arms laden with tools. Now listen. "Oh, mother, could you possibly manage to help me right off? Our cows are out again and the neighbors will soon be raving. We just must fix that old fence." There was but one answer, and much as I resented leaving a waiting wash and good hot suds, along I marched behind Dad into the cool freshness of the woods.

After rounding up Brindle, and three of her straying companions, we tackled the task of driving some new posts. Then together we managed the wire, the stretcher and driving the staples. Old rusty barbed wire is like some folks I have known. You need to wear gloves to avoid being pricked, and often you are scratched when you least expect it.

Trudging Along the Line

On and on along that line we trudged, over logs, past fallen tree tops, and across the stream so peacefully gliding away. "Oh," I exclaimed as we entered an old field, "is this the three-cornered lot?" "Yes," replied Dad, "was it ever worked?"

Then came memories of Uncle Norman and I recalled the splendid crops of rye, oats, corn and potatoes that had been grown where now our herds find pasture. I remembered this same uncle saying, "A good line fence keeps neighbors good friends." Farther on we found a few moss-grown old rails that had marked the line in olden days.

Returning into the yard two hours later, I find that the postman has left a letter and the weekly issue of that paper we all love. Before I go at the laundry work again I must have a glance thru those interesting pages.

Now it is nearly noon, the clothes are waving in the sunny breezes, dinner is started, the fence is fixed, and I look forward to the afternoon when I can thoroly enjoy my PENNSYLVANIA FARMER.—Country Wife.

Prizes Offered

COULD you relate such a story? How was it possible? There is only one answer. Helpful laundry devices that take the "irk" out of laundry work.

The women who enjoy such convenience can cheerfully help husbands if necessity calls. They can lend a hand wherever needed and ring the dinner bell at twelve just the same. They can glance over the morning paper and happily plan the afternoon reading. They can read the letters the postman brings without fear and trembling that the washing will not be finished by noon. They can be all "set" for a quiet hour after dinner. They can even visit favorite haunts about the farm and refresh memories of other days.

How do you do it? Would you like to explain your methods for the benefit of others? Put your story into 300 words and send it to us. Tell exactly how you have managed to "Wash the Blue Out of Monday."

The best letter wins $10.00. The next best wins $5.00, and for all other letters published, we will award $1.00 each.

A Few Rules to Remember

1. On a separate sheet of paper give the names of all your laundry conveniences.

2. Keep your story under 300 words.

3. Write your full name and address on upper left hand corner of your first sheet.

4. Use one side of paper only.

5. Contest closes June 1.

6. Awards will be announced July 2nd.

Send your letter to Sunny Monday Contest Editor, Pennsylvania Farmer, 261 South Third Street, Philadelphia, Pa.

What Fashion Decrees

MRS. GRIEBEL in her spring style shows under the auspices of State College, New Brunswick, N. J., claims distinction in that she has nothing to sell except the idea of her permanent pattern. This is much appreciated by women in the state who are availing themselves of the State Extension Service. This pattern was the foundation of the models exhibited.

Black and navy blue, both in combination with white, also biege, soft greyed green, violet in small quantities and monkey skin are fashion's leading colors. Black is especially nice for women of mature years. It can be worn by anyone, especially when relieved by a white collar or pearl beads. Only those with sallow complexions need avoid black.

The season's fabrics are lovely and soft in texture, many satin on one side, crepe on the other. Flat crepes are fashionable and very pretty. Chiffon voile drapes nicely, and is suitable for sheer summer frocks. Satin finish cottons are available in lovely designs, and can be substituted for silk, helping to stretch the clothing budget.

The frocks exhibited by Mrs. Griebel were of black crepe-back satin, flowered linen, green print with white vest effect, blue flat-crepe two-piece dress, and a sports dress with a blouse using a design from the west canyons and a plain tan skirt. Some other frocks were worn which had been made using commercial patterns combined with the permanent pattern.

Mrs. Griebel has prepared a bulletin on the permanent pattern. It is Extension Bulletin No. 58, and can be had from the New Jersey State College of Agriculture, New Brunswick, N. J.—Edith R. Dilts, N. J.

Blooms in Profusion Assured

"WHAT shall I do to make my sweet peas bloom? The vines look healthy, but I want flowers, not foliage."

There is only one answer to this oft-repeated question—"Keep them growing."

Sweet peas should be sown early, started in the house in pots when practical. If you did this they will have had an early start, and should by now have developed a good strong growth. In this case the dry weather of early summer will not be apt to injure them in the least. Four or five days advance sowing of sweet pea seed frequently spells success.

When the dry weather we are so apt to have in early June sets in, sweet peas stop growing. And about this time myriads of aphis appear. If, however, you can succeed in keeping your vines growing you need pay little attention to this insect as it rarely attacks healthy plants, preferring half dead, stunted plants on which to feed.

To keep your plants growing you must water them every day it does not rain. This does not mean merely pouring water on the soil. It means sprinkling the tops of the plants and seeing that the water reaches every stem and leaf.

If you give your sweet peas plenty of water and cultivate the soil in which they are growing every few days, and then about the middle of June give them some stimulation in the form of weak liquid manure, all will be well. You will thus force them to start sending out new shoots.

Powder Hurries the Laggards

Should a few of the more persistent aphis remain, even after this treatment, you can easily destroy them with tobacco powder. Dust this over the plants quite early in the morning, while they are wet with dew.

Another matter of great importance in sweet pea culture is that of supports. If you do not give these plants proper supports they will fall over; and after they have once fallen, any flowers that so develop will curl up on the ends and be of little further use. From the time the vines are six inches high they must be trained and the more attention you pay to this phase of their culture, the more delighted you will be with the blossoms. Well-trained peas always have long, stiff, straight stems.

Some successful growers depend on supporting their sweet pea vines on "pea brush," meaning branches of dead shrubbery stuck into the soil alongside the vines. The peas delight in rambling over these branches.

Gardeners Have Their Preferences

Other gardeners prefer straight stakes, driven into the ground at intervals along the row. These stakes are joined by strong wire run from stake to stake close to the ground and from top to top. Then parallel lines of onion twine are run from ground wire to top wire. This forms an ample support for the vines.

The most practical and easiest method is to drive strong stakes into the ground six feet apart. Join these stakes with a light top rail. To this top rail attach a 4-foot high, 2-inch wire netting. Such a support is easily made and vines trained against such a support should produce a wealth of perfect flowers.—Jane Leslie Kift, Pa.

Insurance Against Sun, Wind and Rain

WASN'T it fun to buy a new Easter outfit? After no end of searching and bargaining the whole ensemble was laid out ready to go to church on Easter Sunday morning. Fine feathers surely!

Do you remember that old but true saying: "It is not the fine feathers that make the fine birds." And what is more, fine feathers are easily affected by the weather. Rain makes them droop and shrink. Sun fades them. Wind ruins their stylish lines. They are exceedingly perishable and should be highly insured.

There is a kind of insurance which will guarantee a fine appearance for all feathers in any kind of weather. The premium on this policy is due daily and you pay it to yourself in the following terms:

1 bath
2 thoro tooth brushings
9 hours' sleep with open windows
Exercise out-of-doors
2 green vegetables
Fruit in any amount
1 quart milk
6 glasses water

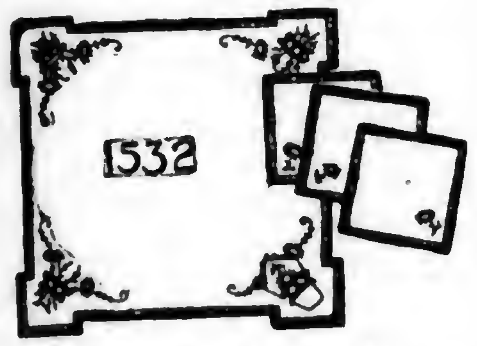
Surely these are easy terms in the light of what you will receive. For if you are careful to keep up the payments in this policy, it will insure you a fine bird to put inside your fine feathers.

Why Throw It Away?

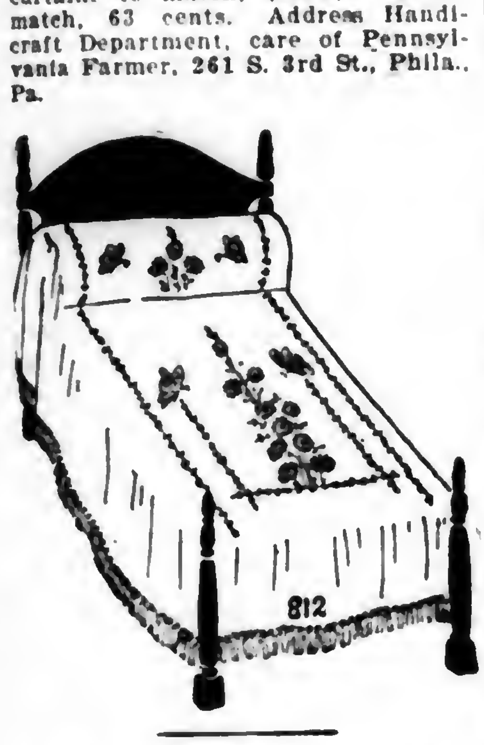
I often very reluctantly throw away the water in which the potatoes for dinner are boiled. One day when considerable fine potato had remained in the water I tried making a gravy by slightly thickening with flour, adding a small lump of butter, a very small onion finely sliced, one small sharp pepper. Then I brought it to the boiling point for a few minutes. It proved a success, so much so that in a day or two one of the boys said: "Make some more of that gravy."—Kate.

Stamped Ready to Embroider

1532.—LUNCHEON SET. — The design is stamped on splendid quality linen finished Indian Head and is very easily worked in French knots and lazy daisy stitch in orange, yellow and black. A lesson leaf explaining stitches, etc., is attached to each set. Set sent postpaid, 90 cents. Give number when ordering and address Handicraft Department, care of Pennsylvania Farmer, 261 S. 3rd St., Phila., Pa.



812.—BED SPREAD.—Hand embroidered pieces always call forth admiration from friends. This spread, 81"x100", with the directions which accompany it, is not difficult to make. A complete combination is also available in this design. Spread of heavy krinkle crepe, $3.95; curtains to match, $2.20; scarf to match, 63 cents. Address Handicraft Department, care of Pennsylvania Farmer, 261 S. 3rd St., Phila., Pa.



The Kitchen Cabinet

SPLIT-PEA SOUP

1 cup dried split peas
2½ quarts cold water
1 pint milk
A 2-inch cube fat salt pork
½ onion
3 tablespoons butter
2 tablespoons flour
1½ teaspoon salt
¼ teaspoon pepper

In the evening look the peas over carefully and soak in water to cover entirely. Next morning, drain and place in soup kettle. Add the cold water, pork and onion. Simmer for three or four hours. Rub thru a sieve to remove skins, pork and onion. Add butter and flour rubbed together, and the seasoning. Dilute with milk, adding more if desired.—Betsey Ford, Md.

• • •

ITALIAN'S DELIGHT

½ lb. hamburg steak, ground
1 cup canned corn
1 cup tomato soup
1 large onion
1 green pepper
1 cup cooking oil
1 cup grated cheese

Fry pepper and onion in oil until brown. Pour in soup and then cheese and cook until cheese melts. Add meat and cook for few minutes, add corn. Season with salt and pepper. Put in covered casserole and bake until meat is cooked.—Betsey Ford, Maryland.

A KITCHEN 3000 miles long!

Our latest model. Porcelain enamel top. New gray color harmony. The most modern liquid fuel stove money can buy.

SUCH A KITCHEN, stretching from New York to San Francisco, would be needed to shelter the 4,500,000 housewives who are cooking today on Perfection Oil Stoves!

Every day more than 50,000,000 meals are prepared on Perfection Stoves. And every year, three out of every five women who buy oil stoves buy Perfections.

Why this extraordinary preference? *Because Perfections give the greatest cooking satisfaction, year-in, year-out.* Consider this fact well when buying a stove. Let the judgment of 4,500,000 women guide you.

Our Library Is Very Much Alive

Patrons Express Appreciation of Books on the Shelves

SPRING is bursting upon us and how ambitious we are! Besides the chirping chicks and the growing needs of our own youngsters, there is the house to brighten up, the yard and flower beds to give attention, the vegetable seeds to be started, the sewing this season crowds upon us, the daily rounds of home chores, cooking, washing, ironing, mending, sweeping, dusting and oh dear! the time speeds along. We are up early and hard at it till dark!

Now that will never do. You must take a few minutes off each day or you will snap. You may remember how the Indians in days of yore released the tension on "bow and arrow" that all would be safe for the next day's hunt. You too, homemakers, must release the tension. Take time to relax each day—the middle of the day is best—and a few moments with a good book before you drop into the nap, are inspiring.

A Trial Makes Converts

Many of our readers are getting help from our library and we recommend that you, too, give it a trial. In my desk are all kinds of appreciative letters from women in every county of Pennsylvania. You might enjoy what they have to say. Space permits that we quote but a few lines.

"Thank you very much for the book 'Getting Ready to Be a Mother.' I have read all the literature on that subject I could get hold of; and this book has been the most helpful. I advise all mothers to read it because I feel sure a mother never knows too much about her care and the care of her baby. I enclose 15 cents in stamps for which please lend me 'Your Child Today and Tomorrow.'"

Several who have read "Your Child Today and Tomorrow" are enthusiastic in their praise. One writes: "With this mail I am returning your book entitled 'Your Child Today and Tomorrow.' It is splendid. Do you have the book in stock for sale, and what is the selling price? I would like to read it at intervals again."

Another writes: "I read 'Child Training' and found it very interesting. I would like to own a copy of this book. May I borrow 'Feeding the Family' by return mail?

One reader thinks "'Feeding the Family' ought to be put under every girl's arm when she leaves the matrimonial altar." Personally I think there is no reason to postpone it for that moment. Mothers, read it now with your daughters.

"'The Woman of Forty,' which you lent me two weeks ago is being returned in this mail. It is excellent and most helpful for those for whom it is written." "'The Woman of Forty' has been interesting as well as very instructive. I consider it packed full of good thoughts and sound advice."

"I enjoy Our Home Page very much and think the library a very good way of helping women on farms. The small amount asked for postage isn't missed but the price of a new book and the chance to get to a book store are both next to impossible for many living on Pennsylvania hills."

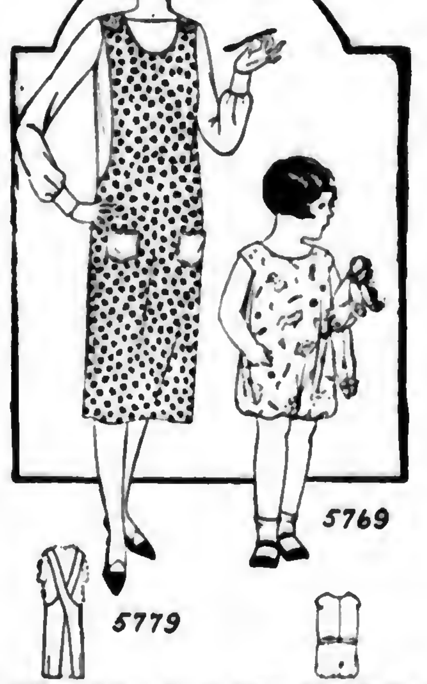
Besides "Your Child Today and Tomorrow," "Getting Ready to Be a Mother," "Child Training," "Feeding the Family" and "The Woman of Forty" mentioned in extracts from letters, the Library offers a volume on "Home Handicrafts," "More Baskets and How to Make Them" and "Cooking for Profit."

To avail yourself of Library Service send with each book request 15 cents in stamps to cover postage. Address letters to Home Page Library, Pennsylvania Farmer, 261 S. Third St., Philadelphia, Pa. It is wise to make a second choice, if you have any, when writing.—Gertrude S. Stewart.

Clothes Meant to Be Lived In

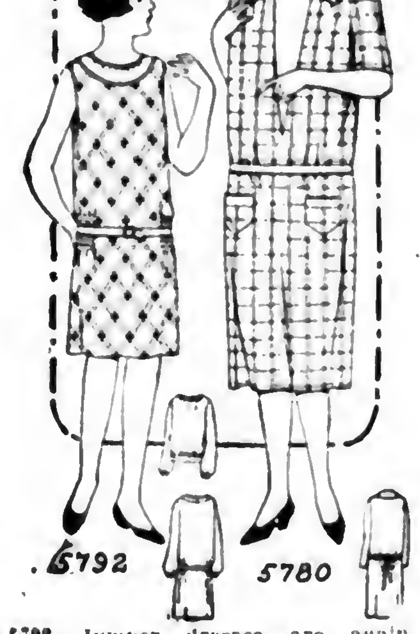
Directions for Ordering.—Give figure or figures of each pattern exactly as printed at beginning of each description. Give bust measure when ordering waist patterns, waist measure for skirt, and age for children's patterns. Address Pennsylvania Farmer, 261 S. Third Street, Philadelphia, Pa.

5779.—Percale, gingham or cretonne with binding of a contrasting color makes an attractive apron. Four sizes: small, medium, large and extra large. A medium size will require 2⅞ yards of 32-inch material together with one-quarter yard of contrasting material. Pattern, 10 cents.



5769 5779

5769.—Cotton print, linen, pongee or rep could be used for this play suit. Four sizes: 2, 3, 4 and 5 years. A 3-year size will require 1⅛ yard of 27-inch material. Pattern, 10 cents.



5792 5780

5792.—Jumper dresses are again in vogue. The model here shown is delightful without sleeves for warm days. Four sizes: 8, 10, 12 and 14 years. To make this pretty style for a 12-year size will require 2⅜ yards for the dress and 1¼ yard for the guimpe of 40-inch material if made with sleeves. Pattern, 10 cents.

5780.—Checked, gingham, figured percale, or washable broadcloth would be suitable and serviceable for this model. Seven sizes: 36, 38, 40, 42, 44, 46 and 48 inches bust measure. A 40-inch size will require 4½ yards of 36-inch material if made with long sleeves and of one material. Pattern, 10 cents.

Send 10c in silver or stamps for our up-to-date spring and summer 1927 Book of Fashions.

Friendly Talks

By EDGAR L. VINCENT

ONE spring when I was plowing with an old-fashioned landside plow I lost my watch out of my pocket. It was still early in the day and I was a long way from the house. The only way I could tell what time it was, was by looking at the sun and guessing.

I worked on till noon, resting the horses a good many times to hunt for my watch. It seemed to be gone beyond recovery. I very nearly gave it up. But we are not easily satisfied when it comes to things that are lost. We keep hunting.

When I went back to my work in the afternoon I felt led to go down to the corner of the field where I began plowing. With my hands I turned back the first furrow, and I had not gone twenty feet before I found my watch, ticking away as good as ever! Then I rejoiced like the woman that found her lost coin.

Pride Weakens Our Resolve

In a good many ways this is what we have to do when we go wrong and set out to get righted again. It is not always easy to go back. If we have planned wrong, for example, and spent some time, strength and money in trying to carry out our undertakings, only to find that we are making matters worse instead of better, how we hate to own up to it! Pride says "Don't you do it! Go ahead!"

Thinking what folks will say when they see us taking the back track stiffens our necks, too, and often leads us to say, "I won't do it! I'll keep on!" But all the time our better judgment tells us that we are making a bad matter worse; and when we have suffered enough and lost sleep enough and seen our hard-earned money go to nothing, if we are wise enough to turn round, go back where we began to go wrong, ten chances to one we will be glad we did so.

It is not easy to speak about, but have we not all come to days when we have lost something a thousand times more valuable than a watch or the fulfilment of a business dream? Was it this morning or a week ago that we lost our temper and said things to the one who is dearest to us, words that brought the tears to her eyes and made the little ones who heard it look up into father's face with a great questioning? "Why did father say such things to mother?"

The Sun Will Shine Again

And then we went away to our work, but we could not work that terrible mistake off. We could put into it so much that sweat would run down our faces, but the wrong we did to Mary sticks in our memory. How we wish we had not said it!

Well for us if we go back when we lost out that day and turn back the furrow. If we do that, if we go to Mary like a man and say, "I was wrong this morning, wife! I didn't mean to say it! The words just slipped out in an unguarded moment," if we do that, we need never doubt that we shall find the lost treasure. Away will go the shadows. The sun will shine again. For Mary will surely say, "I know all about it, my husband! It is all right! We will never think of it again!"

Safe and Sound

Stop and let the train go by,
It hardly takes a minute;
Your car starts off again intact,
And better still—you're in it.
—Boston Transcript.

PAGE FENCE
The Worlds Standard For Forty Years
fence you can depend upon

Year after year—for over three generations—Page Fence has been giving its owners dependable service and honest value. Experience has taught thousands of farmers that it can be depended upon for uniformity, durability and economy. You, too, can *depend* on Page to solve your fence problems once and for all.

Page Fence is woven of the best wire—and is covered with a heavy coat of galvanizing to resist rust. Obtainable either in the staple tie or wrap stay type of knot.

Ask your dealer to show you—he carries the pattern you need.

OUR YOUNG PEOPLE'S FORUM

From Forum Members and Friends

Dear Cousin Ruth:—I don't know whether you are my cousin or not because I live in New York State and I don't live on a farm. I used to live up in North Sanford, N. Y., on a farm, almost five years ago. Then we moved down here to Deposit. Deposit is located on the Delaware River 30 miles east of the city of Binghamton. It has about 2000 inhabitants and isn't very progressive. We have two silk mills but one closed about five or six months ago. Oquago Lake, which is about 3 miles from Deposit is quite a summer resort. It is located 2000 feet above sea level.

Stilesville, a town about one mile from Deposit, is a summer resort. Lots of people from New York go there for the summer.

My parents rent this house. It is really a farm but we only rent the house, a henhouse, and a small garage. The house is more than a hundred years old and has three fireplaces, some wonderful carving, and lots of small cupboards or closets. Years ago it was the fair ground and the buildings on the land are the judge's stand, the horse barn, the dance hall, and the race track.

The horse barn shows that it is old because the planks in it are worn. I have a smaller brother, Stanley, and he and our friends and I play in the barn. (I also have a big brother who is a freshman in college and a sister who is a freshman in high school.)

We would play in the dance hall but the landlord, Mr. Hill, and his wife live there in summer and store goods there in winter. We also play in the judge's stand some and as we haven't chickens now, the henhouse is empty.—E. Webster Haight (X), Delaware Co., New York.

Dear Cousin Ruth and Forum Friends:—My father was plowing and he went to some sales. I would have liked to go to one on the 21st but it rained so I could not go. But I think I will go on Friday if it does not rain. We went up to Logan School to spell on sides but we beat them.

I was so glad to hear from you. I wish you would write some more. Cousin Ruth, will you please come to my place sometime this summer?—Irene Limbert, (X), Centre County Pa.

MY THREE NIECES
Edna Cooper, Schuylkill County, Pa.

I've had many invitations to visit my Forum cousins this summer. How I wish I could accept but I'm afraid work will keep me here in the office.

COUSIN RUTH.

Dear Cousin Ruth and Readers:—We have a poem to speak every Friday. We take nature walks every other Friday. We see birds, trees, insects and other things.—Phoebe E. Simkins, Cumberland County, N. J.

Dear Cousin Ruth:—I am sending you a picture of my sister, Irene, and myself taken with my baby beef. He was very tame.

I am a member of the Adams County Baby Beef Club and we take our baby beeves to the State Farm Products Show at Harrisburg. I suppose you've all heard of the exhibit.

MY BABY BEEF
Catharine Hostetler, (X), Adams Co., Pa.

My baby beef didn't win such a good prize but my sister won third in the state and my brother won ninth in the county and I won twenty-ninth in the county. I'm interested in club work. I must not forget that a boy won grand champion over all from our county.—Catharine Hostetter, (X), Adams County, Pa.

Dear Cousin Ruth:—I live on a farm on the main road from Nottingham to Pine Grove and about three miles west of Oxford. I milk three cows. I claim two of our horses, Dolly and Fanny, because I have to drive them to Glenroy Creamery which is about two miles from my home.

Every Thursday at school we have a poem to learn. The last ones we learned were Paul Revere's Ride and The Spacious Firmament on High.—Anna L. Sheetz, fourteen (X), Chester County, Pa.

Dear Cousin Ruth:—There was a lot of hepaticas out in our woods and I thought for sure that spring had come, but last night it got colder and in the morning I was surprised to see six inches of snow.

The Tunkhannock Creek flows back of our schoolhouse and a branch of it flows on one side of the schoolhouse, so we have water on two sides. The boys and girls have lost a lot of balls in the water. Sometimes when the water is high in the creeks it covers half of our school yard.

The school yard is quite large and has ten or a dozen maple trees on it. We have a flagpole and the boys and girls stand at the other side of the school yard and try to hit it with snowballs.

Last month we had "exams" and my average was ninety-four.—Marion M. Snyder, twelve (X), Susquehanna County, Pa.

Dear Cousin Ruth:—I broke my left collarbone last week in school. I like to help my daddy to tend the chickens.—Margaret Miller, twelve, Schuylkill County, Pa.

Dear Cousin Ruth:—I am eleven and milk two cows. I like to help do the spring work. I can drive a team of horses to harrow and to make hay. It is a big white team of horses.

I go to a consolidated school at East Brook. I ride in a bus every morning and evening. We have fun in the gymnasium.—Robert Jameson, eleven, Lawrence County, Pa.

Dear Cousin Ruth:—I have two dogs, Tippy and Jack. They are very playful. Tippy is a shepherd and Jack is a fox terrier. My father got a pair of mules.—John Russel Hoy, ten, Centre County, Pa.

Dear Cousin Ruth:—I thank you for my membership pin. I showed it to the boys at school and they said it was nice. I have nineteen little chickens, they are Jersey Black Giants. I have a pet dog. This winter he pulled me on my sled. I play cowboy with him.—George W. Christman, (X), Bucks County, Pa.

Dear Cousin Ruth:—This is my first year at school. I had scarlet fever and my teacher sent my lessons home every day after I got better. We used to live on a farm. I had a dog but don't have him now as we live in town. My little sister and I fed the birds this winter. I like to hear them sing. I can play the mouth organ and so can my little sister. She is three years old. Daddy will buy us a new mouth organ some of these days.—Edgar Delp, six (X), Clarion County, Pa.

OUR LITTLE FOLKS' PUZZLE CORNER

DEAR LITTLE FOLKS:—Today we're having another birthday party, and many people—Little Folks and big folks—in many lands are glad that this great man once lived. He was born more than 300 years ago but the plays he wrote are much enjoyed, whether played on the stage or read silently or aloud, even until this day. You see he was interested in so many things—Nature as we see her out of doors and human nature as we feel it in ourselves and as we notice it in other folks—and fairies, too. In the cities in the list below and in the country, too, there are many people who would feel that at least part of their lives would have been missed had this man not written some of the things he did. I think he would have liked to have his name in a puzzle, because he was fond of puzzles, both the solving of them and the making of them, and you can find his name if you will supply the missing letters in the names of these cities. After you have added what you need to make these names complete, write down on another piece of paper the letters you added and you will have the name of one of the men whose writings have added so much to our pleasure. Then send me his name on a postcard or in a letter so that it reaches me by April 30th. BE SURE TO SAY HOW OLD YOU ARE, and please remember to tell me the name of the county where you live and when YOUR birthday comes. The prizes go to the ten children, sending in the correct answer, whose cards or letters are the best in grammar, spelling, punctuation, penmanship and general appearance. Address all puzzle answers to The Puzzle Editor, Pennsylvania Farmer, 261 South Third Street, Philadelphia, Pa.

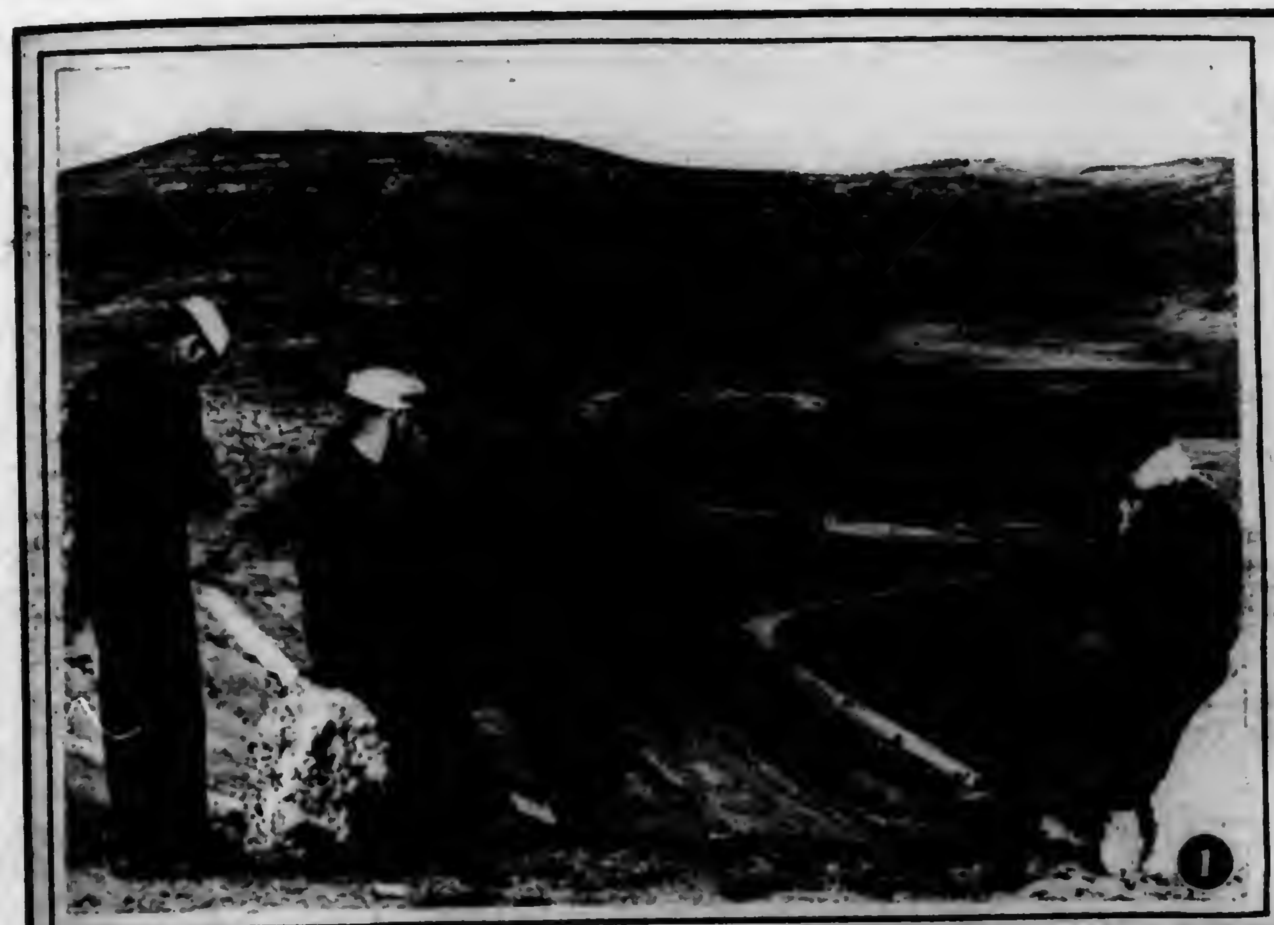
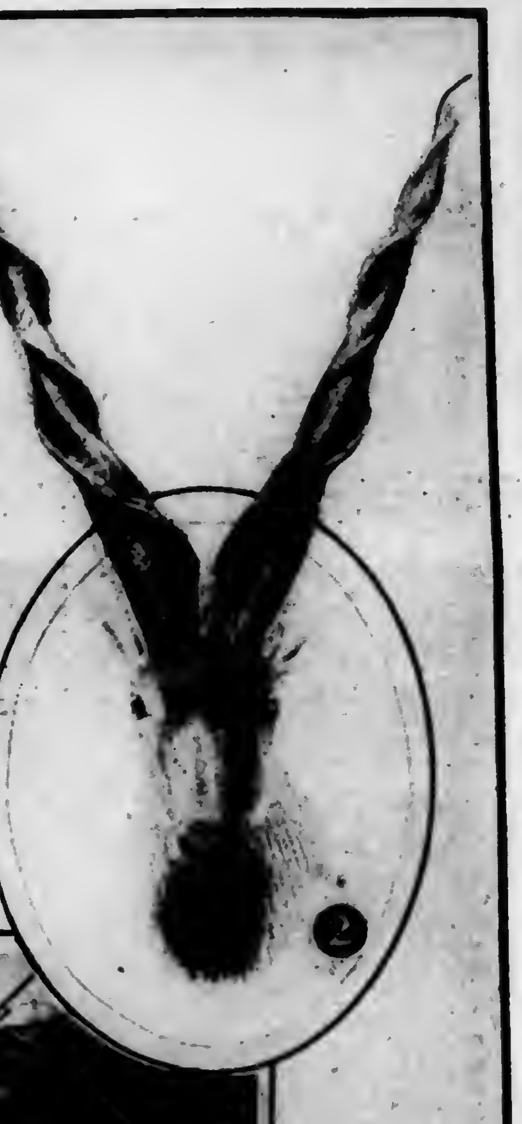
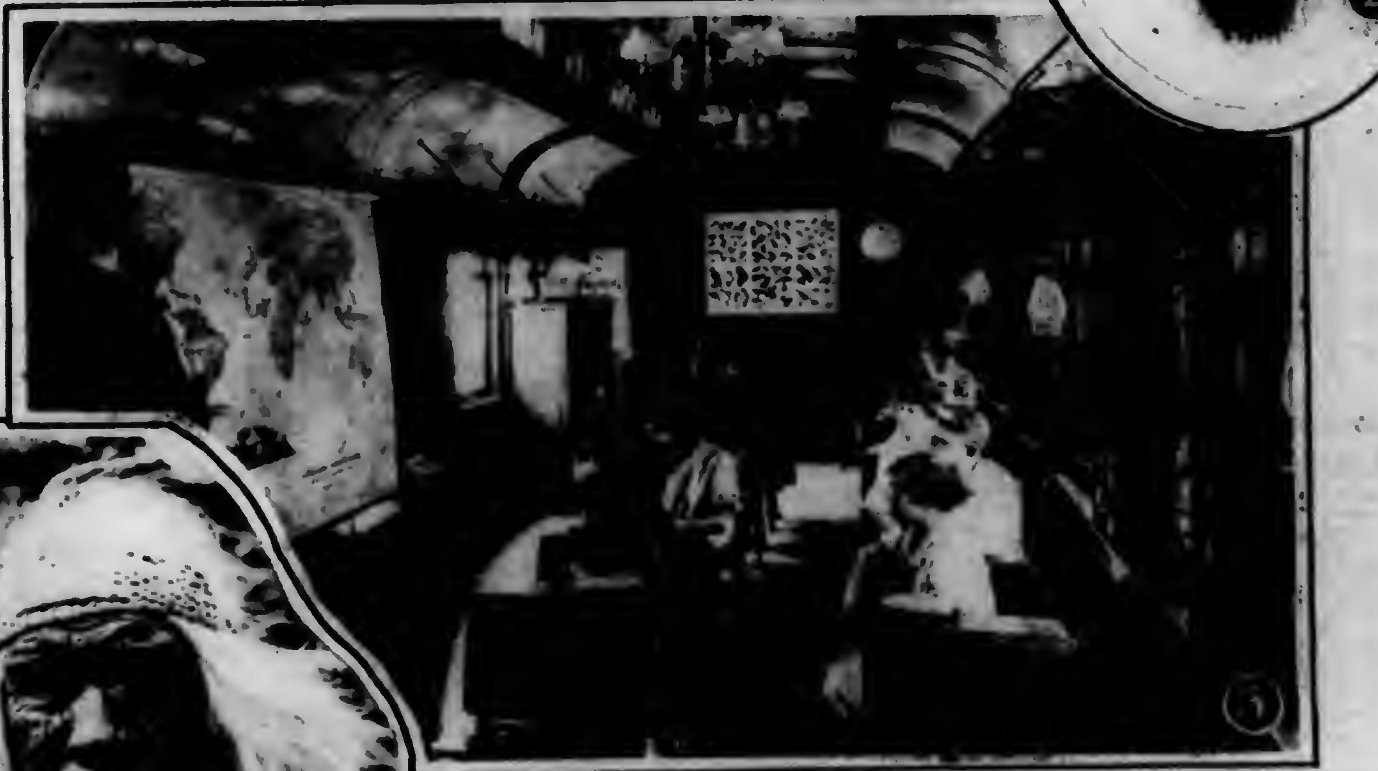
The answer to the puzzle about spring flowers (in the issue of April 2) is: NARCISSUS, HYACINTH, DANDELION, DAFFODIL, VIOLET, PANSY, CROCUS, TULIP, ARBUTUS.

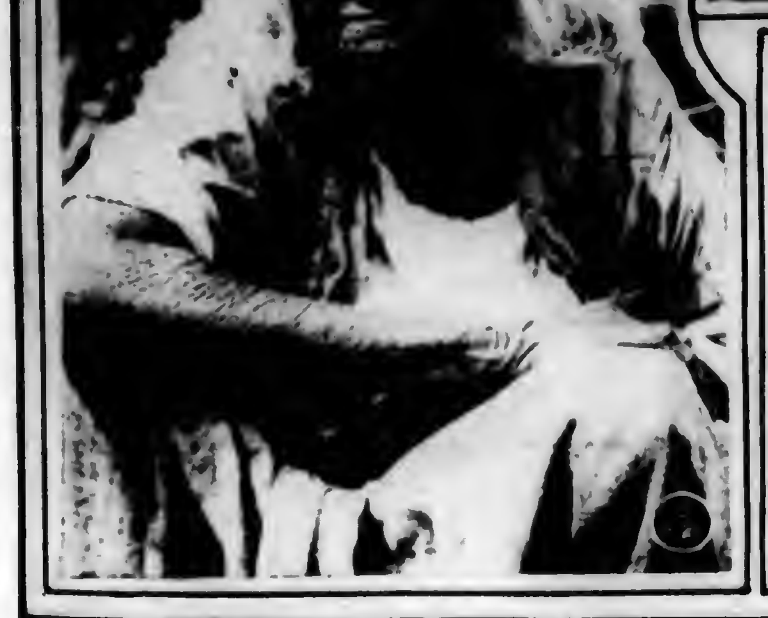
The prize winners are: Gladys Anderson, age 10, Stewartstown, Pa.; John Bixler, age 8, Hallam, Pa.; May Clemson, age 9, Frederick, Md.; Mary Lavina Keener, age 7, Manheim, Pa.; Fred Lankford, age 10, Hurlock, Md.; Gail Logan, age 12, New Stanton, Pa.; Helen P. Myers, age 10, Taneytown, Md.; Beatrice Pearl, age 8, Kulpmont, Pa.; Lawrence Whitlock, age 8, Chesapeake City, Md.; Emily Worrell, age 11, Pemberton, N. J.

PASSING EVENTS IN PICTURES









(Copyright by Underwood and Underwood)

1.—Sailors from the U. S. S. Memphis view the ruins of Khan El Loubban, Palestine, from the mountain road above the village.

2.—The only specimen of the straight-horned markhor in the United States is in a museum in Chicago. This animal, a species of goat, is so rare that there are fewer than ten specimens of it in the museums of the world. Its habitat is the Shin Gar mountain range of India.

3.—The Canadian government sends a schoolroom on wheels to districts so sparsely settled that the population is not large enough to justify the erection of a schoolhouse. A specially fitted railway coach which gives the teacher ample facilities for instruction follows new lines of railroad construction.

4.—Monica Ordello, over one hundred years of age, is one of the oldest Indians on the Campo Reservation near San Diego, California.

5.—A silhouette view of the airplane carrier, the U. S. S. Langley, now with the Asiatic Fleet in the Mediterranean Sea. Nine planes can be seen on the "take-off" deck against the skyline.

Judith of Blue Lake Ranch

By JACKSON GREGORY

Copyright Charles Scribner's Sons

The Story Thus Far

JUDITH SANFORD, part owner in Blue Lake Ranch since the death of her father, Luke Sanford, fired Bayne Trevors, general manager, because he wasn't square. The men grumbled. Trevors made trouble in every way possible. Bud Lee, horse foreman, and old Carson promised to stay. Judith could depend on them and on "Doc" Tripp, veterinarian and a friend of her father.

Busy days followed. Mrs. Simpson took up her duties caring for the ranch house and Pollock Hampton, part owner of the ranch, arrived with Major and Mrs. Langworthy and Marcia, their daughter.

Months passed and then Trevors made his last desperate play to ruin Blue Lake Ranch. He abducted Judith. But Hampton wouldn't believe anything against Trevors so Lee left him guarded by Tommy Burkitt when he went in search of Judith.

To Judith life had become a nightmare. Again and again she went over in her thoughts all that had happened since she had been made prisoner by Trevors and taken to the cave of Mad Ruth. Heavy wooden panels blocked the mouth of the cave. Blackness shut her in. She must do something. From her bed of fir boughs she selected the largest branch and slowly and patiently prepared a weapon. This and a jagged stone she hid away in case of need. The need came in the shape of Chris Quinnion, the man she believed responsible for the death of her father and the man Lee had severely punished for talking about her. It was dark. Mad Ruth had gone to the cabin across the chasm. She was alone. At sight of the man fear gripped her but at his evil touch anger took the place of fear.

Continued from last week

NOW, tho he had the brutal force of a strong man, Quinnion did not have the swiftness of movement of an alert, desperate girl. Before he could grasp her motive she leaped toward him and toward the bed of boughs, found the ragged stone, and lifting it high above her head flung it full into his face. The man staggered back, crying out in throaty harshness, a cry of blind rage. But he did not fall, did not pause more than a brief instant.

A little dazed with blood in his eyes, he lunged toward her. She had found the club now and struck with all her might, again beating into his face and again and again. He sought to grapple with her and she beat him back. She saw his hand go to his hip and heard him curse her, and she leaped in on him and, panting with the blow, struck again. He flung up his arm. She struck once more. Taking the blow full across the face, Quinnion reeled back, stumbled at an uneven spot in the rock floor, balanced, almost falling. . . . .

Only a moment he held thus. But there was a chance to pass him in the narrow way, and she took her chance, her heart beating wildly. And as she shot by she struck again.

She heard him after her shouting curses, stumbling a little, coming on. The door was open, thank God, the door was open! She shot thru. If she could but take time to close it! But there was no time for that; he was almost at her heels. And outside was the ledge and the dizzy climb down.

If she slipped, if she fell, well, it would just be a clean death and nothing more. Quinnion was but a few steps behind her. He had not fired. Had he perhaps dropped his gun back there in the darkness? Or was he so sure of taking her, alive and struggling, into his arms in another moment?

SHE was on the ledge. It was dark, pitch-dark. But she found a handhold, threw herself flat down and thrust her feet out over the edge, less afraid of what lay below than what came on behind her. She was gripping the ledge now with her hands, already torn and bleeding, her feet swinging, touching sheer rock wall, slipping, seeking a foothold. Quinnion was just there, above her. She must move her hands so that he could not reach her. It seemed an eternity that she hung there, seeking a place somewhere to set her feet.

She found it, another, lesser ledge which she had almost missed, and knew that this way she had clambered upward with Bayne Trevors. If she could only find another step and another before Quinnion came upon her! She held her club in her teeth; she must not let that go.

Quinnion was over the ledge, following her. She heard his heavy breathing, heard him cursing her again. She was going so slowly, so slowly, and Quinnion would know the way better than she. Quinnion would make better time in the dark.

She moved along this lower ledge. At each instant she wondered if it were to be her last, if she were going to fall, if a swift drop thru the darkness would be the end of life.

Suddenly there was scarce room in the girl's breast for hatred of Chris Quinnion, so filled was it with the love of life. She wanted to see the sun come up again, she wanted the sweet breath of the dawn in her nostrils, the beauty of a sunlit world in her eyes. She thought of Bud Lee. Clinging to the rocks, hanging on desperately, taking a score of desperate chances momentarily, she made her way on and down. She found scant handhold and, almost falling, dropped her club, heard it strike, strike again. Black as the night was, its gloom was less than that of the cavern to which Judith had grown accustomed; little by little she began to make out the broken surface of the cliffs. The chasm below was a pool of ink; above were the little stars; in the eastern sky, low down, was a promise of the rising moon.

THE surge of quickening hope came into her heart. Had she hurt Quinnion more than she had guessed? For, slowly as she made her hazardous way down, it seemed to her that Quinnion came even more slowly. Could she but once get down into the gorge below, could she slip along the course of the racing stream, she might run and the sound of her steps would be lost even to her own ears in the sound of the water; the sight of her flying body would be lost to Quinnion's eyes.

Then she heard him laughing above her. Laughing, with a snarl and a curse in his laugh, and something of malicious triumph. Was he so certain of her then?

"Ruth!" called Quinnion. "Oh, Ruth! The girl's gettin' away. Goin' down the rocks. Head her off at the bottom."

Judith had found, because her fate was good to her, the long slanting crack in the wall of rock up which she had come that day with Bayne Trevors. There was still danger of a fall, but the danger was less now than it had been ten seconds ago. She could move more swiftly now and confidence had begun to come to her that she could elude Quinnion. But now, suddenly, she heard Mad Ruth's voice screaming a shrill answer to Quinnion's shout; knew that Ruth had been in her cabin across the gorge and was running to intercept her at the foot of the cliffs.

Well, still there was a race to be run and the odds not entirely uneven. Ruth must descend the other side of the canyon, get down into the gorge, make the crossing, which, so far as Judith knew, might be farther up or farther down stream, come to the cliffs below Judith before Judith herself made her way down.

Again Judith took what risks the night and the rocks offered her and thanked God in her soul that it was given her to take a chance in the open, to use her own muscles in her own fight, not to lie longer, playing the part of a do-nothing. Now and then, across the void, there floated to her a little moaning cry from the mad woman's lips. Now and then she heard a curse from Quinnion above; often from above her, from below her own feet, from across the chasm, dropping stones, falling almost sheer, told of haste and death which might come from an unlucky step.

Fast as Judith went now, having a fair sort of cliff trail under her, Mad Ruth went faster. The gorge measured a scant fifty feet between them and the girl's alert senses told her that already Ruth was on a level with her. Ruth was winning in the desperate race. She knew her way down so perfectly, her heart was so filled with madness, that danger was nothing to her.

DOWN and down climbed Judith, caution wedded to haste, as she told herself that she had a chance yet, that that chance must not be tossed away in a fall, tho it were but a few feet. She must have no sprained ankle if she meant to see the sun rise tomorrow.

The flush had brightened in the sky where the moon was so near the ridge. The moon, too, had joined in the race; with one quick glance toward it, Judith again discarded caution for haste. She must get down into the floor of the canyon before the moonlight did; she must be running before its radiance showed her out to Quinnion and Ruth.

Her hands were cut and bleeding, her heart was beating wildly, already her body was sore and bruised. But these things she did not know. She only knew that Quinnion was still coming on above her, and coming more swiftly now, quite as swiftly as she herself moved, since his feet, too, were in the better trail; that Mad Ruth had completed the descent across the chasm and by now must be crossing the stream upon some fallen log or rude bridge; that one minute more, or perhaps two, would decide her fate.

She could see the stream, glinting palely in the starlight. It seemed very near; its thunder filled her ears. Down she went and down, down until at last she was not ten feet above its surface, with a strip of gently sloping bank just under her. She stooped, took firm hold upon a knob of boulder, prepared to swing down and drop to the bottom. And, as she stooped, she heard a little whining moan just under her and straightened up, tense and terrified. Mad Ruth was there before her, Mad Ruth was waiting.

And Quinnion was coming on. She was trapped, caught between the two of them. She heard Quinnion laugh again; he, too, had heard Ruth.

"Oh, God help me!" whispered Judith. "God help me now!"

There was no time to hesitate. If she stood here, Quinnion would in a moment wrap his arms about her; if she dropped down, she would be in the frenzied clutch of Mad Ruth.

A SECOND she crouched, peering down into the gloom below her, seeking to make out the form of the mad woman. Then she did not merely drop, but jumped, landing fair upon the waiting figure, striking with her boots on Mad Ruth's ample shoulders. A scream of rage from Ruth, a little, strangling cry from Judith, and the two fell together. Ruth clutched as she went down and a hand closed over the girl's ankle. Judith rolled, struck again with the free boot, twisted sharply and felt the grip torn loose from her ankle. She was free.

She jumped up and ran and knew that Ruth was running just behind her, screaming terribly. Judith fell, and her heart grew sick within her. But again she was up just as Ruth's hand clutched at her skirt, clutched and was torn away as Judith ran on. Quinnion cursed from above as she had not yet heard him curse. Ruth reviled both her and Quinnion for having let her go.

Judith was running swiftly and felt that she could get the better of the heavier, older woman in a race of this sort. She stumbled and fell, and fear again gripped her; it seemed so long before she could rise and clamber over a fallen log and race on. But the darkness which tricked her protected her at the same time, playing no favorites now. Ruth, too, had fallen; Ruth, too, was frenzied at the brief delay.

Stumbling, falling, rising, staggering back from a tree into which she had run full tilt, bruised and torn, the girl ran on. At every free step hope shot upward in her heart; at every fall she grew sick with dread.

The canyon broadened rapidly, the ground underfoot grew less broken and littered with boulders and logs. Thru tangles of brush she went blindly, throwing herself forward, falling, rising, falling, rising again. It was a nightmare of a race, with Ruth always just there almost at her heels. She turned as far away from the stream as she could, keeping under the cliffs where there was less brush; where the way was more open, where the shadows were thickest.

She was outdistancing Mad Ruth. Ruth's weird voice came from a

(Continued on next page)

LET ME SHAKE YOUR HAND! MY COMPANY WILL BE GLAD TO HEAR OF THIS! IT'S A PLEASURE TO MEET AN HONEST YOUNG MAN! HOW IS IT THAT YOU ARE SO DIFFERENT FROM YOUR NEIGHBORS?
?
WELL! YOU SEE IT WASN'T OUR COW!

greater distance; the woman was ten, maybe twenty, feet behind her.

The moon at last rose pale gold above the eastern ridge. And now Judith could thank God for it. For the canyon had widened more and more, the banks of the river were studded with big trees, there were wide open spaces between them thru which she shot like a frightened deer, turning this way and that, darting about a clump of little firs, plunging into the shadows under great sky-seeking cedars, running as she had never run before and as she knew Mad Ruth could not run.

FREE! She was free. The triumph of it danced in her blood. On she ran and now Quinnion's voice and Ruth's were confused with the roar of the river. On she ran and on and on, and but faintly there came to her the sound of breaking brush somewhere behind her. Never had her blood sung within her as it sang now; never had the dim, moonlit solitudes of the mountains opened their sheltering arms to one more grateful to slip into them, like a wounded child into the soothing embrace of its mother.

Now again she turned so that her flying steps brought her close to the water's edge. Louder and louder grew its shouting voice in her ears, little by little drowning out the sounds of Ruth and Quinnion behind her. Now, in all the glorious night, there was no sound to reach her but the sound of running water and her own beating feet. She was free.

But still she ran, summoning all of the reserve of strength and willpower which was hers to command. The sky was brightening to the climbing moon. She must round many a sweeping curve of the river, pass under many a sheltering, shadowing tree before she dared slow her steps.

When she felt that she was overtaxing herself, she dropped from the wild pace she had set herself into a little jogging trot. When her whole body cried out at the effort demanded of it, she slowed down to a brisk walk. She was shot thru with pain, her throat ached, she was growing dizzy. But on she went stubbornly. It was a full hour after the last sound of pursuit had died out after her that [illegible] flung herself down at the wa[illegible]ge to drink and bathe her arms [illegible] face in the cold stream. And, even then, she chose a spot where the shadow of a great pine lay like ink over the bank.

The moon was high in the sky, the world bright with it, when Judith left the valley into which the canyon had widened and made her way slowly upward along a timbered ridge to the west. Of Quinnion and Mad Ruth she now had no fear. Their chance of coming upon her was less than negligible. She could creep into a clump of thick-standing young trees and, even if they should come, could watch them go past. But as they had dropped out of her world, another matter had entered it. The mountains had befriended her; they had opened their arms to her and that was all that she had asked of them. They had mothered her, drawing her into hiding against their bosom. But it was a barren, barren breast. And already she was hungry, daring to eat but sparingly of her handful of bread and meat.

FROM this ridge, finding an open crest, she stood looking over the world. Mile after mile of mountain and canyon and cliff fell away on every side. She sought eagerly for a land-mark: to see yonder in the distance Old Baldy or Copper Mountain or Three Fools' Peak, any one of the mountains or ridges known to her. And in the end she could only shake her head and sigh wearily and slip down where she was to fall asleep, thanking God that she was free, asking God to lead her aright in the morning.

The stars watched over her, a pale, worn-out girl sleeping alone in the heart of the wilderness; the night breezes sang thru the century-old tree-tops; and Judith, having striven to the uttermost, slept in heavy dreamlessness.

With the cool dawn she awoke shivering and hungry. Her hair had tumbled about her face, and sitting up she braided it with numb, sore fingers. She looked at her hands; they were stained with blood from many cuts. Her skirt was torn and soiled; her stockings were in strips; her knees were bruised. But as she rose to her feet and once more searched the riddle of a crag-broken world, her heart was light with thankfulness.

Last night the one friend she had with her was the north star. Today she would seek to push on toward the west. In that direction she believed the Blue Lake ranch lay, tho at best it was a guess. But going westward she could follow the course of the bigger streams, and soon or late, if her strength held, she would come to some open valley where men ran stock. Now, she would go down into the little meadow lying a mile away yonder and seek to find something to eat. If she could but dig a few wild onions, wild potatoes, they would keep her alive. West she would go, if for no other reason than because thus she would be setting her back squarely upon the cavern where Quinnion and Ruth were.

The sun rolled into a clear blue sky and warmed her. She made her way down the long flank of the mountain and into the tiny meadow. For upward of two hours she remained there, nibbling at roots which she dug up with a broken stick, seeking edible growths which she knew, finding little, but enough to keep the life in her, the heart warm in her breast. Then she went on, over a ridge again, down into a canyon and along the stream which rose here and flowed westward.

(To be continued next week)

Did you ever hear this one?—

Working Up an Appetite

A tramp knocked at the kitchen door of a Portland home one day, where he was greeted by a smiling Chinaman.

"Say, John," croaked the tramp, "give me a hand-out, for the love o' Mike, will yer? S'elp me, I'm starvin'."

"Like fish?" inquired the Chinaman with a bland smile.

"Betcha sweet life I like fish," said the tramp eagerly.

"Call Fliday," said the Chinaman, and still smiling blandly, he shut the door.

An Infantile Banquet

"You're looking fine," announced the doctor to his patient. "Have you followed my dieting instructions and eaten only what a three-year-old child would?"

"Yes, doctor," was the sad reply. "For dinner I had a handful of mud, one of coal dust, a button hook and a box of safety matches."—American Legion Monthly.

Vanishing Miracle

Tillie—What would you call a man who hid behind a woman's skirts?

Willie—A magician.—Awgwan.

Several ways to eliminate railroad crossing accidents:

1—Sell your car.
2—Sell your car.
3—Sell your car.
4—Sell your car.
5—If you can't sell your car, junk it.—F. R.

Policeman (to pedestrian, just struck by hit-and-run driver)—Did you get his number?

Victim—No, but I'd recognize his laugh anywhere.—Life.

"Do you think your public understands your arguments?"

"Not fully, I hope," answered Senator Sorghum, "I may want to contradict 'em 'most any day."—Washington Star.

Which Farm Engine Would You Choose?

If you were given your choice between two farm engines—one with its cylinder, gears, bearings and other important parts exposed to sand, dust and dirt, one having a number of grease cups and oilers to fill, adjust and watch;

—another engine with all of its important parts (cylinder, bearings, gears) all completely enclosed in a dust-proof case, with a simple automatic oiling system that does away with all grease cups and oilers—an engine that will run until the fuel is exhausted without one moment's attention—

—wouldn't you choose the latter?

The John Deere Type E

is the enclosed engine that oils itself. It has set new standards in farm engine building. Its longer life, smooth running, lower upkeep costs and ease of operation result in time-saving and money-making advantages you want in your engine.

Be sure to see it on display at your John Deere dealer's. Ask him to run it for you. Built in 1-½, 3 and 6 H. P. sizes.

For years to come it will always be ready to save time and money for you on your lighter farm power jobs.

This is the John Deere Direct Drive Pumping Outfit — compact, self-oiling —will run without attention until the fuel is exhausted. No belts, gears or chains for the stock to get into. An ideal outfit for the stock raiser.

JOHN DEERE
THE TRADE MARK OF QUALITY MADE FAMOUS BY GOOD IMPLEMENTS

Stop Chick Diarrhea
White—any kind

When diarrhea appears in your flock, in any form whatever, stop it. Modern science has evolved a tablet to cope with this chick plague. You get it only in

Dr. Hess
WHITE DIARRHEA TABLETS

You use them either way, as a preventive, or as a remedy.

Lots of folks like to take no chances of backsets from diarrhea in their flock. For the first three weeks they give all the drinking water this scientific treatment.

You simply crush and dissolve 4 tablets to each gallon. Need never stir but once.

These tablets are inexpensive. You get 225 fifteen-grain tablets for one dollar. Or 100 for fifty cents.

Now mark this—You use these tablets at our risk, not yours. If any form of diarrhea attacks your flock that Dr. Hess White Diarrhea Tablets will not remedy, and do it most effectually, your dealer will refund your money cheerfully, because he knows we protect him fully.

DR. HESS & CLARK, Inc.
Ashland, Ohio

Stopped Her Chicks Dying of Diarrhea

Didn't lose another one after using this. Costs nothing to try.

Readers who wish to stop the loss of chicks from white diarrhea and other bowel diseases, will be interested in the following letter, from Mrs. W. R. Bode, Llano, Tex. She says:

"I formerly lost a big part of every hatch of baby chicks, and my neighbors have had the same experience. But I have found that this loss can be easily avoided. A few years ago, when I was losing 6 to 8 chicks a day, I started putting Avicol in the drinking water. It stopped my chicks dying so promptly that I have used it regularly ever since as a preventive. Last year I raised 140 chicks and never lost one. I've preached prevention to my neighbors, but just today I had to divide my supply of Avicol with two of them. One had already lost 20 chicks and the other 27. I can't understand why people risk such losses, when they are so easily prevented."

The same tablets which Mrs. Bode used have proven equally effective for thousands of other poultry raisers. Their reports prove positively that all anyone need do is drop an Avicol tablet in the drinking water, to stop the usual chick epidemics and insure rapid, vigorous growth. Whether the trouble has started or not, readers should not lose a minute, but send for Avicol at once. From the moment it is placed in the water, the dying chicks revive and begin to thrive and grow. The way it makes sick chicks lively and healthy, in just a few hours, is really amazing. A liberal supply of these tablets can be obtained by sending 50c (or $1 for the large size, nearly 3 times as much) to Burrell-Dugger Co. 894 Postal Station Bldg., Indianapolis, Ind. Avicol is guaranteed to do the work or money refunded, so it costs nothing to try. Folks who have used Avicol wouldn't think of trying to raise chicks without it.

Nest Box Notes

OUR oldest chicks have outgrown their mash hoppers so we made some new ones in the form of a box 16 inches wide, 4 inches deep and two feet long. This will hold about twenty quarts of mash. On top of the mash we lay a piece of inch mesh poultry wire that will just go inside the box to prevent scratching. An energetic little cockerel will soon scratch out more feed than he will ever be worth if some method isn't employed to stop his efforts.

• • •

About the fourth week Leghorn cockerels can easily be told from the pullets and should be removed to separate quarters. They are larger and stronger than the little pullets and crowd them away from the feed, preventing their best development. We plan to fatten and sell the cockerels as broilers as soon as they are big enough to go.

• • •

Coal brooders with a small smoke pipe sometimes get such an accumulation of soot, creosote and scale at the base of the pipe as to completely shut off the draft. It is a good idea to lift up the pipe and clean this stuff out several times a season.

• • •

Just as soon as the breeding season is over we dispose of the roosters at once. They are of no further use and consume a tremendous amount of feed. Their absence insures sterile eggs which are the best kind for market purposes.—R. L. Scharring-Hausen.

Treatment Requires Care

PERHAPS the best way to raise chicks free from gapes is to raise them on clean soil, but this is often not practical since there is no clean soil available that is not infested with gape worms.

If there is not a place available free from gapes, the creolin treatment will keep the chicks from taking gapes if carefully administered.

This treatment consists of putting three drops of creolin in one quart of drinking water and keeping it before the chicks all the time. They will not drink it at first if they can get other water but they should be kept from other water.

Prevents Rather Than Cures

This treatment should be given before the chicks develop gapes as it is a preventive remedy rather than a cure. After the chicks take the gapes it does not cure since its effectiveness consists of dislodging the gape worms before they reach the chick's windpipe.

The West Virginia Experiment Station veterinarian says that the continuous use of this remedy for a few years will rid an infested poultry yard of the gape worm, as the worms will die out for want of a host in which to develop.—A. J. Legg, West Virginia.

Less Poultry to England

THERE has been a big decline in the poultry exports from the United States to Great Britain during the past year. The loss of this market now when stocks in this country are very heavy is a serious loss to the American producer.

Imports from the United States into Great Britain for the month of January show:

	1926 January	1927 January
Dressed poultry, lbs.	62,608	8,624
Cheese, lbs.	446,544	38,416
Eggs in shell, doz.	59,940	23,250

—A. K.

White Diarrhea

Remarkable Experience of Mrs. C. M. Bradshaw in preventing White Diarrhea

The following letter will no doubt be of utmost interest to poultry raisers who have had serious losses from White Diarrhea. We will let Mrs. Bradshaw tell of her experience in her own words:

"Dear Sir: I see reports of so many losing their little chicks with White Diarrhea, so thought I would tell my experience. I used to lose a great many from this cause, tried many remedies and was about discouraged. As a last resort I sent to the Walker Remedy Co., Dept. 510, Waterloo, Iowa, for their Walko White Diarrhea Remedy. I used two 50c packages, raised 500 White Wyandottes and never lost one or had one sick after giving the medicine and my chickens are larger and healthier than ever before. I have found this company thoroughly reliable and always get the remedy by return mail."—Mrs. C. M. Bradshaw, Beaconsfield, Iowa.

Cause of White Diarrhea

White Diarrhea is caused by microscopic organisms which multiply with great rapidity in the intestines of diseased birds and enormous numbers are discharged with the droppings. Readers are warned to beware of White Diarrhea. Don't wait until it kills half your chicks. Take the "stitch in time that saves nine." Remember, there is scarcely a hatch without some infected chicks. Don't let these few infect your entire flock. Prevent it. Give Walko in all drinking water for the first two weeks and you won't lose one chick where you lost hundreds before. These letters prove it:

Never Lost a Single Chick

Mrs. L. L. Tam, Burnetts Creek, Ind., writes: "I have lost my share of chicks from White Diarrhea. Finally I sent for two packages of Walko. I raised over 500 chicks and I never lost a single chick from White Diarrhea. Walko not only prevents White Diarrhea, but it gives the chicks strength and vigor; they develop quicker and feather earlier."

Never Lost One After First Dose

Mrs. Ethel Rhoades, Shenandoah, Iowa, writes: "My first incubator chicks, when but a few days old, began to die by the dozens with White Diarrhea. I tried different remedies and was about discouraged with the chicken business. Finally, I sent to the Walker Remedy Co., Waterloo, Iowa, for a box of their Walko White Diarrhea Remedy. It's just the only thing for this terrible disease. We raised 700 thrifty, healthy chicks and never lost a single chick after the first dose."

You Run No Risk

We will send Walko White Diarrhea Remedy entirely at our risk—postage prepaid—so you can see for yourself what a wonder-working remedy it is for White Diarrhea in baby chicks. So you can prove—as thousands have proven—that it will stop your losses and double, treble, even quadruple your profits. Send 50c for package of Walko (or $1.00 for extra large box)—give it in all drinking water and watch results. You'll find you won't lose one chick where you lost dozens before. It's a positive fact. You run no risk. We guarantee to refund your money promptly if you don't find it the greatest little chick saver you ever used. The Pioneer National Bank, the oldest and strongest bank in Waterloo, Iowa, stands back of our guarantee.

Yellow hominy	32.00@32.25
Gluten feed	35.70
36 per cent cottonseed meal..	37.25@37.50
41 per cent cottonseed meal..	39.75@40.50
43 per cent cottonseed meal..	41.75@42.00
34 per cent linseed meal......	52.30

Millfeed in urgent demand with stocks extremely light owing to small production.

Poultry Slump Anticipated

Review of the Week Ending April 16

POTATOES—The old potato market was rather quiet and trading was generally slow. Prices held about steady on the best stock. There were only light supplies of Pennsylvania potatoes on the market and the majority of the supply on the eastern markets was from Maine.

APPLES—There was a noticeably better demand for good apples in Philadelphia. Barreled offerings were light and rather slow while fancy stock in bushel baskets and tubs moved fairly well.

EGGS—The New York egg market was strong due to the demand by the Easter trade and also for the Jewish holidays. In addition to this large quantities were being loaded for export to Argentina. Prices were firm on practically all classes of clean eggs. Nearby white eggs sold readily and there was a shortage of really fancy stock. Chain stores bought heavily for the Easter trade. The prospect for next week is not as favorable as heavier receipts and a lighter demand are expected.

POULTRY—The New York live poultry market was strong during the early part of the week but slumped at the close. This was due to the fact that the holiday trade had been supplied and supplies were more than ample for the demand.

BUTTER—Supplies of butter were very light during the week. Prices advanced sharply up until Thursday when arrivals of foreign butter in New York caused a decline of 2½c. On Friday prices again advanced and the market closed firm. Receipts were considerably lighter than the week previous but production shows signs of increasing.

LIVESTOCK—The Chicago hog market was unsettled but closed firm. Beef steers were strong while heifers advanced. Cows were steady and vealers unsettled. Heavy calves made moderate gains while stockers and feeders were generally steady. Fat lambs were steady to 35c higher while yearling wethers held steady.

HAY—The markets were steady with the light receipts equal to trade needs. Timothy was dull in eastern markets under a rather poor demand. Southern consuming sections were not buying in quantity.

FEED—The market was irregular with bran and cottonseed meal higher. There was a good demand in the Northwest which was largely responsible for the advance. Linseed meal prices were slightly lower due to heavier production. Gluten feed met a good demand at the lower prices. Hominy feed showed a weaker tone.

GRAIN—Prices were generally lower with wheat down 1c to 2c. Export business was fairly active. Corn prices declined at most markets. Oats were lower with corn.

County News and Comment

Berks County, Pa.—Early-sown wheat looks fine. Late-sown wheat poor and thin. Seed corn scarce and high. Eggs plentiful and low. Livestock in good condition. No clover seed sown on account of cold. Help on farm scarce. Prices: wheat, $1.30; oats, 50c; ear corn, 66c; clover hay, $20; butter, 50c; eggs, 23c; potatoes, $1; pork, 18c.—W. N. M., April 9.

Gloucester County, N. J.—Fruit so far is apparently uninjured. There is every indication of a big crop of fruit. Hot beds and cold frames are all out and appear to be standing the cold very well. There is little indication of any increase in the acreage of any crops except strawberries. All other crops show a slight reduction. Poultry production seems to be on the increase.—A. K., April 11.

Greene County, Pa.—Much winter plowing was done. Only a few have sown oats. Potato planting begins about April 15th. Peaches promise to be a good crop. Trees are in full bloom now. Grass and wheat looking fine. Butter, 40c; eggs, 20c; chickens, 25c.—C. M. K., April 9.

Lackawanna County, Pa.—Some farmers have started to plow, and trimming orchards preparatory to spraying. Brooder houses filled with baby chicks. A few farm sales this spring. Personal property at sales brought good prices. Eggs and potatoes have dropped in price. State roads make it possible for farmers from surrounding counties to bring their produce to our market thereby increasing the supply and lowering prices. There have been slack times at the mines, too, all winter. Eggs, 25@30c, wholesale; potatoes, $1.30@1.33 wholesale; butter, 50@55c.—E. A. K., April 6.

Passaic County, N. J.—The last two weeks of March buds started to swell and since the first of April the temperature has been below normal with one or two snow flurries. Spring work is very near normal with quite a bit of plowing done. Very little planting is done as yet but quite a bit of setting of plants, especially in the Richfield section. Strawberries will be set soon. Peach and pear buds have quite swelled. Eggs have advanced a trifle in price. Asparagus beds have been cleaned off and disced and a few new plantings are being made in this section.—N. D., April 11.

Potter County, Pa.—April was ushered in by a snow storm. Treatment immunizing pupils against diphtheria being given in some schools. Cooperation of state, borough and Health Department furnishes free treatment. Baby clinics and free treatment and operations for throat and eye troubles, made possible by the Rotary Club and public-spirited physicians, contribute much to the health of the young. Soil, except that of dry hillsides, too wet to be worked. Few colts being raised. Dairy cows are high-priced. Butter scarce in local markets, much cream and milk being shipped to creameries and condensaries. Prices: butter, 50@55c; eggs, 25c; oats, 50c.—M. C. S., April 8.

Salem County, N. J.—Potato planting is being delayed by high winds and cold weather. A slight increase in the acreage is now predicted. Pasture is getting a slow start. A few have already turned out to pasture but there is nothing for the cattle yet. Milk production is about normal with but little surplus being produced except in a few instances. Wages have been reduced. Labor is more plentiful and willing to work for $2 and $5 per week less than in previous seasons. Most farming operations are being conducted on a conservative basis as the growers do not anticipate a big year on any one crop. Hay is high and corn cheap. Good hay is bringing $28@30 per ton, while good corn can be bought for 70c per bu. The corn acreage will not be increased this season.—E. M. B., April 8.

Somerset County, Pa.—Rainy and cold with snow. Farmers hauling lime and fertilizer. The sixth annual Inter-high Essay Contest of Somerset County was held February 24th. Seven high schools were in the contest. First prize, ten dollars, was won by Mary Roy; second, Hazel Hoffmaster, $5; third, $2.50, Mary Ryland. The cup was awarded the Somerset Borough High School for one year. Sugar season seems to be at a close. Prices of farm produce: Hay, $15; oats, 55c; corn, 65c; wheat, $1.35; buckwheat, $1.70 cwt.; butter, 50c; eggs, 22c.—H. W. B., April 5.

Tioga County, Pa.—In some places ground is dry enough for plowing and there is a great deal of it to do due to the wet weather last fall. The maple sugar season is ended with an output of about half that of last year. The baby chick season is here and early hatches are much better than they were a year ago. A few prices are: eggs, 22c; maple syrup, $1.75; potatoes, 85c; butter, 50c.—P. W. L., April 11.

Tioga County, N. Y.—Some plowing was done on March 14th. Farm and Home Bureau have held many meetings. The state and county nurses are efficient and have all that they can attend to; child welfare work entails much labor, and is carefully attended to. Many children cared for. Potatoes took a big slump and buyers are only paying 75@80c per bushel at the car. Some truckmen, of Binghamton, paying $1 a bu. Eggs, 22c. C. A. A. B., April 10.

Warren County, Pa.—An unusual number of fishing licenses has been issued. County roads almost impassable, in some instances two teams are used in order to get the milk out. Many farms for sale. Poultry doing fine. Prices as follows: eggs, 29c; poultry, 28c; potatoes, $1.75; butter, 50c; apples, $1.50; veal, 16c; pork, 17c.—H. C. J., April 7.

THE AMERICAN AGRICULTURAL CHEMICAL COMPANY
AA
FERTILIZERS

1866—1927

Three generations of American farmers have endorsed "AA Quality" Fertilizers

TIME is the great test of all things. In the long run only good survives.

"AA Quality" Fertilizers are backed by a first, second and third generation of consistent, enthusiastic farmers—whose soils have been enriched, whose crops have been increased, whose profits have mounted into big money. "AA Quality" Fertilizers have "made good" in the soil, year after year, for three generations.

Sixty years of continuous scientific research and manufacturing experience have been devoted to making "AA Quality" Fertilizers mean better crops and bigger profits. Thousands of practical tests on farms like your own have proved their unequaled crop-producing powers.

You can depend upon these reliable, time-tested crop-producers. Use them for all crops.

Pennsylvania Legislature Winds Up Busy Session

THE Pennsylvania Legislature adjourned on April 14 after a busy session dealing with many minor and but few major issues. Election reform and old-age pension were perhaps the two most important issues, the first being adopted in part and the second being defeated.

ELECTION REFORM MEASURES PASSING UNANIMOUSLY.—The election reform accomplished at the recent session can be boiled down into the following: The mandatory opening of ballot boxes upon petition alleging fraud or substantial error; limiting assistance to those voters who are unable to read or see the ballot; the elimination of "dissemination of information" as a legitimate campaign expense item; the creating of a commission to codify the election laws and suggest remedial legislation. After some modification of Governor Fisher's original bills, the measures providing for the above features passed the House by a unanimous vote.

COST BLOCKS SUCCESS OF PENSION SUPPORTERS.—The old-age pension issue created a real fight in the House and was finally defeated largely on the strength of a statement by Governor Fisher to the effect that such a pension would cost the state approximately $73,000,000 every two years.

One of the very encouraging features of the session just adjourned is that all bills which were linked with the "wet" side of prohibition were defeated.

NEW DEPARTMENT AND COMMISSION CREATED.—Two important changes made in the "administrative code" are the following: The creating of a Department of Revenue which will collect all taxes and fees payable to the Commonwealth; the formation of a State Farm Products Show Commission which will conduct and manage the State Farm Products Show as well as formulate plans for the establishment of a state fair.

The oleomargarine bill and the Sanitary Milk Control Board bill which aroused much interest among dairymen, milk dealers and local authorities were "salted down" in committee. Strong opposition developed against each of these bills.

PENNSYLVANIA STILL WITHOUT STATE FLOWER.—A bill making the tulip tree and flower the state tree and flower was amended in the House, after passing the Senate, making the hemlock the state tree. The bill was short-lived after being amended. So much opposition developed that it was dropped from the calendar.

The bill permitting the use of skimmilk powder in sausage was defeated in the Senate by a margin of only one vote. The bill was opposed by pure food officials because it was thought that such a provision would open the way for adding all sort of material, other than meat, to sausage.

PASSED BY THE "SKIN OF ITS TEETH."—No bill had a narrower escape from defeat than the one raising the resident hunter's license from $1.25 to $2.00. The bill was first defeated, then reconsidered and passed in the Senate. The same thing happened in the House. The fishing license fee was also increased to $1.50 after a close fight.

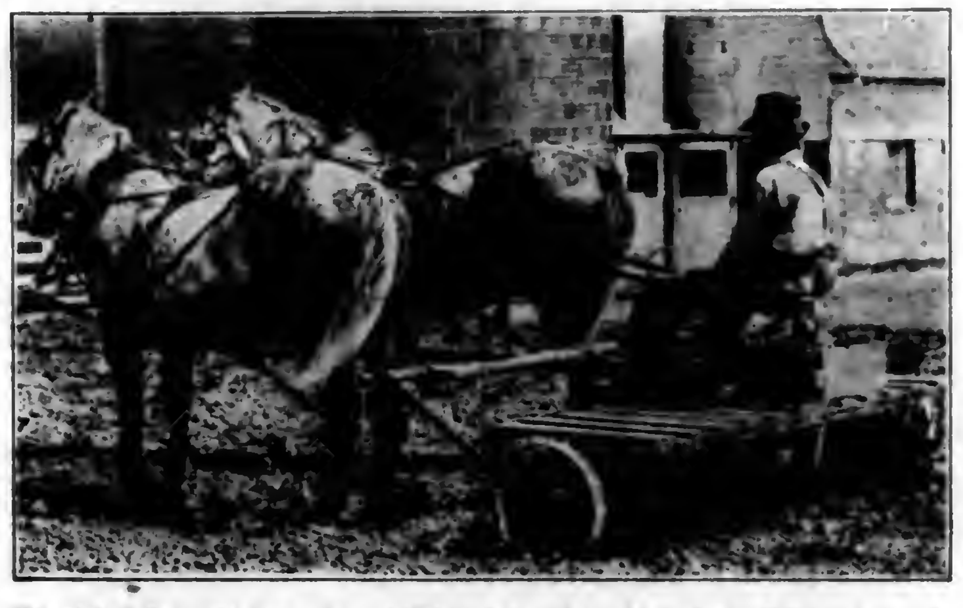
The Brown bill appropriating $350,000 for the erection of a combination armory and State Farm Products Show building in Harrisburg was passed and is now in the hands of Governor Fisher.

STATE COLLEGE TO RECEIVE ORIGINAL SUM ASKED.—The bill appropriating money for the Pennsylvania State College for the next two years finally passed in the form as originally introduced, providing for $4,234,500 to be used as follows: $2,181,000 for general maintenance, $403,500 for research, $650,000 for agricultural extension work, and $1,000,000 for new buildings.

Over 600 miles of road were added to the State Highway system by a bill rushed thru during the closing days of the session.

RUNNING EXPENSES OF THE STATE.—The general appropriation bill carries a total of approximately $105,000,000 for the expenses of the state for the next two years. The amount appropriated for the Department of Agriculture for general purposes outside the Bureau of Animal Industry is $688,000. In the final amendments the amount for tuberculosis indemnity was increased from $2,000,000 to $2,160,000, according to the latest available reports.—J.

Out to Get the Weeds



The rotary hoe used just after seedlings come thru the ground breaks the crust and kills young weeds, leaving the plants in full possession. Planted crops root deeper than weeds so are not injured by this early cultivation.

Favor Five Varieties

A STUDY of the marketing of apples in 291 retail stores in 10 Pennsylvania cities was recently completed by H. Andrew Hannemann, of the State Bureau of Markets. The survey included stores in the following towns: Philadelphia, Pittsburgh, Meadville, Uniontown, Johnstown, Lewistown, Williamsport, Reading, Hazleton, West Chester. These are some of the conclusions drawn by the Bureau of Markets:

"It is very evident that the commercially desirable varieties of winter apples in Pennsylvania can be limited to a few. Five varieties—Stayman, Jonathan, Delicious, Baldwin and Rome—have the widest distribution, being handled by more than three-fourths of the retail stores. . . .

"The Pennsylvania grower who is selling his apples in domestic consumption channels must be prepared to abandon the barrel pack. The stiff side tub basket is becoming increasingly more important in the eastern fruit trade. . . . This unit can be sold more quickly than the barrel and there is less loss to the distributor in spoilage and decay. . . .

Sell in Peck Packages

"The two stores which sold more than 500 bushels of apples weekly made a specialty of selling in peck units. They repacked their apples in attractive peck packages and sold them at a low margin of profit. . . .

"Every retailer who handles western box apples buys them with complete confidence because he knows how many apples are in the package that he buys and also because he knows from experience that the fruit is uniform from top to bottom. He does not have this confidence in buying eastern-grown apples. . . . Eastern-grown apples, because of their excellent flavor, would command much higher prices in leading markets were they more uniformly packed and better graded. . . ."

Mimeographed copies of this report, entitled "Merchandising Apples in Ten Pennsylvania Cities," may be obtained upon request to the State Bureau of Markets, Harrisburg, Pennsylvania.

Spraying Increased Yield

FOLLOWING the example set by Pennsylvania, three spray rings were formed in western New York last year. This was the first work of the kind in that section carried on to protect potatoes from late blight. The fields were covered every ten days, beginning when the leaves were 8 inches high. Measured by check rows left unsprayed in each field the results in the three rings in Monroe County meant an average increase in yield, due to the spraying, of 55.06 bushels per acre. The increase in yield varied from 6 per cent to 80 per cent, and in no case was less than 13 bushels per acre, using 5 applications.

The total cost per acre of spraying was $10.77, paying trained operators at the rate of $75 a month and board. The average net profit from spraying was $69.97 per acre. Results from spraying for blight have become more sure with added knowledge and experience.—M. G. F.

Nut Trees Aren't Hard to Grow

(Continued from page 3)

one foot square and about six to eight feet apart should be prepared. This may be accomplished with a mattock by removing the sod and loosening up the ground a bit. No fertilizer is necessary. The nuts may then be pushed down into the ground for a depth of not over two inches, and covered. Four or five nuts to the spot, set a few inches apart, are sufficient. The nuts should be hulled to facilitate germination. To prevent frost heaving, throw a mulch of leaves or grass over the spot.

If Spring Planting Is Preferred

If spring planting is desired, take the nuts and stratify them in wet sand and keep them in a cool place such as a root cellar. To stratify take a box, cover the bottom with wet sand; throw in a layer of nuts and then alternate layers of wet sand and nuts until they are all stored. Follow the above outlined practice of planting in early spring. The mulch is not necessary at this time.

When planting in a nursery the seeds may be planted in rows far enough apart to allow cultivation and keep down the weeds.

A year or two after planting in the field, if direct seeding is used, go thru the plantation and cut off all but the most vigorous seedling in each spot. As the grove progresses, thinning out the weaker trees should take place regularly, particularly if good nut producing trees are desired. A tree, to produce nuts, should have a fully developed crown of leaves and branches. Eventually, they should be 20 to 40 feet apart.

English walnuts can be grown successfully in the warmer sections of Pennsylvania. However, where it is planned to grow this variety it is safest to procure grafted seedlings from a reliable nursery. There are so many varieties of this species that are subject to winter killing even in the warmest sections of the state, that it is a good plan to be sure of your stock before wasting your time planting.

DAIRY

Milking Shorthorns Some heifers and young bulls over one year, down to six weeks, for sale, price right. Herd sire Glenside Red Boy, sired by Glenside Red Clay by Jon Janson. All are registered and tuberculin tested. S. H. REARICK, SPRING MILLS, PA.

TELL the advertiser you saw adv. in Pennsylvania Farmer.

Veterinary

Conducted by Dr. J. F. Shigley
Associate Professor of Veterinary Science, Pennsylvania State College, and Veterinarian in charge of College Livestock.

Advice thru this department is free to our subscribers. Each communication should state history and symptoms of the case in full; also the name and address of writer. Initials only will be published. We invite readers to make use of this service. Clippings from the column when properly preserved and classified, make one of the most valuable medical symposiums a farmer-stockman can obtain.

SOWS DO NOT COME IN HEAT.—I bought two six-month-old Duroc-Jersey open gilts that were displayed at Harrisburg Futurity Show, Sept., 1926. I also purchased a six-month-old Duroc-Jersey boar. I penned the gilts to the boar on November 26, 1926, and have not seen that the gilts were in heat yet. What can I do? The gilts are not excessively fat.—C. E. S., Tower City, Pa. Feeding of sprouted oats is advised, but green feeds coming on now would tend to take the place of this. Allow plenty of range; reduce the ration so that there will be no excess fat. Some have reported favorably upon the use of gland extracts hypodermically. Better consult your veterinarian on the latter point. Let us know what results you get by increasing the range and watching the diet.

LUMPS FOUND AFTER SLAUGHTER.—I have a cow which foundered four years ago on sweet corn. Was stiff in joint, otherwise seemed all right. I put her dry and fattened and killed her. When opened we found two large lumps on each shoulder and a cluster of smaller ones in the lining of lungs.—T. P., Hamlin Station, Pa. If this cow has not been tuberculin tested these lumps should be examined to determine the nature of the contents. Where these lumps are distributed an examination might be made by your veterinarian, or some of the material sent to a laboratory for examination. It is doubtful that the condition came from the founder.

PIGS HAVE POOR APPETITE.—I have two shoats weighing about 80 pounds each. They have a cough, also stand and scratch their sides. They drink slop but care nothing for shelled corn. What shall I do for them?—H. J. O., Biglerville, Pa. These pigs are very likely infested with parasites. Worm capsules may be administered to remove the adult parasite. The cough is probably due to the larvae as they migrate in the lung. Try feeding a mixture of 100 pounds shelled corn, 10 pounds tankage or fish meal and 5 pounds each of oil meal and ground alfalfa. It is possible they will eat the corn when put on this mixture.

Naming the Farm

Do you ever suggest names for poultry farms? Is it possible to infringe upon another farm's name when selecting one for your own?—G. H., Bucks County, Pa.

One way of selecting a name for a farm is to connect it with some distinguishing feature about the farm or neighborhood, such as a mountain, stream, grove, valley, or some other feature that readily applies to the lay or location of the place. If special emphasis is placed upon the quality of the product an adjective as superior, excellent, premium, modern, standard, etc., or such a word may be included in a name. Many poultrymen use their own name in connection, as "Smith's Modern Poultry Farm." In every case there should be something which ties up the name logically with the place or product.

A name may be said to infringe upon another when it is identical, or when a part of the name would tend to confuse it with another. Pennsylvania has no law which specifically registers a farm name, but there is a law by which a name is recorded for exclusive use as a trademark. The Internal Department will not register a name for this purpose which conflicts with another already registered.—K

Our Readers' Classified Advertising Department

A market place to buy or sell at little expense. Over 100,000 farm families read Pennsylvania Farmer every week. Rate 6 cents a word each for one, two or three consecutive weekly insertions; 5 cents a word each for four or more insertions. Count each number and initial and send cash with order. Orders, discontinuances or changes of copy must reach us by Wednesday of week preceding date of issue. All advertisements set in uniform style, no display type or illustrations. Poultry advertising may run here, but if displayed or illustrations used must run in display advertising columns at commercial advertising rate (65 cents per agate line). Livestock advertising not accepted in this department. Minimum, ten words.

I want you to **see** for yourself what a wonderful, easy-operating, fast-working, strong, substantial machine it is. When it comes, hook it to your biggest, toughest stumps. See how quickly and easily one man alone handles them. PROVE ALL MY CLAIMS! A three year guarantee bond with each Kirstin.

Get Special Offer!

Limited Time Only — to introduce new models in each locality — also *easy terms — one year to pay.*

One Man Alone Pulls Big Stumps.

A. J. KIRSTIN, Gen. Mgr.

Read These Letters From Kirstin Users

My 13-year-old boy easily pulls big solid birch stumps from red clay with our Kirstin. It does all you claim and more.—*G. E. Clark, Brampton, Mich.*

It is wonderful the power your Kirstin develops. I use it for clearing steep hillsides of oak, pine and spruce stumps and standing trees. I would not be without it.— *E. E. Frederick, Pocket Ranch, Quincy, Cal.*

My Kirstin is a wonder. It pulled green oak trees up to 24 inches in diameter with surprising ease, and at less cost than any other method.— *Albert Kahle, Gascondale, Mo.*

My neighbors are astonished to see the Kirstin yank out the big ones. It pulls my largest stumps.— *Martin Peterson, Rio, La.*

My Kirstin cleared six acres of solid, sound tamerac and fir stumps measuring up to 60 inches from hard clay soil.—*Charles Flannigan, Springdale, Wash.*

Last fall I cleared land of stumps up to 34 inches in diameter. However, not a single one sat hard enough to show how much power my Kirstin would develop.— *E. Thompson, Culver, Minn.*

My Kirstin has pulled probably 4,000 stumps—some locust stumps with 20 to 35 foot roots. No stump puller could be better.— *Adam Billett, Wrightsville, Pa.*

World's Largest Makers of Stump Pullers

We make 14 sizes and models—including Kirstin One-Man Clutch, One-Man Drum, and the speedy, strong, powerful Horse Power models—the best and most efficient Horse Power Stump Puller you can get.

With the KIRSTIN ONE MAN ALONE handles biggest stumps! This feature has enabled thousands of farmers to rid their land of money-losing, land-wasting stumps. **No horses or extra help needed!** No digging, no chopping or other expense! Kirstin's scientific leverage principle is the reason! A few pounds pull or push on handle exerts tons on stump. One man pulls big, little, green, rotten, low-cut, tap-rooted stumps — trees, hedges or brush. Clears an acre from one anchor. Works in swamps, boggy soil, thick timber, or on steep hill-sides where horses can't work. Easy to move around field.

One Man Pulls Big, Little, Green, Rotten, Low-Cut, Tap-Rooted Stumps

One Man Pulls Trees, Hedges or Brush

One Man Moves Buildings, Pulls Out Stalled Automobiles, Wagons, Tractors, etc.

Kirstin ONE MAN Stump Puller

Single — Double — Triple Power

The Kirstin weighs less and costs less. Has greater speed, strength and power. **Lasts longer! Guaranteed 3 years against breakage — flaw or no flaw!** Pulls stubborn stumps in a few minutes at low cost. Several speeds. Low speed starts stumps — high, **rips 'em out quick!** Patented, quick-cable take-up **saves time,** cable and machine. Government Officials, University Experts, Land Clearing Contractors, thousands of Farmers — ALL AGREE it is the cheapest, quickest and easiest way to pull stumps!

Send the Coupon for My New Book FREE

Contains valuable land clearing information; tells why expensive labor need no longer prevent pulling pesky stumps; why you should have all your land cleared NOW, available for **more crops — more profits!** Reproduces hundreds of letters from Kirstin users like shown above. Fully describes the famous new model Kirstin One Man Stump Puller. Shows how any Kirstin pays its cost in BIGGER CROPS and increased land value the first season — goes on making money **for years.** Send coupon for the FREE BOOK and for Special Offer! Address me personally.

Pals.

The farmers of northwestern Pennsylvania are out to get the corn borer before it gets them. Page 3.

Car owners expect more from Kellys–and they get it!

MORE people are buying Kelly-Springfield tires this year than in any year during the company's history.

The reason is not far to seek. The tires Kelly is building today are by far the best that ever have come out of the Kelly factory. This statement is not mere talk; it is an undeniable fact, as thousands of tire buyers can testify.

Car owners have learned to expect more from Kellys, and they are getting it—this year to an even greater extent than ever before.

Yet Kelly-Springfields don't cost any more than most other tires.

The Houses People Build

Which Type Best Suits Your Tastes and Location?

By ARTHUR C. PAGE

LAST month in our talk about the new house we are going to build, we promised to take plenty of time to discuss the question of bungalow type or story-and-a-half and two-story construction. So here it is, and if there's anything you don't agree with, get down the old pencil and whittle a good point and write us all about it.

The two-story is probably the cheapest arrangement for securing the required space for more than four rooms, since it requires the minimum amount of basement room and roof area, two of the most expensive parts of the building; while the wall area for the two-story type is only slightly greater, due to the lower ceilings of the upstairs rooms.

The two-story home has better light and air than the bungalow. With more than four rooms on the ground floor, it becomes difficult to get outside windows on two sides of all the rooms and to get free air circulation without the connecting doors open, which is not always convenient in the case of sleeping rooms in cold weather. With the two-story house, up to nine or ten rooms, there is little or no trouble in getting outside light on two sides and a cross breeze without an open door. The upstairs bedrooms get more than those downstairs because they are above more of the breeze obstructions.

Not only is there less heat loss in the two-story house, but almost any kind of heating system will work more efficiently where the rooms are within close horizontal reach of the heating plant. Either hot air, hot water or steam is hard to move any distance horizontally, but naturally moves upward.

Waste Heat Warms an Upstairs

With the bungalow type it is always a problem to get heat to the outer rooms, especially against the wind; but with the other it is a simple matter to heat the upstairs rooms, often with nothing more than a register in the floor using waste heat from the downstairs rooms.

Another point making for better heating efficiency with an upstairs is the greater chimney height, which gives an increased draft, as 30 to 35 feet height is bound to work better than 12 to 15. Also considerably more radiated heat will be obtained where the chimney goes up thru the middle of the upstairs, which is the proper location for a chimney.

A point often made in favor of the bungalow type of home is that it is so much more convenient having the bathroom and sleeping rooms all on the same floor, and that it saves the continual running up and down stairs, so tiring to many women. Undoubtedly it is more convenient to have all the home operations on one floor, and this may in some cases be the deciding factor for choosing this type, especially where there are small children in the family. The importance of this is sometimes overestimated, especially if there is a toilet and lavatory downstairs, since few trips upstairs should be necessary.

Appearance Its Big Asset

The great point in favor of the bungalow home is its appearance. While the two-story home may be entirely appropriate for hilly and timbered sections, many artists and architects feel that a lower type with horizontal rather than vertical lines is more suitable for prairie homes, where most of the strong lines are horizontal. And it does seem that in many locations, the bungalow type has a better appearance than the two-story type. Just how important this is, each home builder must decide for himself, but the point is worthy of careful consideration.

The story and a half home is a compromise between the bungalow and the two-story type. It is often used instead of the two-story house for economy, but this is a mistake, since the saving is only in a small amount of outside wall, and perhaps a small amount of ceiling in the upstairs rooms, and this will be more than balanced in the cost of dormer windows required to secure air and light to the upstairs rooms. Also these upstairs rooms are likely to be uncomfortably hot in summer because of the lack of attic space above them.

Sometimes the story and a half is preferred because of a better appearance, and this consideration may be all right under certain conditions. On the whole, however, the story and a half is not so satisfactory as either the bungalow or the two-story home, and should not be selected without careful consideration.

Depth for Foundation Walls

How deep should I dig down for the foundation walls for barn with walls of hollow clay tile or concrete blocks? Some say 2½ feet is sufficient, others claim 4 feet is necessary. I expect to build 8 feet high with brick.—C. E. F., Bucks County, Pa.

The foundation walls for a house or barn have two main purposes to perform. One is to give the proper bearing surface to prevent unequal settling, the other is to prevent heaving because of alternate freezing and thawing. With a frame barn, 2½ feet is usually considered sufficient depth, since the building is more or less a solid unit, and a slight movement of the foundation is not likely to have a serious effect. With frame houses, 2½ feet is often used, altho it sometimes allows enough movement to produce plaster cracks.

For masonry houses and barns, 2½ feet is not sufficient and a depth of 4 feet is usually recommended. This usually gets down to fairly solid clay and is deep enough so that there is little or no heaving action, even tho the frost does go down that far. The heaving action is also minimized by keeping the water from around the footings by means of tiling.

The best practice is to make the foundation walls of reinforced concrete with the bottom eight inches widened out to form a footing 16 inches wide. Instead of reinforced concrete, the foundation walls can be built of hard burned hollow tile blocks or high grade concrete blocks, or hard burned bricks can be used if care is taken to discard any that do not seem to be hard. With any of these materials, the footing should still be of reinforced concrete 16 inches wide and at least 8 inches thick.

Where the foundation walls are also the basement walls with a depth below the ground of at least four feet, this takes care of the danger of heaving and the footing need be only deep enough to be out of the way of the basement floor.—I. W. D.

"Get the Borer" Is Their Motto

Farmers of Northwestern Pennsylvania Wage Biggest Insect War Ever Fought

By C. L. WHITE

"THIS great campaign against the European corn borer is being carried on by farmers and for farmers." That statement made by Dr. Charles G. Jordan, State Secretary of Agriculture, describes the policy that is followed by the Department in the clean-up work now being brought to completion in the eight worst infested counties of northwestern Pennsylvania.

Within the last two weeks county-wide meetings in six of the eight counties in the clean-up area have been addressed by Secretary Jordan and by Deputy Secretary R. G. Bressler, who is in direct charge of the corn borer control work of the State Department of Agriculture. Director M. S. McDowell, of the State College Agricultural Extension Service, also spoke at most of the meetings. Director McDowell is in charge of the educational work in connection with the campaign

We write this after spending several days traveling over the infested area of northwestern Pennsylvania, watching the clean-up work in progress, talking with farmers and attending the county-wide meetings. After seeing the determined way in which the corn growers of this section have set out to "get the borer before the borer gets them" we can easily believe Mr. Bressler's statement that the campaign against this insect invader is the greatest ever witnessed against any enemy, except in time of war

Federal Government Provides Large Fund

The United States government has set aside $10,000,000 to fight the borer in 70 counties in the five states bordering Lake Erie where the pest has gained a foothold. But even more effective than large sums of money is the splendid spirit being shown by the farmers who are bearing the burden of the fight. The control regulations call for an absolute clean-up of all corn crop remnants this spring. Judging by what we have been seeing it will be difficult to find a piece of corn fodder or stubble in the eight affected counties by May 15th. Everywhere we have seen farmers plowing under stubble, burning leftover fodder and raking up barnyards so as to be able to prove that there isn't left a piece of cornstalk more than an inch long when the inspectors come around after May 1st.

We stopped along the road in Erie County the other day and picked up a stalk from a pile of corn fodder. Breaking it open we found that the pith of the corn had been eaten out by the borers,—borers which were still in the stalk, alive and very active. They were greyish white worms about an inch long. If they were left unmolested in those stalks they would very soon spin a web over the hole thru which they had entered, spend about two weeks in the pupa stage, grow wings and then emerge for an attack on this year's growing corn crop.

Naps Thru Winter—Then Look Out

When the borer comes out of its winter hiding place with wings it can travel a considerable distance and, of course, man is powerless to stop it. When it finds a field of growing corn it deposits eggs on the leaves. In June or July the eggs hatch and the young larvae bore into the stalk to begin their work of destruction. If there are many of them (150 and more have been found in a single stalk) they completely destroy the plant, leaving only the walls of the stalk, which will break over and go down in a slight breeze. Then they stay in that same stalk or in the stubble all winter ready to begin over again in the spring.

It is because they have seen or heard about the borer's destructive work that Pennsylvania farmers are working so earnestly in the present clean-up campaign. They realize that they can catch the worms when they are (to page 22)

They're on the Borer's Trail

Secretary Jordan

THE corn borer is something to get excited about, but common sense methods shouldn't be abandoned in the excitement. Secretary Jordan believes that little more than good, clean farming practice is necessary to control the borer. Deputy Secretary Bressler has been given the responsibility of seeing that such practice is followed in the eight borer infested counties of northwestern Pennsylvania.

Deputy Secretary Bressler

Before the Coming of the White Man

Hudson Found That Diversified Crops Weren't Unknown to the American Indian

By CARL R. WOODWARD
New Jersey State College of Agriculture

DIVERSITY of agricultural production in the American colonies seems not to have been a new thing, introduced by the European settlers. To some degree it existed among the Indians before the foot of the white man had touched our soil. The great abundance and diversity of the native plants so impressed the early explorers and settlers, that the letters they wrote to friends at home fairly bristle with enthusiastic accounts of the productiveness of the New World.

One of the earliest accounts of the territory which later formed the Middle Atlantic States, appears in the journal of Robert Ivet, Hendrick Hudson's mate on board the "Half Moon," on her famous voyage of discovery into New York Bay and up the Hudson River.

After cruising along the coast for some days, on September 3, 1609, the "Half Moon" put into Raritan Bay. Soundings were taken and anchor cast along the north shore of what in time became Monmouth County, New Jersey. For several days the "Half Moon" remained in the bay while exploring parties went ashore. In his journal, Ivet mentions two of the native crops that were to become great staples of American agriculture—corn and tobacco:

"Sept. 4, 1609.—This day the people of the country came aboard of us, seeming very glad of our coming, and brought greene Tabacco, and gave us of it for Knives and Beads. They go in Deere skins loose, well dressed. They have yellow copper. They desire cloathes and are very civill. They have great store of Maiz or Indian Wheate, whereof they make good Bread. The countrey is full of great and tall Oakes.

"Sept. 5, 1609.—Our men went on Land there and saw great store of Men, Women, and Children, who gave them Tabacco, at their coming on Land. So they went up into the Woods, and saw great store of goodly Oakes, and some currants. For one of them came aboard and brought some dryed, and gave me some, which were sweet and good. . . . Some women also came to us with Hempe. They had red copper Tabacco pipes, and other things of copper—they did weare about their neckes."

The "currants" referred to are thought to have been whortleberries, a near relative of the blueberry, or huckleberry, which when dried resembled the currant.

Old Pamphlet Paints Glowing Picture

An interesting picture of the agriculture of West Jersey and Pennsylvania is given to us by a Quaker, Gabriel Thomas, who lived in the vicinity of Burlington. In 1698 he circulated a pamphlet in England, setting forth the advantages of this region to attract new settlers. No need of anyone lacking variety in his diet in this part of the world, according to Thomas:

"Barley, Rice, etc., in vast quantities; also Indian Corn, Pease and Beans, likewise English Hemp and Flax which prospers there exceedingly, Eating Roots, Pumpkins, Cashews, Water-Melons, Musk-melons, Cucumbers, Squashes, Carrots, Artichokes, Potatoes, Turnips, Garlick, Onions, and Leeks, grow there in greater plenty than in England. And for Herbs, they have Cabbages, Coleworts, Savoys, Lettuce, Purslane, and other Salads, in abundance, besides Wild Herbs, which are there very common, as Penny Royal, Mint, Mustard, Sage, Rue, Tansey, etc., and likewise there are choice Phisical Roots, as Sassafras, Sarsaparilla, Black-Snake-Root, Rattle-Snake Root, and Poake-Root, with divers others which there is great store of."

Hemp and flax were regarded as valuable crops in those days, and apparently they were grown with good success. Two of the wild fruits mentioned in the next paragraph are of special interest, being the ancestors of the superb varieties of cranberries and blueberries for which New Jersey has become noted.

"And for Wild Fruits, there are Chestnuts, Filberts, Hickey-Nuts, Grapes, Mulberries, Strawberries, Rasberries, Huckleberries, and Craneberries with several sorts of Plumbs, and all those fruits in great plenty being free for any Body to gather."

The quick maturity of fruit trees in the colonies impressed Thomas, who was familiar with the cool, damp climate of the British Isles.

"Now I am coming to the Planted Fruit-Trees, as Apples, Pears, Apricocks, Quinces, Plumbs, Cherries, Gooseberries, Currants and Peaches, . . . and all those Trees will come to bear in a little more than half the time they do in England, the Soil is so rich; they have great plenty of the afore-mentioned Fruits, which are exceeding delicious. These as also many other Fruits that come not to any pitch of Perfection in England, are the Natural Product of this Country, which lies warmer, being more befriended by the Sun's hot and glorious Beams, which without doubt is the chief cause and true Reason, why the Fruit there so far excells the English."

Vol. 95, No. 18 Phila., Pa., April 30, 1927 Whole No.1563

OUR JOB is to serve our readers. Whenever you are puzzled write to us and we will help you if we can.

There is nought in this bad world like sympathy,
'Tis so becoming to the soul and face.—Byron

A Clever Burlesque

FARMERS who have read the two recent articles in the Saturday Evening Post by Garet Garrett on what is the matter with farmers have no doubt been amused if not incensed. Inferentially, he claims that the farmers' plight is due to the fact that they are too slow to keep up with other industries in the adoption of modern methods. The whole treatment, as well as the cartoons which accompany the articles, is more of a burlesque than a sensible analysis of the situation.

Use the Church Buildings

FETISHES, totem poles, stone altars, etc., if neglected, will not bring to a community righteousness and spiritual growth. Neither will any number of empty church buildings conserve the morality and spiritual power of a neighborhood. Yet present indications are that too many rural communities seem to feel that the existence of church properties in the neighborhood will somehow act vicariously in behalf of the people. We have read that the natives in some parts of India write their prayers on papyrus and fasten it to a windwheel. The force of the wind keeps them in motion, thus allowing the religionist to forget about it and go about his business. The modern generation of Christians has little room to sneer at the mechanical worship of the East Indian.

An Interesting Political Move

MANY political commentators claim to see in the decision of President Coolidge to spend his vacation in the Middle West an adroit political move. The most disturbing political situation is located in that section. There has been severe criticism of the administration's attitude towards farm relief measures and political expediency points out the necessity of placating, if possible, those who might cause trouble in 1928. Besides, two of the most frequently-mentioned candidates in addition to President Coolidge live in the Middle West,—Vice President Dawes and Ex-Governor Lowden. The real as well as the manufactured news concerning the President's vacation will make interesting reading during the summer.

Local Courts and Fees

THE recent decision of the Supreme Court relative to fines imposed by mayors of small towns, justices of the peace, etc., will have a far reaching effect on the local administration of the law. In a suit carried up to the Supreme Court it was decided that a mayor or justice of the peace acted in violation of the Constitution when he received as compensation part of the fine imposed. The Fourteenth Amendment to the Constitution provides that no judge shall sit on a case in which he is financially interested, and since the fee system automatically creates a money interest in a case brought before a minor judge, all convictions in such cases are made illegal by the decision. In every such case a verdict of acquital means no fees, while a verdict of guilty adds to the judge's income. Thus, it is held, a defendant in a criminal action is placed in an unfair position, a condition which the Fourteenth Amendment sought to correct. The result of this ruling should be to wipe out the unfair fee system.

"From Now On"

IT SHOULD be a source of genuine satisfaction and pride to the farmers of Pennsylvania to see the splendid spirit being shown by the corn growers of the eight northern counties in their corn borer clean-up campaign. They are fighting a battle for farmers everywhere against the greatest menace ever faced by American agriculture and they are fighting cheerfully and willingly.

The heads of the State Department of Agriculture and the State College Agricultural Extension Department believed that Pennsylvania corn growers could be trusted to unite against the borer when they saw that it was a case of fighting or eventually giving up the growing of corn. That their faith was amply justified is proven by the willingness with which the clean-up work is being done by the vast majority in the borer area. The supervisors and inspectors in each of the eight Pennsylvania counties affected are local farmers. They know what the borer would do on their own farms and they are able to convince their neighbors that the clean-up must be done, thoroly and on time.

The borer will be with us "from now on." No one thinks it can be totally eradicated. It can be held in check, however, until its parasitic enemies get a start and until we adopt new methods of farming and equip ourselves with new clean-harvesting, clean-plowing machinery.

Do Not Expand This Year

THERE is no justification for expansion in any line of production this year. The acreage of every crop should be held at least to that of last year and in some instances slightly reduced. The publication of the intention-to-plant figures gathered by the U. S. Department of Agriculture should be sufficient to cause a recession of the fifteen per cent increase in the proposed acreage to be planted to potatoes. Other crops may not be largely increased and there is no good excuse for enlarging the potato acreage. The crop which should receive careful attention just now is the hay and forage crop. If, as some signs indicate, there has been serious winter damage to clover and alfalfa, there should be other legumes planted. Cow peas, Canada field peas, soy beans, etc., make fairly good substitutes and should be supplied wherever the clovers have failed.

Keep Up the By-roads

SINCE the state has been doing so much road building and assisting in the upkeep of township roads there has been a noticeable tendency in many districts for the local authorities to neglect the home roads. This is a sad mistake and limits the usefulness of the whole road system. Even a short piece of bad dirt road leading from a community to a hard road makes it impossible to haul a full load to market and also interferes with the enjoyment of a pleasure trip in rainy weather. It is physically and financially impossible for the state to do all the road repair work and local people should take care of the local roads. Even private lanes should be kept in good repair if the full benefits of hard roads in a section are to be realized.

Plenty of Eggs for Egg Week

NEXT week is National Egg Week. The object of the week's special activities is, of course, to advertise and increase the consumption of eggs. The Poultry Department at Penn State plans to advertise by cutting prices during the week.

In this connection it is of interest to note that there were twice as many case eggs in storage on April 1 of this year as on the same date in 1925. There were also many more frozen eggs in storage. On the other hand, many egg freezing and drying plants in China have been closed on account of the strife in that country. The United States Department of Agriculture predicts a falling off of 50 per cent in this year's egg production in China as compared with last year.

Editorial Sidelights

THERE should be three men's pictures on Page 3 instead of only two. The missing one is that of Director M. S. McDowell, of the State College Agricultural Extension Service. Doctor Jordan, Mr. Bressler and Mr. McDowell are leading the fight on the European corn borer in Pennsylvania.

Doctor Jordan owns and operates a large farm in Lawrence County where he produces fine beef, mutton and wool. Altho he has always been a farmer, before he was appointed Pennsylvania's Secretary of Agriculture, Doctor Jordan spent much of his time on the Chautauqua platform and in the pulpit. He is a Doctor of Divinity (Princeton University) who goes to Chicago to buy his feeder cattle, and is seldom more than a pound off in judging their weight. Some years ago he was a member of the agricultural committee of the state legislature.

Director McDowell is seldom in one place long enough to have a picture taken. He has reason to be busy for, as Director of the State College Agricultural Extension Department, he is responsible for the work of all the county agents, the home economics extension specialists, the boys' and girls' club leaders and all of the other extension specialists. The cow testing associations, the better sire organizations, the ton litter and 400 bushel potato clubs, the spray service—all are conducted by or were organized by men responsible to Mr. McDowell.

Mr. Bressler has just moved back to his native county, Dauphin, after a long absence. He was reared on a farm near the Susquehanna River in the northern part of the county. Now, since his appointment as Deputy Secretary of Agriculture, he has been living in Harrisburg. For five years he has been operating his farm near State College where, until January last, he was Vice Dean of the School of Agriculture.

IT CAN'T BE DOWNED

President to Make Good His Criticism—U. S. Treasury Gains Control at Last—Senate May Broadcast.

Washington, D. C.

FARM relief will not down. The promoters of the various schemes for boosting agriculture have gone back home. Nevertheless, during the past week or two farm relief has occupied headliner space on the first pages of the daily papers. The latest movement looking toward the solution of the farmers' relief problem appears to have originated in the temporary White House.

It was charged against the President's veto of the McNary-Haugen bill that while he pointed out many weak points in that measure he did not suggest a better one. It is now evident that he is determined to answer this criticism with a plan to solve the problem of farm relief which he considers better than anything that heretofore has been suggested.

Three Vacancies to Fill

The reorganization of the Federal Farm Loan Board is going forward according to schedule. Robert A. Cooper and Edward E. Jones have handed in their resignations as members of the board. This leaves three vacancies to be filled. The new members will be men who are satisfactory to Secretary of the Treasury Mellon. This will give the Treasury Department control of the Farm Loan system, which it was unable to secure by legislation, and put to sleep any hopes the farmers ever have had of controlling their Federal Land Banks.

The farmers have protested vigorously against this move to turn the rural credit system directly over to the Treasury Department by way of the reorganization route, but without avail. It is generally agreed that this is the most important issue before the farmers and their organizations. It outclasses any farm relief legislation that the administration may propose. It means the end of a farmers' credit system independent of the big financial interests of the country.

Farm Land Values Increase

Farm land values in the United States are approaching stability, according to a report issued by the Bureau of Agricultural Economics. The values have actually increased in some localities, and there is a steadily lessening rate of decline in prices, which on March 1, 1926, were found to be about 25 per cent above the 1912-13-14 average, but nearly 30 per cent below the high point reached in 1920. In this connection the bureau specialists say that the rise in farm taxes has been seriously out of proportion to the movement in the prices of farm products. Since taxes form one of the principal costs of farm ownership, the proportion of income required for payment of taxes under post-war price levels has been and will continue to be a factor of no small importance in determining the level at which farm land values will reach adjustment.

May Listen In on Senate

Broadcasting the proceedings of the United States Senate that are of general public interest is the proposal of Senator Dill, of Washington State. It is believed that it will be feasible to have the large commercial broadcasting stations of the country broadcast certain hours of certain features of the Senate deliberations. Senator Dill thinks that it would mean much from an educational standpoint if the school children of the country and those in the higher institutions of learning could hear Senate debates.

Forest Cover Restored

National forests covering an area of 3,000,000 acres have been established in the East by the federal government in the past 16 years. The government has had to buy most of this area from private owners. The Forest Week committee says that with the protection from fire and with proper methods of timber cutting introduced by the forest service the forest cover is being restored on these lands and they are steadily increasing in value as a public investment.

Milk Makes Health

The consumption of milk in the United States has increased 27 per cent in the past eight years, according to milk specialists in the Bureau of Dairy Industry. It is also found that there has been during this time a 12 per cent reduction in undernourishment among school children following the "milk for health" campaigns which have been promoted by the dairy bureau.—E. E. R.

ACTION DEFERRED

Governor Investigating All Appropriation Bills—Two Bodies Band Together in Reforestation.

Harrisburg, Pa.

GOVERNOR FISHER'S plan to defer acting on the numerous appropriation bills left with him by the legislature adjourning ten days ago until May is due to the close study he has ordered made of not only all bills carrying money but of all which might obligate the Commonwealth in any way. Decision to go slowly in acting on these bills has caused some surprise and efforts of enterprising citizens to get their bills acted upon have not gone far. The Governor has declined to hold hearings but has invited briefs which are being studied closely. The executive offices have been well nigh flooded by letters and telegrams dealing with various measures.

Aim at Notable Effort

According to the plans of the State Department of Agriculture the campaign against the corn borer is to be so conducted as to furnish an object lesson. It is no secret there are fears of wide spread of the borer and what is under way in northwestern and western Pennsylvania is to be conducted carefully and methods and results made available for the governments of other states which may be afflicted. People in several communities have been commended for their voluntary work.

Aid on Reward Plan

Under provisions of bills just approved second-class townships are to be given aid in improvement of various types of roads under the reward plan. The existing system is to be expanded and it is expected to bring about considerable betterment of rural highways.

Tree Planting Plans

Plans to link up the State Highway Department project of lining main highways with trees with reforestation work of the Forests and Waters branch of the government are under discussion. Objection to too much tree planting along roads came from farmers in a half dozen sections because of shade possibilities, opening an interesting line of discussion. The State Highway Department is going in for much planting of various kinds along the roads. The forestry authorities will expand their tree planting program.

Plan to Buy Land

The half million dollars in the general appropriation bill for purchase of lands for reforesting is intended to stay in that measure when the time comes to act and it may be inside of six months the first real expansion of forest reserves will occur. Numerous tracts have been offered.

Locusts May Disappear

An interesting opening for discussion has been afforded at the State Bureau of Plant Industry which announces studies have shown the possibility that the seventeen-year-old locust may disappear. The brood of locusts in districts affected in the last century is said to be declining.—T. C.

WILL EXHIBIT EGGS

Poultry Exposition Next Fall—Many Cattle Sales in Trenton—Bankers Evince Interest in Agriculture.

Trenton, N. J.

A FIVE-DAY exhibition of table eggs and market poultry will be held in conjunction with the annual meeting of the New Jersey Poultry Association at Atlantic City next fall, according to a preliminary announcement just made by the state association. The plan of the exposition is to picture as far as possible the entire poultry industry of New Jersey, with special attention to the production of standard breeds for both market eggs and poultry.

Sold Under the Hammer

Several of the most important cattle sales in the eastern states this season have been scheduled for the fair grounds at Trenton. The first took place during the third week in April when Holstein-Friesian men entered their animals at auction. The Guernsey sale is scheduled for May 12 when animals from many Guernsey herds will be placed on exhibition and on the block the following day. Another Guernsey sale will be held on June 2, to be followed on June 3 with a Jersey sale. This latter will mark the first time that the national Jersey sale has come to New Jersey. Twenty-four breeders have already signified their intention of making consignments to the Jersey sale.

Tests Eliminate Unfit Seed

Results on the seed corn tests which have been conducted thruout New Jersey by the State College and county agents cooperating have eliminated large blocks of unfit seed this spring. The hold-over corn in the farmers' cribs, as earlier reported, is not in prime condition for planting, in many cases, and germination tests conducted in a far-reaching way have, without question, resulted in the saving of many farmers from disappointment on the current season's crop. In one county only 10 out of 33 seed corn tests in one block showed satisfactory germinating properties. Several hundred samples were tested in most of the counties.

Bankers Meet at College

The Annual Agricultural Convention of the New Jersey State Bankers Association was held in the college buildings at New Brunswick on April 21st. The relation of bankers to agriculture was discussed at length from an economic aspect and with particular reference to local conditions in New Jersey. Boys' and Girls' Club work was also discussed at length. Speakers from Washington and from New York State addressed the gathering.—W. H. B.

TANK CARS FEASIBLE

Method Proves Economical for Shipping Milk to Metropolitan Area—Fishermen Deserve Punishment.

Ithaca, N. Y.

EVIDENCE presented to the Milk Program Committee shows that tank cars for the shipment of milk in this area are more than an experiment. These cars have been in use on the Lackawanna for some months. Their use proves that this method of transportation is economical, doing away with the need of elevated platforms for the loading of milk on the cars, dispensing with a can washing and bottling room, and consequently with the need of one or more men, and carrying the milk to the metropolitan area at a rise of but one to two or three degrees of temperature with no use of ice on the journey.

Definite special freight rates have not yet been established for tank cars here, but with the inevitable general use of them a lower rate is expected. The cars consist of a pair of twin tanks, holding 51,000 pounds of milk, and where the station is large enough to fill a car their use seems to be more practical than the use of cans. A tank can be loaded in eight minutes, and the washing process is very brief as compared with former methods.

Troubles with Fishermen

It is possible that application will be made to the Governor to close the Adirondack Reserve during the fishing season because of forest fires set by careless fishermen. One old forest tract of 30 acres has been burned over already and the fire is not yet under control. In other regions the farmers have had to post their land on account of "fish pirates," who net and spear trout illegally.

Goes out of Business

Another fair is planning to sell its grounds and go out of business, the Tri-County Fair, formerly held in DeRuyter. The fair had run up a deficit, which will have to be met, after the state funds have been paid in, by an assessment.—M. G. F.

FARM TRAGEDIES—No. 1.

OF COURSE YOU'RE TESTING YOUR SEED NEIGHBOR?
NOPE, IT'S A WASTE OF TIME! I DIDN'T TEST LAST SEASON AN' I GOT A BUMPER CROP!
GOSH! THERE'S ONLY A THIRD OF IT COMING UP!

Eureka SPRAYERS

Traction or Power

Do the biggest, most important job in raising field crops and fruit. Increase yield 50 to 200 per cent. Improve quality. Insure investment by destroying bugs, preventing mold and blight.

Traction Sprayer has 1, 2 or 3 nozzles per row; 4, 6 or more rows per boom. Wheels adjustable to width of rows. 60 to 100 gal. tanks. Double or triple action pumps. Thousands of satisfied users.

Combination and Power Sprayers for orchards, groves, and field crops, have 3 cylinder pump; pressure regulator; 2 H.P. Engine; 100 gal. tank. Develops 300 lbs. pressure with one spray gun or several spray rods. With or without truck.

In stock near you. Write for Catalog on Eureka Sprayers

Garden and Truck Crops

GILBERT S. WATTS, Staff Contributor and Adviser
Logan Spring Farm

The Less Guess There Is in Farming the Better Off the Farmer

NOT all of us are so fortunate as to be situated on an ideal sandy loam gardening soil. On Logan Spring Farm we have a number of rather stony areas here and there, the stones being water-worn sandstone mostly about the size of apples. We pick as many as we can, especially where lettuce, onions and similar crops are to be grown, but as anyone knows who has been up against this proposition, picking, or for that matter raking and forking stones, is a tedious, expensive job.

The annoyance from the medium and small stones presents a more serious problem than the removal of the comparatively few large rocks. This may be solved to a degree by a system of fitting the land without the use of toothed implements such as spring-tooth, spike-tooth or peg harrows.

Just before plowing an unusually large percentage of the small stones will be on top of the ground, especially following a cultivated crop. The plow will turn the majority of these well toward the bottom of the furrow. If subsequent fitting is done with some combination of cultipacker, disc harrow, smoothing harrow and roller, all wheeled implements, practically no stones will be brought to the surface. Small seeds and plants may be put into the ground in far better shape. This idea is not new but is well worth keeping in mind.

Tests Eliminated Guesswork

A few weeks ago this column was devoted to the subject of lime in vegetable production. Altho we have been liming on a rather systematic schedule for several years no actual tests for acidity had been run since 1923 and I felt we were going entirely too much by guess. One cannot afford to guess in the case of crops that are sensitive to acidity and cost $100 or more per acre to produce. Accordingly, soil samples were taken from each field and tests were run to determine the amount of ground limestone, if any, required to make the soil sweet.

A blue print of the farm map was used to chart the records and a glance serves to show the conditions in each field. With records of future applications of lime this chart should prove a safe guide for three years. It positively does not pay to go by guess where the facts can be determined and I am sure county agents generally are willing and ready to assist gardeners who are in earnest about this lime problem and who will use the results obtained.

Some of our readers may have missed the previous notes on relative tolerance of vegetables to acidity. Comparatively few vegetables will make a satisfactory crop in sour soil. Peas, beans, tomatoes, radishes, turnips, potatoes and strawberries are usually little affected by acidity unless it is extreme. Asparagus, beets, celery, lettuce, onions, parsnips, peppers and spinach are considered to be in the super-sensitive class and as a rule should receive lime unless the soil in which they are to be grown gives a reaction.

Eastern Farmer's Job Not So Bad

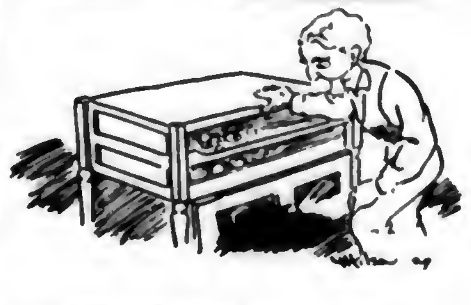
A farmer friend from western Kansas visited us the other day. He has been touring with his family for nearly three months on the proceeds of a thirty-five-bushel per acre crop of wheat last summer from [illegible] of his 320-acre farm. Most of it sold for $1.25. Looks like a pretty nice business but it does not always work that way. One year his yield fell to eight bushels per acre. Such a crop along with low prices would hit pretty hard.

After all, the Pennsylvania and eastern farmer with nearby markets does not have such a bad job if he balances his production among several staples, and takes the [illegible] cut in every way he can.

As planting progresses it is important to keep a complete record of varieties, strains and sources of seed used. Differences in crop may result later and without full records we will be lost.

I have just received a list of 1927 rates and limits on hail insurance

(Continued on next page)



The Cheerful Plowman

My Incubator

OLD Biddy does well in her old-fashioned way and she hatches pell-mell, I am willing to say! For twenty-one days and for twenty-one nights, thru evenings of grays and thru mornings of lights she sticks to her nest with a terrible zeal, grows thin on the breast and runs down at the heel, and when she is thru with her vigil, by gee, she gives ten and two little chickens to me! She's worthy, I say, and I haven't a word to take credit away from that elegant bird, yet when I've said all and have given full dues without stutters or stalls in my praises and views, the fact still remains in this hurry-up age one must push on the reins if he wishes the wage; so, Biddy, I find, is a trifle too slow in producing her kind for the market, you know! I therefore have bought at a neat little price, this hatcher, now fraught with these chickens so nice! It's bully for speed, and it hatches as fast as ten biddies, indeed, of the present or past! It's giving new life and it's giving new zest to my hen-raising strife, it is standing the test! It's come here to stay, like the auto has done, and while Biddy will [illegible] have her place in the sun, her method is slow, the times never wait for people, you know, when they get out of date. I'll praise her as long as my body has breath, I'll sing her a song till the day of my death, but nevertheless, such a hatcher as mine puts Biddy, I guess, in the old-fashioned way.—J. Edw. Tufft.

for Pennsylvania. The company is apparently reliable and the separate rates for different crops are of especial interest. Tobacco takes the highest rate, lettuce and spinach come next, all are leaf crops, very susceptible to hail damage and in each case comparatively slight injury greatly depreciates, even destroys market value.

I am thinking of insuring the lettuce which I transplant into the field. More than 40,000 plants are set on an acre, the cost of which along with manure, fertilizer and labor totals a substantial sum. Up to $300 per acre insurance is allowed for this crop and the cost is $5.00 per $100 of insurance. In other words $15.00 per year will cover hail injury up to $300 per acre. If I should insure an acre of transplanted lettuce every year for 20 years I will pay out $300.

Will hail do this amount of damage to early lettuce on an average of once in 20 years here in Blair County? Let us hear from readers on this subject in regard to their hail experiences not only with lettuce but other vegetables. We insure against fire. At present rates will it be good business to insure against hail damage to some of our more important and costly crops?—Gilbert S. Watts.

From the Week's News

H. G. NIESLEY, economist, and Dr. H. H. Havner, livestock specialist of the State College Agricultural Extension Department, are planning to spend three months in Europe this summer, studying farm conditions in Denmark, Germany, Czechoslovakia, Austria, Italy, Switzerland, Holland, Belgium, France and Great Britain.

* * *

FRANKLIN has more bearing peach trees than any other county in Pennsylvania. The state as a whole has 4279 peach orchards of more than 100 trees each according to the Bureau of Statistics of the State Department of Agriculture.

* * *

KING GEORGE V of Great Britain, His Royal Highness the Prince of Wales, King Albert of Belgium and King Alfonso of Spain are among the world's notables who grow chickens,—or at least own poultry farms. Their flocks will be represented at the World Poultry Congress, to be held in Ottawa, Canada, July 27 to August 4th. Forty nations will send delegates or exhibits to the Poultry Congress.

* * *

THE BOYS' BEE CLUB sponsored last year by the Clearfield County Beekeepers' Association was a real success. The 18 members of the adult organization decided at their recent annual meeting to enlist still more boys this year.

Emphasize Goodwill

WITH an afternoon and evening attendance of 350, the spring meeting of the Gloucester County Pomona Grange, of New Jersey, April 12, was one of the most successful Grange gatherings ever held in this county. Several state Grange officials were present and took part on the program which was in charge of Mrs. Ella Brown, lecturer of Pomona. The committee devoted the entire lecturer's hour to discussing "goodwill."

Goodwill in the Grange was discussed by Dr. W. H. Whiton, lecturer of the State Grange. Other speakers were Mrs. Howard B. Hancock, who spoke on goodwill in the home, and Mrs. Jessie DeHart, an active school teacher in the county spoke on goodwill in the schools. In the evening a play was staged by Mickleton Grange, following an address by Wilbur K. Thomas, Philadelphia, on international goodwill.

Camels are superb tobaccos in a joyous blend

NO DOUBT about it, you can't beat Camels, regardless of how much you pay. Here are the world's choicest tobaccos combined with a skill that makes Camel the masterpiece of cigarettes. Smoke a pack or a million and each successive Camel opens a new understanding of tobacco enjoyment. Never a tired taste in a thousand packs of Camels.

For smoking pleasure supreme, get acquainted with Camels. There is or can be no better tobaccos or blending. Camels are first in popularity, and your own pleasure, as soon as you try them, will confirm the experience of millions.

In fact, you'll agree, after a trial, that this is the one sure call to smoke contentment: *"Have a Camel!"*

Rambles of a Pennsylvania Fruit Grower

VII. Georgia Peaches

THE red clay hills of north Georgia, with their distressing erosion, merge gradually into the flat piney woods of south Georgia. This is a land of yellow pines, embellished with turpentine cups, of shiftless tenant farmers, razor-back hogs, scrubby long-horned cattle, negroes and sand, especially sand. The floor of the pine woods is ablaze all along the way; it is burnt over annually to favor the grass that springs up beneath the thin stand of trees.

The saw palmetto comes in under the pines as we near the Florida line. There are long stretches of unfenced woods between farmsteads. Here and there are heavily wooded swamps, thru which creep sluggish streams, home of the catfish and the moccasin. The sand-clay roads, when properly drained and dragged, are like the little girl of Mother Goose fame who had a little curl

> "Right in the middle of her forehead.
> When she was good she was very, very good,
> But when she was bad she was horrid!"

Fortunately we found them dry, and very, very good; twenty-four hours later they were horrid.

Include Fort Valley in Itinerary

No Pennsylvania fruit grower would motor thru Georgia without visiting Fort Valley, the most intensive peach-growing district in the world. Georgia shipped 14,000 cars of peaches last year from more than a dozen counties, and has earned the right to be called the "Peach State." One of its most distinguished citizens, "Ty" Cobb, is known to a million fans as "The Georgia Peach." The Fort Valley district, very appropriately, is in Peach County and adjacent parts of Houston County.

Thirty years ago I heard J. H. Hale, the "Peach King" of Connecticut and Fort Valley, sing the glories of this district. It nearly comes up to his enthusiastic word painting,—mile upon mile of level sandy soil, not a stone in sight, good roads, prosperous-looking farm homes and peach trees everywhere. It is the height of the blossoming season. The whole valley is a fragrant bouquet of tender pink. I shall never forget this day.

Land values are not high, about $75 an acre for unplanted land and around $200 for bearing orchards. Some of the holdings are large; A. J. Evans has over 1000 acres of peaches, in several farms, besides many acres of apples at Cornelia, Ga. Cotton is raised between the young trees but there was no profit in eleven-cent cotton the past year.

Few Crops Supplement Peach

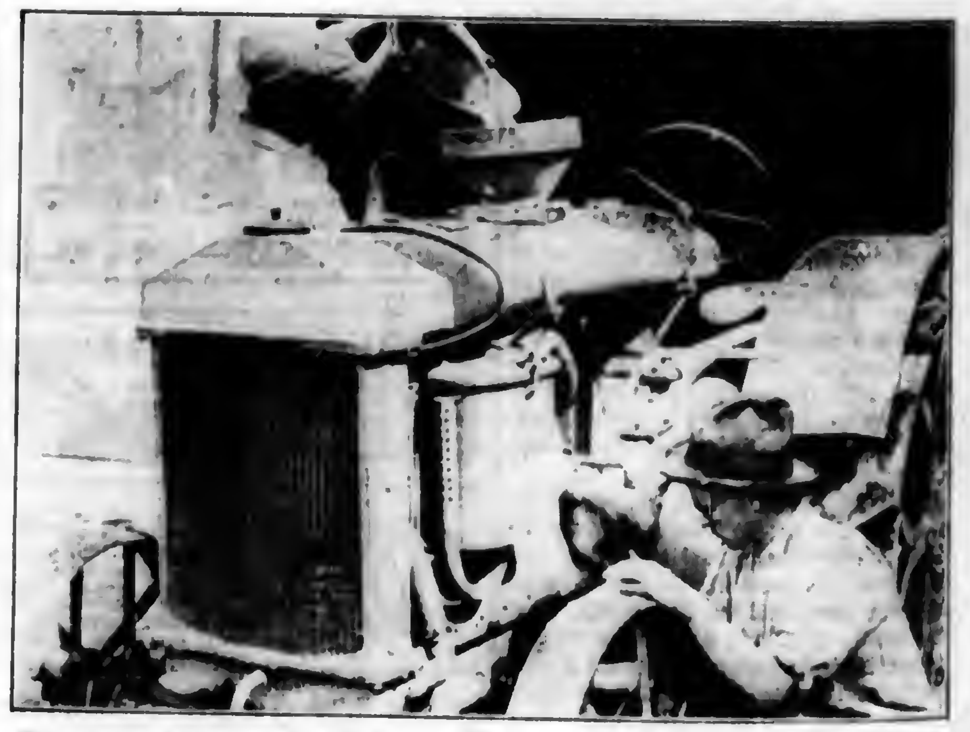
Some asparagus and sweet potatoes are grown and occasionally there is a pecan grove with peach fillers; but in the main this is a one crop district and that crop is the peach.

There are the usual uncertainties that are attendant upon single-crop farming everywhere, not so much the weather hazard here as the market hazard. This district rarely has a complete crop failure. With the new orchards coming on there is prospect of a 20,000-car crop in Georgia this year, if all sections have a full crop. Some of the best posted growers are convinced that there is a good market for only about 12,000 cars. This is why I found Fort Valley growers not particularly concerned about the forward spring, with trees in full bloom nearly a month ahead of normal. They say that if half the crop of the state is killed the growers will make more money and save the expensive thinning that was necessary in 1926.

Only a few growers use cover crops of cow peas or vetch; the majority practice clean tillage, as late in the season as possible and without cover crops. This looks like a mistake, especially on these light soils; they are likely to discover this in a few years just as the fruit growers of California and Washington found it out after years of clean cultivation. A complete fertilizer is used, commonly about two parts nitrogen, four parts phosphorous and one part potash, applied at the rate of four to eight pounds per tree. Cottonseed meal replaces nitrate, in part at least, potash is essential to carrying quality.

(Continued on next page)

There's a Day's Work Ahead



The boss, Thomas F. Biddle, president of the Pennsylvania Vegetable Growers' Association, inspects his tractor before sending it to the field, while the "chauffeur" fills the gas tank.

Pruning is much more severe and open than in the North but the young trees are not cut back as heavily as in the Chattanooga district. A dormant spray of lime-sulphur is applied between November and January and three to five summer sprays of self-boiled lime-sulphur. More than half the growers ar dusting, using a mixture of eighty pounds of sulphur, five of lead and fifteen of lime. Brown rot is kept under control both by spraying and dusting unless there should come two or three wet seasons in succession so that it gets established in the orchard. Yellows and Oriental moth disturb the serenity of these peach growers not at all.

Elberta Leads in Popularity

The shipping season begins with Mayflower, about May 25, and closes with Elberta, about July 25th. The succession of varieties is Mayflower, Uneeda, Arp Beauty, Early Rose, Red Bird, Hiley, Georgia Belle and Elberta. About forty per cent of the planting is Elberta and twenty-five per cent Hiley. Georgia Belle and the early varieties have not been profitable recently and are being cut out. This district well illustrates the truth of the statment by H. P. Gould in his book "Peach Growing," that success in wholesale peach growing depends most of all in being able to ripen the Elberta peach—and no other variety -at a time when the market is not abundantly supplied with this dominant sort.

Peach harvest is a gala time to thousands of colored folk, who are brought in from neighboring counties and are paid $1.50 to $2.00 a day. This help is not very dependable, especially if an adjacent orchard pays a few cents more a day. The bushel basket pack is increasing in favor but most of the crop still goes into Georgia carriers, which are now as cheap as baskets, about eighteen cents each.

Marketing Poorly Organized

Marketing is not well organized. One would suppose that here conditions would be favorable for sustained cooperation, but the numerous efforts have been abortive. The Georgia Fruit Exchange, recently reorganized as the Georgia Peach Growers, does not have a strong hold here. Most growers ship independently or sell to the big distributors, many of whom have representatives at Fort Valley thruout the season and sometimes the year round.

My general impression of Fort Valley peach growing is that this district has great natural advantages, that planting has outstripped demand, and that marketing is poorly organized. In spite of a rather low average net return most of the growers are not discouraged for they are getting as much from peaches as from any other crop grown in the valley. The outlook for general farming here, especially cotton, is not particularly bright and there is always the chance with peaches, of striking a "big year."—S. W. Fletcher.

Over the Radio

THE first week in May has been set aside by the National Poultry Council as Egg Week. Producers and dealers in the Philadelphia section will endeavor to encourage the use of eggs at this time when they are most plentiful and of best quality. On May 2, at 4:15 P. M., the Pennsylvania Bureau of Markets will broadcast a talk on Grading Eggs from Station WIP, and on May 5 at 6.50 P. M. a representative of the Pennsylvania Extension Service will also talk on eggs.—W.

The Chug of Tractor Motors Is Music to Jersey Growers

THE Garden State (New Jersey) is just naturally strong for garden tractors. At the recent three-day demonstration of garden and orchard machinery, held under the direction of the State College of Agriculture in three widely separated districts, the small machines were out in full force and attracted more attention than any other class of equipment shown.

Four makes of the small tractors and two representatives of the slightly larger ones, those able to do heavier cultivating and light plowing, were exhibited at the first day's session on Del-Bay Farms at Bridgeton. They kept chugging all the time so that growers could make a careful comparative study of their various points and the quality of their work.

They Will Run—But How?

The greatest interest seemed to be centered on the wide range of tool combinations and the efficiency of their work. There is no longer a question as to whether they will run, all can do that. The problem now is what kind of work can they do.

Cultivator teeth, wide, narrow and spring, were the favorite tools used by the demonstrators and some operators in their enthusiasm to "work" the crop (rye one and a half inches high growing in 14-inch rows especially planted for the day) buried more than half of it. Only one machine used a combination of hoes and cultipackers which was able to get close to small plants and not cover them with earth. Of course, this machine could attach any of the teeth for use when the plants were larger.

Having the ability to give plants their first cultivation, seemed to be the vegetable men's test for the ideal power cultivator. Hand labor, they find, is the most expensive item in raising a crop and weeding the hardest operation so when these are materially reduced profits are correspondingly increased.

Buy 1927 Model on the Spot

Thomas J. Groham and his son, who intensively handle a 20-acre farm at Vineland, were among the hundreds of interested observers at the demonstration. They had used a small motor cultivator, or garden tractor as most folks call it, last year and were looking for a better one, if possible, to help in their work. After studying all those shown they went home that night taking with them a this year's model of the machine they already had.

"Now," said Mr. Greham to me, "both my son and I can go into a crop at just the ideal time to cultivate it and finish the job in jig time. Very often this will mean the difference between a profit and a loss to us."

This year is the first that the Del-Bay Farms, possibly better known by their former name of Seabrook Farms, have used gasoline for cultivating vegetables. Small mules have heretofore been depended upon to do this work but in the effort to reduce growing costs small tractors are being tested.

Warren W. Oley, general manager of the farms, told me he thought the small tractors he was using had already received as much use this season as the average man would give in a year and he was satisfied with their work. Del-Bay, you know, has an almost unbelievable size vegetable garden on its 2600 cultivated acres.—Thos. H. Wittkorn.

The end of an old chore

TWICE a day—every day—it's milking time. Often, mother or the boys must do it when the men are busy—but not on the electrified farm.

A little motor on a milking machine will milk several cows at one time. Electricity will cool and separate the milk, grind the feed, and pump the water—do a dozen chores at a cost of a few cents for each chore.

And when electricity washes, cleans, and cooks, and lights every building on the farm, it makes life easier for every member of the family.

Being a "milkmaid" is small fun, anyhow. Electricity is the modern milkmaid and all-round farm worker.

When you find this monogram on the motor of a milking-machine, washer, cleaner, or churn, you'll know that the best materials and workmanship have contributed to the building of a motor designed to stand up under the grind of the daily chores. G-E MAZDA lamps, Wiring System, and household equipment can also be depended upon to make your farm safe and convenient.

If you are on an electric line or hope to be soon, ask your electric power company for a copy of the G-E Farm Book which explains many uses for electricity on the farm.

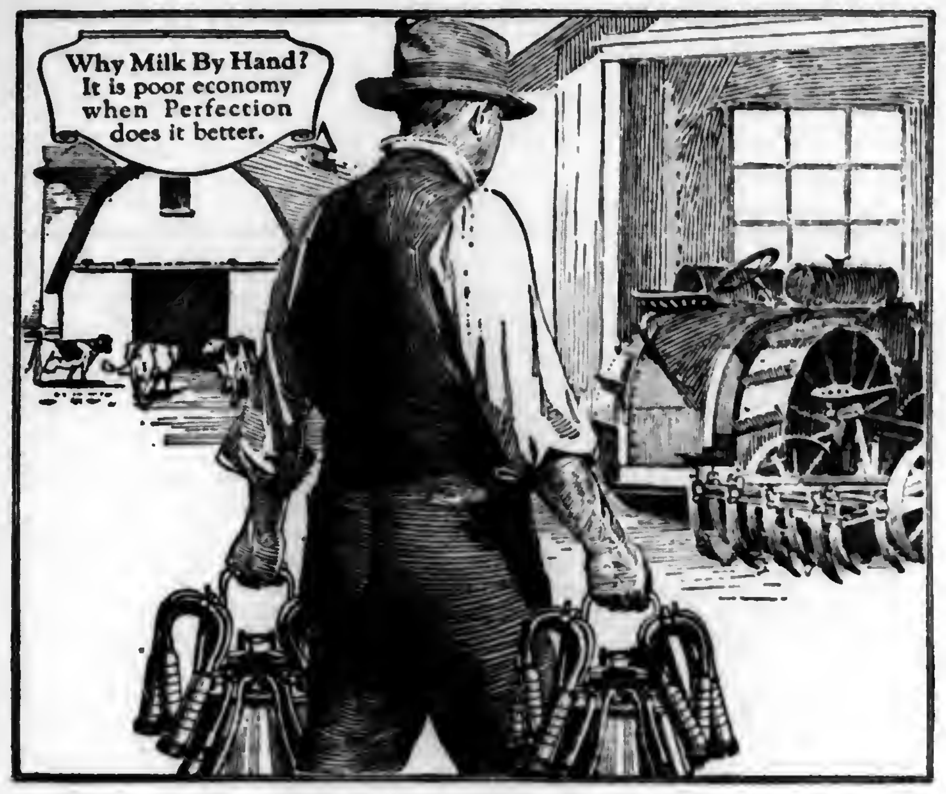
BETHLEHEM



Why Milk By Hand? It is poor economy when Perfection does it better.

"My Most Economical Farm Machine"

"MY Perfection Milker is just as good as ever" writes Lynn Bradford of Sparta, Michigan. "It hasn't missed a milking in the six years I have had it. As you know, I got it second hand—its factory number is 647. I should like to know if there are any older machines in use at the present time."

"The ten cows that I have had on test at the West Kent Cow Testing Association were high herd for both milk and butterfat—12100 lbs. of milk and 418 lbs. of fat. Four of them were first calf heifers. I also had high cow for milk and butterfat."

Mr. Bradford's Perfection was seven years old when he bought it second hand. So it is now going strong after thirteen years. Its cost of upkeep is practically negligible, "less than any other tool on the farm," and Perfection milking takes only a fraction of the time that hand milking takes.

The new sanitary teat cup has only two pieces. One pull and it's all apart. That's why the Perfection Milker is so easy to wash and keep sanitary.

Send for your copy of free catalog and the names of users nearest you.

The new 2 piece Teat Cup. One pull and it is all apart for quick and easy cleaning.

Herd Comes in Several Paces Ahead of Other Entries in Year's Race

IT IS not much of an honor to win a three-minute race among a bunch of ordinary farm horses but to win a two-minute race against a field of fast trotters is a real honor and requires a wonderfully good horse and a skilful driver.

Likewise to lead twenty-six exceptionally high producing herds in milk and butterfat production in a cow testing association is an accomplishment worthy of note and requires an excellent herd and a skillful herdsman. This enviable record was won by Jesse E. Kurtz in the Cumberland County Cow Testing Association for the year ending September, 1926. His herd of eight registered and grade Holsteins averaged 13,929 pounds of milk and 474.4 pounds of fat. The average production for the 278 cows in the association was 9777 pounds of milk and 349 pounds of butterfat valued at $259.40. Each cow ate on an average $108.46 worth of feed, leaving her owner a net return over feed cost of $150.94.

Evinces Remarkable Progress

This cow testing association, under the leadership of A. A. Raudabaugh, has made remarkable progress since its organization in 1919. The average production per cow the first year was 7325 pounds of milk and 244.6 pounds of butterfat. Steady improvement has been made until at the end of the seventh year the average yield per cow was 9777 pounds of milk and 349 pounds of butterfat, an increase of 2452 pounds of milk per cow and 104.5 pounds of butterfat.

The fine record made by Mr. Kurtz was not accomplished by any spectacular methods but simply by regularity in feeding and milking and by good care of the cows. Of course, it takes good cows to start with. No matter how much feed and care a half bred or a scrub dairy cow receives she is not likely to do much at the milk pail.

Mr. Kurtz started in with purebred Holsteins in 1921 with the purchase of a daughter of Lothian DeKol Korndyke, a bull formerly owned by I. V. Otto, and later purchased by the Pennsylvania State College on account of the good type and high average production of his daughters. Twelve of them averaged on a mature basis 15,414 pounds of milk and 524.5 pounds of butterfat on twice-a-day milking in the cow testing association, an increase over the average production of their twelve dams of 1478 pounds of milk and 55.5 pounds of butterfat.

Two bred heifers were also purchased in addition to the yearling heifer mentioned above. They all proved to be good producers but the daughter of Lothian DeKol Korndyke was outstanding as a breeding cow. In six years she has produced three daughters and three sons. The daughters are all in Mr. Kurtz's herd at the present time and two of her sons head Cumberland County herds. Two granddaughters and one great-

(Continued on next page)

Chester Valley C.T.A. Seven Years Old This Month

Editors' Note—This is one of a series of annual reports of Pennsylvania cow testing associations. As each association completes its fiscal year a summary of its records is published in this department. The owners of herds with a 300-pound butterfat average, whose names appear at the end of the report, will be awarded prize ribbons by the Pennsylvania Dairymen's Association at the 1928 State Farm Products Show.

THE Chester Valley Cow Testing Association finished its seventh year, April 1, 1927, with 19 whole-year members. There were 503 cows in the association during all or part of the year.

The result for the six years' testing is as follows:

Year	Average no. cows	Lbs. Milk	Lbs. fat
1922...	400.57	6616	278.3
1923...	335.82	6970	280.9
1924...	363.74	7247	294.6
1925...	376.73	6186	283.1
1926...	260.66	6011	276.3
1927...	445.67	6085	291.0

The summary for the members of the association is as follows:

Average number of cows in the association	445.67
Avge. per cow: lbs. of milk	6085
Pounds of butterfat	291.0
Percentage of butterfat	4.8
Value of product	$272.96
Cost of pasture	8.71
Cost of roughage	23.25
Cost of grain	45.30
Total cost of feed	77.33
Value of product above feed cost	195.63
Returns for $1 expended for feed	3.53

One cow in this association produced more than 600 pounds of butterfat, 3 produced between 500 and 600 pounds, 33 between 400 and 500 pounds and 131 between 300 and 400 pounds. Thus, 37 cows produced over 400 pounds during the year.

Cow Tester in Charge, Warren Shingle; County Agent, Wm. Vandegrift; summary compiled by I. O. Sidelmann.

Eight herds with an average of 5 or more cows exceeded an average production of 300 pounds of butterfat. The records of these herds follow:

Owner	Avge. no. Cows	Breed	Pounds Milk	Pounds Fat
C. E. Mather, West Chester	17.25	R. J. & G. J.	7453	352.7
Norman K. Beach, Parkesburg	20.25	R. & G. G.	7099	352.3
Harry B. Shenk, Elverson	30.17	R. G.	6802	350.4
Mrs. Mary N. Carter, Pocopson	17.42	R. G., G. G. R. J. & G. J.	6861	345.0
Claverach Farm, James Speirs, Downingtown, Pa.	15.00	R. J.	6563	343.2
Wm. M. Lloyd, Downingtown	25.58	R. J.	6166	312.6
Wallace C. Pierson, Downingtown	18.67	R. J.	6183	310.3
Jonathan P. Styer, Glen Moore	13.33	G. H. & R. & G. J.	7879	304.5

---

granddaughter of this cow are also members of the Kurtz herd.

One of the other females purchased in 1921 has also proven an excellent producer—Chapindale Gertrude Skip 2d. Last year she was the highest cow in the herd with a yield of 16,080 pounds of milk and 520 pounds of butterfat. Her yearling daughter is now producing forty pounds of milk daily.

The cows are milked three times daily and are fed grain according to appetite and condition. On account of a short hay crop last year, less than the usual amount of hay is fed. Mr. Kurtz believes it is economical to make up a deficiency in hay by feeding more grain, rather than by purchasing additional hay. The fact that his herd shows an average profit above feed cost of over $150 per cow is evidence that he is not far wrong in his belief.

Silage is fed at least six months in the year. Mr. Kurtz considers silage responsible for at least 10 per cent of the production of the herd.

Aside from the three milkings per day, the Kurtz herd is handled under ordinary conditions. The lack of modern stable equipment, however is more than made up by better care and management than is ordinarily given the average herd.

A. R. Tests Do Their Bit

Mr. Kurtz is also a believer in advanced registry testing. While he considers the cow testing association record valuable in determining the economy of production by each cow in the herd, yet in most cases this test does not bring out the upper limit of a cow's ability to digest feed and produce milk as is the rule in advanced registry tests.

One cow, purchased a year ago, which had a record of 10,000 pounds of milk and 380 pounds of butterfat, increased her production to 13,500 pounds of milk and 465 pounds of butterfat last year, is a good example of a case where the animal could do much better when given an opportunity. Another cow raised by Mr. Kurtz is an example of the other kind. She reaches the limit of her ability to produce milk with very ordinary amounts of feed.

Last fall several cows were tried out on advanced registry tests. They were milked only three times daily instead of four. One cow produced 26.6 pounds of butter in a week and four others made over 20 pounds each during the week.—A. A. Borland.

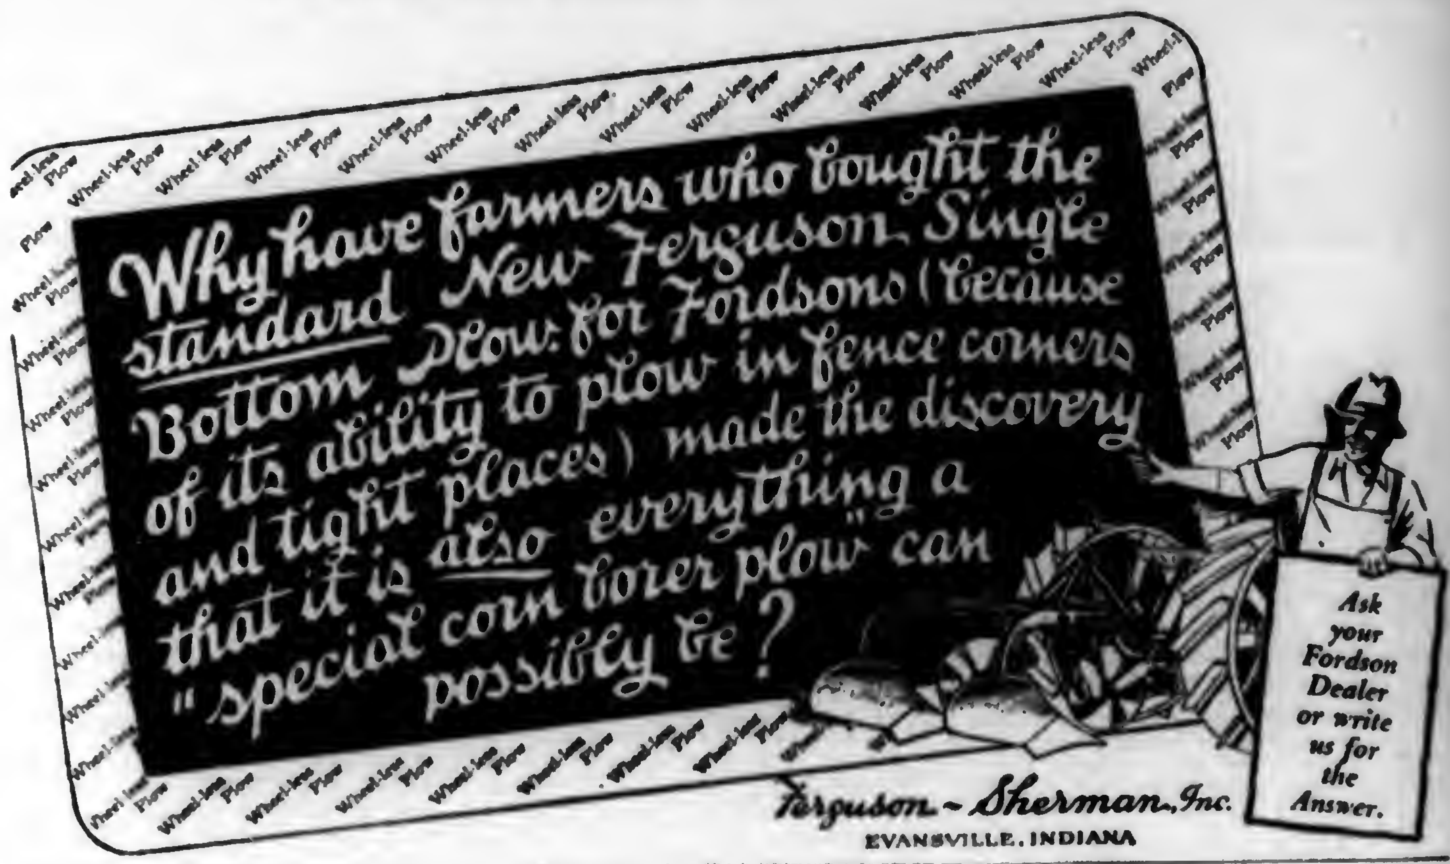
Moisture in Wood Often Causes Paint to Peel

The paint on my house peels off in spots, especially along the cornice and along the windows where the shutters we used to have stood open all the time. What is the cause of this trouble and what can I do to get the paint to stick?—H. H., N. J.

I think there is no question but what the trouble with your paint peeling is due to that very common cause, too much moisture in the wood when the paint is applied. In the case of a cornice, this is sometimes caused by water getting in behind the board thru an open crack.

Very little can be done in the way of a remedy other than to wait until a very dry period, protecting the wet places so that no more water can get on them and giving plenty of time for that in the boards to dry out. Then brush off all loose paint, and give a coat of shellac, followed by the proper paint coats. After the first coat has been put on, fill in any cracks with putty where water is likely to get in back of the boards.

Readers having paint work to do should secure a copy of Farmers' Bulletin 1452, "Painting on the Farm," which can be secured free on request from the U. S. Department of Agriculture, Washington, D. C. Most of the paint firms also have valuable painting booklets which can be secured on request.—I. W. D.



Why have farmers who bought the standard New Ferguson Single Bottom Plow for Fordsons (because of its ability to plow in fence corners and tight places) made the discovery that it is also everything a "special corn borer plow" can possibly be?

Diarrhea Killed Half Her Chicks

Not another chick died after using this in the drinking water

Readers whose chicks are dying, will be interested in this letter from Mrs. John Shaffer, of Owen, Wis. She says:

"I bought 25 baby chicks. When about a week old, they began to get droopy and in a few hours would die. After 10 of them had died, I began putting Avicol in the drinking water. They stopped dying at once and I didn't lose another chick."

A free test of Avicol will show how easily white diarrhea can be prevented and stopped. The way it makes sick chicks lively and healthy, in just a few hours, is positively amazing. Readers who have never tried Avicol should write today for a free sample, or send 50c for full-sized package, to Burrell-Dugger Co., 849 Postal Station Bldg., Indianapolis, Ind. It costs nothing to try the 50c package, because Avicol is guaranteed to do the work or money refunded. But if you prefer, try the free sample first.

AVICOL stops chicks dying

Don't Let Chicks Die

Give them *Wackers Chick Tablets* in the water, stops *White Diaherrea, Gaps* and other chick diseases, makes your chicks grow like weeds, ask anyone who has used them.

Rambles of a Pennsylvania Fruit Grower

VII. Georgia Peaches

THE red clay hills of north Georgia, with their distressing erosion, merge gradually into the flat piney woods of south Georgia. This is a land of yellow pines, embellished with turpentine cups, of shiftless tenant farmers, razor-back hogs, scrubby long-horned cattle, negroes and sand, especially sand. The floor of the pine woods is ablaze all along the way; it is burnt over annually to favor the grass that springs up beneath the thin stand of trees.

The saw palmetto comes in under the pines as we near the Florida line. There are long stretches of unfenced woods between farmsteads. Here and there are heavily wooded swamps, thru which creep sluggish streams, home of the catfish and the moccasin. The sand-clay roads, when properly drained and dragged, are like the little girl of Mother Goose fame who had a little curl

"Right in the middle of her fore-
head.
When she was good she was very,
very good,
But when she was bad she was
horrid!"

Fortunately we found them dry, and very, very good; twenty-four hours later they were horrid.

Include Fort Valley in Itinerary

No Pennsylvania fruit grower would motor thru Georgia without visiting Fort Valley, the most intensive peach-growing district in the world. Georgia shipped 14,000 cars of peaches last year from more than a dozen counties, and has earned the right to be called the "Peach State." One of its most distinguished citizens, "Ty" Cobb, is known to a million fans as "The Georgia Peach." The Fort Valley district, very appropriately, is in Peach County and adjacent parts of Houston County.

Thirty years ago I heard J. H. Hale, the "Peach King" of Connecticut and Fort Valley, sing the glories of this district. It nearly comes up to his enthusiastic word painting,—mile upon mile of level sandy soil, not a stone in sight, good roads, prosperous-looking farm homes and peach trees everywhere. It is the height of the blossoming season. The whole valley is a fragrant bouquet of tender pink. I shall never forget this day.

Land values are not high, about $75 an acre for unplanted land and around $200 for bearing orchards. Some of the holdings are large; A. J. Evans has over 1000 acres of peaches, in several farms, besides many acres of apples at Cornelia, Ga. Cotton is raised between the young trees but there was no profit in eleven-cent cotton the past year.

Few Crops Supplement Peach

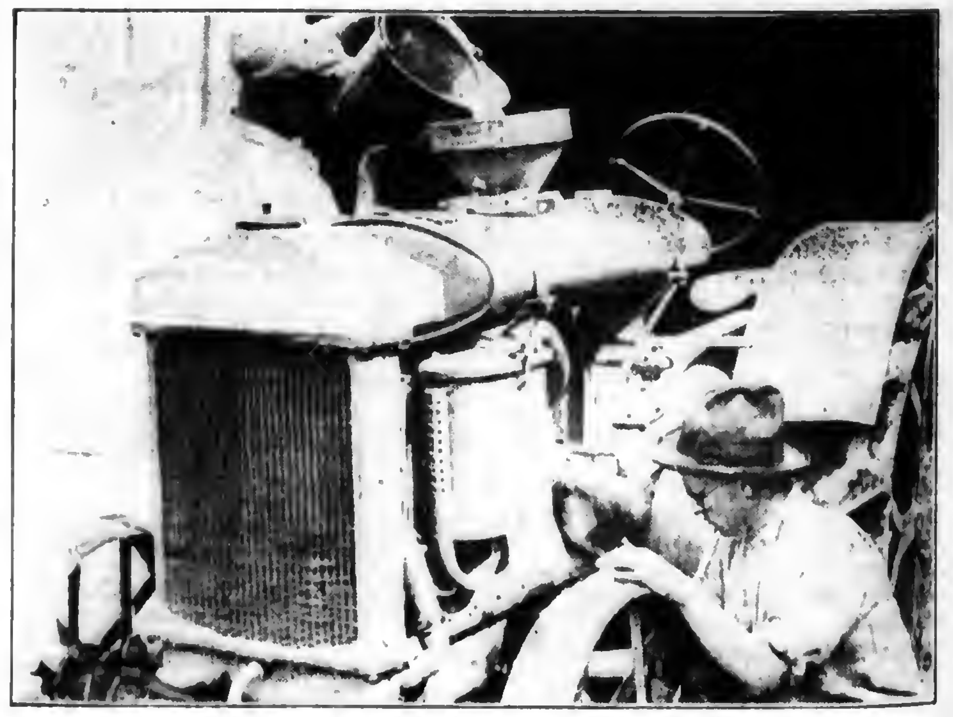
Some asparagus and sweet potatoes are grown and occasionally there is a pecan grove with peach fillers; but in the main this is a one crop district and that crop is the peach.

There are the usual uncertainties that are attendant upon single-crop farming everywhere, not so much the weather hazard here as the market hazard. This district rarely has a complete crop failure. With the new orchards coming on there is prospect of a 20,000-car crop in Georgia this year, if all sections have a full crop. Some of the best posted growers are convinced that there is a good market for only about 12,000 cars. This is why I found Fort Valley growers not particularly concerned about the forward spring, with trees in full bloom nearly a month ahead of normal. They say that if half the crop of the state is killed the growers will make more money and save the expensive thinning that was necessary in 1926.

Only a few growers use cover crops of cow peas or vetch; the majority practice clean tillage, as late in the season as possible and without cover crops. This looks like a mistake, especially on these light soils; they are likely to discover this in a few years just as the fruit growers of California and Washington found it out after years of clean cultivation. A complete fertilizer is used, commonly about two parts nitrogen, four parts phosphor-

(Continued on next page)

There's a Day's Work Ahead



The boss, Thomas F. Biddle, president of the Pennsylvania Vegetable Growers' Association, inspects his tractor before sending it to the field, while the "chauffeur" fills the gas tank.

ous and one part potash applied at the rate of four to eight pounds per tree. Cottonseed meal replaces nitrate, in part at least, potash is essential to carrying quality.

Pruning is much more severe and open than in the North but the young trees are not cut back as heavily as in the Chattanooga district. A dormant spray of lime-sulphur is applied between November and January and three to five summer sprays of self-boiled lime sulphur. More than half the growers are dusting, using a mixture of eighty pounds of sulphur, five of lead and fifteen of lime. Brown rot is kept under control both by spraying and dusting unless there should come two or three wet seasons in succession so that it gets established in the orchard. Yellows and Oriental moth disturb the serenity of these peach growers not at all.

Elberta Leads in Popularity

The shipping season begins with Mayflower, about May 25, and closes with Elberta, about July 25th. The succession of varieties is Mayflower, Uneeda, Arp Beauty, Early Rose, Red Bird, Hiley, Georgia Belle and Elberta. About forty per cent of the planting is Elberta and twenty-five per cent Hiley. Georgia Belle and the early varieties have not been profitable recently and are being cut out. This district well illustrates the truth of the statment by H. P. Gould in his book "Peach Growing," that success in wholesale peach growing depends most of all in being able to ripen the Elberta peach—and no other variety—at a time when the market is not abundantly supplied with this dominant sort.

Peach harvest is a gala time to thousands of colored folk, who are brought in from neighboring counties and are paid $1.50 to $2.00 a day. This help is not very dependable, especially if an adjacent orchard pays a few cents more a day.

The bushel basket pack is increasing in favor but most of the crop still goes into Georgia carriers which are now as cheap as baskets, about eighteen cents each.

Marketing Poorly Organized

Marketing is not well organized. One would suppose that here conditions would be favorable for sustained cooperation, but the numerous efforts have been abortive. The Georgia Fruit Exchange, recently reorganized as the Georgia Peach Growers, does not have a strong hold here. Most growers ship independently or sell to the big distributors, many of whom have representatives at Fort Valley thruout the season and sometimes the year round.

My general impression of Fort Valley peach growing is that this district has great natural advantages, that planting has outstripped demand, and that marketing is poorly organized. In spite of a rather low average net return most of the growers are not discouraged for they are getting as much from peaches as from any other crop grown in the valley. The outlook for general farming here, especially cotton, is not particularly bright and there is always the chance, with peaches, of striking a "big year."—S. W. Fletcher.

Over the Radio

THE first week in May has been set aside by the National Poultry Council as Egg Week. Producers and dealers in the Philadelphia section will endeavor to encourage the use of eggs at this time when they are most plentiful and of best quality. On May 2, at 4:15 P. M., the Pennsylvania Bureau of Markets will broadcast a talk on Grading Eggs from Station WIP, and on May 5 at 6.50 P. M. a representative of the Pennsylvania Extension Service will also talk on eggs.—W.

The Chug of Tractor Motors Is Music to Jersey Growers

THE Garden State (New Jersey) is just naturally strong for garden tractors. At the recent three-day demonstration of garden and orchard machinery, held under the direction of the State College of Agriculture in three widely separated districts, the small machines were out in full force and attracted more attention than any other class of equipment shown.

Four makes of the small tractors and two representatives of the slightly larger ones, those able to do heavier cultivating and light plowing, were exhibited at the first day's session on Del-Bay Farms at Bridgeton. They kept chugging all the time so that growers could make a careful comparative study of their various points and the quality of their work.

They Will Run—But How?

The greatest interest seemed to be centered on the wide range of tool combinations and the efficiency of their work. There is no longer a question as to whether they will run, all can do that. The problem now is what kind of work can they do.

Cultivator teeth, wide, narrow and spring, were the favorite tools used by the demonstrators and some operators in their enthusiasm to "work" the crop (rye one and a half inches high growing in 14-inch rows especially planted for the day) buried more than half of it. Only one machine used a combination of hoes and cultipackers which was able to get close to small plants and not cover them with earth. Of course, this machine could attach any of the teeth for use when the plants were larger.

Having the ability to give plants their first cultivation, seemed to be the vegetable men's test for the ideal power cultivator. Hand labor, they find, is the most expensive item in raising a crop and weeding the hardest operation so when these are materially reduced profits are correspondingly increased.

Buy 1927 Model on the Spot

Thomas J. Greham and his son, who intensively handle a 20-acre farm at Vineland, were among the hundreds of interested observers at the demonstration. They had used a small motor cultivator, or garden tractor as most folks call it, last year and were looking for a better one, if possible, to help in their work. After studying all those shown they went home that night taking with them a this year's model of the machine they already had.

"Now," said Mr. Greham to me, "both my son and I can go into a crop at just the ideal time to cultivate it and finish the job in jig time. Very often this will mean the difference between a profit and a loss to us."

This year is the first that the Del-Bay Farms, possibly better known by their former name of Seabrook Farms, have used gasoline for cultivating vegetables. Small mules have heretofore been depended upon to do this work but in the effort to reduce growing costs small tractors are being tested.

Warren W. Oley, general manager of the farms, told me he thought the small tractors he was using had already received as much use this season as the average man would give in a year and he was satisfied with their work. Del-Bay, you know, has an almost unbelievable size vegetable garden on its 2600 cultivated acres. —Thos. H. Wittkorn.

The end of an old chore

TWICE a day—every day—it's milking time. Often, mother or the boys must do it when the men are busy—but not on the electrified farm.

A little motor on a milking machine will milk several cows at one time. Electricity will cool and separate the milk, grind the feed, and pump the water—do a dozen chores at a cost of a few cents for each chore.

And when electricity washes, cleans, and cooks, and lights every building on the farm, it makes life easier for every member of the family.

Being a "milkmaid" is small fun, anyhow. Electricity is the modern milkmaid and all-round farm worker.

When you find this monogram on the motor of a milking-machine, washer, cleaner, or churn, you'll know that the best materials and workmanship have contributed to the building of a motor designed to stand up under the grind of the daily chores. G-E MAZDA lamps, Wiring System, and household equipment can also be depended upon to make your farm safe and convenient.

If you are on an electric line or hope to be soon, ask your electric power company for a copy of the G-E Farm Book which explains many uses for electricity on the farm.

Why Milk By Hand? It is poor economy when Perfection does it better.

"My Most Economical Farm Machine"

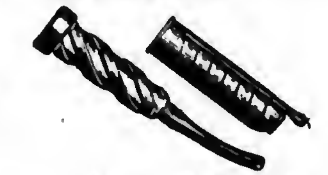
"MY Perfection Milker is just as good as ever" writes Lynn Bradford of Sparta, Michigan. "It hasn't missed a milking in the six years I have had it. As you know, I got it second hand—its factory number is 647. I should like to know if there are any older machines in use at the present time."

"The ten cows that I have had on test at the West Kent Cow Testing Association were high herd for both milk and butterfat—12100 lbs. of milk and 418 lbs. of fat. Four of them were first calf heifers. I also had high cow for milk and butterfat."

Mr. Bradford's Perfection was seven years old when he bought it second hand. So it is now going strong after thirteen years. Its cost of upkeep is practically negligible, "less than any other tool on the farm," and Perfection milking takes only a fraction of the time that hand milking takes.

The new sanitary teat cup has only two pieces. One pull and it's all apart. That's why the Perfection Milker is so easy to wash and keep sanitary.

Send for your copy of free catalog and the names of users nearest you.



The new 2 piece Teat Cup. One pull and it is all apart for quick and easy cleaning.

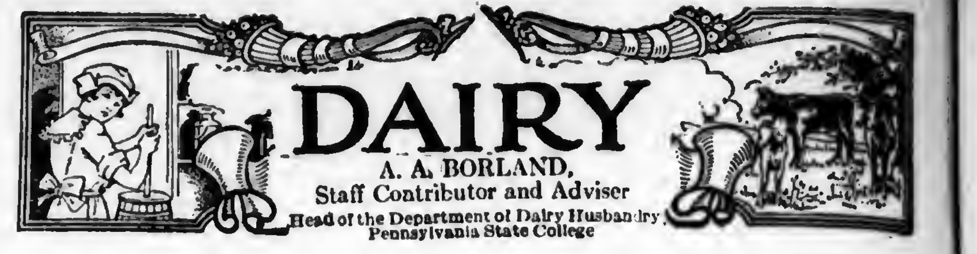
PERFECTION MILKER



DAIRY

A. A. BORLAND,
Staff Contributor and Adviser
Head of the Department of Dairy Husbandry, Pennsylvania State College

Herd Comes in Several Paces Ahead of Other Entries in Year's Race

IT IS not much of an honor to win a three-minute race among a bunch of ordinary farm horses but to win a two-minute race against a field of fast trotters is a real honor and requires a wonderfully good horse and a skilful driver.

Likewise to lead twenty-six exceptionally high producing herds in milk and butterfat production in a cow testing association is an accomplishment worthy of note and requires an excellent herd and a skilful herdsman. This enviable record was won by Jesse E. Kurtz in the Cumberland County Cow Testing Association for the year ending September, 1926. His herd of eight registered and grade Holsteins averaged 13,929 pounds of milk and 474.4 pounds of fat. The average production for the 278 cows in the association was 9777 pounds of milk and 349 pounds of butterfat valued at $259.40. Each cow ate on an average $108.46 worth of feed, leaving her owner a net return over feed cost of $150.94.

Evinces Remarkable Progress

This cow testing association, under the leadership of A. A. Raudabaugh, has made remarkable progress since its organization in 1919. The average production per cow the first year was 7325 pounds of milk and 244.6 pounds of butterfat. Steady improvement has been made until at the end of the seventh year the average yield per cow was 9777 pounds of milk and 349 pounds of butterfat, an increase of 2452 pounds of milk per cow and 104.5 pounds of butterfat.

The fine record made by Mr. Kurtz was not accomplished by any spectacular methods but simply by regularity in feeding and milking and by good care of the cows. Of course, it takes good cows to start with. No matter how much feed and care a half bred or a scrub dairy cow receives she is not likely to do much at the milk pail.

Mr. Kurtz started in with purebred Holsteins in 1921 with the purchase of a daughter of Lothian DeKol Korndyke, a bull formerly owned by I. V. Otto, and later purchased by the Pennsylvania State College on account of the good type and high average production of his daughters. Twelve of them averaged on a mature basis 15,414 pounds of milk and 524.5 pounds of butterfat on twice-a-day milking in the cow testing association, an increase over the average production of their twelve dams of 1478 pounds of milk and 56.5 pounds of butterfat.

Two bred heifers were also purchased in addition to the yearling heifer mentioned above. They all proved to be good producers but the daughter of Lothian DeKol Korndyke was outstanding as a breeding cow. In six years she has produced three daughters and three sons. The daughters are all in Mr. Kurtz's herd at the present time and two of her sons head Cumberland County herds. Two granddaughters and one great-granddaughter of this cow are also members of the Kurtz herd.

One of the other females purchased in 1921 has also proven an excellent producer—Chapindale Gertrude Skip 2d. Last year she was the highest cow in the herd with a yield of 16,080 pounds of milk and 520 pounds of butterfat. Her yearling daughter is now producing forty pounds of milk daily.

The cows are milked three times daily and are fed grain according to appetite and condition. On account of a short hay crop last year, less than the usual amount of hay is fed. Mr. Kurtz believes it is economical to make up a deficiency in hay by feeding more grain, rather than by purchasing additional hay. The fact that his herd shows an average profit above feed cost of over $180 per cow is evidence that he is not far wrong in his belief.

Silage is fed at least six months in the year. Mr. Kurtz considers silage responsible for at least 10 per cent of the production of the herd.

Aside from the three milkings per day, the Kurtz herd is handled under ordinary conditions. The lack of modern stable equipment, however, is more than made up by better care and management than is ordinarily given the average herd.

A. R. Tests Do Their Bit

Mr. Kurtz is also a believer in advanced registry testing. While he considers the cow testing association record valuable in determining the economy of production by each cow in the herd, yet in most cases this test does not bring out the upper limit of a cow's ability to digest feed and produce milk as is the rule in advanced registry tests.

One cow, purchased a year ago, which had a record of 10,000 pounds of milk and 380 pounds of butterfat, increased her production to 13,500 pounds of milk and 465 pounds of butterfat last year, is a good example of a case where the animal could do much better when given an opportunity. Another cow raised by Mr. Kurtz is an example of the other kind. She reaches the limit of her ability to produce milk with very ordinary amounts of feed.

Last fall several cows were tried out on advanced registry tests. They were milked only three times daily instead of four. One cow produced 26.6 pounds of butter in a week and four others made over 20 pounds each during the week.—A. A. Borland.

(Continued on next page)

Chester Valley C.T.A. Seven Years Old This Month

Editors' Note.—This is one of a series of annual reports of Pennsylvania cow testing associations. As each association completes its fiscal year a summary of its records is published in this department. The owners of herds with a 300-pound butterfat average, whose names appear at the end of the report, will be awarded prize ribbons by the Pennsylvania Dairymen's Association at the 1928 State Farm Products Show.

THE Chester Valley Cow Testing Association finished its seventh year, April 1, 1927, with 19 whole-year members. There were 503 cows in the association during all or part of the year.

The result for the six years' testing is as follows:

Year	Average no. cows	Lbs. Milk	Lbs. fat
1922...	400.57	6616	278.3
1923...	335.82	6970	280.9
1924...	363.74	7247	294.6
1925...	376.73	6186	283.1
1926...	260.66	6011	276.3
1927...	445.67	6085	291.0

The summary for the members of the association is as follows:

Average number of cows in the association	445.67
Avge. per cow: lbs. of milk	6085
Pounds of butterfat	291.0
Percentage of butterfat	4.8
Value of product	$272.96
Cost of pasture	8.78
Cost of roughage	23.25
Cost of grain	45.30
Total cost of feed	77.31
Value of product above feed cost	195.63
Returns for $1 expended for feed	3.53

One cow in this association produced more than 600 pounds of butterfat, 3 produced between 500 and 600 pounds, 33 between 400 and 500 pounds and 131 between 300 and 400 pounds. Thus, 37 cows produced over 400 pounds during the year.

Cow Tester in Charge, Warren Shingle; County Agent, Wm. Vandegrift; summary compiled by I. O. Sidelmann.

Eight herds with an average of 5 or more cows exceeded an average production of 300 pounds of butterfat. The records of these herds follow:

Owner	Avge. no. Cows	Breed	Pounds Milk	Pounds Fat
C. E. Mather, West Chester	17.25	R. J. & G. J.	7453	352.7
Norman K. Beach, Parkesburg	20.25	R. & G. G.	7099	352.3
Harry B. Shenk, Elverson	30.17	R. G.	6802	350.4
Mrs. Mary N. Carter, Pocopson	17.42	R. G., G. G. R. J. & G. J.	6861	345.0
Claverach Farm, James Speirs, Downingtown, Pa.	15.00	R. J.	6563	343.2
Wm. M. Lloyd, Downingtown	25.58	R. J.	6166	312.6
Wallace C. Pierson, Downingtown	18.67	R. J.	6183	310.3
Jonathan P. Styer, Glen Moore	13.33	G. H. & R. & G. J.	7879	304.5

Save with a Harder

"The Bulwark of the Paying Dairy"

Your corn, preserved in a Harder Silo is worth one third more. If corn fails, fill your Harder with clover, alfalfa—anything you have. Your Harder will keep silage perfectly because it's absolutely airtight. Built to endure, of selected White Spruce or Oregon Douglas Fir, cut extra-thick and doweled at every joint.

Be sure to get Harder prices and attractive payment terms, before you decide on a silo. Write us today, giving number of cows or size of silo desired.

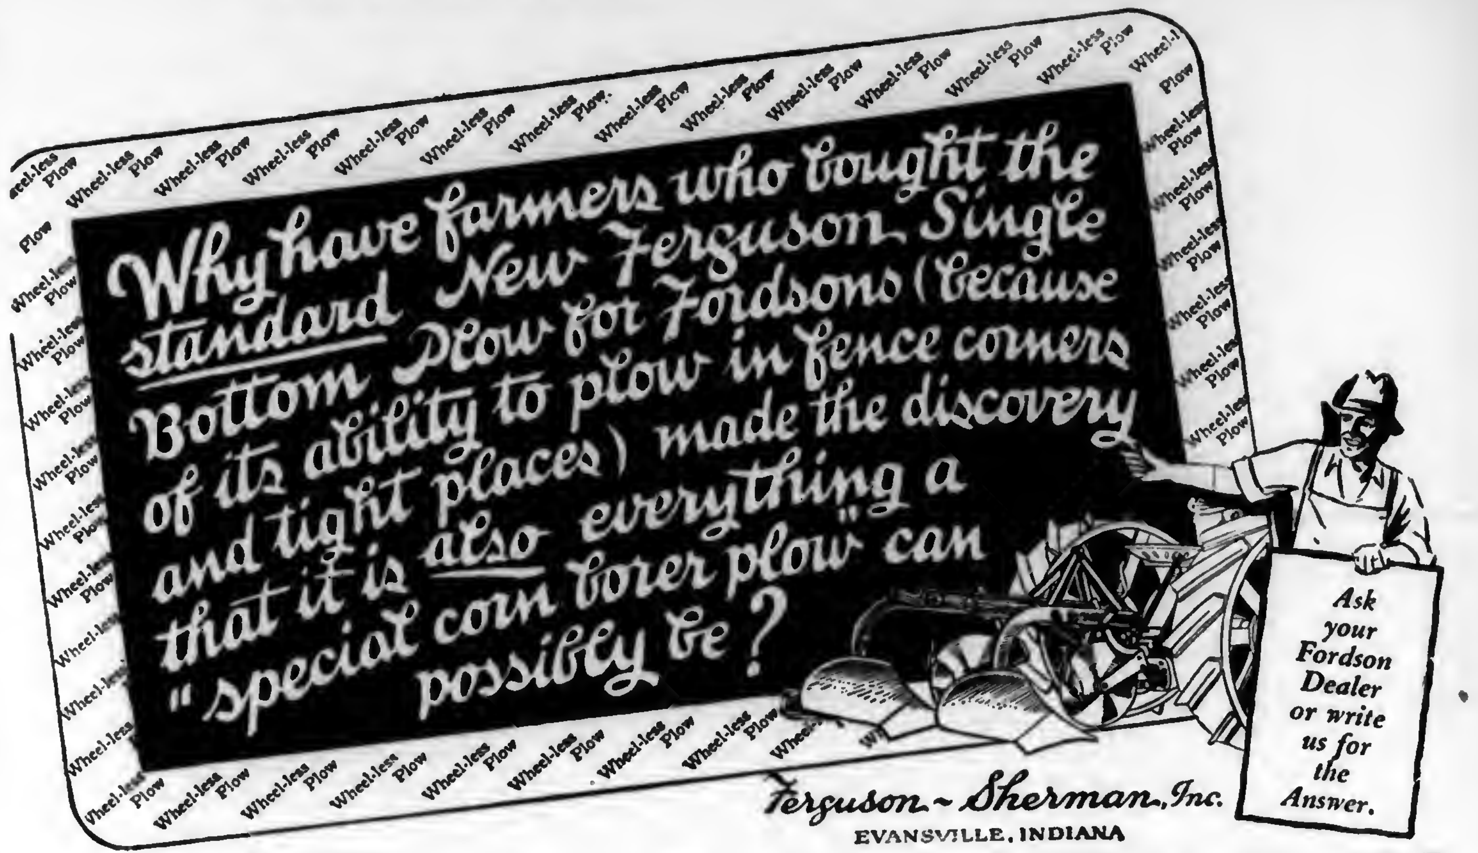
Moisture in Wood Often Causes Paint to Peel

The paint on my house peels off in spots, especially along the cornice and along the windows where the shutters we used to have stood open all the time. What is the cause of this trouble and what can I do to get the paint to stick?—B. R., N. J.

I think there is no question but what the trouble with your paint peeling is due to that very common cause, too much moisture in the wood when the paint is applied. In the case of a cornice, this is sometimes caused by water getting in behind the board thru an open crack.

Very little can be done in the way of a remedy other than to wait until a very dry period, protecting the wet places so that no more water can get on them and giving plenty of time for that in the boards to dry out. Then brush off all loose paint, and give a coat of shellac, followed by the proper paint coats. After the first coat has been put on, fill in any cracks with putty where water is likely to get in back of the boards.

Readers having paint work to do should secure a copy of Farmers' Bulletin 1452, "Painting on the Farm," which can be secured free on request from the U. S. Department of Agriculture, Washington, D. C. Most of the paint firms also have valuable painting booklets which can be secured on request.—I. W. D.



Why have farmers who bought the standard New Ferguson Single Bottom Plow for Fordsons (because of its ability to plow in fence corners and tight places) made the discovery that it is also everything a "special corn borer plow" can possibly be?

Rebuild Rebuild

Your Chance to have a Craine Silo
at about half the cost of a new, ordinary silo

That tilting, weakened, dilapidated silo of yours—

Have it rebuilt the Craine Way and turn loss into profit!

Every year, more dairy owners order us to rebuild for them. They see an opportunity—just like yours. They get a real Craine—the silo that laughs at smashing storms—resists frost—keeps silage better—stands firm and straight—needs no tinkering—earns profits for years.

You know what a good silo means to you. Now's your chance to have it—and save hundreds of dollars at the same time!

Write to us. Tell us about your present silo. Ask for information about Craine rebuilts—how they stand up and serve others—how we rebuild—what you get.

Diarrhea Killed Half Her Chicks

Not another chick died after using this in the drinking water

Readers whose chicks are dying, will be interested in this letter from Mrs. John Shaffer, of Owen, Wis. She says: "I bought 25 baby chicks. When about a week old, they began to get droopy and in a few hours would die. After 10 of them had died, I began putting Avicol in the drinking water. They stopped dying at once and I didn't lose another chick."

A free test of Avicol will show how easily white diarrhea can be prevented and stopped. The way it makes sick chicks lively and healthy, in just a few hours, is positively amazing. Readers who have never tried Avicol should write today for a free sample, or send 50c for full-sized package, to Burrell-Dugger Co., 849 Postal Station Bldg., Indianapolis, Ind. It costs nothing to try the 50c package, because Avicol is guaranteed to do the work or money refunded But if you prefer, try the free sample first.

AVICOL stops chicks dying

Don't Let Chicks Die

Give them Wackers Chick Tablets in the water, stops White Diahorrea, Gaps and other chick diseases, makes your chicks grow like weeds, ask anyone who has used them.

Darkness Handicaps the Worker

A Fact Well to Remember If Building or Remodeling

"YOUR kitchen must be especially convenient," said a friend who spent several days with me. "I can work here so easily and do not seem to get tired."

"It is as convenient as I can possibly plan or afford to have it," I answered. "But I imagine the reason you do not tire so readily as usual is because we have plenty of light."

Her own kitchen, I knew, was always dark. Sink and drainboard were so placed against an inside wall that the worker always worked in her own shadow. Every closet and cupboard door opened against a window and so excluded light from the interior. The only spot in the whole room where she did not work in a shadow was at a work-table placed across a bright window which was equally as trying as the shadows.

The disposal of light in relation to the worker is more important than many people realize. Many women, in an endeavor to see, draw their sewing-machine directly across a window and then wonder why sewing invariably gives them a headache.

For a right-handed person the light should come from the left and shine upon the work without shining directly into the eyes of the worker. When an effort must constantly be made to see there is a strain upon the eyes and nerves tiring the worker more than the actual doing of the work. If you habitually have a poor light at your work-table, try drawing it to a suitable position and see how much more easily you can accomplish a morning's baking.

Wall Lamps Shed Best Light

For several months of the year a number of hours' work must be done by artificial light each day in the farm kitchen. One reason why this season seems so trying is because of the poor arrangment of lights in the kitchen. Wall-lights are best and are easily arranged even tho oil-lamps are used for illumination. Have small shelves placed on the walls where a hand-lamp may be set so that the light falls upon the work yet is sligntly above the level of the worker's eyes.

A wall lamp having a reflector is convenient if placed so that the light is thrown toward the store-room, hall or other room which is not lighted; it is then possible to go into those rooms on errands without carrying a hand-lamp.

Sometimes we wonder why our dining-room seems so much less attractive in the evening than during the day. Usually this feeling of discomfort can be traced to the use of an unshaded table lamp or a hanging lamp so placed that the shade does not protect the eyes of the diners.

By all of which we learn that ideal lighting consists of plenty of light both day and night but so placed that there is no glare in the eyes. The majority of children have school work to do at night and mother should be especially careful to insure that they have proper light by which to work. Good eye-sight is one of our most priceless possessions. —Alice Margaret Ashton.

Child Health Day

HEALTHY minds in healthy bodies. Keep that idea in the very front room of your mind all thru May 1—National Child Health Day. How splendid it is that all over our fair land forces are united for the good of our children. You, too, little mother way out in the country—you have a share in this great enterprise. Is today, is every day, a Health Day for your child? Healthy minds in healthy bodies.—Gertrude S. Stewart.

Was Monday Sunny?

THE Sunny Monday Contest Editor wants to remind you of the fine contest announced last week. If your letter isn't yet written, better get out pen and ink this minute. With your assistance this contest should prove one of the most helpful the Home Page could hope for. Is there any way to help the busy country mother more than by solving laundry difficulties. In many states the county home workers are specializing on better kitchens and often the laundry is included in the farm kitchen. If your wash day has been lightened by any plan or by the installing of labor-saving machinery and equipment, do share your experience with others.

Remember to write not more than 300 words, using but one side of the paper. Be sure to give your full name and address on upper left-hand corner of paper, and on a separate sheet give the names of all your laundry conveniences. Send letters to SUNNY MONDAY CONTEST EDITOR, PENNSYLVANIA FARMER, 261 S. Third Street, Philadelphia, Pa.

A Drink to the Health of Children

Plenty of milk and sanitary refrigeration play a large part in the health of growing children. Let's make every day Child Health Day.

Are You Submerged?

THE other day a man said to me: "My mother used to be a brilliant woman but she is so entirely submerged by just work of recent years, that I feel sure sometimes she has absolutely ceased to think any more!"

What a tragic story. Yet how many there are who are meeting the same fate.

It is an easy habit to fall into—this habit of becoming so submerged with mere work that we lose our vision—our perspective. Work is not an end in itself—but a means to an end. There should be enjoyment and pleasure in it.

Work should tone us up mentally and it is good for us physically. We farm women would dislike very much to have to walk miles or do a certain amount of physical exercises every day to keep well. That is what we would be compelled to do if we did not get our exercise thru work. We should glory in being able to work—in having work to do.

I am sure our families would much rather have us alert mentally, physically exuberant with life, than to know that we have given the best of our lives for work, work—that which will always be with us and yet cannot live thru eternity as we will.

Don't you see? We are so much bigger than mere things or work—we are important—so let us keep ahead of work—but never, no never, submit to being driven by work and have our children rise up and say of us: "She became submerged by mere work and died years before her time"—for it would be better to be laid away physically than keep living on in the flesh when the brain had ceased to function.—May H. Mumaw, Ohio.

May Day Budget Simplifies Canning

MAY 1 we celebrate nationally as Child Health Day. In your own home, every day is child health day, for no one is more carefully guarding the health of the nation's children than you mothers. May 1 is a good day to make out a canning budget, and to plan the planting of foods to can.

Each of the different kinds of fruit may be served once a week, including peaches, berries, cherries, pears, apple sauce and plums. You may add a few jars of pineapple and apricots if it is economical to can these at home. Allow for serving fruit every morning for breakfast, and at the evening meal each day, with some jars of fruit for pies at noon.

Part of your year's supply of fruit may be dried apples, peaches, figs, apricots and raisins, tho dried fruits are a none too dependable source of vitamin. You will use oranges, grapefruit and lemons often. Commercially canned fruits are even better than home-canned fruit in this respect since they are tightly sealed before processing. Purchased in dozens on sales, they may be just as cheap as home-canned fruit.

Tomatoes Should Be Served Often

Tomatoes should be served three times a week, or oftener if you like them. They may take the place of baby's daily orange juice, so rich are they in Vitamin C. For conservation of this vitamin they should be canned in tins, or by the hot pack method according to the new government bulletin 1471, (free from U. S. Dept. of Agriculture, Washington, D. C.). If only partially sealed before processing, there is some destruction of this vitamin.

Greens should be served twice a day, tho lettuce and fresh celery may supply the green vegetable for one of these meals, and canned peas may be classed as a green vegetable.

Shelling Peas a Tedious Job

After emphasis has been placed upon greens and tomatoes in our canning budget, we plan enough of the other vegetables to have two vegetables daily besides potatoes, including corn, beets, string beans, carrots and peas. Commercially canned peas may be cheaper if you have not enough space to raise all your vegetables. If one vegetable is to be bought, I would rather it would be peas, since they are so slow to handle in canning season.

Home-canned corn generally has a better flavor than that commercially canned, unless you buy those cans priced highest. Dried peas, beans and lentils finish out menus and are high in calories.

Fruit and vegetables, as well as milk, determine your child's health, and authorities now recommend a much larger proportion of these in the diet than formerly.—Doris W. McCray, Iowa.

My Own Experience

I WAS very much interested in the pressure cooker articles in the March 19 Pennsylvania Farmer.

I have used my pressure cooker for two years and have found it fine for cooking mush.

Have the required amount of water boiling in the utensil in which the mush is to be cooked. Mix the corn meal with cold water and stir into the boiling water. Salt and add a bit of sugar if desired. Then place in the steam pressure cooker and run up to fifteen pounds for one-half hour. I cook all cereals in the steam pressure cooker and find I can get breakfast quickly and easily.

Another thing not mentioned in either of the articles published is steamed puddings. We are very fond of suet and other steamed puddings and often I wonder how I ever managed to make them before I had my pressure cooker.—M. H. M.

Color Tempts Balky Appetites

PLANNING nourishing meals is job enough for almost any homemaker, but the meals must look good to eat or the family may balk no matter how wholesome they are. The way food is prepared has a great deal to do with its appetizing appearance, but when planned with color combinations in mind the battle is half won.

Roast beef with fried potatoes and carrots make a plate of yellow and brown. By substituting mashed potatoes with a sprig of parsley or a dash of paprika for fried potatoes, the plate becomes as good to look at as to eat.

A combination like creamed chicken, boiled rice, and cauliflower makes a listless looking meal, but a baked potato in place of the rice and a few slices of beet or tomato, add color. Pork chops, creamed potatoes, and apple sauce go well together so far as taste is concerned, but the bright green of carefully-cooked spinach adds zest.—New York State College of Agriculture.

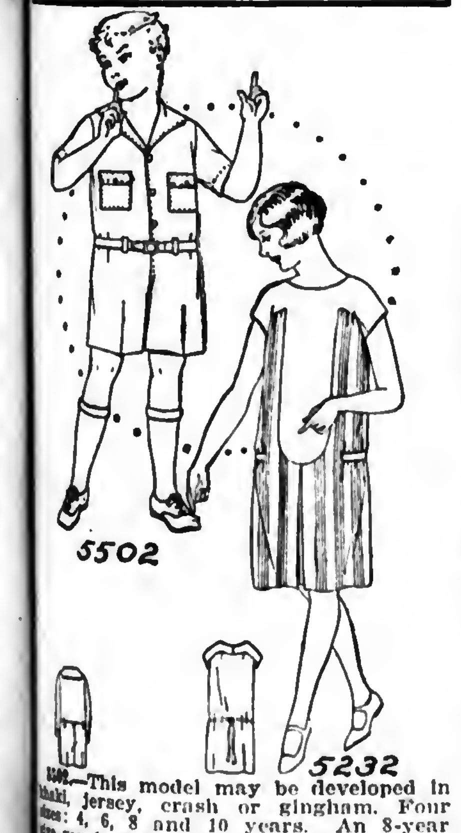
Kept Out of Mischief

"SATAN finds some mischief for idle hands to do." So the saying goes, and that must account for the trait of toe-picking and other cannibal performances in which little chicks often indulge. Farmers' wives who are rearing chicks can help that situation by placing in the brooder house bunches of alfalfa hay (not mere leaves), but real alfalfa hay.

Use just as many and as large bunches as space will permit, then watch what happens. Each bunch will be covered in a few minutes with your happy little flocks. Turn the bunches as the chicks clean off the leaves, and presto! up they are and at it again. Remove the bundles at night and place fresh ones in the morning.—Elizabeth Fisher Davis, N. J.

Our Boys and Girls

Directions for Ordering.—Give figure or figures of each pattern exactly as printed at beginning of each description. Give bust measure when ordering waist patterns, waist measure for skirt, and age for children's patterns. Address Pennsylvania Farmer, 261 S. Third Street, Philadelphia, Pa.



5502—This model may be developed in khaki, jersey, crash or gingham. Four sizes: 4, 6, 8 and 10 years. An 8-year size requires 2½ yards of 36-inch material, if made with long sleeves. Pattern, 10 cents.

5232—Striped broadcloth is combined with plain broadcloth in this instance. Four sizes: 6, 8, 10 and 12 years. A 10-year size requires 1⅞ yard of striped material and ⅝ yard of plain material 36 inches wide, if made as illustrated in the large view.

Send 10c in silver or stamps for our up-to-date spring and summer 1927 Book of Fashions.

Big Meals *easier!*

Color in Newest Perfections!

Gray porcelain enamel tops. Gray legs. Satin-black body finish. White enamel warming cabinets. Large white front ovens. —On newest Perfections, and *all* those with Superfex burners.

See the latest Perfection Stove

When loads of company come—trust Perfection Oil Stoves to carry through your cooking plans. Touch a match to the wick. Vigorous heat pours up the long chimneys direct to the cooking.

Cook anything—in any quantity. Perfection Stoves meet the biggest cooking demands. The flames stay where you set them. No need to watch them. For "family" meals, or for "big meal" cooking Perfections have no equal. See the newest models at any dealer's. One to five burner sizes. Priced from $7.50 to $130.

THE PENNSYLVANIA FARMER PHILADELPHIA, PA.

OUR YOUNG PEOPLE'S FORUM.

What's Around Your Home?

DEAR FORUM FRIENDS:—Spring has come and summer is almost here. Buds are bursting, leaves unfolding, birds singing and schooldays are over for most of you. But even tho schoolbooks and lunch boxes end pencils are put away for the summer see if you can't find a stray sheet of paper on which to make a drawing for the Forum page.

Around your home are buildings, animals, tall trees and tiny streams winding thru the meadow, hilltops that give distant views, mother working in the kitchen or with her chickens, father in the barn or plowing in the fields, brothers and sisters playing and working—these and many other things are all about you waiting to be drawn. Can't you make one little sketch entitled "Around My Home" for me and for our page?

Here are just a few rules for those who enter the contest to remember:

1. Use ink paper (paper on which ink will not spread).
2. Draw with pencil or black ink. (If you haven't black ink use pencil and I'll ink in the drawing when it's used.)
3. Write name, age and address (including the county) in the upper right hand corner of paper.
4. Name your drawing "Around My Home."
5. Use separate sheet of paper if sending a letter with the drawing.
6. Prizes will be awarded the six best drawings.
7. All contest drawings should reach me on or before May 14th.
8. Don't think you have to be an artist to enter the contest. Anyone who reads this Forum page, whether a member or not, may send in a drawing, but please remember to tell me who is sending it and where you live.

Our page needs drawings. Many of you have asked for a drawing contest. Here's a chance for everybody.

COUSIN RUTH.

261 S. 3rd St., Philadelphia, Pa.

Letters from Forum Members and Friends

Dear Forum Friends:—We have two farms. Every morning I milk three cows. Every morning we must walk to the other farm to do the work. Last summer our barn burned down. I was all excited when the lightning struck. I have a little pet dog, Rover. When we hold a bone up he jumps to get it.—Mabel M. Heffelfinger, eleven (X), Berks County, Pa.

Dear Cousin Ruth and Forum Friends:—I have a pet lamb. I feed it with a bottle. I call her Maggie. I also have a calf named Jiggs. I like to ride horseback. I have a bicycle.—Gerald T. Hammond, eleven (X), Franklin County, Pa.

READY FOR A BALL GAME
Ruth Wood, Cumberland County, Pa.

Dear Cousin Ruth:—My father has three large incubators, two double-decks and one triple-deck. Every week a lot of chicks are hatched out. We have a piano and I am taking music lessons. I like it. I don't have any pets just now but I wish I would have some.—Dorothy Heagy, twelve, Lancaster County, Pa.

Dear Cousin Ruth:—Mother and I planted onions, peas and lettuce in our garden today, March 18th. Aren't we early?

Today we have a Literary Society meeting at our school. We have songs, recitations and dialogues and all enjoy it very much. The term will close the first week in May, then I can help in the garden and around the house and barn more.

We have a new horse that we call Dolly.—Pearl Astheimer, (X), Montgomery County, Pa.

Dear Cousin Ruth:—I am little Mary Arlene Davis. I am nearly six years old. I am visiting my grandma and she is writing this for me. I want to tell you about our dog, Polly. She has two baby puppies and one day she got shut out of the barn and stood by the barn door and cried, and cried, till my grandpa came and opened the door for her. I like to hear the letters read on the Forum page.—Mary Arlene Davis, Crawford County, Pa.

Dear Cousin Ruth:—I received your letter and the membership pin for which I thank you very much. Our school will be out April 29 and then we boys will have more time to go fishing.

Last summer my chum and I went fishing and as we were out a ways from the shore, I saw a lot of water in the boat and we wondered where the water came from, but looking we saw the hole.

We tried to empty the boat out some way until my friend said that to tip the boat a little on one side. But doing that we tipped it too much and we fell right into the water. We had to swim to save our lives but no one drowned. Next day we said that we would never go on a boat until we looked it over.—Richard Wyka, (X), Wayne County, Pa.

Dear Cousin Ruth:—I like to see your letters in the paper. I will show you a picture of me and my pet coon. I caught the coon along the creek one day last April while my friend and I were fishing. The coon was very young. He did not have his eyes open when I caught him.

HOLDING MY PET COON
Emery Plank, (X), Lycoming County, Pa.

I brought him home and fed him out of a bottle.—Emery Plank, (X), Lycoming County, Pa.

OUR LITTLE FOLKS' PUZZLE CORNER

DEAR LITTLE FOLKS:—Away back in the days of Old England—even before the time of the famous man whose birthday we celebrated last week—they spoke a language which looks very strange when we see it printed. It always makes me glad I didn't have to study spelling in those days. But they did some pleasant things and even nowadays in many parts of England and in this country, too, the spirit of May-day seems to take hold of us about this time. Not all of us can be Queen of the May, and not everybody can gather fresh wild flowers for May baskets, but we can all realize, when we see the way the fields and woods, the gardens and orchards, are blossoming forth that they must be dressing up for some delightful occasion.

The answer to the puzzle has something to say about the getting ready for all this blooming. I think you will soon see that the queer words, which look as tho they might be Old English, can easily be made into the language you all know. Each group of letters below is really a word, but the letters in it are not in the correct order. Look at each group carefully and see if you cannot rearrange the letters to form a word you know. The first word really begins with the letter "M," and the words themselves are in the order which will make the sentence read correctly. When you have solved the puzzle, let me have your answer by May 7th. BE SURE TO SAY HOW OLD YOU ARE, and tell me the name of the county in which you live and just when your birthday comes. The prizes go to the ten children, sending in the correct answer, whose letters to me are the best in grammar, spelling, punctuation, penmanship and general appearance. Address all puzzle answers to The Puzzle Editor, Pennsylvania Farmer, 261 South Third Street, Philadelphia, Pa.

CRAHM SWIDN DAN PLAIR WHEROSS GRINB THROF VAM SWELFOR.

The answer to the puzzle about what I ate this morning (published in the April 9 issue) is: BREAKFAST.

The prize winners are: William Apple, age 7, Bethlehem, Pa.; Arlene S. Dietz, age 11, Coopersburg, Pa; Mary Fretz, age 11, Ottsville, Pa.; Martha Grimm, age 11, Smithfield, Pa.; Clarence Hollinger, age 10, Hershey, Pa.; Pearlene Metzger, age 13, Slatington, Pa.; John Miller, age 8, Fayetteville, Pa.; Rhoad E. Moore, age 10, Perkasie, Pa.; Mary E. Wiles, age 10, Chambersburg, Pa.; Edwin Wilson, age 8, New Sheffield, Pa.

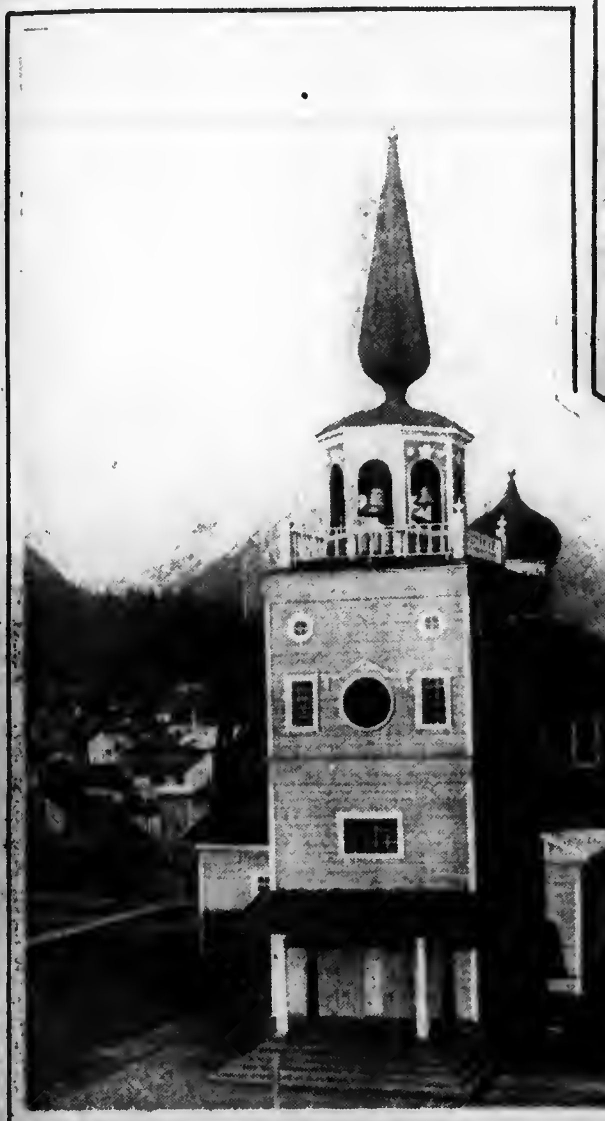
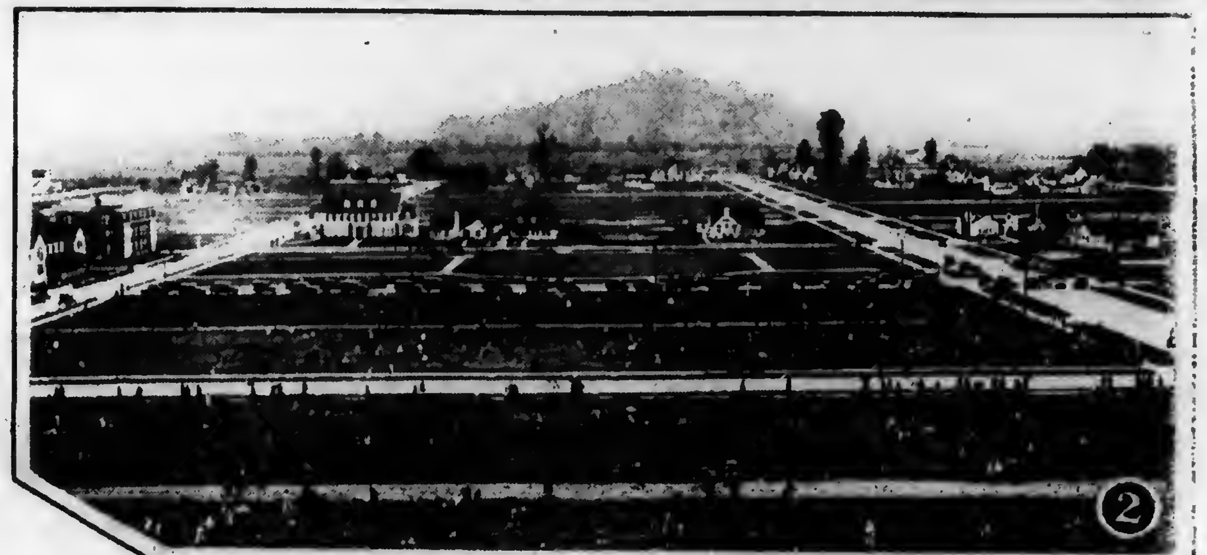
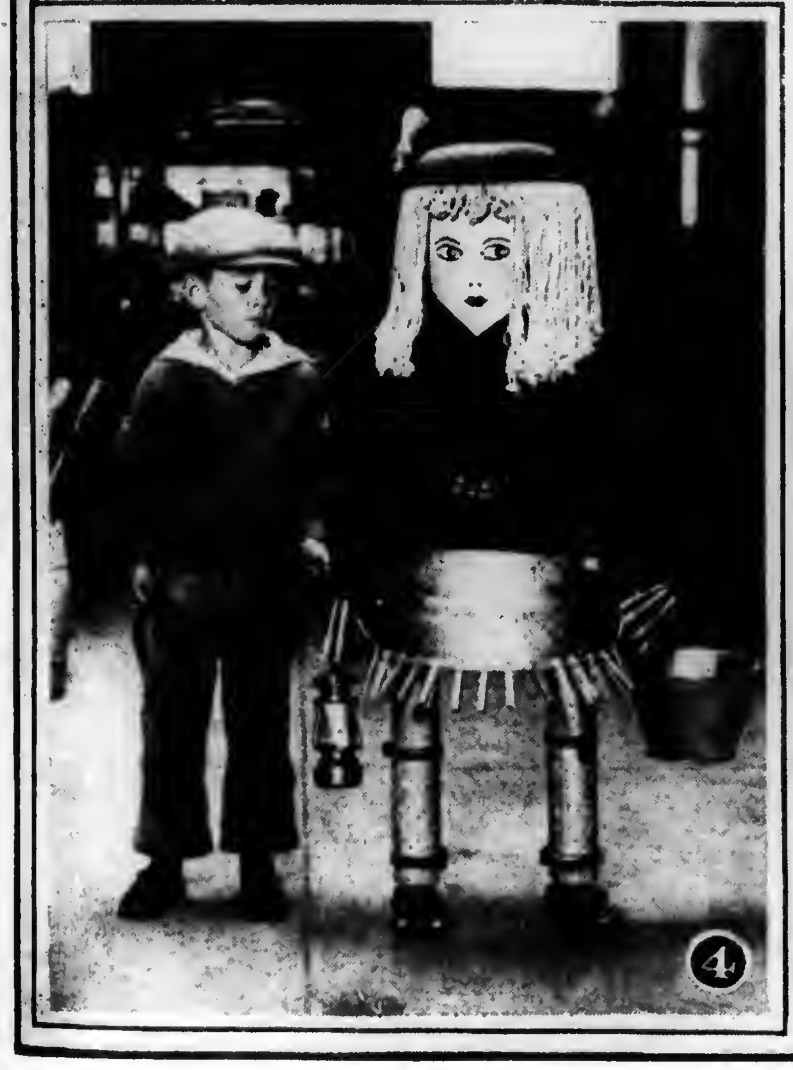
PASSING EVENTS IN PICTURES







(Copyright by Underwood and Underwood)

1.—St. Michael's Cathedral at Sitka, Alaska, built by the Russians in 1817, is a historic shrine. This church, which is still in daily use, is equipped with gold and silver trimmings, jeweled crowns and icons. The congregation consists of Alaskan Indians.

2.—A novel Easter egg hunt was enjoyed by eight hundred Washington children on an estate on the outskirts of the city. Eighteen hundred eggs were planted in the grounds, prizes being awarded those finding certain marked eggs.

3.—Mrs. Kenneth N. Gilpin, of Kentmere, Clarke County, Virginia, daughter of Senator Lawrence D. Tyson, of Tennessee, has been chosen to be "Queen Shenandoah" in the fourth annual Apple Blossom Festival at Winchester, Virginia.

4.—A hardware milkmaid, displaying various articles of merchandise sold in his store, proved an effective bit of advertising for a California hardware dealer.

5.—Secretary of Commerce Herbert Hoover photographed April 7 while his voice and face were being transmitted from Washington to New York by television.

Judith of Blue Lake Ranch

By JACKSON GREGORY

Copyright Charles Scribner's Sons

The Story Thus Far

JUDITH SANFORD, part owner in Blue Lake Ranch since the death of her father, Luke Sanford, fired Bayne Trevors, general manager, because he wasn't square. The men grumbled. Trevors made trouble in every way possible. Bud Lee, horse foreman, and old Carson promised to stay. Judith could depend on them and on "Doc" Tripp, veterinarian and a friend of her father.

Busy days followed. Mrs. Simpson took up her duties caring for the ranch house and Pollock Hampton, part owner of the ranch, arrived with Major and Mrs. Langworthy and Marcia, their daughter.

Months passed and then Trevors made his last desperate play to ruin Blue Lake Ranch. He abducted Judith and took her to the cave of Mad Ruth for safe keeping. While Bud Lee searched the mountains for her, Judith gained her freedom, escaping the evil clutches of Chris Quinnion and the mad woman, his mother.

Continued from last week

BY NOON Judith was faint and sick and had to stop often to rest, her legs shaking under her. Again she made a scant meal. She had stumbled on a tiny field of wild potatoes and ate what she could, thinking longingly of a match for a fire. The match which Ruth had dropped she still had, but she carefully reserved it now, thinking how perhaps a trout, caught in a pool, might save her life.

In her already half-starved condition and with the demands constantly put on her strength, she would grow weaker and weaker if help did not soon come. But she was still filled with the glory of freedom.

It was a heart-weary, trembling Judith who late that afternoon made her way upward along another ridge, seeking anxiously to find from this lookout some landmark which she had sought in vain last night. In her blouse were the few roots she had brought with her from the field discovered at noon. Lying in a little patch of dry grass, resting, she watched the day go down and the night drift into the mountains, filling the ravines, creeping up the slopes, rising slowly to the peak to which she had climbed, seeping into her soul. Never had the passing of the day seemed to her so majestic a thing, truly filled with awe. Never until now had the solitudes seemed so vast, so utterly, stupendously big. Never until now, as she lay staring up into the limitless sky, having given up the world about her as unknown, had she drunk to the lees of the cup of loneliness.

So great was the weariness of her tired body that as she lay still, watching the stars come out one by one, she was half-resigned to lie so and let death come to find her. It seemed to her that here in the rude arms of Mother Earth a human life was a matter of no greater consequence than the down upon a moth's wing. But she rested a little and this mood, foreign to her intrepid heart, passed, and she sat up, again resolute, again ready to make her fight as long as life beat thru her blood. At last she took the one match from her pocket. She scarcely dared breathe when, with dry grass and twigs piled against a rock, her dress shielding them from the wind, she rubbed the match softly against her boot. A sputtering flame, making the blue light of burning sulphur, died down, creating panic in her breast, then flared, crackled, licked at the grass. She had a fire and she knew how to use it!

When a log was blazing, assuring her that her fire was safe, she rose swiftly and went in search of the tree she meant to burn. She found a giant pine, pitch-oozing, standing in a rocky open space where there was little danger of the fire spreading. Fagged out and eager as she was, she had not come to the point of forgetting what a great forest-fire meant.

She went back to her burning log, for a blazing dry branch which she carried swiftly to the tree. Then she piled dry grass and dead twigs, logs as heavy as she could carry, bits of brush. The flames licked at the tree, ran up it, seemed to fall away, sprang up it again, hungering. Now and then a long tongue of fire went crackling high up along the side of the tree. Judith went back to a spot where, in a ring of boulders, there was another grassy plot, threw herself down and lay staring at the tongues of fire which were climbing higher and higher.

Some one would see her beacon. A forest ranger, perhaps, whose duty it was to ride fast and far to battle with the first spark threatening the wooded solitudes; perhaps some crew in a logging-camp, than whom none knew better the danger of spreading fires; perhaps some cowboy, even one of her own men—perhaps Quinnion and Ruth? She then would hide among the rocks until they had come and gone. Even now, against the sleep falling upon her, she drew farther back thru the tumbled boulders. Perhaps, Bud Lee. . . .

SHE went to sleep beyond the circle of light, tired and hungry and striving against a returning hopelessness, her body curled up in the nest she had found, a cheek cuddled against her arm, wondering vaguely if some one would see her fire and come—if that some one might be Bud Lee.

Thruout the night the tree blazed unseen. Judith's eyes were closed in the heavy sleep of exhaustion. The flames roared and leaped high skyward, burning branches fell crashingly, to lie smouldering on the rocky soil, the upstanding trunk glowed, vivid against the sky-line.

In the early morning at least two pairs of eyes found the plume of smoke above the still burning giant pine. A man named Greene, one of the government forest rangers, blazing a new trail over Devil's Ridge, came out upon a height, saw it and watched it frowningly across the miles. It called him to a hard ride, perhaps to a difficult journey on foot after he must leave his horse. He turned promptly from the work in hand, ran to his horse, swung up and sped back to his cabin, to telephone to the nearest station, passing the word. Then with axe and shovel, he began his slow way toward the beacon.

Bud Lee, from the mountain-top where he and Burkitt had taken Hampton, saw it. Lee judged roughly that it was separated from him by four or five miles of broken country, impassable to a man on horseback, to be covered laboriously on foot in a matter of weary hours.

LEE and Greene approached the signal smoke from different quarters, Lee from the west, Greene from the northeast. They fought their way on toward it with far different emotions in their breasts, Greene with the desire to do a day's work and kill a forest-fire in its beginning, Lee with the passionate hope of finding Judith. Lee reached his journey's end first.

As he came pantingly up the last climb he discharged his rifle again and again, to tell her that he was coming, to put hope into her. And, because he was a lover and a lover must be filled with dread when she is out of his sight, he felt a growing anxiety. She had lighted the fire last night; what might have happened to her since then? Had she been wandering, lost all these days? If nothing else, then had she waited here half the night and in the end had she gone on plunging deep into some canyon hidden to him? Would he find her well? Would he find her at all?

Suddenly he called out, shouting mightily, and began running, tho the way was steep. He had seen Judith, he had found her. She was standing among the scattered boulders, her back to a great rock. She was waving to him. Her lips were moving, tho he could not see that yet, could not hear her tremulous:

"Oh, thank God, thank God!"

"Judith," he called, "Judith!"

Now, near enough to see her distinctly, he saw that her face was white, that the hand she held out was shaking, that her clothes were torn, that she looked pitifully in need of him. But at last, when he stood at her side, one of the old rare smiles came into Judith's tired eyes, her lips curved, and she said quietly:

"Good morning, Bud Lee. You were very good—to come to me."

"Oh, Judith," he cried sharply. But no other word came to his lips then. The brave little smile had gone, the whiteness of her face smote him to the heart. And now she was shaking from head to foot, and he knew why she had not stepped out to meet him, why she had kept her back to the rock. He thought that she was going to fall, he saw two big tears start from the suddenly closed eyelids, and with a little inarticulate cry he took her into his arms.

"If you had not come, Bud Lee," she whispered faintly, "I should have died, I think."

Very tenderly he gathered her up so that her little boots were swung clear of the flinty ground and she lay quiet in his arms. He stood a moment holding her thus, looking with eyes alternately hard and tender into her face. He wanted to hold her thus always, to watch the glad color come back into her cheeks, to carry her, like a baby, back across the weary miles and home. And, oddly, perhaps, the thought came back to him and hurt him as it had never hurt him before, that he had once been brutal with her, that he had crushed her in his arms and forced upon her lips his kiss. He had been brutal with Judith, when now he could kill a man for laying a little finger on her.

"I have been a brute with you, a brute," he muttered to himself. But Judith heard him, her eyes fluttered open and into them came again her glorious smile.

"Because you kissed me that night, Bud Lee?" she asked him.

"Don't!" he cried sharply. "Don't even remember it, Judith."

"Do you know so little of a girl, Bud Lee," she went on slowly, "to think that a man can so easily—and her lips with his unless—unless she wants to be kissed?"

He almost doubted his ears; he could hardly believe that he had seen what he had seen in Judith's eyes. They were closed now, she lay quiet in his arms, it seemed that she had fainted, or was asleep, so very white and still was she. He had forgotten that he must carry her to where he could lay her down and bring water to her, give her something to eat. He just stood motionless, holding her to him, staring hungrily down at her.

"Are you going to play—I'm your baby—all day, Bud Lee?" she asked softly.

HE CARRIED her away from the ring of boulders and to a little grassy, level spot where be put her down with lingering tenderness. Judith had not been very angry with him all these months! Judith had let him kiss her because she wanted to be kissed—by him!

He raked some coals out of the ashes, hastily set some slices of bacon to fry, cursed himself for not having brought coffee and milk and su and a steak and a flask of whi and enough other articles to lo mule. He ran down into the ca and brought water in his hat, sw ing at himself all the way up he had not brought a cup. He his arm about her while she dra kept his arm about her, kneeling her side, while he gave her a li crisp slice of bacon, held his there when she had finished, wat ing her solicitously.

"The two nicest things in th world, Mr. Man," she said, with a second attempt at the old Judith brightness, "are half-burnt bacon and Bud Lee!"

Then, because, tho he had bee slow to believe, he was not a fool and now did believe, he kissed her And Judith's lips met his lingeringly. Judith's two arms rose, slipped about his neck, holding him tight to her.

The faintest of flushes had come at last into her cheeks. He saw it and grew glad as he held her so that he could look into her face. But now she laid a hand against his breast, holding him back from her.

"That's all now," she told him, he eyes soft upon him. "Just one ki for each slice of bacon, Mr. Lee. B —I'm so hungry!"

For a little there was nothing t do but for Judith to rest and g some of her strength back. Lee ma

Free Trial of Proved Swedish Abortion Treatment

Famous Foreign Formula quickly relieves badly infested herds. Gives amazing results in cases believed hopeless.

Thousands of American Farmers say the Froberg Swedish Abortion Treatment has saved their herds from destruction. This remarkable treatment has been used with complete success in the big dairy herds of Sweden for many years, and has cleaned up whole districts over there literally rotting with contagious abortion.

It was only after great expense of time and money that this secret formula was made available to American Farmers. During the past nine years the treatment in American herds has given all the amazing results that made it so famous abroad. Herd after herd has been rid of this disease. Even cows considered hopeless by veterinarians have yielded to its healing qualities and been restored to health and produced fine vigorous calves.

SAVED HIS HERD

David Mohr, Jenison, Michigan, says: "Last year I raised only one good calf out of 14 cows bred. All other calves were aborted. I was desperate. I used your C.C.C. treatment. This year with the same herd I have not lost a single calf. It's wonderful. My neighbor lost 3 calves in a few days—I gave him some C.C.C. and it stopped the trouble right there."

The fame of Cow Calf Control (C.C.C.) the name of this treatment has spread from breeder to breeder. Today it is put out only on an absolute binding guarantee that it will stop every case of abortion; that every cow treated will deliver a normal calf, or the treatment cost is refunded. Two reliable banks stand behind our guarantee. You can't lose. C.C.C. is practically 100% successful.

SEND NO MONEY

Mr. John W. Froberg, a native of Sweden and a large dairy owner, is responsible for introducing C.C.C. into this country. He has made the treatment easy to give, and at a cost per animal that any farmer will gladly pay.

Write today for full details explaining our free trial offer. Just send your name and address without further obligation to Froberg Remedy Co., 16 Lincoln St., Valparaiso, Ind.

Six Reasons for Unadilla Leadership

It doesn't *just happen* that more Unadilla silos are sold each year than any others. Here are six of the reasons:

A Unadilla cures and *keeps* silage better.

The air-tight *fitted* staves defy frost and save all the valuable silage juices.

It is strong, durable, well-built of *selected* lumber.

The famous Unadilla ladder makes for the greatest silo *safety* and *easy use*.

Every hoop can be taken up 12 inches *at the door front*.

Continuous opening at feed level. You just *push* out the silage.

Order early while the factory is not rushed and effect a real saving of money. Liberal discount for cash.

Write for our silo catalog, containing information on our strongly built storage tanks, water tubs and vats.

PENNSYLVANIA FARMER
261 So. 3rd St., Phila., Pa.

of his coat and vest a seat for her against a rock, sat at her side, his arm about her, made her lean against him and just be happy. Not yet would he let her tell him of the horrors thru which she had gone. And he saw no need of telling her anything immediately of conditions as he had left them at the ranch. Time enough for that when she was stronger, when they were near Blue Lake.

Greene, the forester, came at last up the mountain. He noted the isolated tree, nodded at it approvingly, made a brief tour around the charred circle, extinguishing a burning brand here and there.

"What sort of a fool would want to climb way up here to start a fire, anyway?" he grumbled.

THEN, unexpectedly, he came upon the happiest man he had ever seen, with his arms about an amazingly pretty girl. Not just the sort of thing a lone forest ranger counts upon stumbling upon on the top of a mountain. Greene stared in bewilderment, Bud Lee turning a flaming red. Judith smiled.

"Good morning, stranger," said Lee. "Fine day, isn't it?"

Judith laughed. Greene continued to stare. Lee went a trifle redder.

"If you two folks just started that fire for fun," grunted Greene finally, "why, then, all I've got to say is you've got a blamed queer idea of fun. Here I've been busting myself wide open to get to it."

"Haven't got a flask of brandy on you, have you?" asked Lee.

"Yes, I have. And what's more I'm going to take a shot at it right now. If nobody asks you, I need it!"

Now, Lee heard for the first time something of Judith's adventure. For, recognizing the ranger in Greene, she told him swiftly why she had started the fire, of her trouble with Quinnion, of the cave where Quinnion had attacked her and of Mad Ruth. Greene's eyes lighted with interest. He swept off his hat and came forward, suddenly apologetic and very human, proffering his brandy, insisting with Lee upon her taking a sip of it.

Yes, he knew Mad Ruth, he knew where her cabin was. He could find the cave from Judith's description. Also, he knew of Quinnion and would be delighted to break a record getting back to his station and to White Rock. White Rock was in the next county, but so, for that matter, was the cave. He'd get the sheriff and would lose no time cornering Quinnion if the man had not already slipped away.

"I don't know you two real well," said Greene, with a quick smile at the end, "but if you don't mind, pardner," and he put out his hand to Lee, "I'd like to congratulate you! I don't know a man that's quite as lucky this morning as you are!"

"Thank you," laughed Judith. She rose and shook hands too. "We're at Blue Lake ranch for the present. Come and see us."

"Then you're Miss Sanford?" said Greene. He laughed. "I've heard of you more than once. Greene's my name."

"Lee's mine," offered Lee.

"Bud Lee, eh? Oh, you two will do! So long, friends. I'm off to look up Quinnion."

And, swinging his axe blithely, Greene took his departure.

"THERE are other things in the world besides just cliffs to stare at," said Judith. "And I would like a bath and a change of clothes and a chance to brush my hair. And the bacon doesn't taste so good as it did and I want an apple and a glass of milk."

So at last they left the mountain-top and made their slow way down.

As they went Lee told her something of what had happened at the ranch, how Carson would hold off the buyers, how Tommy Burkitt was assuming charge of Pollock Hampton. And when they came near enough to Burkitt's and Hampton's hiding-place, Lee fired a rifle several times to get Burkitt's attention. Finally they saw the boy, standing against the sky upon a big rock, waving to them. From Lee's shouts, from his gestures, chiefly from the fact that Judith was there, Burkitt understood and freed Hampton, the two of them coming swiftly down to Judith and Lee.

Hampton's face was hot with the anger which had grown overnight. He came on stiffly, chafing his wrists.

"These two fools," he snapped to Judith, "have made an awful mess of things. They've queered the deal with Doan, Rockwell & Haight, they've made themselves liable to prosecution for holding me against my will, they've—"

"Wait a minute, Pollock," said Judith quietly. "It's you who have made a mistake."

Briefly she told him what had happened. As word after word of her account fell upon Hampton's ears, his eyes widened, the stiffness of his bearing fell away, the glint of anger went out of his eyes, a look of wonder came into them. And when she had finished, Hampton did not hesitate. He turned quickly and put out his two hands, one to Lee, one to Burkitt.

"I was a chump, same as usual," he grunted. "Forget it if you can. I can't."

They went on more swiftly now, the four of them together, Judith insisting that that last sip of brandy had put new life into her. In a little, seeing that Judith did in fact have herself in hand, Bud Lee, with a hidden pressure of her hand, left them, hurrying on ahead, trying to reach Carson or some of the men in Pocket Valley and to get horses.

(To he continued next wek)

Did you ever hear this one?—

Why Fathers Leave Home

"Father, freight is goods that are sent by water or land isn't it?"

"That's right, son."

"Well, then, why is it that the freight that goes by ship is called a cargo, and when it goes by car it is called a shipment?"

And then Johnny wondered why father put on his hat and sauntered outside to get the air.—Automotive Advertising.

Preference

Traveler—I would like a room. Anything, doing?

Clerk—I have them at $1.25 and $2 a night.

Traveler—What's the difference?

Clerk—Not much, only the two-dollar ones have rat traps in them. —Automotive Advertising.

The Big Mystery

Reckless Motorist—My car is practically worn out right now, and you told me it would last me a lifetime.

Salesman—Well, I can't understand why it hasn't.—Life.

Mounting the Ladder

Boss (in a beneficent mood)—Well, Jones, you've been with us now for thirty years. You've been a faithful employe, and we want you to know that we appreciate your services. Therefore, as a mark of our appreciation, we have decided that in the future you'll be called "Mr. Jones."

She Knew What She Wanted

A woman shopper approached the post office clerk at the stamp window.

"I would like to look at your red two-cent stamps," she said.

The clerk obligingly brought out a sheet of 100 or more stamps. Pointing to one of the stamps in the center of the sheet, his discriminating customer sweetly said, "I'll take that one."

"What could be more sad," said the teacher, "than a man without a country?"

"A country without a man," replied the pretty girl.

The Last 20 Years See Drastic Changes

ANYONE who looks back ten or twenty years will be impressed by the changes in poultry farming. Of late years, a great deal of scientific work has been done on poultry at our experiment stations, and facts determined there have brought about many modifications in methods. For instance, on many farms all the hens used to get whole corn. Now every intelligent farmer feeds a mash containing mill feeds and meat scrap, or perhaps dried milk, in addition to scratch grain.

Recently we have been hearing a lot about vitamins and enzymes. These substances, undiscovered a few years back, are bound to have a great effect on poultry feeding. Cod liver oil, milk, diastase, yeast, protozyme, germinated oats—all these are new words in the poultryman's dictionary, or have new meanings.

Recently I was talking to a farmer of the old school, who was shocked to learn that my hens had free access to dry mash—all they wanted. The old notion begrudged the hens the food they ate; but the new idea is to get all the food, in the form of a properly balanced ration, into the birds that they will eat.

Old Methods Replaced by New Ways

Twenty years ago green cut bone was the last word in poultry feeding. Many a backache was gotten at the wheel of the bone cutter, but now prepared meat scrap has taken the place of the green product. I can remember when steamed cut clover hay was a sovereign getter of winter eggs; now sprouted and germinated oats are used instead.

Once houses were heated by stoves or steam; then the fresh air fad hit the country, and the open front house came to the fore. These were extremes; now we are building closed front houses with curtains and glass, and talking of a closed front house with artificial ventilation. It is interesting to note, however, that while heated laying houses are no longer used, artificial heat is suggested as a treatment for roup.

Some of the old methods were faulty, some wrong, and some good. The last are being used today, combined with the best of the new. A glimpse ahead shows the future poultryman a specialist, with exact scientific information on feeding and management taking the place of hearsay and guesswork.—R. L. Scharring-Hausen.

Death to the Duck

Will you kindly inform me as to the best way of killing and picking ducks?—W. S. M., Northampton County, Pa.

The best way to kill a duck is to hang it up by the feet and cut across the back of the roof of the mouth, severing the arteries. The knife is then pushed up into the brain.

As soon as it has ceased to struggle, take the carcass by the head and feet and dip it several times in a wash boiler of boiling water. Do not scald too much. Then wrap it up in a heavy sack and leave it there for a minute or two, until the soft feathers on the breast come out easily. The fine feathers, if put in a muslin bag and hung on the line will dry out for pillows.

If you hang the duck up, level with your face, it is much handier to pick. To remove the down, sprinkle the duck's body with powdered rosin, dip in hot water to melt the rosin, and wipe rosin and down off your hands.

Practice makes perfect.

After the ducks are picked, wash and place in cold water to plump up for an hour or two.—R. L. Scharring-Hausen.

More than seven tons of carefully graded dressed turkeys were shipped on the cooperative plan from Dorchester and Kent Counties on the Del-Mar-Va Eastern Shore Peninsula during the last holiday season. The poultry industry of the Eastern Shore is likely to expand rapidly in the opinion of F. B. Bomberger, chief of the Maryland Bureau of Markets.

Hats Off to the Egg!

THE National Poultry Council, a delegate organization representing the production and allied interests of the poultry industry, has issued a proclamation designating the week of May 1 as "National Egg Week."

This will be a time to pay our respects to an industry that stands fifth among the agricultural pursuits of the United States as measured by the value of products produced. It will be a period set aside to spread the message of the peculiar and protective properties possessed by eggs in the human diet. Consider the attitude of a famous French chef, Stacpoole by name, who said: "All cookery rests on an egg. The egg is the atlas that supports the world of gastronomy; the chef is the slave of the egg. What is the masterpiece of French cookery, the dish that outlives all other dishes, the thing that is found on His Majesty's table no less than upon the table of the bourgeois—the thing that is as French as a Frenchman, and which expresses the spirit of our people as no other food could express it—The Omelette. Could you make an omelette without breaking eggs?

"Then cast your mind's eye over this extraordinary Monsieur Egg and all his antics and evolutions. Now he permits himself to be boiled plain, and even like that, without frill, naked and in a state of nature, he is excellent. Now he consents to appear in all ways from poached to perdu, now he is the soul of a vol-au-vent, now of a sauce; not a piecrust fit to eat but stands by virtue of my lord the egg, and should all the hens in the world commit suicide tomorrow every chef in France worthy of the name would fall on his spit, for fish is but a course in a dinner, whereas the egg is the cement that holds all the castles of cookery together."

The slogan adopted for "National Egg Week" is "Sunshine in Sealed Packages." Several states are planning parades and special exhibits. Radio talks have already been given and many more will be given during the week. Articles on the particular value of eggs as a food will appear from time to time. It is sincerely hoped that the slogan "Sunshine in Sealed Packages" and the sub-slogan "Three Hundred and Sixty-five Egg Days Make a Health Year" will become by-words in every household of this United States.—L.

34 per cent linseed meal......	[illegible]

Millfeed in small supply with mand from all sections.

The Potato Season Nears End

Review of the Week Ending April 23

POTATOES—Old potatoes were dull in practically all markets and prices averaged lower. The end of the season is drawing near and interest is centered on the new crop. Pennsylvania's shipments have dropped off but other late producing states are still rolling large amounts. Quite a proportion of this stock will be used for seed but it would be hard to say just how much will be used for this purpose.

ASPARAGUS—The New Jersey asparagus season opened and the warm weather brought fairly large amounts to the Philadelphia market. The season is earlier than last year and a fair volume is expected by the middle of May. South Carolina has been shipping heavily but will probably wind up cutting around May 15th. The large grass has been selling at about 30c to 50c per bunch but there are several growers who have been making larger bunches and grading carefully that have regularly received 80c. Some Delaware and Maryland asparagus arrived and sold at prices about in line with New Jersey stock.

LIVESTOCK—Hog prices in Chicago declined during the week and closed about 65c lower than a week ago. Beef steers dropped 25c to 75c and cows 25c to 60c. Heifers were about steady while vealers declined sharply. Fat lambs, yearling wethers and feeding lambs were lower.

BUTTER—Prices fluctuated widely during the week and the market was unsettled. The fact that prices were 11c to 12c per pound higher than last year and that dealers were unwilling to carry surplus stocks were the chief causes for the irregularity.

FEEDS—The feed market was strong with wheat feeds generally 50c to $1.00 higher than a week ago. Shorts and middlings were firm. Linseed meal was firm in the East but barely steady in the West. Cottonseed meal was weaker and gluten feed steady.

HAY—The hay markets were generally firm with light receipts. Floods in some districts were holding back shipments. Timothy prices were about steady and alfalfa was more active.

GRAIN—The grain market was higher than last week but trading was dull. Wheat prices were slightly higher and corn about 1c above last week's close. Oats were fractionally higher.

EGGS—The New York egg market was quieter. Many dealers had eggs carried over from the Easter and Jewish holidays. Nearby white eggs accumulated and prices were lower.

POULTRY—The market for live fowls was irregular. There was a fair demand for light fowl but the heavy stock was hard to move. Broilers were active and old roosters weaker. Receipts of dressed poultry were light and trading rather unsatisfactory.

Wouldn't it be great?

ounty News and Comment

County, Pa.—The weather has seasonable for the past month and farm work done. A few farmers just finished corn husking. On ac of the excessive moisture in corn fall and early freezing there is little showing satisfactory germination much 1925 corn will be used for seed. is usually good except in low land winter killed. Many grass fields little clover of last spring sowing. usually good. Plans are being for an Apple Blossom Day in our which will likely be about April Prospects off about 50 per cent of year's crop. Prices: wheat, $1.25; 75c; oats, 50c; milk, $2.50 for 4 cent; eggs, 21c.—A. R., April 19.

County, Pa.—Spring came this year. A shower Saturday night made things green. State road has started, making work for a of men. Work has been scarce spring. Some plowing being done Little pigs few and far between A shipment of 10 came from down art, Pa., for a few farmers. Feed yellow corn, cwt., $1.70; cracked cwt., $1.85; oats, cwt., $1.85; bran, $1.90; mixed chicken feed, cwt., flour, ¼ bbl., $1.90; seed oats, bu., Butter around 55@60c; eggs, 30@ E. T., April 19.

County, Pa.—We are having days but air still cool. This morning man's pump was frozen in his house. Spring plowing is well on and early garden planted. There been many movings. Spring lambs, Easter, averaging 50 lbs., are bringing per lb.; veal calves, 12c; wheat, $1.20; 75c; oats, 40c; buckwheat, 90c; 50c; lard, 13c; eggs, 22c.—A., 14.

erland County, N. J.—Plowing harrowing have been done for Rhubarb is being shipped in great ities and asparagus is ready to cut. are sown. The very early strawberries were nipped by a late freeze. L. who has a county community plant bed, has been planting early regularly to make the plants ready days. Large numbers of baby chicks being delivered to poultry raisers. Large acreage of potatoes was planted the freezing weather in April.—C. April 20.

Mercer County, Pa.—Pasture and meadows slow in starting and freezing nights are lifting young clover and wheat. Wheat a very poor stand, no good fields anywhere; much of it will be seeded to oats or barley. Farmers busy plowing. No oats sown yet. Much talk about the corn borer as we are in the affected area. All farmers are interested in the clean-up. Farm help very scarce and high priced as young men will not work on farms for less than shop work prices. About the usual acreage of potatoes and other farm crops will be planted. Many public sales of farm equipment and livestock at which horses, fresh cows, sheep, hogs and pigs bring enormous prices. State officials, armed with pump guns, are touring the county after dark and all loose dogs found are shot without any further ceremony. Prices about same as last report except eggs quoted at 22c.—J. W. B., April 16.

Mifflin County, Pa.—Weather fair, warm during the day but cool at night. Very warm today with thunder showers this evening. Farmers busy plowing. Ground in good condition. Some wheat fields looking all right while others are poor. Even thru the Kishacoquillis Valley some very poor looking fields. Grass fields are in the same condition. Public sales are over and most every thing sold at good prices. Fairly good cows $90 to $100, while the best sold for $200 and over. Horses sold better than a year ago. Stock hogs sold well but fat hogs took a drop. Brood sows not doing well. Quite a number of small pigs dying. Market for wheat, $1.20; corn, 85c; oats, 45c; butter, 50c; eggs, 22c; lard, 15c; chickens, 25c; apples, 80c. Cherry and peach blossoms are opening up.—J. H. B., April 16.

Susquehanna County, Pa.—April has been cold so far. Wood mostly cut and farmers plowing and working roads. Altho there are still patches of snow, the ice has gone off of the lakes. Many vacant farms. Stock demand just as much feed and attention as in winter. Hay is scarce. Seed oats and corn are very scarce and costly. Little pigs are scarce. Plenty chances to sell new milk cows. Veal calves are bringing 20c dressed. Chickens, live weight, 30c; butter, 55c; eggs, 24c; apples, 75c@$1.—J. A. G., April 13.

very Year the Miles Grow Shorter

HE motor truck is shortening the distance between the farm market and every year longer are being made. The first motor truck load of North Carolina berries ever reported in Philadelphia arrived on April 20th. They from Wallace, North Carolina, the driver, J. H. Dulaney, drove 10 miles in twenty-three hours.

There were 126 thirty-two quart in the load and they sold at to $9.00 per crate. The berries arrived in excellent condition readily outsold all other offerings. On the same day rail shipments the same section brought $4.00 50 per crate.

Approximated Express Cost

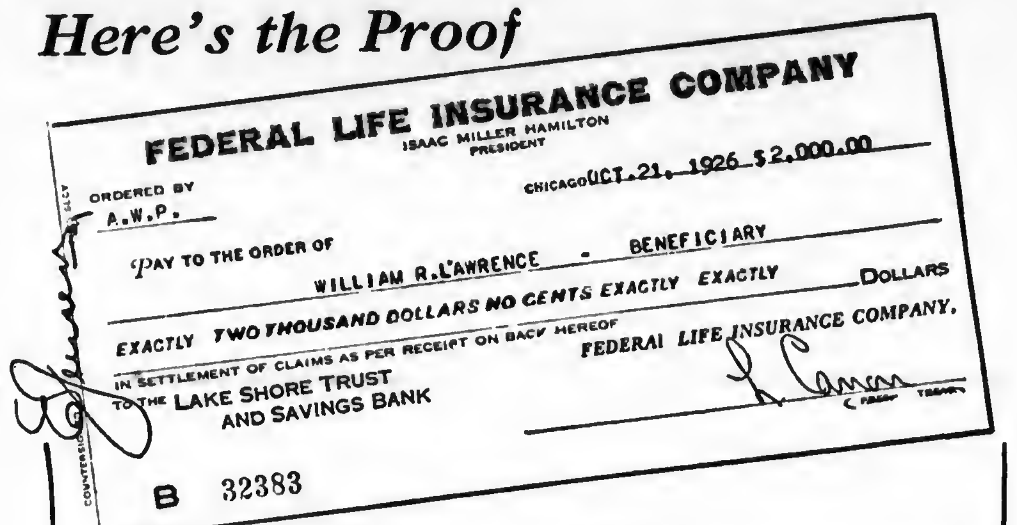
Dulaney stated that his actual was around $1.25 per crate or approximately the same as express rates. The truck was equipped pneumatic tires and the strawberries loaded at the farm were not disturbed until they reached the market. They arrived early in the morning when trading was at its height and this fact combined with the excellent condition was responsible for the high prices which they brought.—W. R. W.

Radio Report Modified

THE Pennsylvania Bureau of Markets and the United States Bureau of Agricultural Economics, cooperating, have modified the daily radio report on farm products. This report now includes prices on butter, eggs, grain, hay, fruits and vegetables. Comments on market conditions are given and an effort made to make this report of greater interest to nearby farmers. This market report is broadcast daily, except Saturday, at 6:45 P. M. by Station WIP.—W.

INSURANCE PAYS

Here's the Proof



FEDERAL LIFE INSURANCE COMPANY
ISAAC MILLER HAMILTON PRESIDENT
ORDERED BY A.W.P.
CHICAGO OCT. 21, 1926 $2,000.00
PAY TO THE ORDER OF WILLIAM R. LAWRENCE - BENEFICIARY
EXACTLY TWO THOUSAND DOLLARS NO CENTS EXACTLY EXACTLY DOLLARS
IN SETTLEMENT OF CLAIMS AS PER RECEIPT ON BACK HEREOF
FEDERAL LIFE INSURANCE COMPANY
TO THE LAKE SHORE TRUST AND SAVINGS BANK
B 32383
COUNTERSIGNED

$2,000 for $1.00 Invested

The reproduction of this check represents the payment of a claim to a subscriber of Pennsylvania Farmer, the result of an automobile accident in which his son was fatally injured. It also represents an investment of only $1.00.

When Henry D. Lawrence, of Bridgeton, N. J., sent in his application for a $5000.00 Travel-Accident Insurance Policy no one foresaw the sad tragedy ahead of him. He was only nineteen years old and anticipated many active years but he realized the dangers that stalk our daily lives and was thoughtful of those who had loved and cherished him from childhood. If anything happened to him he wanted them to be protected. Less than six months later Henry was killed. No money can repay the loss of the bereaved family but the check for $2000.00 from the Federal Life Insurance Company helped take care of the unexpected expense. No one can afford to be without this protection when it can be secured for such an insignificant cost—Only $1.00 per year.

Here is what it is worth to you

$5,000.00 For loss of life by wrecking of railroad passenger car, street, elevated or subway car as specified in policy.

$2,000.00 For loss of life by wrecking of horse drawn or private motor driven vehicle, bus, taxi-cab or passenger elevator as specified in policy.

$1,000.00 For loss of life by being struck or knocked down while on a public highway or being struck by lightning, cyclone, tornado, as specified in policy.

$10.00 Weekly for fifteen weeks for injuries sustained in the above manner as specified in policy.

A few of the many claims paid to Pennsylvania Farmer readers

CHAS. R. KEHRES, Rebuck, Pa.	$38.57	ANNA R. HARRIS, R. 3, Salem, N. J.	$20.00
WM. H. TURNER, Salem, N. J., R. 4.	$20.00	JOHN WILSON, R. 1, Sewell, N. J.	$40.00
FRANK MOLLO, Smethport, Pa.	$28.57	CLARK B. JOHNSON, R. 8, Towanda, Pa.	$40.00
HENDRICK VAN CLEEF, Cliffwood, N. J.	$10.00	K. B. DEEMER, Reynoldsville, Pa.	$70.00
LLOYD C. LEISTER, R. 3, Lewistown, Pa.	$20.00	WM. H. JOHNSON, R. 1, Erie, Pa.	$14.28
CHAS. F. BOSTWICK, Athens, Pa.	$11.43	JAMES W. FELTON, 3767 N. 5th St., Phila., Pa.	$60.00
SAMUEL E. WEAVER, New Holland, Pa.	$52.86	CLARENCE D. CAREY, R. 5, Coatesville, Pa.	$15.00
HENRY D. LAWRENCE, R. 1, Bridgeton, N. J.	$2,000	CLARENCE S. KATES, Glenlock, Pa.	$38.57
JOHN A. PERKINS, R. 3, Dubois, Pa.	$30.00	JOHN F. SHEA, 1182 Westwood Ave., Columbus, Ohio.	$60.00

This policy is offered to readers of Pennsylvania Farmer for only $1.00 a year for each policy. If you already have a policy renew it before it runs out as by so doing you will add 10 per cent value to all parts of your policy except the $10.00 weekly indemnity clause.

☐ NEW POLICY ☐ RENEWAL POLICY

If you are sending for your renewal policy, check above where indicated and fill in below ONLY lines 1, 2 and 3. If you are sending for a new policy, it is necessary for you to fill in every line, otherwise there will be a delay in issuing the policy to you.

Notice: Not more than one policy can be issued to any one person, but any and all members of a reader's family may each secure one.

Application

Print each name and address clearly and plainly. Illegible names will delay the delivery of your policy.

CHAMPION NATIONAL CHANGE WEEK, MAY 1 TO 7

INSTALL CHAMPIONS NOW

Once again Champion reminds you that to enjoy maximum engine performance during the next twelve months you should install a complete new set of spark plugs now.

Car manufacturers recommend and hundreds of thousands of motorists are changing spark plugs every year to insure better and more economical car operation.

This is true, even of Champions, in spite of their world-wide reputation for remarkable long life.

If you have used your spark plugs more than 10,000 miles, a new set of dependable Champions will restore power and speed and save their cost many times in less gas and oil used.

Make Champion National Change Week your yearly reminder to install a complete new set of Champions.

Champion X—exclusively for Ford Cars, Trucks and Fordson Tractors—packed in the Red Box— Set of Four, $2.40

Champion—for trucks and cars other than Fords—packed in the Blue Box— Set of Four, $3.00 Set of Six, $4.50

CHAMPION Spark Plugs TOLEDO OHIO

Doctor Lipman's Weekly Talk on Soil Fertility Problems

Soil Does Its Best

The following paragraphs written in a letter answering questions from M. J., of Chester County, Pa., may be of interest to other readers.

In general farming it is not expected that all of the potash taken out by the crop is replaced in the fertilizer used. The average loam or clay soil is sufficiently supplied with potash to call for a partial replacement only. The actual amount of potash replacement will depend, of course, on the size of the crops and the original potash contained in the land. By using a 2-12-5 fertilizer instead of the 2-12-2, you would be giving your ground a better chance to obtain its potash supply during a part of the growing season.

Lime Stimulates Activity

Where the land is well supplied with lime, the application of one ton of hydrated lime for the alfalfa and none for the wheat might ordinarily be recommended. On the other hand, lime is useful in stimulating the activities of soil bacteria, on which we must depend for increasing the supply of nitrates for wheat. Hence, it probably would be safer for you to apply one-half ton of hydrated lime for wheat and the other half ton on the alfalfa.

In applying manure, the labor item must, of course, be given serious consideration as you point out in your letter. As against this, we should remember that two medium applications of manure used in successive years would be utilized more economically than one large application applied in one year. The saving in labor will, no doubt, often more than offset the less efficient utilization of the manure where single large applications are made. Your point is well taken that manure spread on the alfalfa soil is less liable to suffer from surface washing than if it were spread on corn stubble ground.—J. G. Lipman.

Inducements Country Offers City Workers

LIVING in the city is expensive so some people live in the country and work in the city. But the question in my mind is, why don't more people do the same? There are many good houses in the country unoccupied and the owners would rather have them inhabited. In most cases the owner would charge only two or three dollars a month rent with use of an acre of ground, an orchard, garden, the privilege of keeping a lot of chickens, pigs and often a cow or two.

I know of some such places with nearly all city conveniences in the house,—electric current, water and beautiful lawn on a public road.

Good roads and consolidated schools should be inducements to city workers to live in the country. And too, there is always the fascination of country life, of working with nature.—C. R. Bashore.

"Get the Borer"

(Continued from page 3)

in their winter quarters. So they are burning cornstalks and pulverizing or plowing under stubble so the borer won't have an opportunity to sprout wings and fly away.

Every stalk of last year's crop that remains undestroyed after May 15 is a source of possible infestation of this year's crop. For that reason owners of backyard gardens in towns and cities come under the regulations as much as farmers. Town people were invited to the meetings conducted in the borer area. The first of the six we have mentioned was held in the Chamber of Commerce rooms at Erie. The second, in Warren, was sponsored jointly by the Warren County Bankers' Association, The Warren Chamber of Commerce and the County Farm Bureau. Incidentally, and as an indication of their interest, these three organizations paid for a fine dinner served to all who attended the meeting. At a preliminary meeting, held some days before, the Warren Kiwanis Club supplied a meal.

Corn borer meetings also were held during the week of April 18 in Franklin, Mercer and New Castle and another was scheduled for April 25th in Butler County. Of these meetings more later.

Flood Felt in East

A SHORTAGE of Texas and other southern vegetables is reported at St. Louis due to flood conditions. Several cars of Texas cabbage are marooned en route and most railroads are badly crippled and find it difficult to handle shipments promptly. Some of the arrival yards are under water and express shipments of radishes, beans and strawberries are arriving badly heated.—W.

Good-bye GROUND HOG

LET'S all go after the ground hogs at the same time. That's the only way to get rid of them for good. A tablespoonful of Cyanogas A-Dust in each burrow will do it. They don't have to eat it or even touch it. It gives off a poison gas that destroys them.

Kill them with

REG. U.S. PAT. OFF. CYANOGAS CALCIUM CYANIDE

Just as effective against woodchucks, prairie dogs, ground squirrels, rats, moles and ants. Simple, cheap and sure.

Ask your dealer for Cyanogas A-Dust or send us $2.50 for a 5-lb. tin, express collect.

Write for Leaflet 118

Veterinary

Conducted by Dr. J. F. Shigley

Associate Professor of Veterinary Science, Pennsylvania State College, and Veterinarian in charge of College Livestock.

Advice thru this department is free to our subscribers. Each communication should state history and symptoms of the case in full; also the name and address of writer. Initials only will be published. We invite readers to make use of this service. Clippings from the column when properly preserved and classified, make one of the most valuable medical symposiums a farmer-stockman can obtain.

EWES ARE DYING.—What causes sheep to die at the time they have their lambs? The lambs usually die at birth. The mothers seem all right, then drop over dead. I cannot see any cause for this but all the females of the flock are dying.—J. F., Indiana, Pa. There is a relatively high loss at lambing time if parasites are present in any quantity. This appears like cases of nodular disease. The larvae form nodules in the intestinal wall, interfering with secretion, digestion and absorption of food. Have your nearest graduate veterinarian hold a post mortem on one of the ewes as soon after death as is possible to secure the veterinarian, or as soon as you can convey the ewe in your car to the office of the veterinarian.

BONE MEAL FOR SOW.—What kinds of lime should be used for sows and what amount should be fed at a feeding?—F. C. A., Tidionte, Pa. In view of the fact that both bone meal and lime are for the purpose of supplying calcium, one or the other may be used. Steamed bone meal secured from your local feed store may be used. One tablespoonful in the feed daily is sufficient. A variety in the ration is desirable in the feeding program.

SHEEP TICKS.—My sheep have ticks. Would like to know a remedy. —T. E. A., Stewartstown, Pa. The usual policy is to clip the sheep as soon as weather permits. The sheep should then be dipped, using one of the recognized dip solutions. The buildings should be cleaned and sprayed with the dip solution. The dipping process should be repeated in ten to fourteen days to thoroly remove all ticks.

Big Premiums Paid for High Quality

BECAUSE of the high quality of the tomatoes grown in the tri-state territory, comprising Delaware, Maryland and New Jersey, the canners in that section paid the farmers a premium of $4,958,958 for tomatoes in the last three years above the prices paid by canners in competing states of the Middle West. The average price in these three states has exceeded the prices paid in eleven of the other big tomato states by $7 per ton in 1924, $3 per ton in 1925 and $2.35 per ton in 1926.

The eleven states whose figures were averaged against the tri-state group in the survey of the United States Bureau of Agricultural Economics were: Arkansas, Colorado, Indiana, Iowa, Kentucky, Michigan, Missouri, Ohio, Pennsylvania, Tennessee and Utah.

While New Jersey does not figure as a corn state the premium paid on corn from the tri-state group was $1,115,319 above their strongest competitors, Nebraska, Iowa, Michigan, Ohio, Indiana and Wisconsin.

The pea premium drops to less than half a million dollars because the pea industry is centered in Wisconsin, Utah, Colorado, Indiana, Michigan and Minnesota.

The discouraging part in the situation is the fact that the production per acre in Delaware, Maryland and New Jersey is far below the average of competing states. Despite the lower prices per ton the income per acre in the other states has been on a par or above the income of the acre unit in the tri-state territory.—A. K.

Our Readers' Classified Advertising Department

A market place to buy or sell at little expense. Over 100,000 farm families read Pennsylvania Farmer every week. Rate 6 cents a word each for one, two or three consecutive weekly insertions; 5 cents a word each for four or more insertions. Count each number and initial and send cash with order. Orders, discontinuances or changes of copy must reach us by Wednesday of week preceding date of issue. All advertisements set in uniform style, no display type or illustrations. Poultry advertising may run here, but if displayed or illustrations used must run in display advertising columns at commercial advertising rate (65 cents per agate line). Livestock advertising not accepted in this department. Minimum, ten words.

60 LARGE GLADIOLI $1. None alike. 12 Dahlias $1.25. Catalogue. **A. Sherman, Chicopee Falls, Mass.**

Friendly Talks

By EDGAR L. VINCENT

A GOOD old woman who lived near us when I was a boy had a way of putting up maple sugar that I never knew of anyone else doing. She had a great big wooden tub that held more than a barrel; and every year when the sugar bush was tapped she took a nice lot of the syrup and boiled it down until it was soft sugar, without a bit of grain in it. "Long sweetnin'," she used to call it; and how good that sugar used to taste to us children!

Every little while she would dip a big dish of the "long sweetnin'" out of the tub and send it up to mother. I am sure she knew what a lot of sweet teeth six growing boys and girls had, and we surely did think there never was a nicer, kinder old lady anywhere than Aunt Emma. Her heart was a lot bigger than the tub she kept her sugar in, and her love reached to every home where folks were having a hard time to get along.

His Kindly Letters Cheered Many

Down in the City of Brotherly Love there used to be a man who sent his love to folks in a little different way, but I am sure it did them just as much good as did Aunt Emma's sugar. Whenever he learned of a man or woman, young or old, that was having a bit of trouble he would get out his pen and ink and write them a kindly, sympathetic letter. Many a young man and many a young woman, who were striving to make good in the world were made happy and cheered on the way by one of this dear old man's letters. He wrote so many of these letters that the time came when he was known all over the country as the man with the friendly pen; and nobody knows how much good he did in this quiet, unobtrusive way.

While it was still cool this last spring, one morning I met a honey bee. He was flying low and he came near running right into me. I thought maybe there was a bit of frost on his eye-winkers; he started out so early in the morning, beginning the year so soon after the winter had only well started for the North Pole.

And probably he was only one of the many little workers that had begun its season's work. All over the world as soon as it is warm enough these busy friends of the tiny wing were toiling that morning, so that you and I and everybody else might have honey for our tables.

The Best Way to Show Gratitude

And this is only one of the many, many things which are being done every day to make the world happier. It is a great thing to know that because of what some one or somebody has done, not a single want of ours need go unsatisfied.

Are we thankful as we ought to be that this is so, or do we reach out our hands and selfishly take the blessings that come to us and never speak a word of thanks? Would it not cheer the heart of the old man of the golden pen to receive a word of thankfulness from those he had tried to help? Aunt Emma with her big tub of "long sweetnin'" would have been discouraged and disappointed if we had never said, "I thank you," when she filled our sweet tooth to overflowing. And yet, sometimes we do forget.

Would not it be fine if we were all to show our gratitude by trying to make somebody else happy? There are a thousand things we can do. Not a good word we speak, not a kind letter we write, not a good deed we do but helps to fill somebody's cup of happiness full; and that is life at its best.

A *Great* Car made even *Greater*

The New and Finer
PONTIAC SIX
... at New Low Prices

Only by utilizing the tremendous resources of General Motors could Oakland produce such an amazing value as the New and Finer Pontiac Six at its new low prices.

Such arresting beauty and style appear in no other low-priced six—for none other has the advantage of bodies created and built by Fisher.

Such spirited performance and dependability characterize no other six of its price—for none other was developed on General Motors Proving Ground and incorporates the discoveries of General Motors Research Laboratories.

The distinction of the New and Finer Pontiac Six is emphasized by narrowed body pillars—by longer, lower contours—by heavier, more sweeping crown fenders—and by a deeper, more modish radiator.

Its smartness is accented by fresh and original combinations of Duco colors—ranging from Beverly Blue and Satin Black on the Sedan to Cherokee Gray and Brevoort Green on the Sport Cabriolet.

And its mechanical excellence is increased by the addition of such unexpected features as foot-controlled tilting-beam headlights, longer transmission and brake levers, larger steering wheel with aluminum spider, and an even smoother, more powerful clutch.

The New and Finer Pontiac Six towers over its field as a monument to the vast constructive influence that only General Motors commands—for in no other six of equal price is such dazzling value revealed.

Wet mash preferred.

Why Pennsylvania wheat growers frequently receive prices below the market quotations. Page 3.

If you want extra traction and long tread wear in addition to balloon tire comfort, be sure you get this quiet-running *new-type* Goodyear All-Weather Tread

An extra Goodyear value

An important extra value you get when you buy a Goodyear Tire is quite outside the tire itself.

It is the *service* performed for you by the local Goodyear dealer.

He makes sure the tire you buy is the right size and type for your car. He puts it on the rim for you. He fills it with air.

Long after the sale he continues his interest in that tire, and helps you give it the care it should have to deliver maximum results.

This service means cheaper mileage for you. It saves you money. It is an extra Goodyear value you ought to have.

It is part and parcel of the Goodyear policy: *to build the greatest possible value into Goodyear products,* and *to provide facilities so that the user can get all this inbuilt value out.*

Goodyear makes a tire to suit *you*—whether you want the incomparable All-Weather Tread Goodyear, the most famous tire in the world, or the lower-priced Goodyear standard quality Pathfinder

Goodyear Means Good Wear

Corn Borer Meetings Continued

Jordan Also Discusses Rabies and T. B. Clean-up

THE Courthouse at Franklin, Venango County, was the scene of the third in the series of county-wide corn borer meetings held recently in northwestern Pennsylvania, others having been held in Erie and Warren as reported last week. Joseph McElhaney, who is supervisor of the borer campaign in the county, was chairman. Secretary of Agriculture Jordan and Deputy Secretary Bressler were the speakers.

Secretary Jordan stressed the vital importance of a thoro clean-up of all cornstalks and corn stubble, not only to prevent the spread of the borer to other sections, but to save next year's local crop from damage. He included in his speech some information about other activities of the Department of Agriculture.

Dog Law Will Be Enforced

A determined effort is being made to enforce the dog law. The livestock industry of the state demands that this law be enforced, but its enforcement is even more important as a protection to human lives. Seven people have died horrible deaths in Pennsylvania within the last year from rabies, contracted by being bitten by a "mad" dog. In the last six weeks the Department has spent over $20,000 to stamp out rabies disease in Luzerne County and in the Pittsburgh district.

Tuberculosis eradication also is occupying much of the Secretary's attention. The most conservative estimates of some of the country's leading doctors as to the number of children who die every year from drinking milk containing tubercular germs are amazingly high. Secretary Jordan reported that more money will be available in Pennsylvania in the next two years for the eradication of bovine tuberculosis than ever before.

Deputy Secretary Bressler was kept busy by the Franklin audience answering questions about the corn borer control work. He told about a parasite that has been released in large numbers in the Lake Erie section. Entomologists are hopeful that eventually it will play an important part in corn borer control. With almost human intelligence this parasite flies to an infested cornstalk, goes up and down until it finds where a borer is working, sinks its egg-laying organ thru the stalk and into the borer. The egg laid in the body of the borer hatches into a smaller worm which eventually kills the corn borer.

The hope for American corn growers lies in the activity of this and other parasites, and, more still, in the adoption of a clean system of farming which will leave no corn or other hiding place where the borer can hibernate during the winter.

Meetings Well Attended

Another meeting similar to the one at Franklin was held in the Courthouse at Mercer. Director McDowell, of the State College Agricultural Extension Department; Secretary Jordan, and Deputy Secretary Bressler addressed the Mercer County farmers.

The fifth meeting of the series was held in the Scottish Rite Cathedral at New Castle, in Secretary Jordan's home county, Lawrence. About 1200 people from the town and surrounding farms were present to hear the county's first representative in the cabinet of a Pennsylvania Governor. The other speakers were State Treasurer Samuel Lewis, Mr. Bressler, Mr. McDowell, Fred L. Rentz, of the New Castle Chamber of Commerce, and County Agent McCulloch.

Another well attended meeting in Butler completed the series. Butler County farmers were busy with their corn clean-up work, as were the farmers in every county in the area where the meetings were held. The outstanding feature of the corn borer campaign in Pennsylvania is the willingness being shown by nearly everyone concerned to do all possible to control this enemy of the most important farm product.—C. L. White.

A Corn Borer Special is being operated by the Pennsylvania Railroad in Indiana in cooperation with Purdue University, which is the state agricultural college of Indiana. The special train carries corn borer exhibits and speakers who will tell how to fight the borer. It will visit other states later.

He wasn't such a handsome dog, but he seemed friendly and we stopped to pet him and to examine his collar.

"I'm Bobby Jones' dog," the brass plate read, "whose dog are you?"—Imperial Type Metal Magazine.

The Seed Corn Situation Is Bad

By NICKOLAS SCHMITZ

Agronomy Extension Specialist, Pennsylvania State College

IN SPITE of all warnings, there are still many farmers who do not fully appreciate the very poor seed condition of the 1926 corn crop. Very little of the seed selected last fall and stored in the usual manner over wagon sheds or other out-buildings is fit for seed. In most cases it is absolutely worthless. That of the 1926 crop in cribs is still worse. In fact, in most cribs it is difficult to find a single ear that will give strong, healthy germination.

This trouble has all been brought about by the wet weather last fall which prevented the kernels from drying out properly before hard freezing weather.

While the germination test is the only sure way of determining the germinating ability, it is not difficult at this time, by careful inspection, to tell whether the seed will be worth while planting.

All grains which were frozen are blistered on both the germ and back sides. On the germ side and over the germ cavity the hull will be raised and loose, so that the point of a knife blade can be easily inserted beneath. This condition is very much like a water blister on the hand. Very few of the blistered kernels will germinate or at best give any more than a weak sprout. Therefore, all ears showing blistering or molding should be discarded, and if more than 15 per cent of the ears are blistered the whole lot should be discarded unless an individual ear test is made.

Fortunately, very little of the 1925 corn crop in cribs was injured by freezing. All county agents have been on the job locating cribs of 1925 corn and other sources of good seed. Farmers who have not assured themselves of good seed and who find many blistered kernels in their supply should get in touch with their county agents.

Why Real and Quoted Prices Don't Agree

Wheat Growers Can Secure Better Returns by Eliminating Weed Pests

By W. R. WHITACRE

Pennsylvania Bureau of Markets

"WHY is it that I never get as much for my wheat as the prices published in Pennsylvania Farmer and in other newspapers? My wheat is as good as anybody else's but the dealers won't offer me within 15c of the price of Number 2 wheat." This is a question that a number of Pennsylvania farmers have asked and many others are wondering about.

Before any prices can be quoted that mean anything, there must be uniform grades. There are six grades of Red Winter wheat and in order of quality they are: No. 1, No. 2, No. 3, No. 4, No. 5 and Sample Grade. These grades are definite and depend upon the weight per bushel, the amount of moisture the wheat contains, damaged grains and the amount of foreign material.

Forms Basis for Other Grades

The prices that are generally published in Pennsylvania Farmer are those of No. 2 Red Winter and No. 2 Red Winter Garlicky. The wheat that contains garlic is discounted and this discount varies from 5c to 22½c per bushel. The reason that No. 2 Red Winter is the price that is usually quoted is because it is the price basis for the other grades.

No. 3 Red Winter sells at 3c per bushel below No. 2, No. 4 at 7c below No. 2, No. 5 at 11c below, while the price of Sample Grade depends upon the factors that put it in that grade. There is so little No. 1 wheat that it generally sells at the same price as No. 2, or may receive a premium.

This Lancaster County flour mill removes the germ from the wheat and ships it to another plant to be made into breakfast food.

The farmer who said his wheat was as good as anybody else's would be surprised to know that only 31 per cent of the 1705 cars of Pennsylvania wheat shipped to Philadelphia and Baltimore in 1926 graded No. 2 Red Winter on arrival. The greatest percentage graded No. 3 Red Winter Garlicky. This means that if No. 2 Red Winter was quoted at $1.11 per bushel that the farmer's wheat would most probably have an actual market value of $1.08 at the terminal market minus a discount of 5c to 22½c per bushel for the garlic.

Is Discount Unfair?

Such a discount for garlic may seem unfair and the farmer may think that it is just another scheme to lower the price of his product. Garlic affects the milling quality of wheat and when it is present in considerable amounts it imparts a noticeable odor to the flour. The equipment needed to remove garlic is expensive and discounts are made to cover this investment. It would seem that there should be a fixed discount for wheat depending upon the actual cost to remove garlic, but the law of supply and demand upsets this apparently simple solution. When wheat is scarce the discount is less than when there is an abundant supply and the discount depends upon how badly the wheat is wanted.

There is one point which is not just and fair but which is unavoidable at present (to page 15)

Farmers Are in the Banking Business

TEN years ago we started an experiment in farm finance in this country. Europe had tried it since the days of Frederick the Great. But in Europe, agriculture and general farming conditions differ from ours, and there was a good deal of speculation whether we could adapt their co-operative long-term first mortgage institutions to our needs. Proof that we have succeeded to a remarkable degree is shown by the progress of the twelve Federal Land Banks established by the Farm Loan Act of July, 1916. During this first decade of their existence they have made loans to 416,768 farmers amounting to $1,300,674,000.

Senator Capper

The borrowers have not only obtained this money at low interest rates, mostly at 5½ per cent, but also have made substantial progress in its repayment.

Every borrower pays a stipulated amount every six months or annually. At first most of this goes to pay the interest, but as the years pass more and more is applied to the principal, and less and less is required for interest, until at the end of the loan period of about 33 years, the mortgage is paid off entirely.

During this time the farmer who has not borrowed from a Federal Land Bank but carries the ordinary short-term loan of three to five years, and is not able to pay it off, must renew it five to ten times and pay the expense of renewals or of making new loans.

It is surprising how many short-term mortgages are carried in this way from year to year without substantial reduction of the loan. It demonstrates the need for the long-term loan upon which a small amount is paid annually.

The land banks do not make "Government loans." They do not lend "Government money." Their loans are secured by mortgages on farms. They are made from funds paid by investors for bonds. These bonds, secured by the farmers' mortgages, are sold by the banks to obtain the money to lend the farmers, which the farmers apply for thru their own local farm loan associations.

With a Federal Land Bank mortgage the borrower need not worry about renewals, commissions, bonuses or other expense, for so long as he keeps up his small payments annually or semi-annually he will not be disturbed. Further, should he have a particularly profitable year he may pay off his loan or he may make payments on the principal any time his installments come due.

Land Banks Not Government Institutions

Frequently we hear these land banks referred to as "Government banks." Neither the public generally, nor some of the farmers, know that the land banks are farmer banks and farmer-owned and that farmers are the stockholders. There is criticism that the banks are too exclusively controlled from Washington, which is too far away. The farmers who own the business and are on the ground and in better position to direct its policies, should have a little more to say in its management.

To enable the land banks immediately to start business the United States Treasury back in 1916 supplied about nine million dollars of capital to them. That's the reason why most persons think of these banks as Government institutions. However, since they were started, the borrowers, thru their National Farm Loan associations, have repaid all but one million dollars to the Federal Treasury, and in addition have bought stock amounting to fifty-six million dollars, thereby building these farmers' cooperative, or mutual, first farm mortgage institutions into the greatest farm mortgage business the world has ever seen.

Have Won Confidence of Investing Public

These banks certainly have won and held the confidence of the investing public, for to date it has bought more than 1¼ billion dollars' worth of Federal Land Bank bonds. This is the money which is supplied to the farmers thru the local National Farm Loan association.

The establishment of the 4665 National Farm Loan associations is in itself no small accomplishment. There now is an average of more than one to every agricultural county in the United States. Every borrower is a member of his local association, and is a stockholder as well to the extent of five per cent of the amount of his loan. He receives an annual dividend on this stock. In some years this dividend has amounted to from 6 to 13 per cent.

In the next decade these cooperative credit organizations should prove even more helpful than they have in the first 10 years.

Will the Advantage Be On Your Side This Year?

NOW comes the cultivating season, with its great need for good work done quickly. Other crops and other jobs are waiting, but you must go into the corn fields regularly, equipped to do the kind of cultivating that encourages bumper crop growth.

You can't afford to put your time and energy into limited work with old-fashioned cultivators. Your time is worth too much for one-row work. Modern crop production calls for two-row cultivating — one man and three or four horses doing the work of two men each day.

McCormick-Deering dealers stock all types of McCormick-Deering Cultivators—two-row, one-row, and walker—for your selection, but your interest in farm profit and progress should urge you to invest in the fast-working, thorough two-row.

Even though your acreage is not large, the two-row will be a money-maker for you. It saves time, when time is gold, and opens the way to easy cultivation of your fields, even when late rains, etc., shorten the season to the danger point.

Ask the local McCormick-Deering dealer to show you the McCormick-Deering Cultivators he has in his store.

WHEN YOU BUY DIP

3 Things are more important than the price you pay

First—How strong is it? How does it compare with carbolic acid?

Second—Is it standardized? That is, will it run uniform, or does it vary in strength?

Third—What kind of emulsion does it make? Milky white? Free from any specks or oily streaks on the top, and free from settlings at the bottom? A poor emulsion not only denotes an inferior dip, but a waste to you.

Dr. HESS DIP and DISINFECTANT

IS FIVE TIMES AS STRONG AS CARBOLIC ACID

It has a carbolic acid co-efficient of 5. That's why Dr. Hess Dip costs less to use, no matter what price you pay for others. It requires less of it to make an emulsion.

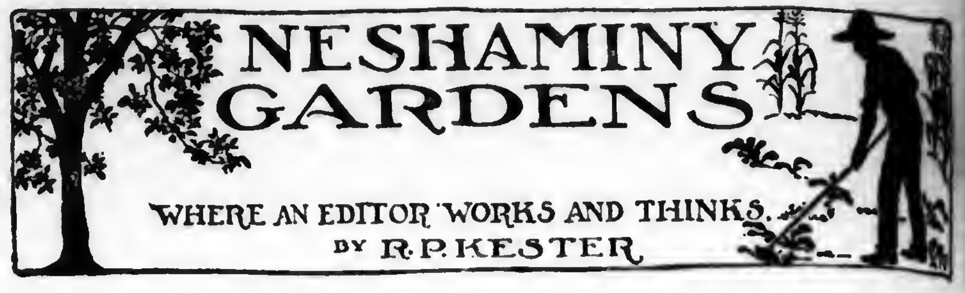
Dr. Hess Dip is standardized, always the same, whether you buy it in Maine or Texas, the same yesterday, today and tomorrow.

Dr. Hess Dip makes the finest, whitest milky emulsion of any dip that you can buy, and stays that way for weeks. The whiteness proves its worth.

Have your dealer place a teaspoonful in a glass of water—and see for yourself how much better it is.

Dr. Hess Dip and Disinfectant kills hog lice, sheep ticks and scab; destroys disease germs; keeps down foul odors; makes living quarters healthful. Guaranteed.

Dr. Hess & Clark, Inc., Ashland, Ohio



NESHAMINY GARDENS

WHERE AN EDITOR WORKS AND THINKS

BY R. P. KESTER

THE new house at Neshaminy Gardens is heated by a hot air furnace with delivery to each room, including the kitchen. Hot water is to be furnished from a little water heater in the basement. A very little coal will keep it running. The cooking stove is an oil range, a modern invention which is a blessing to housewives in hot weather. No need to keep the kitchen heated all day long as is necessary when the cooking is done on a coal stove! The oil stove has been so perfected that it is safe, economical and as quickly available as gas.

✣ ✣ ✣

OUR range is a five-burner one—three cooking flames and two flames under the oven. The women have tried both cooking and baking and pronounce it A-1 as to convenience and efficiency. The old-fashioned farm kitchen was big and roomy, and a stove was necessary to furnish warmth in cold weather, and its heat in summer was not so apparent in the big room. But the smaller modern kitchen is turned into a veritable bake-oven when a coal stove is heated up for business in hot weather. However, thousands are equipping their homes with oil ranges for summer use.

✣ ✣ ✣

THE peach trees were sprayed with New Jersey Dry-Mix just before the blossoms opened. This spraying is to control brown rot. Another will be given later. Arsenate of lead will be added to the second spray as a repast for the codling moths. That is, the second spray will be applied if the freeze this morning did not kill the buds. The thermometer registered 30 degrees this morning, April 25, and the peaches, pears and cherries are in full bloom. Sometimes that temperature is fatal to blossoms of these fruits.

✣ ✣ ✣

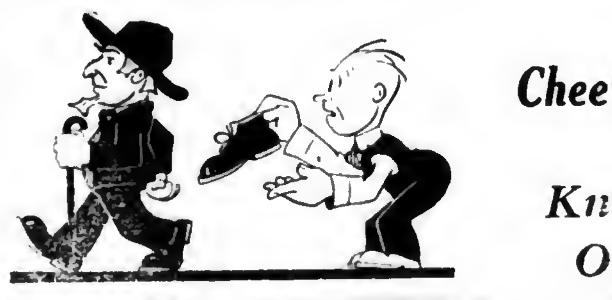
THE wrinkled peas planted on March 18, and about which I was very skeptical because of the succeeding cold weather, are up and looking thrifty. It does not appear as if any had rotted, altho it was four weeks before they showed above ground. The spinach came up also, altho it has not made much growth. The heavy and much needed rain which fell on April 22 puts all our crops in good condition to grow now, providing we have some high temperatures. We made our first cutting of asparagus on April 20th.

✣ ✣ ✣

I SPENT most of the week of April 18 out at the Old Homestead where I went to see my Mother who is hovering in the Shadowland. The energy and determination which carried her thru almost eighty-one years is still evident. Even tho she does not exert them, the life forces persist and she wavers between the real and the unreal—between the now and the yesterdays. Part of the time she is concerned about the little children of the long ago, while at intervals she is alert to everything about her. I was glad she recognized me and was able to welcome me and bid me goodby.

✣ ✣ ✣

THE fine weather permitted me to roam over the old home place to every nook and corner. I visited the trees I helped plant many years ago, a few of which lived up to their names, but most of them bore apples of a different kind and have been grafted. On a stony hillside just cleared I planted my first small orchard. For twenty-five years a never-ending battle was waged to keep the bushes down. Locusts, sumac and briers grew with a persistency that was disheartening. Every year they were cut and every year they came up undiscouraged. This time I found the place clear and clean. I found they had fenced it and hired it out the last two years for sheep pasture. The sheep had done in two summers what we could not do in twenty-five years!



The Cheerful Plowman

Knowing My Own Mind

THAT clerk at Dumphrey's makes me tired; I'd sort of like to see him fired! Will that gent never, never find that I am master of my mind? Will he not some day figure out that I can tell what I'm about? For years, and years, and years I've worn a shoe that's gentle with my corn, and I have seen no other make that I shall ever, ever take! My feet are very hard to please, and I must have my pedal ease; but that fresh little, two-cent guy must always tell me when and why; he loves to tell me I am wrong, each time I go he sings his song.

"Now, Mr. Plowman, here's a shoe that I am sure will tickle you; it's better than the kind you wear, and better tailored, I declare! This shoe is made for touchy corns—the kind that have inverted horns—and if you try it once, I know, you'll buy nine pairs right in a row! The shoe you wear is not the kind a modern man should have in mind!" "Now hark," says I, "and listen here! You do not get me right, I fear! The shoe I wear I've always worn since first I raised that stabbing corn! It gives me tons and tons of ease! I'll duplicate them, if you please!"

"But listen," said that little man, "these shoes are built on better plan! It is a sure and certain cinch there is no corn this shoe will pinch! You make a bad and raw mistake to purchase any other make!" I rose in fury. "NO!" said I, "how loudly must I hoot and cry to make you see I know my mind? I WILL NOT take that other kind! I know exactly what I think and why I think it, little gink! I know my mind, I live with it! I know the shoes that seem to fit! Show me MY kind and I will buy! No one knows ME so well as I!"—J. Edw. Tufft.

Vol. 95, No. 19 Phila., Pa., May 7, 1927 Whole No. 1564

OUR JOB is to serve our readers. Whenever you are puzzled write to us and we will help you if we can.

Happiness quite unshared, can scarcely be called happiness; it has no taste.

Take the Stitch in Time

IN NO other way is it possible to save the proverbial nine stitches so surely as in the matter of spraying. An agricultural note makes the remark that "ninety per cent of the spraying and dusting must be preventive rather than curative in order to be successful." As is the case with human health, it is easier to keep a plant healthy and free of pests than it is to cure troubles after they have gained a foothold. Research and experimentation have made it possible to prevent, check, or cure most of the serious plant enemies, providing the work is done promptly and intelligently. Keeping trees and plants healthy is a job which our grandfathers did not have to do, but which is absolutely necessary today if a farmer is to succeed.

An Untamed Giant

THE Mississippi has been on a rampage for several days. Hundreds of people have been drowned and property worth hundreds of millions of dollars destroyed. All of man's efforts to keep the Father of Waters within bounds prove to be like child's play when flood-making rains occur over a wide area. The poverty and suffering in the nearly ten thousand square miles devastated call for prompt assistance from the government and from every individual.

The United States must bend every effort toward making a repetition of this calamity impossible. The nation cannot afford to lose life and money in this way, if money and engineering skill can prevent it. It is a kind of defense that is more important just now than any other that can be imagined.

Farmers Buy Radios

THE old saying that, when farmers take up a thing its success is assured, ought to be reassuring to radio makers. Farm people usually hold back when a new thing comes out until they see whether it is a good thing, or, until it is past the experimental stage. People in towns and cities bought and made radio receiving sets by the tens of thousands before farmers began to buy, but once farmers were convinced of their value and efficiency they bought rapidly. The Department of Agriculture estimates that the number of radios on farms increased 126 per cent in 1926.

The investigation shows that farm people are more interested in informational talks than city people and less interested in "jazz." They look upon the radio as a means of information and do not consider it entirely as a source of entertainment. Weather and market reports, talks on methods of farming and livestock management are reported as being wanted. Up to date, most of the leading broadcasting stations have given only a minimum of time to furnishing the kind of program most wanted by farm people.

Poultry Important in Pennsylvania

PENNSYLVANIA has a place in the sun as an egg-producing state which few people realize. The figures for 1926 show that the value of the eggs laid in the state that year had a market value of over forty-one million dollars. This is nearly eight million dollars more than the wheat crop was worth, and is exceeded only by corn and potatoes. Yet, many farmers look upon poultry raising as "small business," all right for women and children but beneath the dignity of strong men!

Again, some people, having heard about the eggs from the West and Middle West being shipped in great quantities to eastern cities, think we are hopelessly outclassed in production. As a matter of fact, only two states producing a surplus, Missouri and Iowa, produce more eggs than Pennsylvania. But even with a production of 113,000,000 dozen last year we were short by over fifty million dozen of having enough to supply the demand in the state.

In spite of the importance of the industry, Pennsylvania does not have an adequate poultry organization. Many other lines of agriculture having a much smaller money value have efficient business organizations. Why not the poultrymen?

Federal Land Banks Prosper

THAT the bonds of the Federal Land Banks are considered a good investment is shown by the fact that the last issue of bonds for $100,000,000 sold quickly at a premium of one and one-fourth points. This is especially significant when it is known that the rate of interest is only four and one-fourth per cent. The ten years that have elapsed since the establishment of this form of banking has shown the value of the banks to the farming industry. It has also shown to investors that moderate, long-time loans on agricultural land are safe investments. During these ten years, $1,332,000,000 have been loaned to 380,000 farmers. The low rate of interest at which the bonds are being sold will be of interest to borrowing farmers, because the law limits the interest on loans to the rate borne by the bonds, plus one per cent.

Decline in Farm Population

THE greatest decrease in the number of people living on farms in six years occurred in 1926, the net reduction being 649,000. The 1925 census places the whole number living on farms at 27,892,000, as against 28,541,000 a year before. Had not the births on farms greatly exceeded the deaths, the loss would have been still greater. This large excess of births over deaths is a double-edged argument in favor of the country life.

We expect to see this cityward movement continue as long as other industries are able to pay better than does farming. But whenever the tide turns and the industries become oversupplied with labor, then we shall see a decided treking back to the land. At least, it has happened several times in the past. Whatever else may change, human nature changes but little.

What Do We Want in Milk?

WE HAVE a communication from H. H. Hall, a veteran milk producer in Potter County, who points out that the practice of paying for milk on a butterfat basis is unfair and unjustified, except when it is sold for making butter. He claims that the value of milk as human food is not dependent upon its fat content, and since the other elements are not related in amount to the fat content it is a fallacy to accept the amount of butterfat in milk as a basis from which to compute the food value of whole milk. As we shall publish Mr. Hall's article later we have no wish to anticipate his argument, but we give the gist of it here, hoping that others may express their opinion and, as "Uncle Henry" says, "start something."

Quality Counts—Not Age

"WHAT'S in a name?" asked the New York Legislature when it passed a bill, since signed by Governor Smith, eliminating the old standards of egg grading. The law aims to grade eggs by quality as determined by candling. Its sponsors hope it will overcome prejudice against storage eggs, which often are equal or superior to many so-called "fresh" eggs.

If the new regulations work out as intended eggs will really be sold on the New York market by quality,—not by meaningless names. The new standards will not affect shipping producers directly. In times of high prices, however, the new plan may bring high quality storage eggs into competition with newly laid eggs. It remains to be seen just what the effect will be.

Editorial Sidelights

"FRIENDS of the Comforting Heart," is the name Mr. Vincent says he would choose if he were to organize a new society that is much needed in these bustling days. Surely he has a right to be a charter member of such a society for his Friendly Talks (Page 19) bring comfort and good cheer to many of us each week.

Now it is our turn to bring some comfort and good cheer to Mr. Vincent. For weeks this winter his wife hovered between life and death but he permitted no word of his worry to appear in his Friendly Talks. Slowly she improved until last week she was able to be around the house. Then, still weak from her long illness, she fell. Her hip was fractured and all is anxiety in the Vincent home again.

If readers of Friendly Talks wish to write a letter of comfort and hope to Mr. and Mrs. Vincent they may send them thru this office. Letters should be addressed to 261 South 3rd Street, Philadelphia.

"TO WEAR an overcoat is considered positively traitorous to the sovereign state of Florida," writes Doctor Fletcher (Page 10). Next week, and the week after, our rambling Horticultural Editor will write about other phases of farming in the land of sand and sunshine.

Speaking of celery, as Doctor Fletcher does this week, we wonder how many readers have seen those great celery and head lettuce fields near Wellsboro Junction in Tioga County, Pa. Evidently the land there was once the bed of a lake, for it is as black as your hat. The long, perfectly straight rows of young plants make those level fields look like great strips cut from giant bolts of suiting,—black with a green pin stripe.

MAY BLOCK CHANGE

Congress May Thwart Mellon's Plan for Farm Loan Board —Child Labor Amendment Not Dead.

Washington, D. C.

THE total loans closed by the Federal and Joint Stock Land banks under the Federal Farm Loan system now amount to $2,133,665,559. Secretary Mellon is out with a statement in which he asserts that alterations in the policies of the Farm Loan Board will not be definitely determined until the new personnel of the board is announced. He has talked over the situation with his advisers in the Treasury Department as well as with officials directly concerned with credit bank management.

There is one hitch in the plans of Secretary Mellon to reorganize the Farm Loan system according to his ideas of farm credit. His appointees to fill the vacancies caused by the forced resignations of Commissioners Landes, Cooper and Jones will have to be confirmed by the Senate. And the Farm Loan system has some influential friends in the Senate.

Would End Booms and Hard Times

A nation-wide drive is being made by Congressman Strong, of Kansas, to gain support for his stabilization bill. Mr. Strong predicts that his bill will be effective in doing away with business booms and depressions and stabilize employment, production and the general level of prices.

It will give the scientific elastic currency which we thought we were getting when the Federal Reserve act was passed. The money volume will expand as commerce expands and contract as commerce contracts. The result will be a stable price level. The Strong stabilization bill was introduced at the last session of Congress, and will be reintroduced as soon as Congress convenes next December.

Child Labor Still Live Issue

Thirty states have rejected the child labor amendment, and only five states have adopted it. Nevertheless, it is far from being a dead issue. There is no limit to time when a state legislature shall take action on it. In an address before the Continental Congress of Daughters of the American Revolution, Senator Bayard, of Delaware, declared that the amendment would give Congress power to over-ride state law and to regulate the life of the child from birth to his eighteenth birthday. He charges the Children's Bureau with working incessantly to induce state legislatures to adopt the child labor amendment.

Millions Spent on Flood Control

The devastating flood along the Mississippi River has brought to public attention the fact that control of flood waters is one of the biggest questions which the Federal government is called upon to settle. Senator Harrison, of Mississippi, says "this flood crisis will draw to the attention of the Federal Congress and the American people the necessity of broader measures being enacted and large appropriation being made to control the flood waters that fall in the upper reaches of the Mississippi River and find their way thru tributaries into the Mississippi Valley. It will be one of the big problems that will demand the attention of the next Congress." Since 1916 Congress has appropriated $80,000,000 for Mississippi River flood control. Of this amount the engineers have expended $75,000,000.

New Shipping Policy Favored

Farmers thruout the country are deeply interested in the reappointment of W. S. Hill as a member of the United States Shipping Board. His term will expire soon. Mr. Hill was appointed to represent agriculture on the board. It was largely due to his efforts that the Shipping Board fleet was sent to the Gulf ports during the wheat marketing season to carry the wheat of the Southwest to foreign markets when there was a demand for it, and that the fleet of 60 ships is being kept in readiness to handle the grain from the Gulf ports the coming season.

Public opinion formerly strongly favored the transfer of Shipping Board lines to private ownership. Sentiment is changing in favor of the continuance of government ownership of the present fleet. Under the former policy when a government line was built up to the extent that it paid a profit on operation, it was sold to a private company. Under the new plan trade lines will be retained and the profits turned into the building up of non-profitable lines, thus reducing the need of government appropriations. —E. E. R.

ROAD MONEY RUNS LOW

Governor May Prune Omnibus Road Bill—To Study Rural School Needs—State Can Buy Toll Bridges.

Harrisburg, Pa.

AS A RESULT of the survey just completed of the bills carrying money which passed the recent legislature it is probable some of the much discussed measures may go down in the chopping necessary to bring appropriations within the $144,000,000 limit. One of these is the omnibus road bill, so called because it was intended to take in many new routes. It contains over 1200 miles, which is away beyond the means of the state to finance for a long time to come, especially when it is recalled the legislature of 1925 also tacked on about a thousand miles. The chances of this bill are not regarded as of the best.

The bill making an appropriation for a combined armory and food show building in Harrisburg is also more or less in trouble. It is possible it may be cared for out of the armory appropriation provided local contributions match what the state furnishes. State College is scheduled to get more than ever and the plans are to give the Department of Agriculture about the same as the budget allowed.

Important Road Acts Signed

Governor Fisher's recent approvals include about a dozen laws of direct interest to country roads. One would permit supervisors to close roads under certain conditions, an act which will likely be the subject of some conferences with state officials. Another permits improvement of roads at expense of abutting property owners on petition being filed, while others enlarge powers as to sidewalks and widths.

More Cash for Townships

By terms of one of the new laws the state is empowered to go up to a thousand dollars per mile in rewarding townships for grading and draining roads, an increase of four hundred dollars. It is calculated this will lead to considerable improvement in drainage alone.

Will Start Inquiry

State school authorities will lose no time in launching the study of financial conditions of fourth-class school districts. This inquiry is to go into valuations of property, collections of taxes and various other items and is aimed to obtain first-hand information on what such districts can afford and what the state must give. Men familiar with the conditions are to make the inquiry which will be on a more extended scale than those of recent years. The report will go to the Governor and then to the legislature in 1929.

Borer Work Well Organized

Reports coming to the Capitol indicate the campaign against the corn borer has been well organized. The destruction of corn remnants in northwestern counties has been carried on systematically. It is the plan of officials here to push the work of supervision from headquarters in the field.—T. C.

FARM LABOR NEEDED

Good Men in Demand for Jersey Farms—Will Push Area Test for Tuberculosis—Study Market Problems.

Trenton, N. J.

THE number of farm laborers in New Jersey according to recent survey is moderate. Good hands, both for all round farm work and milkers, are in demand. The former are getting $50 a month while milkers get from $60 up. Few married men are reported as available for farm work at the present time, except with their families in some of the early harvest sections. The farm labor division of the Federal Employment Service in cooperation with the State Department of Labor is listing men at its city agencies, to which farmers may call for assistance. Some 2000 farm laborers were placed thru this source with New Jersey farmers last year.

Should Test Cows Now

After June 30 practically all of the cattle indemnity money in New Jersey will be used for area testing work. This means that such counties as Morris, Middlesex and Cape May as well as several others which have encouraged the testing of cattle, will benefit chiefly from the funds. There will be little or no money available for testing isolated herds as has been done in the past. The area system of testing was sanctioned by the legislature this year and one by one the counties will probably adopt the plan and eventually all cows in the state will be tested.

Cumberland Grange Meets

The Cumberland County Pomona Grange held an active meeting in late April at Greenwich, N. J. Speakers from the State Department of Agriculture stressed the importance of grading potatoes and pointed out that New Jersey potatoes in well graded shipments last year brought a premium over ungraded stock. The question of grades was also applied to egg marketing, the Cumberland County Agent describing the cooperative work of Vineland poultry producers. The question of central loading points for the shipping of solid cars of perishable produce to market, was also discussed. The Cumberland growers hope by the establishing of such central loading points that carlot buyers may eventually be brought to these points, to the advantage of producers.

Fruit Committee Active

The marketing committee of the New Jersey State Board of Agriculture, at its April meeting, will tackle the fruit marketing problem in the state as its next job. The causes of bruises and deterioration in transit are foremost considerations in the survey to be made. In addition, the grades, sizes, colors and condition of fruit preferred by various commercial and individual consumers will be studied. Discussions were also held on ways and means to advertise New Jersey products as they move to market.—B.

FORESTER HIRED

Chautauqua to Have Permanent Woodland Specialist—Warren Favors Fluctuation of Retail Milk Price.

Ithaca, N. Y.

THRU the cooperation of fifty-four organizations, Chautauqua County has hired a county extension forester, the first county forester in the United States. Altho the county is one of the leading agricultural counties of the state, it has much waste land, and the duties of the new forester will include not only reforesting and planting but forest management and the marketing of forest products.

Retail Milk Price Should Vary

Eastern farmers who are agitating the need of more money for fall and winter milk have a supporter in Dr. G. F. Warren, of Cornell, farm economist. Dr. Warren announces that consumers must expect the price of milk to fluctuate with supply and demand, and not remain the same summer and winter, thru rain and thru drought. The recent tendency has been to sell this product at a fixed price, regardless of varying costs or shortened supply. A fluctuating retail price would stabilize production, in his belief, while during a series of years the average price would be no more than when the price is stationary.

Record Price for March Milk

Members of the Dairymen's League are to get the highest pool price in the history of the League for March milk, or $2.60 per 100 pounds of 3.5 milk. Last year's price for this month was $2.42. Last week was a record week in League history for new contracts, 572 being received. The total amount of milk handled by the organization last month exceeded the previous year's business by more than 3,000,000 pounds, or an approximate total of 186,000,000 pounds.—F.

No other spray will produce Pyrox results

THAT'S what Pyrox users tell u[illegible] [illegible] there is nothing like it for enabling plants to produ[illegible]e to the very last ounce of their capacity.

Pyrox Spray—which is an insecticide and a fungicide combined—kills bugs, worms and insects, and controls fungous diseases and prevents blights, at the same time. When leaves turn brown or black, use Pyrox. Not only saves plants, but improves their foliage.

Saves time, labor and money. Ready to use in five minutes. No fuss, no mess, no guesswork. And once sprayed on, it *sticks*—making frequent sprayings unnecessary.

Use Pyrox for potatoes, tomatoes, cucumbers and other vegetables; grapes, small fruit, roses, shrubs and flowers.

One pound jars; 5 and 10 pound cans; 25 and 50 pound drums; and barrels. Costs much less per pound in the larger containers. For sale everywhere.

FINE QUALITY
SEED CORN
[illegible]
[illegible] FARM, [illegible] Pa.

"On 15 acres of corn, I lost but 3 or 4 hills"—

writes A. B. Wilmot, of E. Thetford, Vt. And it cost Mr. Wilmot only about $3.00 to save from 1-4 to 1-3 of his entire crop. Previously, the crows and other pests had fairly picnicked on his corn-fields. Hill after hill was entirely pulled up. Hill after hill he had to replant every season. This cost him not only money but it cost him a lot of his valuable time right at planting time. Then someone told him of a way to coat his seed corn in a mixture that no crows or any other pests would touch, after they once had a taste of it. This corn-saver was

Stanley's Crow Repellent

Mr. Wilmot sent for some. He mixed it with his seed corn. He did not have to wait for it to dry, but planted it at once. And it did not clog the planter. It did not injure the seed corn. It was not poisonous, so it would not kill birds or animals. But it did keep every crow, mole, squirrel and other pest off of his corn-field, after they got the first whiff of it. Now there are no more scare-crows in Mr. Wilmot's field. There's no more worry over not getting a full crop, so far as pests are concerned. And Mr. Wilmot is only one of hundreds who have written us that they would never plant a hill of corn again without coating their seed corn with Stanley's Crow Repellent. "Money Back" guarantee. Large can, enough for 2 bu. of seed corn (8 to 10 acres), $1.50. Half size, $1.00. If your hardware, drug or seed store doesn't have it in stock, order direct. Address, Cedar Hill Formulae Co., Box 500-R, New Britain, Conn.

No, I'm not dead, but what is that stuff?

GUERNSEY [illegible]

[illegible] That Spring [illegible] "[illegible]"

[illegible] reports on [illegible]. This comes [illegible] sizes, de[illegible] to be covered. [illegible] are loaded in[illegible] are formed [illegible] application, [illegible] molds being [illegible] keep-up supply will [illegible]

Cultivated [illegible] greater consideration [illegible] ers in Pennsylvania [illegible] tory. Thruout New England the vegetable [illegible] great popularity and brings in dollars at a season when the grower's money [illegible] to be somewhat slack. [illegible] ed varieties [illegible]

The seed should [illegible] as possible, preferably [illegible] in order to provide [illegible] large roots. The rows may be [illegible] close as 12 inches and the seedlings should be thinned to 4 inches. Give good cultivation thruout the season. No winter mulch is required. Yields are heavy under good culture and quality is superior.

[illegible] bottom [illegible] of the mold [illegible] laid across the [illegible]. A sheet of paper is laid over [illegible] and is shaped by pressing the [illegible] section of the [illegible] section. When [illegible] of the mold is removed [illegible] with it and is [illegible] hill, soil is [illegible] edges of [illegible] form is [illegible]

When [illegible] no ventilation is required [illegible] seedlings appear. With seedlings or transplanted plants the top of the protector may be slightly cut or torn to admit fresh air. Apparently this does not greatly impair efficiency in frost protection. Additional details will be supplied upon request.—G. S. W.

Service Sold Increases Sales

Here is a worthwhile idea from the Massachusetts Agriculture College: "Vegetables well prepared, mean vegetables eaten, mean more vegetables needed." As producers and sellers of vegetables we have wonderful talking points in the well-established facts of the richness of vegetables in minerals and vitamins.

The wide-awake grower who sells good vegetables retail at market, on a route or from the wayside market sells more than vegetables. He also sells the service which makes his products available to the housewife while quality is unimpaired. [illegible] as he or his salespeople [illegible] ready to [illegible] cooking directions [illegible] additional service [illegible] which is bound to [illegible] and favor [illegible] folks will not eat [illegible] simply because they are good for one's health, they must be good to eat.

Protectors Worth a Trial

The various kinds of paper plant protectors that are now being manufactured are attracting more and more attention. The extent to which some sort of cheap plant protector will become of commercial importance in the East will be determined by long experience but the proposition is certainly worthy of a trial on a small scale.

It appears that some makes do not have the rigidity to stand up under our relatively high humidity and dashing rains. On the other hand, I

Needs Clean Ground

Please tell me about the advisability of planting cabbage on the same land two successive years. I grow the Danish variety.—J. L., Monmouth County, N. J.

It is extremely questionable practice to plant cabbage on the same land two successive years. Club root, black leg and some other diseases are carried over in the soil for several years. Even tho your last year's crop may have been apparently free from diseases there is the probability that some were present and that a larger infestation would follow this year.—G. S. W.

Destroyed Onions

[illegible] to do to get [illegible] They nearly [illegible] fall.—R. C., [illegible]

Onion [illegible] can not be controlled by ordinary spraying measures, as they feed inside the plant or bulb.

One recommendation has been to poison the flies which lay the eggs. One-fifth ounce of sodium arsenate is dissolved in one gallon of boiling water, adding a pint of cheap molasses to sweeten the mixture.

This is placed in shallow pans at short intervals, say 20 to the acre. These must be refilled after heavy rains and to replace the liquid lost thru evaporation.—G. S. W.

World Feeds Philadelphia

MORE than a dozen foreign countries and 41 states shipped fruits and vegetables to the Philadelphia market during 1926. The total receipts by rail at the Pennsylvania metropolis amounted to 44,608 carloads, of which 10,561 came from California, 6446 from Florida, 5699 from New York, 3018 from Virginia and 1792 from Pennsylvania points.

Altho these shipments included everything from turnips to tangerines, and pineapples to pomegranates, the largest single shipments were potatoes, 8156 carloads. Grapes were second with 4630 carloads.

Frost Damage Not Considered Serious

PROSPECTS for a fruit crop are still good in spite of recent severe frost, according to the State Department of Agriculture.

W. A. McCubbin, state pathologist, has received reports since the last serious frost which occurred Sunday night, April 24, from all the important fruit producing sections. Reports from Chester County indicate a small amount of injury to peaches, cherries and plums, but so far, the damage is of no great importance.

Adams County reports slight injury to a few varieties of apples but the principal commercial varieties have apparently suffered but little damage.

Peaches in Franklin County have been killed in the lower portions of some orchards, but the damage in the higher sections has been comparatively slight. The crop as a whole has come thru in good shape. The damage to apples is slight, according to the report.

"Generally speaking, the injury from frost has been scattering and while a few orchards suffered more than is desirable, the prospects for a crop are still good," Mr. McCubbin concludes.

Omitted One Spray—Lost a Million

IT IS estimated that New Jersey potato growers lost a million dollars last year by neglecting to spray at the proper time.

A spray test on the farm of J. Leamy Bitters, Roadstown, showed a loss of 50 baskets to the acre valued at $31.25, because a part of the field was not given the final application as recommended by the Agricultural College at New Brunswick. Both plots had been carefully sprayed until the final application late in the season. Then only one-half of the field was covered with the final application. At digging time the results of the spraying showed up with a nice profit for the extra time and cost of applying the spray solution. The vines that received the one extra treatment stayed green a full two weeks longer than the others. This accounted for the increased yield according to County Agent D. M. Babbitt.

The gain on this particular plot, if duplicated on the other 35,000 acres of potatoes grown in New Jersey last year would have added a snug million dollars to the income of the farmers of the state.—A. K.

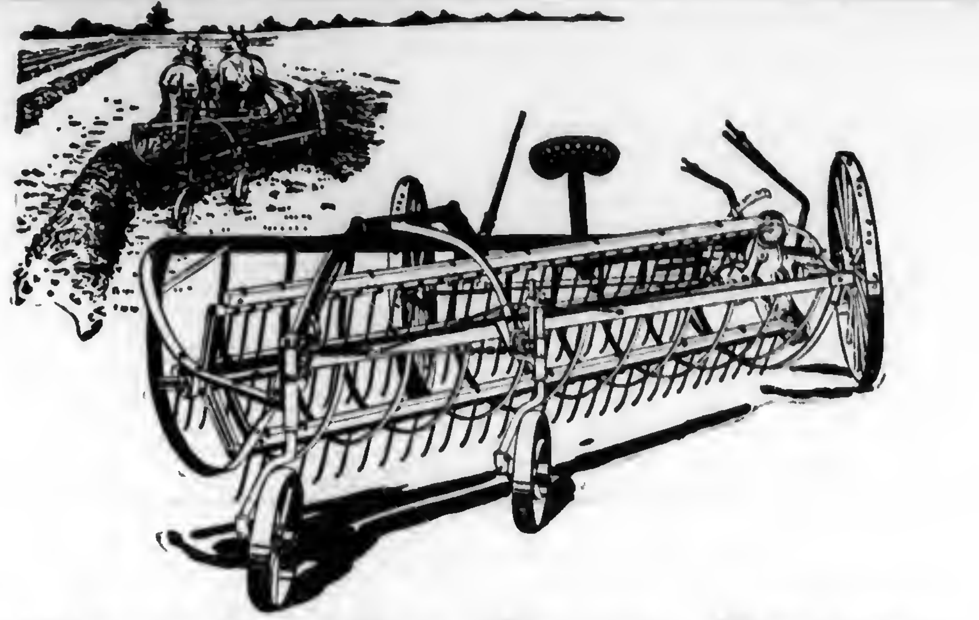
Goodling Leaves Penn State Farms

C. L. GOODLING, well known superintendent of farms at the Pennsylvania State College, has resigned to become director of the National Farm School, near Doylestown, Bucks County, Pennsylvania.

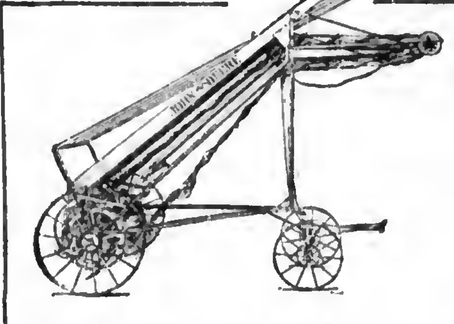
Mr. Goodling has been in charge of the Penn State College farms, the third largest operation of the kind in Pennsylvania, for the past seventeen years. When he took charge in 1910 the College had but 400 acres of farm land. Now it has 1800 acres, of which about 1300 acres are under cultivation.

The National Farm School has an enrolment of 180 boys who are being trained in all kinds of agricultural work. The new director was chosen with the object of emphasizing the practical side of this farm training.

Mr. Goodling was born in York County, Pa., and graduated from the Pennsylvania State College in 1907 where he was an assistant in dairy husbandry for two years before becoming farm superintendent. He was granted the degree of Master of Science in 1910.



"Hay in the Barn Seven Hours After Cutting"



Light Draft and Efficient

The John Deere Single Cylinder Loader has ample capacity for handling windrows made with a side rake.

Has light draft. Minimum number of working parts. Single drum is mounted on the axle. Hinged carrier makes loading easy in windy weather. Forecarriage eliminates lifting when coupling to wagon.

"We had alfalfa in the barn seven hours after cutting and the hay was in excellent shape. Although it was poor hay weather, we never put up hay so cheaply or that was any better."

Thus Ralph I. Lesher of Antrim County, Michigan, relates his experience in making hay the John Deere Way, using a

John Deere Side Delivery Rake

The results obtained by Mr. Lesher explain why farmers in all sections are adopting the John Deere Way.

They know that the leafy, green, high-protein hay produced by curing the John Deere Way is good for their stock.

They know that hay made the John Deere Way grades uniform and brings high prices on the market.

The John Deere Way is simple and sensible. The John Deere Side Delivery Rake with Curved Teeth and Inclined Frame is the only machine that is needed. It provides for protecting the leaves in the shelter of loose, fluffy windrows, from the time the hay is cut until it is ready to store. The leaves are the "bran" of the hay, and when you save the leaves, you save 65 per cent of the feeding value.

The curved teeth lift the hay. The inclined frame gives greater capacity where the volume of hay is heaviest. Most of the leaves are protected; they do not become brittle and shatter as they do when exposed to the sun's rays.

See these machines at your John Deere dealer's. Write for folders describing them. Address John Deere, Moline, Ill., and ask for Folder SC-436

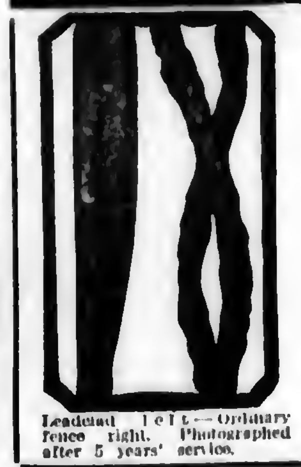
LEADCLAD FARM FENCE



Leadclad left—Ordinary fence right. Photographed after 5 years' service.

Leadclad Fence Starts You Saving Money

A Leadclad Fence saves you the cost and labor of erecting two ordinary fences, because it lasts longer.

The life of any fence depends a lot on where you live. Fences are long-lived in high and dry country and short-lived in foggy and smoky districts. But wherever you live, Leadclad Fence will triple the record of the best fence you ever put up on your farm.

If the useful life of your horses was tripled or you could get three times as many miles per gallon from the gasoline you are now using, you'd figure you were saving money.

You'll save money too, if you put up fences that will last three times longer than the fences you have been erecting.

OUR JOB is to serve our readers. Whenever you are puzzled write to us and we will help you if we can.

Happiness quite unshared, can scarcely be called happiness; it has no taste.

Take the Stitch in Time

IN NO other way is it possible to save the proverbial nine stitches so surely as in the matter of spraying. An agricultural note makes the remark that "ninety per cent of the spraying and dusting must be preventive rather than curative in order to be successful." As is the case with human health, it is easier to keep a plant healthy and free of pests than it is to cure troubles after they have gained a foothold. Research and experimentation have made it possible to prevent, check, or cure most of the serious plant enemies, providing the work is done promptly and intelligently. Keeping trees and plants healthy is a job which our grandfathers did not have to do, but which is absolutely necessary today if a farmer is to succeed.

An Untamed Giant

THE Mississippi has been on a rampage for several days. Hundreds of people have been drowned and property worth hundreds of millions of dollars destroyed. All of man's efforts to keep the Father of Waters within bounds prove to be like child's play when flood-making rains occur over a wide area. The poverty and suffering in the nearly ten thousand square miles devastated call for prompt assistance from the government and from every individual.

The United States must bend every effort toward making a repetition of this calamity impossible. The nation cannot afford to lose life and money in this way, if money and engineering skill can prevent it. It is a kind of defense that is more important just now than any other that can be imagined.

Farmers Buy Radios

THE old saying that, when farmers take up a thing its success is assured, ought to be reassuring to radio makers. Farm people usually hold back when a new thing comes out until they see whether it is a good thing, or, until it is past the "experimental" stage. People in towns and cities bought and made radio receiving sets by the tens of thousands before farmers began to buy. But once farmers were convinced of their value and efficiency they bought rapidly. The Department of Agriculture estimates that the number of radios on farms increased 120 per cent in 1926.

The investigation shows that farm people are more interested in international talks than city people and less interested in "jazz." They look upon the radio as a means of information and do not consider it entirely as a source of entertainment. Weather and market reports, talks on methods of farming and livestock management are reported as being wanted. Up to date, most of the leading broadcasting stations have given only a minimum of time to furnishing the kind of program most wanted by farm people.

Poultry Important in Pennsylvania

PENNSYLVANIA has a place in the sun as an egg-producing state which few people realize. The figures for 1926 show that the value of the eggs laid in the state that year had a market value of over forty-one million dollars. This is nearly eight million dollars more than the wheat crop was worth, and is exceeded only by corn and potatoes. Yet, many farmers look upon poultry raising as "small business," all right for women and children but beneath the dignity of strong men!

Again, some people, having heard about the eggs from the West and Middle West being shipped in great quantities to eastern cities, think we are hopelessly outclassed in production. As a matter of fact, only two states producing a surplus, Missouri and Iowa, produce more eggs than Pennsylvania. But even with a production of 113,000,000 dozen last year we were short by over fifty million dozen of having enough to supply the demand in the state.

In spite of the importance of the industry, Pennsylvania does not have an adequate poultry organization. Many other lines of agriculture having a much smaller money value have efficient business organizations. Why not the poultrymen?

Federal Land Banks Prosper

THAT the bonds of the Federal Land Banks are considered a good investment is shown by the fact that the last issue of bonds for $100,000,000 sold quickly at a premium of one and one-fourth points. This is especially significant when it is known that the rate of interest is only four and one-fourth per cent. The ten years that have elapsed since the establishment of this form of banking has shown the value of the banks to the farming industry. It has also shown to investors that moderate, long-time loans on agricultural land are safe investments. During these ten years, $1,332,000,000 have been loaned to 380,000 farmers. The low rate of interest at which the bonds are being sold will be of interest to borrowing farmers, because the law limits the interest on loans to the rate borne by the bonds, plus one per cent.

Decline in Farm Population

THE greatest decrease in the number of people living on farms in six years occurred in 1926, the net reduction being 649,000. The 1925 census places the whole number living on farms at 27,892,000, as against 28,541,000 a year before. Had not the births on farms greatly exceeded the deaths, the loss would have been still greater. This large excess of births over deaths is a double-edged argument in favor of the country life.

We expect to see this cityward movement continue as long as other industries are able to pay better than does farming. But when the tide turns and the industries become oversupplied with labor, then we shall see a marked trekking back to the land. At least that has happened several times in the past. Whatever else may change, human nature changes but little.

What Do We Want in Milk?

WE HAVE a communication from R. Hall, a veteran milk producer in ter County, who points out that the pr of paying for milk on a butterfat basis i fair and unjustified, except when it is for making butter. He claims that the of milk as human food is not dependent its fat content, and since the other elem are not related in amount to the fat tent it is a fallacy to accept the am of butterfat in milk as a basis from wh to compute the food value of whole As we shall publish Mr. Hall's article we have no wish to anticipate his ment, but we give the gist of it here, hop that others may express their opinion and "Uncle Henry" says, "start something."

Quality Counts—Not Age

"WHAT'S in a name?" asked the N York Legislature when it passe bill, since signed by Governor Smith, eli ating the old standards of egg grading. T law aims to grade eggs by quality as de mined by candling. Its sponsors hope it overcome prejudice against storage which often are equal or superior to so-called "fresh" eggs.

If the new regulations work out as int ed eggs will really be sold on the New Y market by quality,—not by meaning names. The new standards will not af shipping producers directly. In times of prices, however, the new plan may bring quality storage eggs into competition newly laid eggs. It remains to be seen what the effect will be.

Editorial Sidelights

"FRIENDS of the Comforting Heart," is name Mr. Vincent says he would if he were to organize a new society that is needed in these bustling days. Surely he h right to be a charter member of such a for his Friendly Talks (Page 19) bring and good cheer to many of us each week.

Now it is our turn to bring some comfort good cheer to Mr. Vincent. For weeks thi ter his wife hovered between life and death he permitted no word of his worry to appe his Friendly Talks. Slowly she improved last week she was able to be around the ho Then, still weak from her long illness, she Her hip was fractured and all is anxiety i Vincent home again.

If readers of Friendly Talks wish to wri letter of comfort and hope to Mr. and Mrs. V cent they may send them thru this office. Le should be addressed to 261 South 3rd St Philadelphia.

"TO WEAR an overcoat is considered p tively traitorous to the sovereign state of Fl ida," writes Doctor Fletcher (Page 10). N week, and the week after, our rambling Hortic tural Editor will write about other phase farming in the land of sand and sunshine.

Speaking of celery, as Doctor Fletcher this week, we wonder how many readers have those great celery and head lettuce fields Wellsboro Junction in Tioga County, Pa. dently the land there was once the bed of a for it is as black as your hat. The long, straight rows of young plants make those fields look like great strips cut from giant of suiting,—black with a green pin stripe.

MAY BLOCK CHANGE

Congress May Thwart Mellon's Plan for Farm Loan Board—Child Labor Amendment Not Dead.

Washington, D. C.

THE total loans closed by the Federal and Joint Stock Land banks under the Federal Farm Loan system now amount to $2,133,665,133. Secretary Mellon is out with a statement in which he asserts that alterations in the policies of the Farm Loan Board will not be definitely determined until the new personnel of the board is announced. He has talked over the situation with his advisers in the Treasury Department as well as with officials directly concerned with credit bank management.

There is one hitch in the plans of Secretary Mellon to reorganize the Farm Loan system according to his ideas of farm credit. His appointees to fill the vacancies caused by the forced resignations of Commissioners Landes, Cooper and Jones will have to be confirmed by the Senate. And the Farm Loan system has some influential friends in the Senate.

Would End Booms and Hard Times

A nation-wide drive is being made by Congressman Strong, of Kansas, to gain support for his stabilization bill. Mr. Strong predicts that his bill will be effective in doing away with business booms and depressions and stabilize employment, production and the general level of prices.

It will give the scientific elastic currency which we thought we were getting when the Federal Reserve act was passed. The money volume will expand as commerce expands and contract as commerce contracts. The result will be a stable price level. The Strong stabilization bill was introduced at the last session of Congress, and will be reintroduced as soon as Congress convenes next December.

Child Labor Still Live Issue

Thirty states have rejected the child labor amendment, and only five states have adopted it. Nevertheless, it is far from being a dead issue. There is no limit to time when a state legislature shall take action on it. In an address before the Continental Congress of Daughters of the American Revolution, Senator Bayard, of Delaware, declared that the amendment would give Congress power to over-ride state law and to regulate the life of the child from birth to his eighteenth birthday. He charges the Children's Bureau with working incessantly to induce state legislatures to adopt the child labor amendment.

Millions Spent on Flood Control

The devastating flood along the Mississippi River has brought to public attention the fact that control of flood waters is one of the biggest questions which the Federal government is called upon to settle. Senator Harrison, of Mississippi, says "this flood crisis will draw to the attention of the Federal Congress and the American people the necessity of broader measures being enacted and large appropriation being made to control the flood waters that fall in the upper reaches of the Mississippi River and find their way thru tributaries into the Mississippi Valley. It will be one of the big problems that will demand the attention of the next Congress." Since 1916 Congress has appropriated $80,000,000 for Mississippi River flood control. Of this amount the engineers have expended $75,000,000.

New Shipping Policy Favored

Farmers thruout the country are deeply interested in the reappointment of W. S. Hill as a member of the United States Shipping Board. His term will expire soon. Mr. Hill was appointed to represent agriculture on the board. It was largely due to his efforts that the Shipping Board fleet was sent to the Gulf ports during the wheat marketing season to carry the wheat of the Southwest to foreign markets when there was a demand for it, and that the fleet of 60 ships is being kept in readiness to handle the grain from the Gulf ports the coming season.

Public opinion formerly strongly favored the transfer of Shipping Board lines to private ownership. Sentiment is changing in favor of the continuance of government ownership of the present fleet. Under the former policy when a government line was built up to the extent that it paid a profit on operation it was sold to a private company. Under the new plan trade lines will be retained and the profits turned into the building up of non-profitable lines, thus reducing the need of government appropriations. —E. E. R.

ROAD MONEY RUNS LOW

Governor May Prune Omnibus Road Bill—To Study Rural School Needs—State Can Buy Toll Bridges.

Harrisburg, Pa.

AS A RESULT of the survey just completed of the bills carrying money which passed the recent legislature it is probable some of the much discussed measures may go down in the chopping necessary to bring appropriations within the $144,000,000 limit. One of these is the omnibus road bill, so called because it was intended to take in many new routes. It contains over 1200 miles, which is away beyond the means of the state to finance for a long time to come, especially when it is recalled the legislature of 1925 also tacked on about a thousand miles. The chances of this bill are not regarded as of the best.

The bill making an appropriation for a combined armory and food show building in Harrisburg is also more or less in trouble. It is possible it may be cared for out of the armory appropriation provided local contributions match what the state furnishes. State College is scheduled to get more than ever and the plans are to give the Department of Agriculture about the same as the budget allowed.

Important Road Acts Signed

Governor Fisher's recent approvals include about a dozen laws of direct interest to country roads. One would permit supervisors to close roads under certain conditions, an act which will likely be the subject of some conferences with state officials. Another permits improvement of roads at expense of abutting property owners on petition being filed while others enlarge powers as to sidewalks and widths.

More Cash for Townships

By terms of one of the new laws the state is empowered to go up to a thousand dollars per mile in rewarding townships for grading and draining roads, an increase of four hundred dollars. It is calculated this will lead to considerable improvement in drainage alone.

Will Start Inquiry

State school authorities will lose no time in launching the study of financial conditions of fourth-class school districts. This inquiry is to go into valuations of property, collections of taxes and various other items and is aimed to obtain first-hand information on what such districts can afford and what the state must give. Men familiar with the conditions are to make the inquiry which will be on a more extended scale than those of recent years. The report will go to the Governor and then to the legislature in 1929.

Borer Work Well Organized

Reports coming to the Capitol indicate the campaign against the corn borer has been well organized. The destruction of corn remnants in northwestern counties has been carried on systematically. It is the plan of officials here to push the work of supervision from headquarters in the field.—T. C.

FARM LABOR NEEDED

Good Men in Demand for Jersey Farms—Will Push Area Test for Tuberculosis—Study Market Problems.

Trenton, N. J.

THE number of farm laborers in New Jersey according to recent survey is moderate. Good hands, both for all round farm work and milkers, are in demand. The former are getting $50 a month while milkers get from $60 up. Few married men are reported as available for farm work at the present time, except with their families in some of the early harvest sections. The farm labor division of the Federal Employment Service in cooperation with the State Department of Labor is listing men at its city agencies, to which farmers may call for assistance. Some 2000 farm laborers were placed thru this source with New Jersey farmers last year.

Should Test Cows Now

After June 30 practically all of the cattle indemnity money in New Jersey will be used for area testing work. This means that such counties as Morris, Middlesex and Cape May as well as several others which have encouraged the testing of cattle, will benefit chiefly from the funds. There will be little or no money available for testing isolated herds as has been done in the past. The area system of testing was sanctioned by the legislature this year and one by one the counties will probably adopt the plan and eventually all cows in the state will be tested.

Cumberland Grange Meets

The Cumberland County Pomona Grange held an active meeting in late April at Greenwich, N. J. Speakers from the State Department of Agriculture stressed the importance of grading potatoes and pointed out that New Jersey potatoes in well graded shipments last year brought a premium over ungraded stock. The question of grades was also applied to egg marketing, the Cumberland County Agent describing the cooperative work of Vineland poultry producers. The question of central loading points for the shipping of solid cars of perishable produce to market, was also discussed. The Cumberland growers hope by the establishing of such central loading points that carlot buyers may eventually be brought to these points, to the advantage of producers.

Fruit Committee Active

The marketing committee of the New Jersey State Board of Agriculture, at its April meeting, will tackle the fruit marketing problem in the state as its next job. The causes of bruises and deterioration in transit are foremost considerations in the survey to be made. In addition, the grades, sizes, colors and condition of fruit preferred by various commercial and individual consumers will be studied. Discussions were also held on ways and means to advertise New Jersey products as they move to market.—B.

FORESTER HIRED

Chautauqua to Have Permanent Woodland Specialist—Warren Favors Fluctuation of Retail Milk Price.

Ithaca, N. Y.

THRU the cooperation of fifty-four organizations, Chautauqua County has hired a county extension forester, the first county forester in the United States. Altho the county is one of the leading agricultural counties of the state, it has much waste land, and the duties of the new forester will include not only reforesting and planting but forest management and the marketing of forest products.

Retail Milk Price Should Vary

Eastern farmers who are agitating the need of more money for fall and winter milk have a supporter in Dr. G. F. Warren, of Cornell, farm economist. Dr. Warren announces that consumers must expect the price of milk to fluctuate with supply and demand, and not remain the same summer and winter, thru rain and thru drought. The recent tendency has been to sell this product at a fixed price, regardless of varying costs or shortened supply. A fluctuating retail price would stabilize production, in his belief, while during a series of years the average price would be no more than when the price is stationary.

Record Price for March Milk

Members of the Dairymen's League are to get the highest pool price in the history of the League for March milk, or $2.60 per 100 pounds of 3.5 milk. Last year's price for this month was $2.42. Last week was a record week in League history for new contracts, 572 being received. The total amount of milk handled by the organization last month exceeded the previous year's business by more than 3,000,000 pounds, or an approximate total of 186,000,000 pounds.—F.

No other spray will produce Pyrox results

THAT'S what Pyrox users tell us. They say there is nothing like it for enabling plants to produce to the very last ounce of their capacity.

Pyrox Spray—which is an insecticide and a fungicide combined—kills bugs, worms and insects, and controls fungous diseases and prevents blights, at the same time. When leaves turn brown or black, use Pyrox. Not only saves plants, but improves their foliage.

Saves time, labor and money. Ready to use in five minutes. No fuss, no mess, no guesswork. And once sprayed on, it *sticks*—making frequent sprayings unnecessary.

Use Pyrox for potatoes, tomatoes, cucumbers and other vegetables; grapes, small fruit, roses, shrubs and flowers.

One pound jars; 5 and 10 pound cans; 25 and 50 pound drums; and barrels. Costs much less per pound in the larger containers. For sale everywhere.

SEED CORN
[illegible]
SHULL FARM, Box 4 [illegible], Pa.

"On 15 acres of corn, I lost but 3 or 4 hills"—

writes A. B. Wilmot, of E. Thetford, Vt. And it cost Mr. Wilmot only about $3.00 to save from 1-4 to 1-3 of his entire crop. Previously, the crows and other pests had fairly picnicked on his corn-fields. Hill after hill was entirely pulled up. Hill after hill he had to replant every season. This cost him not only money but it cost him a lot of his valuable time right at planting time. Then someone told him of a way to coat his seed corn in a mixture that no crows or any other pests would touch, after they once had a taste of it. This corn-saver was

Stanley's Crow Repellent

Mr. Wilmot sent for some. He mixed it with his seed corn. He did not have to wait for it to dry, but planted it at once. And it did not clog the planter. It did not injure the seed corn. It was not poisonous, so it would not kill birds or animals. But it did keep every crow, mole, squirrel and other pest off of his corn-field, after they got the first whiff of it. Now there are no more scare-crows in Mr. Wilmot's field. There's no more worry over not getting a full crop, so far as pests are concerned. And Mr. Wilmot is only one of hundreds who have written us that they would never plant a hill of corn again without coating their seed corn with Stanley's Crow Repellent. "Money Back" guarantee. Large can, enough for 2 bu. of seed corn (8 to 10 acres), $1.50. Half size, $1.00. If your hardware, drug or seed store doesn't have it in stock, order direct. Address, Cedar Hill Formulae Co., Box 300-R, New Britain, Conn.

No, I'm not dead, but what is that stuff?
Let's get him out of this quick!

Seed coated with Stanley's Crow Repellent

Garden and Truck Crops

Cultivated [illegible] Satisfy That Spring [illegible]

[illegible] as possible [illegible] should be [illegible] 4 inches [illegible] good cultivation throughout the season. No winter mulch is required. Yields are heavy under good culture and quality is superior.

Service Sold Increases Sales

Here is a worthwhile idea from the Massachusetts Agriculture College: "Vegetables well prepared mean vegetables eaten, mean more vegetables needed." As producers and sellers of vegetables we have wonderful talking points in the well-established facts of the richness of vegetables in minerals and vitamins.

The wide-awake grower who sells good vegetables retail at market, on a route or from the wayside market sells more than vegetables. He also sells the service which makes his products available to the housewife while quality is unimpaired. Insofar as he or his salespeople stand ready to give customers [illegible] cooking directions [illegible] additional service [illegible] which is bound to [illegible] than and future sales. As a rule folks will not eat things simply because they are good for their health, they must be good to eat.

Protectors Worth a Trial

The various kinds of paper plant protectors that are now being manufactured are attracting more and more attention. The extent to which some sort of cheap plant protector will become of commercial importance in the East will be determined by long experience but the proposition is certainly worthy of a trial on a small scale.

It appears that some makes do not have the rigidity to stand up under our relatively high humidity and dashing rains. On the other hand, I

Needs Clean Ground

Please tell me about the advisability of planting cabbage on the same land two successive years. I grow the [illegible] variety.—L., Monmouth County, N. J.

It is extremely questionable practice to plant cabbage on the same land two successive years. Club root, black leg and some other diseases are carried over in the soil for several years. Even tho your last year's crop may have been apparently free from diseases there is the probability that some were present and that a larger infestation would follow this year.—G. S. W.

Destroyed Onions

[illegible] to do to get [illegible] They nearly [illegible] fall.—R. C.

Onion maggots can not be controlled by ordinary spraying measures as they feed inside the plant or bulb.

One recommendation has been to poison the flies which lay the eggs. One-fifth ounce of sodium arsenate is dissolved in one gallon of boiling water, adding a pint of cheap molasses to sweeten the mixture.

This is placed in shallow pans at short intervals, say 20 to the acre. These must be refilled after heavy rains and to replace the liquid lost thru evaporation.—G. S. W.

World Feeds Philadelphia

MORE than a dozen foreign countries and 41 states shipped fruits and vegetables to the Philadelphia market during 1926. The total receipts by rail at the Pennsylvania metropolis amounted to 44,608 carloads, of which 10,561 came from California, 6446 from Florida, 5699 from New York, 3018 from Virginia and 1792 from Pennsylvania points.

Altho these shipments included everything from turnips to tangerines, and pineapples to pomegranates, the largest single shipments were potatoes, 8156 carloads. Grapes were second with 4630 carloads.

Frost Damage Not Considered Serious

PROSPECTS for a fruit crop are still good in spite of recent severe frost, according to the State Department of Agriculture.

W. A. McCubbin, state pathologist, has received reports since the last serious frost which occurred Sunday night, April 24, from all the important fruit producing sections. Reports from Chester County indicate a small amount of injury to peaches, cherries and plums, but so far, the damage is of no great importance.

Adams County reports slight injury to a few varieties of apples but the principal commercial varieties have apparently suffered but little damage.

Peaches in Franklin County have been killed in the lower portions of some orchards, but the damage in the higher sections has been comparatively slight. The crop as a whole has come thru in good shape. The damage to apples is slight, according to the report.

"Generally speaking, the injury from frost has been scattering and while a few orchards suffered more than is desirable, the prospects for a crop are still good," Mr. McCubbin concludes.

Omitted One Spray—Lost a Million

IT IS estimated that New Jersey potato growers lost a million dollars last year by neglecting to spray at the proper time.

A spray test on the farm of J. Leamy Bitters, Readstown, showed a loss of 50 baskets to the acre valued at $31.25, because a part of the field was not given the final application as recommended by the Agricultural College at New Brunswick. Both plots had been carefully sprayed until the final application late in the season. Then only one-half of the field was covered with the final application. At digging time the results of the spraying showed up with a nice profit for the extra time and cost of applying the spray solution. The vines that received the one extra treatment stayed green a full two weeks longer than the others. This accounted for the increased yield according to County Agent D. M. Babbitt.

The gain on this particular plot, if duplicated on the other 35,000 acres of potatoes grown in New Jersey last year would have added a snug million dollars to the income of the farmers of the state.—A. K.

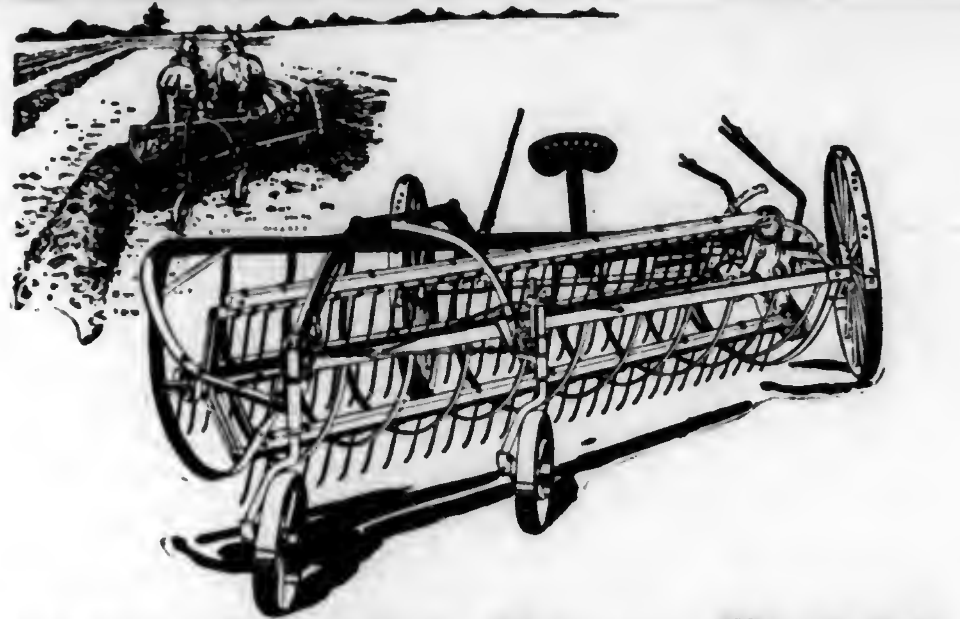
Goodling Leaves Penn State Farms

C. L. GOODLING, well known superintendent of farms at the Pennsylvania State College, has resigned to become director of the National Farm School, near Doylestown, Bucks County, Pennsylvania.

Mr. Goodling has been in charge of the Penn State College farms, the third largest operation of the kind in Pennsylvania, for the past seventeen years. When he took charge in 1910 the College had but 400 acres of farm land. Now it has 1800 acres, of which about 1300 acres are under cultivation.

The National Farm School has an enrolment of 180 boys who are being trained in all kinds of agricultural work. The new director was chosen with the object of emphasizing the practical side of this farm training.

Mr. Goodling was born in York County, Pa., and graduated from the Pennsylvania State College in 1907 where he was an assistant in dairy husbandry for two years before becoming farm superintendent. He was granted the degree of Master of Science in 1910.



"Hay in the Barn Seven Hours After Cutting"

Light Draft and Efficient

The John Deere Single Cylinder Loader has ample capacity for handling windrows made with a side rake.

Has light draft. Minimum number of working parts. Single drum is mounted on the axle. Hinged carrier makes loading easy in windy weather. Forecarriage eliminates lifting when coupling to wagon.

"We had alfalfa in the barn seven hours after cutting and the hay was in excellent shape. Although it was poor hay weather, we never put up hay so cheaply or that was any better."

Thus Ralph I. Lesher of Antrim County, Michigan, relates his experience in making hay the John Deere Way, using a

John Deere
Side Delivery Rake

The results obtained by Mr. Lesher explain why farmers in all sections are adopting the John Deere Way.

They know that the leafy, green, high-protein hay produced by curing the John Deere Way is good for their stock.

They know that hay made the John Deere Way grades uniform and brings high prices on the market.

The John Deere Way is simple and sensible. The John Deere Side Delivery Rake with Curved Teeth and Inclined Frame is the only machine that is needed. It provides for protecting the leaves in the shelter of loose, fluffy windrows, from the time the hay is cut until it is ready to store. The leaves are the "bran" of the hay, and when you save the leaves, you save 65 per cent of the feeding value.

The curved teeth lift the hay. The inclined frame gives greater capacity where the volume of hay is heaviest. Most of the leaves are protected; they do not become brittle and shatter as they do when exposed to the sun's rays.

See these machines at your John Deere dealer's. Write for folders describing them. Address John Deere, Moline, Ill., and ask for Folder SC-436

LEADCLAD FARM FENCE

Leadclad left—Ordinary fence right. Photographed after 5 years' service.

Leadclad Fence Starts You Saving Money

A Leadclad Fence saves you the cost and labor of erecting two ordinary fences, because it lasts longer.

The life of any fence depends a lot on where you live. Fences are long-lived in high and dry country and short-lived in foggy and smoky districts. But wherever you live, Leadclad Fence will triple the record of the best fence you ever put up on your farm.

If the useful life of your horses was tripled or you could get three times as many miles per gallon from the gasoline you are now using, you'd figure you were saving money.

You'll save money too, if you put up fences that will last three times longer than the fences you have been erecting.

Write for the new, big Leadclad Catalog—it's free.

Rambles of a Pennsylvania Fruit Grower

VIII. Florida Celery—and Florida Climate

WE PASS from Georgia into Florida without any perceptible shock, altho it would seem that some sort of pyrotechnic phenomena should herald our entrance into the state where fortunes have been made and lost during the past few years with as little to do about it as when conservative Pennsylvanians pay their grocery bills.

As we pass the state line I lay a reassuring hand on my pocketbook and mentally renew a vow, extracted from me by my wife before we started, to avoid the real estate agent as I would the smallpox. Not for me are the alluring sub-divisions and the entrancing river, lake and bay fronts which, so I am told, in letters five feet high, would soon make me a rich man. I am here strictly on business and would have no use for more money, anyhow.

The Beginning of America

In comparison with this present-day exploitation and blatant self-advertising, how peaceful seem the walls of the Old Spanish Fort of St. Augustine. It was built four centuries ago, nearly a hundred years before the Pilgrims set foot on Plymouth Rock. It was the beginning of America. The Spaniards, however, were looking for gold, the Pilgrims for religious freedom; perhaps it was not merely an accident that the civilization of the Pilgrim has persisted.

A "Scenic Highway," so called, leads us thru north central Florida. Why it is called a scenic highway will always be a mystery to a Pennsylvanian. The scenery is mostly interminable stretches of scrub oaks and still scrubbier pines. Now and then appears a little rise of land, locally called a "height" (150 feet above sea level) from which one can get a view of still greater desolation. The roads are good, presumably to enable the traveler to pass thru as quickly as possible. Only one feature do I covet—the numerous little lakes, teeming with fish—and water moccasins. We pass the extensive early potato fields at Hastings, each row perched precariously on a sandy ridge a foot high. These potatoes will be ready to dig soon—if the freeze does not get them first.

But They Won't Admit It's Cold

There is, of course, the Climate! and we must grudgingly admit that it is delightful most of the time, especially when State College is under two feet of snow. But it has its failings. We have had more shivering and gooseflesh in north Florida than any winter in Pennsylvania. The difference is that in Pennsylvania we know it is going to be cold, frankly admit it, and prepare for it with tight houses, furnaces and stoves. Here they know it but won't admit it even when it comes, and never prepare for it except with totally inadequate wood fireplaces.

Today (March 4) there is a sweeping north wind at thirty-three degrees which cuts to the marrow. My small son appeals to me in vain, "What I want most is a radiator." This weather, of course, is "very unusual," only a flare back of the real blizzard you are having up North. The natives go 'round hunched over, hands in pocket, collar turned up; but it is not considered good form to make any remarks about the weather except to commiserate the poor devils who have to bear the brunt of this storm, in Pennsylvania. To wear an overcoat is considered positively traitorous to the sovereign state of Florida. As Puck remarked, "What fools these mortals be!" Fortunately these cold spells do not last long.

Diverse Horticulture Found

Florida does have a diverse, unique and usually a profitable horticulture. The celery growing of Sanford is one of the most interesting phases of Florida horticulture. Here are 3500 acres of perfectly level land, almost pure sand, practically all in celery, with about 1500 acres more that could be brought under cultivation. The distinctive feature of this celery district is its sub-irrigation. When excavations are made standing water is found at eight or nine feet, so Sanford houses have no cellars. Artesian wells which flow constantly can be driven anywhere in this limited district and water is reached at 200 feet.

The celery fields are sub-irrigated by laying lines of drain tiles twenty feet apart and about eighteen inches deep. Water runs from the artesian well into a head line with cemented joints on one side of the field and passes thru lines of tiles with open joints, thence into a waste line at the other end of the field. The amount of sub-irrigation varies with the season. The rainy season here is from May to August; the winter months are clear and dry. The tiles are used as a drainage system in wet weather by taking the plugs out at the lower end.

Land Produces Three Crops a Year

The main crop of celery is being harvested now; a smaller acreage is harvested in the fall. It takes 120 days from planting to harvest, usually from November till March. Most of the land is in celery every year. This is made possible by the year-round growing season. Celery may be followed by corn, in which cow peas for green manuring are seeded at the last working; then a fall crop of lettuce and back into celery again.

Most growers, however, make no effort to maintain the organic content of the soil. They argue that the chief function of organic matter is to hold moisture and to supply nitrogen; that sufficient moisture is supplied by sub-irrigation and it is cheaper to supply nitrogen from sacks. I wonder, however, if these soils will not eventually get celery sick, or fertilizer sick, as did those in the older trucking district of Norfolk, Virginia, a toxic condition which only manure or green manuring can remedy.

Yield Has Lessened by 200 Crates

L. A. Brumley, one of the oldest and best posted growers, told me that it is harder to get 700 crates per acre now than it was to get 900 crates twelve years ago. This may be insect and disease accumulation, but part of it may be diminishing fertility.

There is little incentive to rotation of crops other than the maintenance of fertility because celery is so much more profitable than any other crop that has been tried. Big Boston head lettuce was a money maker until recently but competition from California Iceberg has about driven it off the market. Some peppers are grown; these had to be protected with "hot caps," or with wisps of Spanish moss during this frosty weather.

Crops Fed Like Swine

Crops produced on Florida sand require heavy feeding. The sand merely furnishes an anchorage for the roots and a medium for the application of moisture and plant food. The crop is fed regularly and heavily, like pigs at the trough. Celery gets four or five tons per acre of a 6-2-8 fertilizer. The high percentage of potash is necessary to promote solidity of stalk; the low percentage of phosphoric to prevent the plants from shooting flower stalks. About 1500 pounds are broadcasted at planting; the balance is applied as side dressings at the bottom of shallow furrows opened close to the rows.

There are few weeds to fight, especially in the winter; these celery fields are stoneless and weedless—a trucker's paradise. Bordeaux is applied every ten to fourteen days, one or more special applications of pyrethrum are necessary for the celery

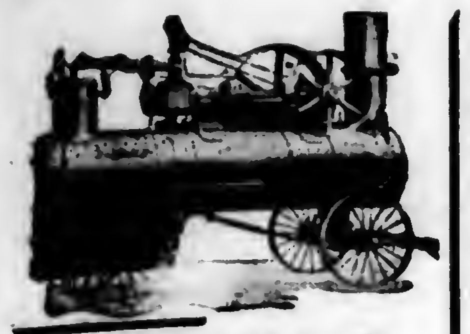
SENATOR BORAH, I HAVE A GOOD NOTION TO SOCK YOU IN THE EYE

The White House is now in the hands of workmen—News Item.



FARQUHAR STEAM POWER

For the big jobs where dependable power is required, use Farquhar Steam Engines—there is nothing to equal steam when real work is to be done. The rated horse power of steam engines is about one-third the power developed on brake test; the initial cost and upkeep of steam is very much less than the internal combustion engine. Easier to operate. Burns coal, crude oil or wood. Less parts to care for; simpler lubrication. More flexibility—wider range of speed and power—Does the work of an internal combustion engine of three times its rated horse power.

Write for detailed description of Farquhar dependable steam engines.

What Prof. Mapes Did in 1847 Is Benefiting You Today

As an expert chemist, Prof. James J. Mapes—originator of Mapes Manures—was famed far and wide. But he was not satisfied to be famous, he also wanted to be right; he recognized the place where the laboratory test should leave off and the crop test should begin. So, in 1847, Prof. Mapes bought a farm in New Jersey to ask the crops themselves what fertilizing materials they liked best.

Prof. Mapes believed that the crop could tell the value of fertilizing materials better than the laboratory. He set the crop up as the final judge. He put crop results far ahead of laboratory analysis. Today, every good farmer knows that two fertilizers of the same analysis may give widely different results because of the difference in the materials from which they are compounded.

Mapes Manures have always been formulated on the basis of crop results. The crops tell us what materials they like best—we put these materials into Mapes Manures. They are first made right, then they are priced as low as possible.

The little additional cost is returned to you many times over in increased crops of better quality. Try Mapes this year. Compare the crop yield, the crop quality and the crop profits with the results from any other fertilizer you can buy. Mapes "costs little more—worth much more".

Just Mail This Coupon Today

Write today for a list of the crop brands and prices of Mapes Manures. You'll be surprised at the little difference in cost between Mapes brands and other brands. Mapes "costs little more—worth much more". Please tell us what crops you plan to fertilize so that we can be of the greatest possible service to you in selecting the right brand to suit your special needs.

Makes Growing Chicks Develop Rapidly

Dr. L. D. LeGear, V.S. (In Surgeon's Robe)

"I use Dr. LeGear's Poultry Prescription because I have found it a wonderful and safe tonic. It undoubtedly increases egg production and fertility, and develops chicks to maturity quickly. Best of all, it keeps the whole flock in a healthy laying condition and hastens moult."
CHAS. V. KEELER, Winamac, Ind.

When noted breeders like W. D. Holterman, Ft. Wayne, Ind.; the Kerlin Grand View Poultry Farm, Center Hall, Pa.; J. C. Fischel & Sons, Columbus, Ind., and others use and recommend this old, reliable prescription, you, too, can depend upon it to quickly mature your growing flocks.

Dr. LeGear's Poultry Prescription MINERAL-IZED

Contains essential MINERALS for egg production, rich blood, bone tissues and feathers—TONICS for the blood, nerves and egg organs—CONDITIONERS for the digestive organs—LAXATIVES for the bowels; all being vital ingredients lacking in home or commercial mixed feeds, without which best results cannot be obtained from poultry.

Get a pail or package from your dealer. Mix with mash feed. Use it all. If not satisfied, return empty container to dealer and he will refund full amount paid.

Keep Your Poultry Houses Sanitary With Dr. LeGear's Dip and Disinfectant
Clean, sweet-smelling houses, nests, runs, etc., mean healthy, money-making flocks.

FOR LICE
use Dr. LeGear's Lice Powder. End these pests quickly with this old, reliable exterminator. Guaranteed to do the work or money refunded.

FREE—New Poultry Book EVERY poultryman needs "Dr. LeGear's Complete Poultry Guide and Feeding Manual," an authoritative and up-to-date treatise on disease, care, housing, feeding and every conceivable poultry question. Gives the feeding formulas for most every state and big egg-laying contests. Let this book help you to bigger poultry profits. Ask your dealer for a copy, or send us 6 cents in stamps to cover mailing.

ADVERTISERS WANT TO KNOW WHERE THEIR ADVERTISING IS SEEN AND THEREFORE APPRECIATE HAVING YOU MENTION THE NAME OF THIS PAPER WHEN YOU ANSWER ADVERTISEMENTS.

THE PENNSYLVANIA FARMER PHILADELPHIA, PA.

it's the Early bird that gets the PROFIT

Pullets lay early and broilers are ready for early market, and command top prices, when you raise them on

Quaker
FUL-O-PEP
GROWING MASH

For this is the famous balanced ration that contains *Cod Liver Meal.* Its base is good, pure oatmeal, with which other ingredients, including proteins and minerals, are blended. At every mouthful the chicks get just the things they should have. Your profit doesn't depend on what the feed costs; it depends on what it costs to raise your birds. The better the feed, the more economical it is.

The Pullets You Keep Will Be Good Layers

Ful-O-Pep Growing Mash is the feed for the pullets you intend to keep in your flock. It promotes swift, sound growth, so that the pullets have a large frame and a sound digestive system; they make good layers and produce lots of big eggs.

Out of this year's flock of chicks you will obtain unusually productive laying hens if you will only rear them on this complete, balanced ration.

Near you is a dealer who handles Ful-O-Pep Feeds. Look for the blue-and-white striped sacks. Send today for your FREE copy of the Ful-O-Pep Poultry Book, containing the latest information on raising young birds. Use the coupon, or a postal card.

Up to the 7th Week feed Ful-O-Pep Chick Starter

There's nothing like Ful-O-Pep Chick Starter for your baby chicks up to the 7th week. This is the famous oatmeal-base feed that contains

both Cod Liver Oil and Cod Liver Meal

It saves the lives of the little fellows and reduces or eliminates many chick ailments. It gives them a firm hold on life and they're all ready to grow swiftly when you put them on Ful-O-Pep Growing Mash. Use Ful-O-Pep Chick Starter—the "feed built on oatmeal."

Duck Raising Is a Profitable Sideline on Many Eastern Farms

DUCK raising is done on a large scale as a regular business in some sections but a good many farmers or their wives raise flocks under ordinary farm conditions as a sideline and find them profitable.

Many of my neighbors attend the Trenton Farmers' Markets, and along about four o'clock in the afternoon during the summer and fall, you can see their trucks rolling down the road loaded with a variety of farm produce, usually with a crate of quacking young ducks on behind that are to be sold alive to retail customers. The White Pekin is the breed most commonly kept.

Some of these growers buy baby ducks from hatcheries, while others have their own breeding flocks and hatch the eggs under hens or in incubators. Ducklings can be raised with hens or brooded artificially the same as chicks.

In selecting the breeders, well-shaped females in their second year are mated with young drakes. One drake is mated with from four to eight ducks. In determining the sexes, it will be noticed that the female says "quack, quack," while the male says "eek, eek," in a hoarse voice. The drake also has several curled feathers in his tail.

Wanderers Forget to Come Home

Breeding ducks should be on range in all but severe weather. Opportunity to mate in a pond or stream is thought to increase fertility. Ducks are very liable to follow a stream and forget to come home at night so it is best to put a fence across the brook to keep them within bounds. It is otherwise easy to teach ducks to come home and to go into their pen at night.

Any sort of a shed will do for ducks, provided the floor is kept dry and clean. A few inches of straw make a good litter, and this must be renewed frequently, as ducks are rather dirty. The flock must be kept in the house until ten o'clock in the morning, by which time the day's eggs will have been laid; otherwise the ducks will drop their eggs wherever they happen to be, even if it is the middle of the pond. After they start in the spring, ducks lay steadily.

Breeding Ducks Fed Twice a Day

A ration recommended for breeding ducks is composed of the following ingredients: 100 cornmeal, 100 middlings, 100 bran, 50 meat scrap. This is fed morning and night as a wet mash at the rate of ten quarts a meal for thirty ducks. A quart of some form of green feed should be added to this.

Grit and oyster shell should be available, and if the ducks are laying heavily, a quart of grain, composed of equal parts of wheat and corn, may be fed at noon. Ducks of all ages need lots of drinking water; and this always should be given in vessels deep enough so that they can wash the feed out of their nostrils.

If duck eggs are hatched in incubators the machine is run about a degree less than for hens' eggs. It is the custom to sprinkle the eggs once a day with warm water, especially toward the close of the period, whether they are hatched artificially or under hens. The incubation period is four weeks.

If the ducklings are to be brooded artificially, the temperature is started at 90 degrees and reduced 5 degrees each week until 75 is reached.

NEST BOX NOTES

WHEN the warm days come and the brooder fires are let go out, it is a good idea to clean out the ashes and lay a fire all ready to light. Then in case of a cold storm the houses can quickly be made comfortable for the chicks, which will prevent crowding and resulting losses.

* * *

We are using 2x3's with the upper corners rounded for roosts in the brooder houses. Once the chicks learn to roost, the danger from crowding and smothering is no longer present. The roosts should be about a foot above the floor.

When we first litter down the house for the baby chicks we use peat moss. We had several bales that were very coarse, so we ran them thru the feed mill with the plates wide apart. The peat came out just the right size, and the job was done very quickly.

* * *

The peat moss will last until the chicks are a month old, after which the house should be cleaned out every two weeks at least. Straw makes the best litter for older chicks, especially if it is cut.

* * *

At this time of the year many layers are in thin condition and are liable to prolapsis, colds or molting because they are run-down from heavy laying. Especially with Leghorns it is necessary to feed heavily on grain, or add extra cornmeal to the ration in order to keep up body weight and maintain production. Some poultrymen feed a fattening mash of equal parts cornmeal, rolled oats and condensed buttermilk at noon, at the rate of three pounds of the mixture to 100 hens. This is made into a moist mash with water, and is given in addition to the regular laying mash.

* * *

We are planting some cabbage to provide green stuff for the hens that are yarded up during the summer, and expect to grow another patch of a late variety to store for winter use. —R. L. S-H.

It Is Nothing Serious

Our chickens shake and scratch their heads. We have been using the tobacco dust for a month or more. How long should we use the tobacco dust?—G. A. S., Westmoreland County, Pa.

If your chickens seem in good health, I wouldn't worry about them scratching and shaking their heads, as all chickens do this more or less to clean the nostrils of dust and mash while feeding.

Tobacco dust is generally added to the mash for a month, discontinued for two or three weeks, and then the process repeated, if you think re-infestation has occurred.—R. L. Scharring-Hausen.

DAIRY

A. A. BORLAND,
Staff Contributor and Adviser
Head of the Department of Dairy Husbandry
Pennsylvania State College

All Signs Point to a Good Year for Milk Producers

ALL the familiar tests by which the present dairy situation may be sounded out yield a favorable reading. Prices of milk and butterfat in recent months have been relatively high. Feed costs have been low. Dairy production has been on a moderate scale, while industrial conditions have favored large consumption. Owing to tariff protection, low prices abroad have had no seriously depressing effects. Carryovers of dairy products in storage are moderate and will give no important competition for the new season of production.

The average price paid to producers at country points for standard or grade B milk averaged $2.76 per 100 pounds in 1926 against $2.68 in 1925 and was the highest since 1920. The average farm price of butter was 41.1 cents per pound in 1926 against 40.7 cents in 1925, again the highest since 1920. The average price paid to producers for butterfat was 42.1 cents in 1926 against 42.4 cents in 1925. This record is not available for earlier years.

Veal Prices Highest Since 1920

The farm price of veal calves averaged $9.61 per 100 pounds in 1926 against $8.85 in 1925 and was the highest since 1920. Milk cows averaged $65.61 in 1926 against $57.87 in 1925. Once more, it is necessary to go back to 1920 to find a period when prices were higher. Low grade cows sold for beef, consisting largely of discarded milk cows, averaged $4.20 per 100 pounds on the Chicago market in 1926 against $3.35 in 1925, and established a new high record since 1920.

These higher price levels have carried over thus far in 1927. Butter and butterfat prices have been higher than at the corresponding period in 1926. Milk cows, old cows sold for beef, and veal calves also have surpassed 1926 price levels. While fluid milk has been a shade lower than a year back, it has been above any other year since 1920. Fluid milk prices are greatly influenced by local conditions, but the average for the entire country makes this showing.

The present dairy situation looks all the more favorable when it is remembered that the average price of farm products was nearly 8 per cent lower in 1926 than in 1925. The index number of average prices of all farm products in March, 1927, the latest month for which the record is available, was only 126, compared with 140 a year previous. In other words, present farm prices are only 26 per cent higher than the pre-war period taken as a base, while a year ago, they were 40 per cent over pre-war.

Feed prices have continued on a relatively low basis since the spring of 1925. They have averaged only 5 to 10 per cent above their pre-war level, while prices of milk and butterfat have been 60 to 65 per cent over pre-war.

Grain Ratio Affects Production

Moderate production has been one reason for the favorable ratio between prices of dairy products and of feeds. The unfavorable price ratios in the latter part of 1924 and the first half of 1925, caused largely by high priced grain, discouraged production and induced some curtailment of dairy herds. The number of heifer calves saved was reduced. As a result, the number of cows and heifers two years old and over kept for milk has declined about 3 per cent in the last two years. On January 1, 1927, only 21,824,000 head were reported, the smallest number since 1922. Tuberculosis clean-up campaigns also have played a part in the situation. At any rate, the steady expansion of production since 1920 was brought to a temporary halt.

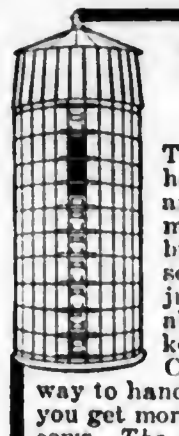
Some increase in production can be brought about by more liberal feeding, and the favorable feeding ratio undoubtedly has caused this to be done to some extent. But, the poor pastures in some of the important dairy states last summer and

(Continued on next page)

They're Sailing to South America

THE first purebred animals sold for export from Mercer County, N. J., are three Holstein heifer calves purchased from the farm of Henry Schmidt. They will be shipped to the Argentine Republic, where they will be used for experimental purposes by the government. One additional Holstein was purchased from the farm of Peter Van Nuys, of Somerset County.

These animals for the South American shipment are under six months of age because of the fact they are more apt to develop immunity from cattle ticks, which is an insect that causes considerable damage to cattle in countries where the temperature is high.—P.



This Silo Lasts a Lifetime

THE carefully selected heavy Northwest spruce and fir of which it is made, insures its durability. Double splines, sealed joints and adjustable doors make it absolutely air-tight and keep silage perfectly. Cheapest and easiest way to handle your corn crop and you get more milk from silage-fed cows. *The extension roof, an exclusive feature, reduces the cost per ton capacity.* A good investment and permanent improvement.

Please Mention Pennsylvania Farmer When Writing to Advertisers

Why Real and Quoted Prices Don't Agree

(Continued from page 3)

and that is that the wheat is not discounted in proportion to the amount of garlic it contains. This is due chiefly to lack of storage space to classify garlicky wheat and for this reason all garlicky wheat, light or heavy in garlic, is dumped into the same bin and receives the same discount.

Since 60.3 per cent of the Pennsylvania wheat contained garlic in 1926 and discounts during the heavy shipping season averaged around 8c per bushel, it means a loss of $98,688 from this cause alone. (Figured on the basis of 1200 bushels per car.) It is very hard to free an infested farm from garlic but it is possible and garlic-free seed and crop rotation are big aids.

State Grows Too Many Varieties

One more reason that Pennsylvania wheat may not bring satisfactory prices is because of the large number of varieties grown. In 1924 it was estimated that there were 45 different varieties of wheat grown in Pennsylvania making it impossible for a miller to produce uniform flour or for a buyer to load a uniform car. Tests have been made to determine which varieties are best suited to Pennsylvania soils and will give satisfactory yields and at the same time will have good milling and baking qualities. Mr. George A. Stuart, of the Pennsylvania Bureau of Markets, states that this condition has improved greatly during the past three years and in 1926 about 90 per cent of the crop was of the five best milling varieties: Leap's Prolific, Pennsylvania 44, Red Rock and Forward.

False Surplus Depresses Prices

Wheat is usually harvested at a time when the farmer needs ready cash. His notes, taxes, fertilizer bills and other obligations fall due at this time. The lack of licensed country warehouses and elevators prevents him from securing money on a warehouse receipt. Therefore, he has a choice of two things, sell immediately, or store the grain himself in his own buildings. In the latter case his money is tied up and he assumes all the risk.

For this reason about 85 per cent of the Pennsylvania crop is marketed in July, August and September and altho there may be no real surplus, the large amount of grain coming on the market in a comparatively short period depresses prices.

The Pennsylvania farmer often thinks that it does not pay to produce good clean wheat since most of the mills and buyers pay the same price for all the wheat in the neighborhood. The buyer will purchase wheat and ship several cars to the terminal market. He tries to have those cars represent an average run of the wheat in the territory he is working. It is graded at the terminal market and the buyer is paid on the basis of grade. After this he knows just about what the wheat will grade, what discounts to expect and just how much he can pay and still make a profit. For this reason he finds it most advisable and most simple to pay the same price to all growers. This practice works a hardship on the farmer who is producing No. 2 wheat because he is helping hold up the price for the farmer who is growing No. 4 or Sample Grade.

In a section where practically all farmers are producing a uniformly good grade of wheat the buyer can afford to pay more money and would be glad to, for there is less risk involved. Then, too, the farmer who says that it does not pay to produce the best should consider that it actually costs less to produce No. 2 Red Winter than even No. 3 or No. 4, because the yield is always greater when wheat is free from garlic, smut and weeds.

Premium Encourages Higher Grades

The time will come when Pennsylvania farmers will sell their wheat on the basis of grade. In western wheat producing sections, the states maintain an inspection service and grade the wheat for the farmers. Pennsylvania does not have such a service at present but it is in the position to do so if there were enough farmers who wanted it. A few mills have already begun to pay a premium for high grade wheat. This practice will encourage the production of the higher grades for it will be more evident that the lower grades do not pay.

Pennsylvania wheat is "as good as anybody else's" and when marketing and production methods improve it will sell for as much money "as anybody else's."

Five Million Await Test

DURING March over 800,000 cattle were tested for tuberculosis in 47 states. In all, 802 counties in 26 states have been declared free of bovine tuberculosis. This includes eight counties in Pennsylvania.

More than 17,400,000 cattle are now under official supervision for the eradication of tuberculosis. Of this number over 550,000 are in Pennsylvania.

Almost 5,000,000 cattle were on the waiting list thruout the United States on April 1st. There were 163,000 awaiting the test in Pennsylvania, according to the State Bureau of Animal Industry.

All Signs Point to a Good Year

(Continued from page 14)

the shortage of hay helped to keep down production.

High wages and nearly full time employment everywhere have maintained consumer buying power. In addition, the number of consumers is constantly increasing. In the last two years, when the number of milk cows decreased 3 per cent, the consuming population gained 3 per cent, making a change of six per cent in consumers per cow. The spread of dietetic information is another factor constantly at work to stimulate consumptive demand for dairy products.

Past experience has shown that low prices for dairy products usually follow on the average about two years after high prices. There is considerable variation in the length of these periods, however. Nevertheless, we can safely conclude that the next 12 to 15 months will be about as favorable for the dairyman as the past year. As time goes on, the favorable feeding ratio will stimulate production, until lower prices become necessary to stimulate consumption. There is a possibility that business conditions by 1928 will become less favorable for high consumption, altho there is not much indication of an early change in that respect.

You will appreciate this new De Laval feature

The Turnable Supply Can

Separator users who have seen and tried the new 1927 De Lavals are pleased with the turnable supply can—it is so handy and convenient. The supply can may be turned so that tinware and bowl can be put in place or removed, even though the supply can is filled with milk. This is just one of a number of new features on the 1927 Series De Laval Separators, which are everywhere being praised as the best separators ever made. Other features are:

2. Easier Turning: For three years the De Laval experimental and engineering departments have been conducting extensive tests to develop still easier turning separators. The results of these tests are embodied in this new series, which both start and turn easier than any other machines.

3. Oil Window: The new oil window enables you to see at all times the level and condition of the oil. It shows at a glance whether or not the separator is being properly oiled.

4. Floating Bowl: All new De Lavals have the wonderful "floating bowl," now used in De Laval Separators with such splendid results. It is self-balancing, runs smoothly without vibration, with the least power and wear, skims cleaner and delivers a richer, smoother cream.

You can't afford to use any other separator, because the new De Lavals skim cleaner, are easier to handle and operate, are more convenient, and soon pay for themselves. Trade in your old separator as partial payment. Sold on easy terms. See your De Laval Agent or write nearest De Laval office for full information.

What My Old Home [illegible]

Mother Has Passed on Her Spirit of [illegible]

M[illegible] a small village [illegible] girlhood in various [illegible] other villages over the state [illegible] was not a settled place—but to me Home was where my Mother was. She could have made a Home in a box car.

There were certain material things grouped about her—an old organ, (it made the sweetest music I have ever heard) around which the family gathered morning and evening to sing the old, old hymns—a few shabby, comfortable old chairs—a big round living room table around which we gathered night [illegible] while Mother read aloud [illegible]

There was Uncle Tom's [illegible]

Only One

Hundreds of stars in the pretty sky;
Hundreds of shells on the shore together;
Hundreds of birds that go singing by;
Hundreds of bees in the sunny weather.

Hundreds of dewdrops to greet the dawn;
Hundreds of lambs in the purple clover;
Hundreds of butterflies on the lawn;
But only one mother the wide world over.
—George Cooper.

used to curl up in the corner of the couch to cry over Little Eva so my brothers would not see the tears) Arabian Nights, David Copperfield, Scott's novels, and chapter after chapter of the Bible that we committed thru hearing it read.

Books Compensated Lack of Money

There were books, books everywhere. Books that we read and books that were read to us. We never had money for clothes as other children, but we did not mind, because our minds were well nourished and full of other things.

Mother's kitchen was a big part of home, for there we gathered to make candy and pull taffy and make popcorn balls and play games when our parents were entertaining the Ladies' Aid or marrying somebody. Mother's kitchen was always a shining place—I never knew another kitchen to be always so immaculately clean, and I have never seen such beautifully baked loaves of bread in any other kitchen.

Our shabby parsonage was always full to overflowing, for out of the bigness of her heart my Mother always "mothered" most of the young people of the community where we happened to be living.

I Ask But One Thing of Life

As a result of those years in my parsonage home, there is one big thing I ask of life. I want to be a Mother in some small degree like unto my own Mother. I want to be to my children what my mother is to me.

It is years since my Mother passed on, and I know now that her smile was one of the precious, wonderful things of life.

[illegible] in my home [illegible] that make [illegible] Ohio

Their Children Didn't Forget

I HAVE just been [illegible] that there is no such thing [illegible] like there used to [illegible] ed with contented people [illegible]

[illegible] where girls and boys gather [illegible] and chat with Dad and Mother.

Now stroll with me to a low farm house peeping from its frame of trees. The picket gate opened. I met the owner of that make-you-feel-at-home place, and his wife—Uncle Charley and Aunt Jane McFadden.

It's no great task, usually, to measure the social standing of any home. Nearly every one of them shows most definite signs; and it wasn't any trouble to recognize this one for what it is. The clematis over the doorway assured one here was cordiality, sociability, loyalty; a spot where one might throw off perplexing care like one's coat on hot days; where one may freely share the warmth of fire and hearts, where reality of welcome brings joy to every soul.

Old and Young Celebrate Together

They led me over beautiful old stone steps thru the grassy yard with its "spotlight" of windlass well; among rosebushes, lilacs and other floral plantings, to the deep cool woods beyond the new-mown meadow. Here, back of rows and rows of automobiles, folks were humming with pleasure; tiny tots, boys and girls, young folks, parents, grandfathers and grandmothers—like a hive of lively bees and there was a long shadow-flecked table with rich trappings of "eats."

Why so many happy-faced people here and such a quantity of good things to eat? What is the explanation? Why, just Aunt Jane's birth-[illegible]

Uncle Charley and Aunt Jane welcome every visitor with sincere courtesy and genuine hospitality.

[illegible] Stanley, Ohio.

Beauty in Half an Hour

M[illegible]

[illegible] An old [illegible] few [illegible] cost. It has been a thing [illegible] Sister's bedroom is calling for complete redoing in soft ivory French gray or a beautiful cool green, and that shabby old wicker chair will hardly be recognized when dry and given its new cretonne cushion.

Paint Conceals Original Color

A few years ago, I needed a small living room stand, and being, as usual, "hard up" I looked around for possibilities. A small old-fashioned wash stand was bereft of a wing or two, thoroly sanded, and given a coat of black enamel. Glass knobs from the "five-and-ten" replaced the old ones in the drawer, and I was proud of my convenient and artistic sewing table. That was five years ago, and I have just redone it for twenty cents. I used this "new something" in Dutch blue, applying it over the original black, and a half hour later it was much admired by callers who found it in its accustomed place with my work basket on it. I believe every woman would enjoy her spring housecleaning a bit more if she took advantage of the new painting supplies on the market.—Ruth Arnold, N. Y.

Note.—If you have caught the inspiration of Ruth Arnold's message, send me a stamped envelope, self-ad-[illegible]

[illegible] what the [illegible]

Thank You! But How About Wash Day?

O[illegible] spirit of [illegible] I want to [illegible] you all [illegible] appreciate your [illegible] to lend a [illegible] prised at the [illegible] that [illegible] made. Many [illegible] helping, and my [illegible] themselves [illegible] opportunity [illegible]. Many do [illegible] cannot reach [illegible]

[illegible] offer new [illegible]-day secrets [illegible] that keeping [illegible] of the arduous [illegible] but there are [illegible] who have conquered [illegible] laundry work and we hope they will enlighten others who are hoping and wondering. How do you do it?

Just a Few Requirements

We have offered a prize of $10 for the best letter, $5 for the next, and $1 each for all others we can find room to publish. All you need keep in mind besides your inspiring message is to limit yourself to 300 words, use but one side of your paper, write full name and address on upper left-hand corner of first sheet, and on a separate sheet of paper give the names of your laundry devices that lighten your work. Contest closes June 1st. Address all letters to Sunny Monday Contest Editor, Pennsylvania Farmer, 261 S Third St., Philadelphia.

The Kitchen Cabinet

STEWED dried apricots are rubbed thru a sieve to remove skins. Orange juice and sugar added "to taste" and the mixture is piled into a baked pie shell. Whipped cream tops it off, and you have a delicious dessert.

• • •

Condensed milk thickened with powdered sugar and cocoa until a good spreading consistency, makes a good chocolate frosting.

• • •

Jam or jelly sprinkled thickly with nuts or cocoanut is a welcome change from the usual cake icings.

• • •

When making angel food cake, try using equal parts of flour and cocoa instead of all flour. We prefer this to the white angel cake.—Mrs. Corey C. Garey, Pa.

• • •

WHITE FUDGE

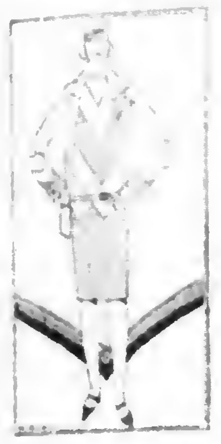
The following recipe for fudge is the one used by the Vassar girls which I have found to be "great."

1 cup sugar
1 cup of cream
Butter size of a walnut
1 tablespoon of vanilla, added when done

Cook until candy will stay together when dropped in cold water. Beat well before pouring into buttered pans.—Mrs. Daniel Moyer, Pa.

Paris Sponsors the Gingham Girl

WITH [illegible] of 1927, the [illegible] into her [illegible] brought [illegible] gingham [illegible] to the [illegible]



[illegible] quality [illegible] also the [illegible] you will always find the conventional design in gingham. It must be woven in—not printed! The [illegible] of the [illegible] easy to cut and fit.

Any [illegible] her daughter [illegible] sembles [illegible] little trouble. [illegible] is made sleeveless [illegible] is made with long sleeves [illegible] jacket sleeveless. The [illegible] in the sketch is of a plain jade green chambray for the jacket, with a dress of a novelty check in a fine white stripe on a jade green ground to match the one-tone. The dress is sleeveless, and the jacket is trimmed with the check. It is wise to line the jacket as it gives it more body and better fit.

When making anything of gingham, it is wise to first shrink the fabric. You will find that it will shrink in length and width in the same proportion, and without injury to color or freshness. Be sure when using plain material and one with a design that both are gingham. Then you have a guarantee against the colors running or fading.

Baskets Serve in Many Ways

WHEN I go into the garden I swing a light market basket over my arm and I can gather the day's vegetable supply without going back to the house for a dish. If I pull a handful of weeds they are dropped in the basket and taken to the edge of the garden instead of being dropped between the rows. Returning across the lawn I find there are roses for a bouquet and am again glad that I have my basket.

Going upstairs to do the morning work, I take a similar basket. In it I put the things that go downstairs.

From the number of waste baskets you will find in different rooms, you might call mine "the waste basket" house but they all hold scraps that would mean many extra steps.

Even in the garage there is a big basket which is frequently emptied.

Don't be satisfied with a clothes basket, a work basket and a lunch basket. There are uses for many others.—L. M. Thornton, N. Y.

Let the Cyclamen Rest

DEAR EDITOR:—Please publish how to take care of a cyclamen plant.—Mrs. J. H. C.

When the plant seem to be entirely thru blooming, and there is no sign of new buds developing, gradually diminish the amount of water. At first water it every second day, then once a week. When the leaves have all fallen off, set it in a cool dark section of the cellar and let it rest until early fall. Then bring to the light and give it water daily. It will soon show growth.—G. S. S.

Such clean, quick, intense heat for cooking!

What a real joy it is to have a cake turn out just right—evenly browned all over, light and fluffy, baked uniformly through and through. A real source of pride and satisfaction for yourself. That's why so many thousands of women are glad they chose the Nesco Kerosene Cook Stove. It never fails to produce and maintain the uniform heat so necessary for baking and roasting or the quick, intense heat for frying, boiling or toasting. The hot, clean, blue flame of the Nesco spreads over the bottom of the utensil with no soot, smoke or odor. You get city gas cooking efficiency with oil stove economy.

Ask your Nesco dealer to show you the latest models. Send for our booklet, which shows many sizes and models.

Important To Employers!

The Workmen's Compensation Act became effective Jan 1, 1915, but it seems some employers ignore their obligations, intentionally or through misunderstanding. Failure to provide protection to employes makes the employer liable to a heavy fine in addition to the paying of benefits in accordance with the Compensation schedule.

Our Policy furnishes complete protection as required by the Compensation Act, and if the employer wishes, we can protect him against accident, while engaged in his work, or at all times during the day and night.

Our policyholders are receiving a large return premium each year. (17½% was returned to them in 1924 and 1925) when their premiums were above the minimum.

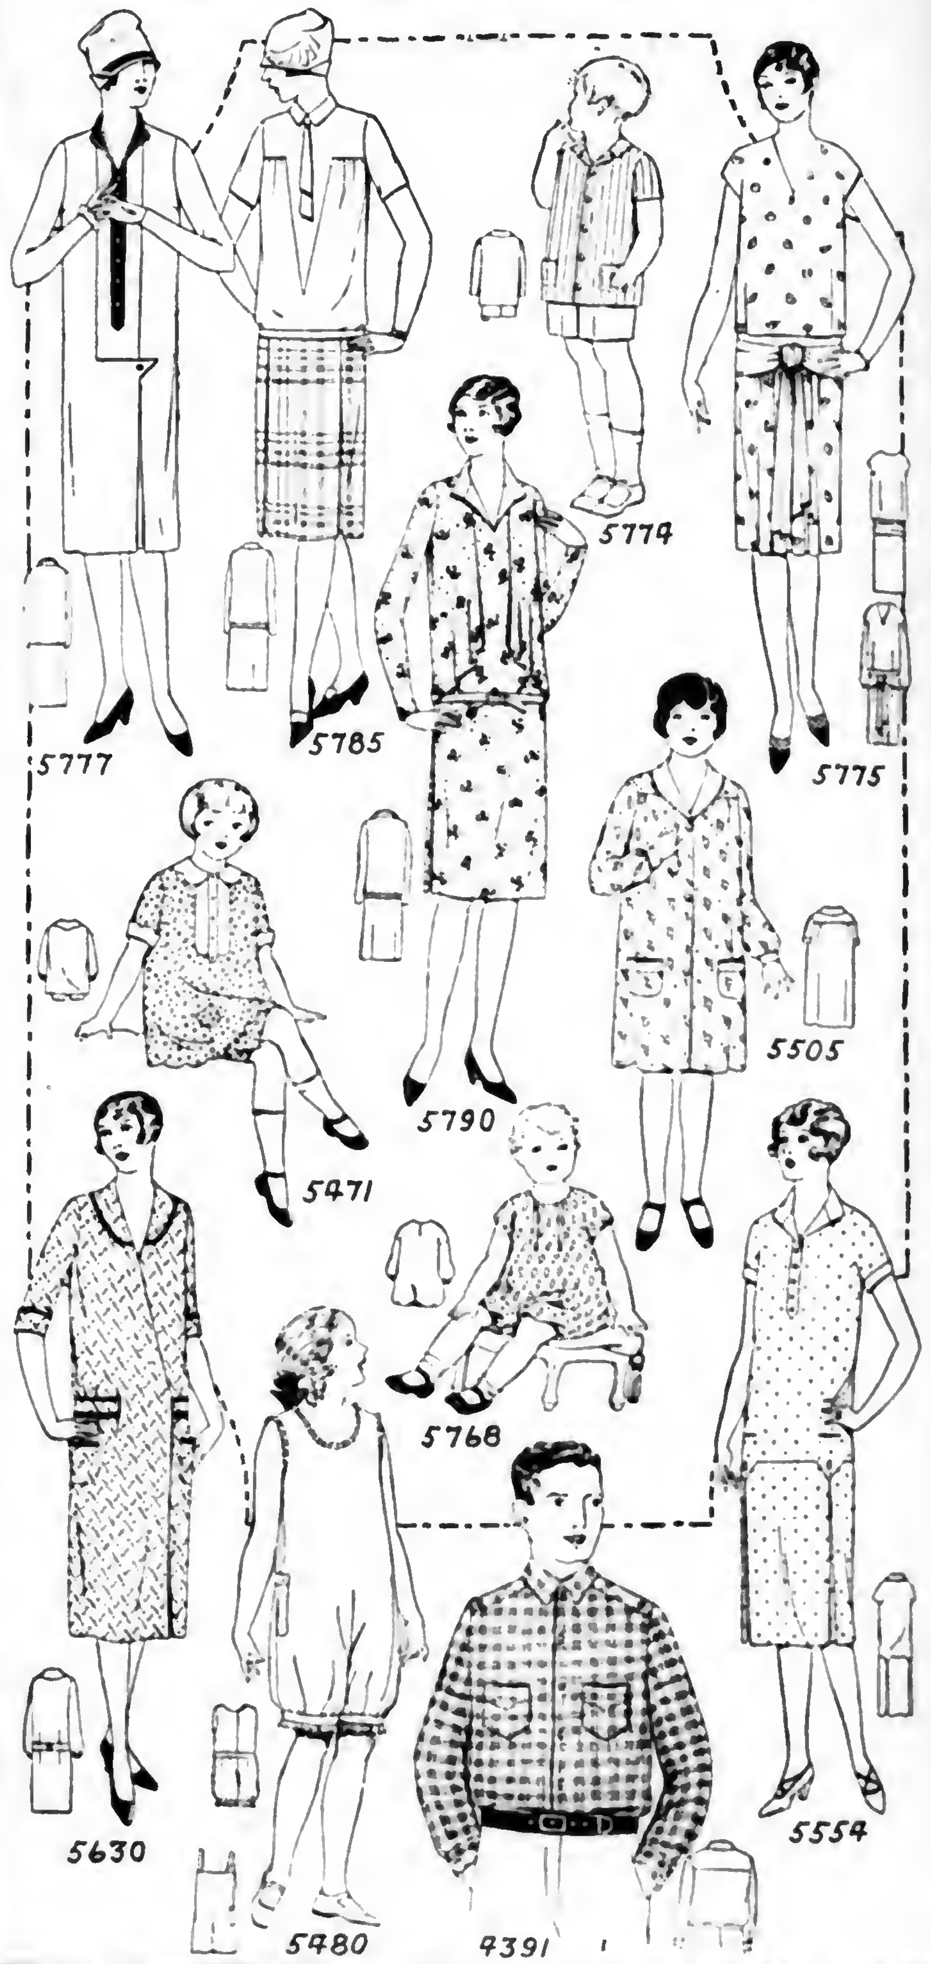
Garments for All Ages and All Occasions



Directions for Ordering.—Give figure or figures of each pattern exactly as printed at beginning of each description. Give bust measure when ordering waist patterns, waist measure for skirt, and age for children's patterns. Address Pennsylvania Farmer, 261 S. Third Street, Philadelphia, Pa.

5777.—Six sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. A 38-inch size requires 4 yards of 40-inch material together with ¼ yard of contrasting material. For underback of lining ⅝ yard 36 inches wide is required.

5785.—Seven sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. A 38-inch size requires 1¾ yard of 32-inch material for the blouse if made with short sleeves or 2⅜ yards if made with long sleeves and ⅞ yard of 36-inch lining and 1½ yard of 40-inch material for the skirt.

5774.—Four sizes: 2, 4, 6 and 8 years. A 6-year size requires 1½ yard for the blazer and 1 yard for the trousers in material 36 inches wide, if blazer is made with long sleeves. If made with short sleeves 1¼ yard is required. Price 10c.

5775.—Six sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. A 38-inch size will require 2 yards of 32-inch material for the waist, girdle and tie sash, and 4 yards for bolero and skirt of contrasting material. If bolero is made with long sleeve portions 4½ yards will be required. Price 10c.

5471.—Four sizes: 2, 4, 6 and 8 years. A 6-year size requires 2¼ yards of figured material and ⅝ yard of plain 36 inches wide if made as illustrated in the large view. If made with long sleeves 2⅝ yards of the figured material is required. Price 10c.

5790.—Six sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. A 38-inch size requires 3⅝ yards of 40-inch material together with ⅝ yard of lining and ⅝ yard of contrasting material 32 inches wide. Price 10c.

5505.—Five sizes: 6, 8, 10, 12 and 14 years. A 12-year size if made as shown in the large view will require 3⅛ yards of figured material and ¼ yard of plain material 36 inches wide. Price 10c.

5768.—Two sizes: 6 months and 1 year. A 1-year size with long sleeves requires 1⅝ yard of 27-inch material. Price 10c.

5630.—Four sizes: small, 34-36; medium, 38-40; large, 42-44; extra large, 46-48 inches bust measure. A medium size as illustrated in the large view requires 4⅛ yards of 36-inch material. If made with long sleeves 4⅝ yards will be required. To bind the free edges as illustrated requires 5 yards of bias binding. Price 10c.

5480.—Seven sizes: 4, 6, 8, 10, 12, 14 and 16 years. A 12-year size requires 2¾ yards of 36-inch material. Price 10c.

4391.—Nine sizes neck measure: 14, 14½, 15, 15½, 16, 16½, 17, 17½ and 18 inches. A 15-inch size requires 4⅛ yards of 27-inch material. Price 10c.

5554.—Six sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. A 38-inch size requires 4 yards of 36-inch material with ⅝ yard of contrasting material. Price 10c.

Send 10c in silver or stamps for our up-to-date spring and summer 1927 Book of fashions.

Friendly Talks

By EDGAR L. VINCENT

AFTER a long, hard winter, how we do like to see warm weather springing into the foreground! Now we think of the first spring flowers. Somehow we long to see them sticking up their heads out of the big blanket of leaves and grass which has sheltered them since they went to bed many a month ago. Anemones, violets, squirrel corn, how well we know these dainty blossoms, and with what memories we long for their bright faces!

And we know where to look for these cheery blossoms. It is not on the cold side of the hill where the sunshine is latest in touching nature into loveliness. No. We look on the sunny side of the hill, where it is warm and the early showers moisten the ground first. There, up from their winter quarters they come now, greeting us gladly and bringing joy to our hearts. Only when we have a big handful for the table and for Mother's dress are we satisfied to go home; and then we turn from the warm sunny slope with something of regret.

Troubled Hearts Find Comfort

Away out in the country, where no railroad thunders across the landscape and where the hot, restless life of our day is as yet unknown, there is a farm home to which, in spite of its isolation, a great many men and women find their way. But they are not casual visitors, seeking a quiet place for the day. The faces of these folks are almost always shadowed by trouble, for they come seeking a word of advice or friendly counsel. Trouble has left its marks on the spirits of these callers at the old farmhouse, and that is why they come. For they know that here they will find a sympathetic welcome, and comfort for the hearts that are sore.

I have known the man who lives on that farm to sit down on a big stone or on the top rail of the fence, when his work pressed hard, and listen for hours to the stories told of trouble; while down at the house might be a woman who was unburdening her heart to the farmer's wife. And always they go away with happier faces and with the clouds lifted from their hearts. The sunny side of the hill! Folks have learned to know where to find it when sorrow sets its teeth deep into their hearts.

Turn to the Sunny Side of the Hill

It seems to me that more of us ought to be men and women of the comforting heart. When I organize a new society, if I ever do, it shall have that for its title—"Friends of the Comforting Heart." And the need is great in these days in which we live. We do not have to journey far to find it. Sometimes it is a father and a mother, grieving their hearts out over a wayward boy or girl. Far too often it is a man whose home life has been made hard by evils of which the world knows little. These people of the sore heart cannot tell their troubles to everyone they meet. They know that many would turn them away with a sneer: But it is to the men and women of the sunny side of the hill they turn, and turn not in vain.

Now, it takes something right out of your life to be a good comforter. It costs the sweetest there is in one's nature. Only when we have ourselves drunk deep of the cup of affliction do we know how to be a good comforter. And then, too, it takes love so deep that no plumbline ever can fathom it. But oh! how well it pays! Do you know the joy of a sunny-side life?

Cooks as fast as gas

THE RED STAR OIL STOVE BURNS OIL OR GASOLINE

This is the famous Red Star "Lively Heat" Burner that burns oil or gasoline with equally good results

"For two years this stove has made cooking a pleasure"

—Says Mrs. G. Baumgardner, New Hampton, Iowa

Dear Sirs: "Since I have been using cook stoves, I have had the experience of a number of different ones, but never found it all pleasure until two years ago, when we bought a beautiful Red Star. For two years this stove has made cooking a pleasure.

"It has no wicks to stick or go out and no expense of buying new ones. The 'Lively Heat' burners give a wonderful heat at once and the oven is a perfect baker. One can burn gasoline or kerosene. I would not exchange my Red Star for any other kind in the world. It works as satisfactorily as gas or an electric and it has the advantage of these two, because it is cheaper to run, and can be used anywhere.

"If you want real satisfaction, use a 'Red Star'." (*Signed*) MRS. G. BAUMGARDNER.

Thousands of women, like Mrs. Baumgardner, will tell you the pleasure and economy brought by the Red Star Oil Stove with its wonderful wickless "Lively Heat" burners. The Red Star burns either kerosene or gasoline.

Go to your nearest Red Star dealer. See a demonstration and be convinced. Made in two to six burner sizes and at a price for every purse. Smaller sizes cost no more than ordinary oil stoves. Most dealers sell on easy terms. If the list below does not include a dealer near you, write us at once and we will send you a nearby dealer's name and the interesting Red Star Book *free*.

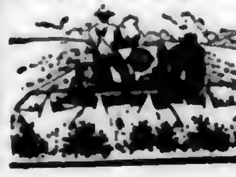
PURE IRON NOT STEEL



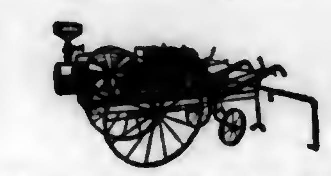
SPRAY For Big Crops of POTATOES

For blight, destroying bugs, fleas and beetles

USE THE OSPRAYMO

The wheels do the pumping and the air chamber holds a strong, constant pressure which drives fine spray mixture home to every part of foliage—above and below. Sprays potatoes, beans, vegetables—4 or 6 rows at once. No cost for power. Don't buy any sprayer until you know the OSPRAYMO line. Includes power orchard rigs, barrel, bucket, knapsack and hand sprayers. Write direct to-day for catalog to

Field Force Pump Co.
Dept. M.
Elmira, N. Y.



PROTECTION From Insect Pests and Fungus Diseases

The SPRA-MOR effectively protects truck gardens from those busy destroyers which—if unchecked—cut so deeply into your profits. To secure the maximum returns from careful cultivation, you must spray.

The SPRA-MOR power traction sprayer is the most sensible and efficient plant sprayer ever designed. One dependable motor drives two stage compressors and propels machine—at high, medium, or low speed. Air, forced into the chemical tank at the pressure needed produces a fog-like mist completely coating the plants without waste of material. Reaches top and both sides of row. Absolutely dependable. Saves its cost many times over for growers of cucumbers, onions, celery, melons, beans, tomatoes, potatoes and other crops.

Built in three sizes. Write today for descriptive folder and prices.

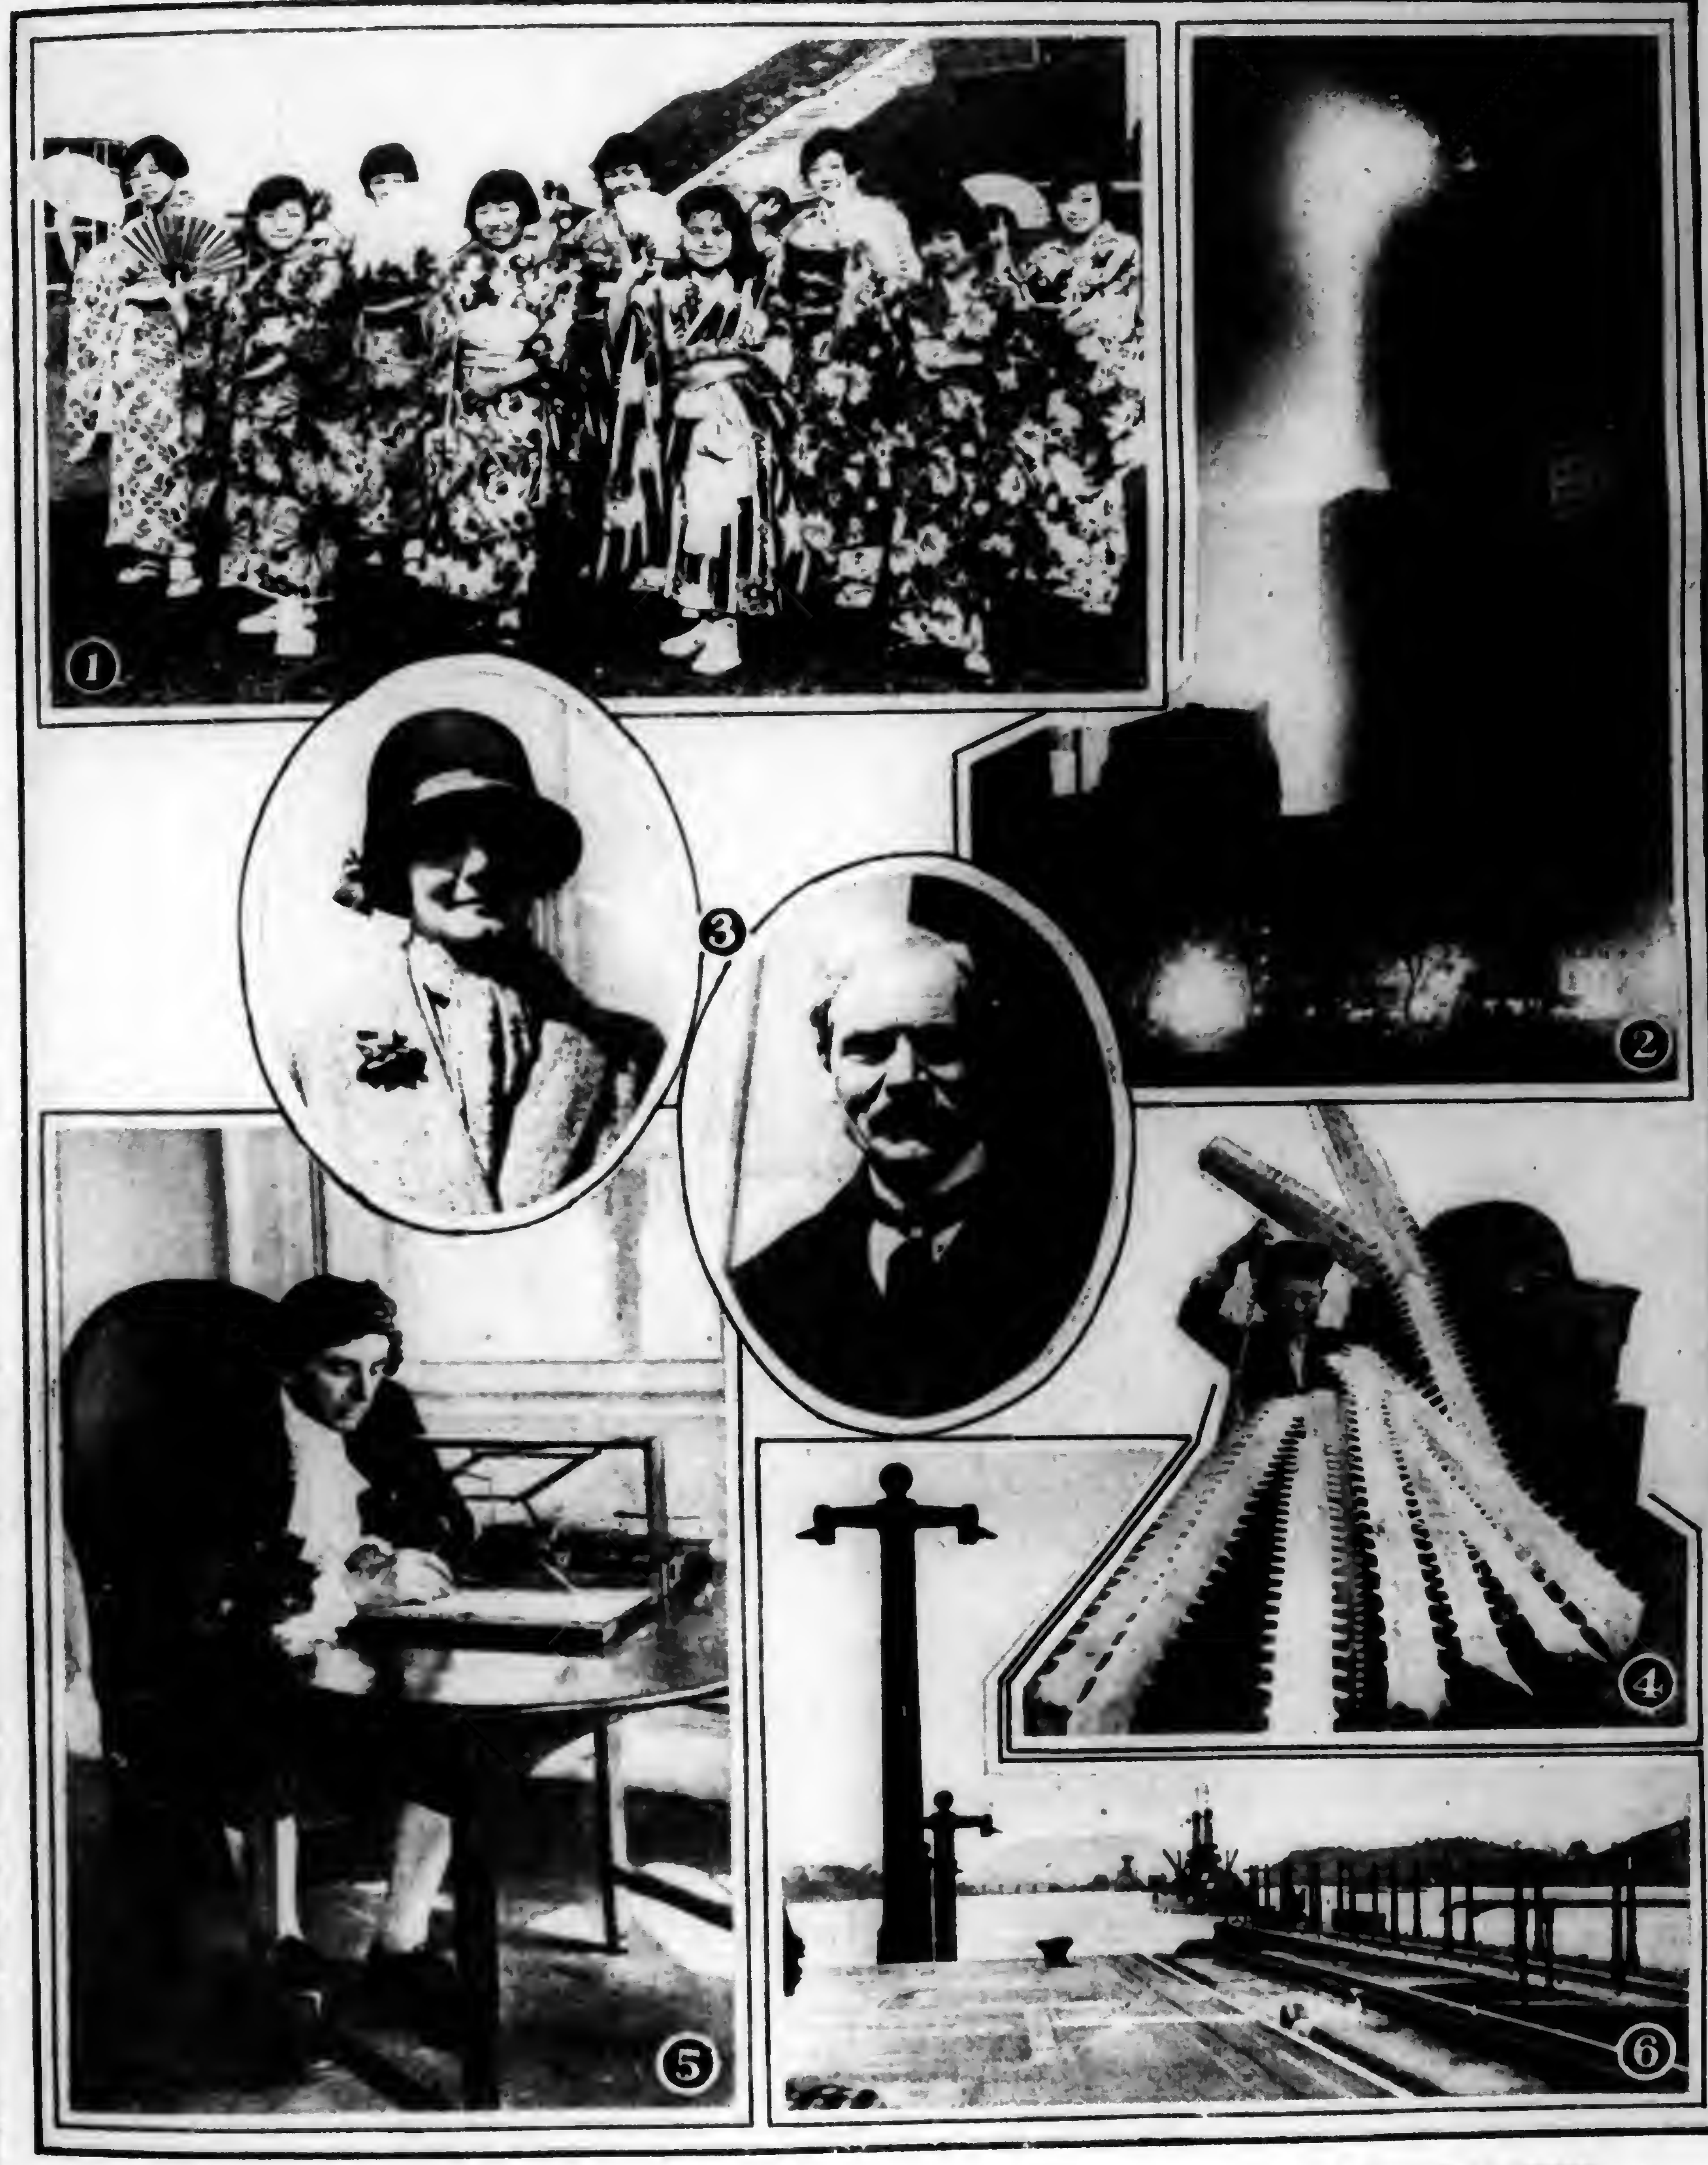
PASSING EVENTS IN PICTURES



(Copyright by Underwood and Underwood)

1.—Altho the Japanese population of Tacoma, Washington, is exceedingly small, a number of girls have formed a Japanese Girl Scout organization. Here are the charter members of the club.

2.—A New York apartment hotel under construction looked like a flaming column when scaffolding on the tower 38 stories above the street burned recently.

3.—J. Ramsay MacDonald, former Prime Minister of Great Britain, now chairman of the Labor Party in the House of Commons, and his daughter, Miss Ishbel MacDonald, arrived in New York April 15th.

4.—Woodrow Wilson can tell a good fish story. He has acquired a dozen sawfish blades at a Florida camp.

5.—In celebration of Thomas Jefferson's 184th birthday, students and faculty members of the University of Virginia portrayed scenes from his life at Monticello. Jefferson invented the first duplicating machine, which is shown here. While he uses one pen his letter is copied in his own writing by another pen.

6.—The U. S. S. Idaho entering the Panama Canal.

Judith of Blue Lake Ranch

By JACKSON GREGORY

Copyright, Charles Scribner's Son

(Continued from last week)

AS HE drew nearer the ranch Lee saw smoke rising from the north ridge. Again he could turn his thoughts a little to what lay in front of him, wondering what luck Carson had had in his double task of fighting fire and holding off the buyers.

At any rate, the Blue Lake stock had not been driven off. The bawling of the big herds told him that before he saw the countless tossing horns. Then, dropping down into Pocket Valley from above he found his own string of horses feeding quietly. Beyond, the cattle. At first he thought that the animals had been left to their own devices. He saw no rider anywhere. Hurrying on, he shouted loudly. After he had called repeatedly, there floated to him from somewhere down on the lower flat an answering call. And presently Carson himself came riding to meet him.

Carson's face was smeared with blood; one bruised, battered, discolored eye was swelling shut, but in his uninjured eye there was triumphant gladness.

"We got the sons-o'-guns on the run, Bud," he announced from afar. "Killed their pesky fires out before they got a good start, crippled a couple of 'em, counting Benny, the cook, in on the deal, chased their deputy sheriff off with a flea in his ear, an' set tight, holding our own."

"Where'd you get the eye, Carson?" demanded Lee.

Carson grinned broadly, an evil grin of a distorted, battered face.

"You want to take a good look at ol' Poker Face," he chuckled. "He won't cheat no more games of crib for a coon's age. I jus' nacherally beat him all to h—, Bud."

"Where are the rest of the men?" Lee asked.

"Watching the fires an' seeing no more don't get started."

Then Lee told him of Judith. Carson's good eye opened wide with interest. Carson's bruised lips sought to form for a whistle which managed to give them the air of a maidenly pout.

"He had the nerve!" he muttered. "Trevors had the nerve! Bud, we ought to make a little call on that gent."

Then, seeing Lee's face, Carson realized that anything he might have to remark on this score was superfluous. Lee had already thought of that.

THEY roped a couple of the wandering horses, improvised hackamores from the rope cut in two, and went to meet Judith. Carson snatched eagerly at her hand and squeezed it and looked inexpressible things from his one useful eye. He gave his saddled horse to her, watched her and Lee ride on to the ranch, and sent Tommy to the old cabin for another rope, while he rounded up some more horses in a narrow canyon for Burkitt and Hampton.

"You d—— fool," he said growlingly to Hampton, "look what you've done."

"Of course I'm a d—— fool," replied Hampton, by now his old cheerful self. "I've apologized to Judith and Lee and Burkitt. I apologize to you. I'll tell you confidentially that I'm a sucker and a Come-on-Charlie. I haven't got the brains of a jack-rabbit."

Carson went away grumbling. But for the first time he felt a vague respect for Pollock Hampton.

"He'll be a real man some day," thought Carson, "if the fool-killer don't pick him off first."

"You may come and see me this evening," Judith told Bud Lee as he left her to Marcia's arms. "I'll be eating and sleeping and taking baths until then. Thank you for the bacon—and the water—and—"

She smiled at him from Marcia's excited embrace. Bud Lee, the blood tingling thru him, left her.

"Before I come to you, Judith girl," he whispered to himself as he went, "I'll have to have a little talk with Bayne Trevors."

BUD LEE, riding alone toward the Western Lumber Camp, turned in his saddle to glance back as he heard hoof-beats behind him. It was Carson, and the old cattleman was riding hard. Lee frowned. Then for an instant a smile softened his stern eyes.

"Good little old Carson," he muttered.

Carson came to his side, saying merely in his dry voice:

"Mind if I come along, Bud? You an' me have rid into one thing an' another more'n just once."

"This is my fight," said Lee coolly.

"Who said it wasn't?" demanded the other querulously. "Only you ain't got any call to be a hawg, Bud. Besides, I got a right to see if there's a fair break, ain't I? Say, look at them cow brutes back yonder! Don't it beat all how silage, when you use it right, shapes 'em up?"

Few enough words were said as the miles were flung behind them; few were needed. A swift glance showed Carson that Lee carried a revolver in his shirt; his own gun rode plainly in evidence in front of his hip. What little conversation rose between them was of ranch matters. They spoke of success now with confidence. These two foremen alone could see the money in late winter and early spring from their cattle and horses to carry the Blue Lake venture over the rapids. Then there were the other resources of the diversified undertaking, the hogs, the prize stock, the olives, poultry, dairy products. And soon or late Western Lumber would pay the price for the timber tract, soon, if they saw that they had to pay it or lose the forests which they had so long counted upon. Lumber values were mounting every day.

Neither man, when it chanced that Bayne Trevors's name was casually mentioned, suggested: "Why not go to the law?" For to them it was very clear that, once in the courts, the man who had played safe would laugh at them. Against Judith's oath that he had kidnapped her would stand Trevors's word that he had done nothing of the kind, coupled with his carefully established perjured alibi and the lying testimony of the physician who had visited Judith in the cave. This man and that might be rounded up, Shorty and Benny and Poker Face, and if any of them talked—which perhaps none of them would—at most they would say that they had no orders from anybody but Quinnion. And where was Quinnion, who stood as a buckler between Trevors and prosecution? And what buckler in all the world can ever stand between one man and another?

Now and then Carson sent a quick questioning glance toward Lee's inscrutable face; now and then he sighed, his thoughts his own. Bud Lee, knowing his companion as he did, shrewdly guessed that Carson was hoping that events might so befall that there would be an open, free-for-all fight and that he might not be forced to play the restless part of a mere onlooker. Bud Lee hoped otherwise.

"There's two ways to get a man," said Carson meditatively, out of a long silence. "An' both is good ways: with a gun or with your hands."

"Yes," agreed Bud quietly.

"If it works out gun way," continued Carson, still with that thoughtful, half-abstracted look in his eyes. "it don't hurt to remember, Bud, that he shoots left-handed an' from the hip."

Lee merely nodded. Carson did not look up from the bobbing ears of his horse as he continued:

"If it works out the other way an' it's just fists, it don't hurt to remember how Trevors put out Scotty Webb last year in Rocky Bend. Four-footed style, striking with his boot square in Scotty's belly."

TREVORS'S name was not again referred to even in the vaguest terms. The road in front of them, at last dropping down into the valley in which the lumber-camp was, straightened out into a lane that ran between stumps to the clutter of frame buildings.

"Something doing at the office," offered Carson, as they drew near. "Directors' meeting, likely."

Two automobiles stood in the road ten steps from the closed door of the unpretentious shack which bore the printed legend, "Office, Western Lumber Company." The big red touring car certainly belonged to Melvin, the company's president. Carson looked curiously at Lee.

Bud dismounted, dropped his horse's reins, shifted the revolver from his shirt to his belt where it was at once unhidden and loosely held, ready for a quick draw. Then he went up the three steps, Carson at his heels, his gun also unhidden and ready. From within came voices, one in protest, Bayne Trevors's ringing out, filled with mastery followed by a laugh. Lee set his hand to the door. Then, only because it was locked from within, did he knock sharply.

"Who is it?" came the sharp inquiry. But the man who made it and who was standing by the door, threw it open.

"What do you want?" he demanded again. "We're busy."

"I want to see Trevors," said Lee coolly.

"You can't. He—"

Lee shoved the man aside and strode on. Carson, close at Lee's heels, his eyes glittering, stepped a little aside when once he was within the room and took his place with his back against the wall close to the door.

It was a big, bare, barn-like room, furnished simply with one long table and half a dozen chairs. Here were five men besides Bayne Trevors. All except Trevors and the man who had opened the door were seated; Trevors, at the far end of the room, was standing, an oratorical arm slowly dropping to his side.

HIS eyes met Lee's, ran quickly to Carson's, came back to Lee's and rested there steadily. Beyond the slow falling of his extended arm, he did not move. The muscles of his face hardened, the look of triumph which just now had stood in his eyes changed slowly and in its place came an expression that was twin to that in Bud Lee's eyes, just a look of inscrutability with a hint of watchfulness under it, and the hardness of agate. While a man might have drawn a deep breath into his lungs and expelled it, neither Lee nor Trevors stirred.

"What the devil is this?" demanded Melvin from across the table. "Hold-up or what?" He rapped the table resoundingly.

"Shut up!" snapped Carson. "It's just a two-man play, Melvin: Lee an' Trevors."

"Oh," said Melvin, and sank back, making no further protest. He was no stranger to Carson or to Bud Lee, and he sensed what might lie between Lee and a man like Trevors. Then, shrugging his shoulders, he said carelessly: "I'm not the man to get in other men's way, and you know it, Carson. But you might tell your friend Bud Lee that Bayne Trevors is rather a big man influentially to mix things with. I've just resigned this morning and Trevors is our new president."

"Thanks," returned Carson dryly. "I don't think that'll make much difference tho, Melvin. Most likely you'll have two presidents resigning the same day."

At last Lee spoke.

"Trevors," he said quietly, "maybe the law can't get you. But I can. For reasons which both you and I understand you are going to clear out of this part of the country."

"Am I?" asked Trevors. The look of his eyes did not alter, the poise of his big body did not shift, his hands, both at his sides again, might have been carved in bronze.

Then suddenly he laughed and threw out his arms in a wide gesture and again dropped them, saying shortly:

"You're playing the game the way I thought you would. You've got a gun. I am unarmed—begin your shooting and be d—— to you!"

He even stepped forward, his eyes fearlessly upon Lee's, and settled his big frame comfortably in a chair by the table.

"Go ahead," he concluded. "I'm ready."

"That's as it should be!" Lee's voice was vibrant. His hard eyes brightened. With a quick jerk he drew the revolver from his belt and dropped it to the floor at Carson's feet.

Carson, tho he stooped for it quickly, did not shift his watchful eyes from Trevors. For Carson had known more fights in his life than he had years; he knew men, and looked to Trevors for just the sort of thing Trevors did.

As Lee stepped forward, Trevors snatched open the drawer of the table at his side, quick as light, and whipped out the weapon which lay there.

"Go slow, Trevors!" came old Carson's dry voice. "I've got you covered already, two-gun style."

TREVORS, even with his finger crooking to the trigger, paused and saw the two guns in Carson's hands trained unwaveringly upon him. There was much deadly determination in Carson's eyes. Again Trevors laughed, drawing back his empty hand.

"You yellow dog!" grunted Bud Lee, his tone one of supreme disgust. "You d—— yellow dog!"

Trevors shrugged.

"You see, gentlemen—two to one, with the odds all theirs."

"You lie!" spat out Carson. "It's one to one an' I see the game goes square." He stepped forward, removed the weapon from the table under Trevor's now suddenly changeful eyes, and went back to his place with his back to the wall.

"For —— sake!" cried the one nervous man in the room, he who had opened the door. "This is murder."

Melvin smiled, a smile as cheerless as the gleam of wintry starlight on a bit of glass.

"Will you fight him, Trevors?" he asked. "With your hands?"

"Yes," answered Trevors. "Yes."

"Move back the table," commanded Melvin, on his feet in an instant. "And the chairs. Get them back."

The table was dragged to the far end of the room; the chairs were piled upon it.

"Now," and Melvin's watch was in his hand, his voice coming with metallic coldness, "it's to a finish, is it? Three-minute rounds, fair fighting, no—"

But now at last Bayne Trevors's blood was up, his slow anger had kindled, he was moving his feet restlessly.

"D— it," he shouted, "whose fight is this but mine and Lee's? If he wants a fight, let him come and get it; a man's fight and rules and rounds and time be d——! Am I to dance around here and sidestep and fence just for you to look on? . . . Carson!"

"Well?" said Carson.

"Lee challenges me, doesn't he? Then I'm the man to name the sort of fight, am I not? Is that fair?"

"Meaning just what?" asked Carson.

"Meaning that I am going to get him, get him any way I can! You let us fight this out our way, any way, and no interference!"

"Talk to Bud there," rejoined the old cattleman calmly. "It ain't my scrap."

"Then, Lee," snapped Trevors, "come on if you want such a fight as you'd get if you and I were alone in the mountains, with no man to watch, a fight where a man can use what weapons God gave him, any weapon he can lay his mind to, his eye to, his hand to! Or," and at last the sneer came, "do you want a pair of padded gloves and somebody to fan you?"

Carson shifted his glance to Bud Lee's face. Lee merely nodded.

"Then," cried Carson sternly, "go to it! No man steps in, an' you two can fight it out like coyotes or mountain-lions for all of me."

"Your word there will be no interference?" asked Trevors. "For you're just a fool and not a liar, Carson."

"My word," was the answer.

BAYNE TREVORS slipped out of his coat and vest, tossing them to the pile of chairs on the table. He loosened his soft shirt-collar and was ready. All of Bud Lee's simple preparations had been made when he threw his broad hat aside.

Then came the little pause which is forerunner to the first blow, when two men measure each other, seeking each to read the other's purpose.

"It ought to be a pretty even break," muttered Melvin, his interest obviously that of a sporting man who would travel a thousand miles to see a fight for a champion's belt. "Trevors has the weight by forty pounds; Lee has the reach by a hair; both quick-footed; both hard; Lee, maybe a little harder. Don't know. Even break. The sand will do it—sand or luck."

The two men drew slowly together. Their hands came up, their fists showed glistening knuckles, their jaws were set, their feet moved cautiously. Then suddenly Bud Lee sprang in and struck.

Struck tentatively with his left hand that grazed Trevor's cheek and did no harm; struck terribly with his right hand that drove thru the other man's guard and landed with the little sound of flesh on flesh on Trevors's chest. Trevors's grunt and his return blow came together; both men reeled back a half-pace from the impact, both hung an instant upon an unsteady balance, both sprang forward. And as they met the second time, they battled furiously, clinging together, striking mercilessly, giving and taking with only the sound of scuffling boot-heels and soft thuds and little coughing grunts breaking the silence. Bayne Trevors gave back a stubborn step, striking right and left as he did so; caught himself, hurled himself forward so that now it was Bud Lee who was borne backward by the sheer weight of his opponent. There was a gash on Lee's temple from which a thin stream of blood trickled; Trevors's mouth was bleeding.

"UNDER his guard, Trevors!" shouted Melvin, on the table now, his face red, his eyes shining. "Under, under!"

"Remember, Bud! Remember!" cried Carson.

"That's it, that's it!" Melvin clapped his two big hands and came perilously near falling from his point of vantage as Trevors's fists drove into Lee's body and Lee went reeling back. "Give him h—! A hundred dollars on Trevors!"

"Take you!" called Carson without withdrawing his eyes from the two forms reeling up and down, back and forth across the room.

"Done!" cried Melvin. "Trevors, a hundred dollars—"

He broke off, forgetful of his own words. The two men met again, clung to each other in a ludicrous embrace, broke asunder, and Lee struck so that his fist, landing fair upon Trevors's chin, hurled the bigger man back, stumbling, falling—

But not fallen. For his back found the wall and saved him. As Lee came on, rushing at him like a man gone mad, Trevors slipped aside and struck back, for the critical moment gaining time to breathe. He spat, wiped his bloody mouth with the back of his hand and again eluded a rushing attack by ducking and stepping to one side. And ever, when he sought to save his own body, he struck back, grunting audibly with the effort.

THEY fought everywhere, up and down, back and forth, until every foot of the floor felt their boots, until each of them was fighting with all of the force that lay in him, fighting with that swelling anger which grows at leaps and bounds when two men strive body to body, when the hot breath of one mingles with the hot breath of the other, when red rage looking out of one pair of eyes sees its reflection in the other. Again and again Melvin muttered: "An even break! By ——, an even break!" And over and over did Carson's heart rise in his breast as he saw Bud Lee drive Trevors, and over and over did his heart sink when he saw Lee sway and reel under the sledge-hammer blows beating at face and body.

In the beginning there had been in Bud Lee's mind but the one thought: This man had laid his hands upon Judith; this man must be punished and punished by none other in God's wide world than Bud Lee. Now all cool thought had fled, leaving just the hot desire to beat at that which beat at him, to strike down that which strove to strike him down, to master his enemy, to see the great, powerful body prone at his feet. Now he was fighting for that simplest, most potent reason in the world, just because he was fighting. And, tho he knew that he had found a man as quick and hard and strong as himself, still he told himself that he must fight a winning fight—there was some good reason why he must fight a winning fight.

His whole body was bruised and battered and sore. A glancing blow now shot him thru with pain. Trevors knew how to put his weight behind his blows, and his weight was well over two hundred pounds. It was like being hammered with a two-hundred-pound sledge.

(To be concluded next week)

Johnny and Kernel Kob begin their spring work.

Jim—One of those show girls is going to ride down the street this noon on horseback, dressed in one of the original seven veils.

Tim—Fine. I'll be there. I haven't seen a horse for years.—Automotive Advertising.

Did you ever hear this one?—

Better Undertaking

Doctor (to sick purchasing agent)—Yes, I can fix you up in fine shape.

Purchasing Agent—What will it cost?

Doctor—Around $500.

Purchasing Agent—You'll have to shade that price considerable. I've a much better price from the undertaker.

That California Climate

A customer stepped into a Los Angeles hardware store.

"I want to get one of those thermometers like the Chamber of Commerce uses," he announced.

"And what kind is that?" asked the clerk.

"It's one that won't go above 80 in the summer or below 50 in winter."

Two advertising men see the Eiffel tower.

"Unusual!"

"Exceptional!"

"World famous!"

"Shaped in steel!"

"Tower of the immortals!"

"Will go down the ages!"

"Backed by a great name!"

"The trademark of a nation!"

"More than one million satisfied users!"—Life.

Texas Vision

Pat Neff was standing on the station platform of a small Texas town, waiting for a train one hot summer day, when an old panhandler came up.

"Waitin' for the train?" he asked.

"Yes," said Neff. "Late, isn't it?"

The old man shielded his eyes with his free hand and took a long look up the track, which extended in a straight line to the horizon.

"I reckon it is a bit late," he drawled, looking at his great soda cracker of a watch. "It's due in an hour—an' I don't see it nowhere!"—DeLaval Monthly.

What's In a Name?

Traffic Cop—What's yer name?

Truck Driver—It's on th' side of me automobile.

Cop (trying to read name)—It's obliterated.

Driver—Yer a liar! It's O'Brien.

Mutual Understanding

Mistress—I am a woman of few words. If I beckon with my hand that means "come."

New Maid—That suits me, mum, I'm also a woman of few words. If I shake my head it means "I'm not coming."—Automotive Advertising.

The Bald Truth

The fond mother was showing the baby to the visitor.

"Isn't baby the image of his father?"

"Absolutely," replied the visitor. "Same lack of expression, same red nose, no teeth to speak of, and, by George! prematurely bald too!"—Automotive Advertising.

Doing Nothing

Junior Partner, to pretty stenographer—Are you doing anything on Sunday evening, Miss Dale?

Steno, hopefully—No, not a thing.

"Then try to be at the office earlier on Monday morning, will you!"

Hotel Clerk—Just in from Chicago, I see, Mr. Smith.

Mr. Smith—No; that's a moth hole in my lapel.

Death Lurks in Mountain Laurel

By Dr. E. M. GRESS, Penna. State Botanist

Editors' Note.—This is the third of a series of articles on poisonous plants commonly found in Pennsylvania and adjoining states.

SOMETIMES death lurks in our most beautiful plants. Such is the case with mountain laurel which is very abundant in the mountains of Pennsylvania. Cattle, sheep, goats, horses and sometimes people die after eating the leaves of this shrub. Chickens have been poisoned by eating matter vomited by poisoned animals.

A case is reported where six trained goats in the Philadelphia Dime Museum died from eating the laurel leaves used for decorating the stage. Children are often poisoned by eating the leaves in mistake for those of winter green.

Mountain laurel is known locally by a number of different common names. Among these are calico bush, American laurel, small laurel, wood laurel and spoon wood. In the South it is sometimes called ivy, ivy bush and ivy wood.

Mountain laurel, the scientific name of which is Kalmia latifolia, is a beautiful shrub which is usually not over ten feet high in Pennsylvania, while farther South it may reach a height of forty feet, with a trunk diameter of eighteen inches. The leathery, evergreen leaves are three to five inches long and from one-fourth to one and one-half inches wide.

The pink or sometimes nearly white flowers which appear in May or June are borne in dense clusters. The round fruit called capsule is about the size of a huckleberry. This splits open and scatters the seed but remains on the plant during the winter. The branches with the shining evergreen leaves are used extensively for Christmas decorations.

The symptoms of laurel poisoning are nausea with vomiting, frothing at the mouth, depression and weakness shown by an unsteady gait or inability to stand, irregular breathing and finally drowsiness, stupor and death. When the symptoms begin to show it is usually too late to do much in the way of remedial treatment. Anything that will aid in eliminating the poison from the stomach will be of some benefit. A veterinarian or physician should be called at once.

Livestock should be kept away from the plants, particularly in the spring when they may be eager to eat almost anything that is green. If laurel has been used for decorating purposes one should be careful not to throw it where the animals are likely to get it. There is also some danger of having it about children, particularly small ones who, like goats, are prone to try to eat everything.

Clusters of mountain laurel are beautiful in early summer.

Good Insulators Improve Radio

THE antenna of a radio receiver extends into space in order that energy may be gathered from radio waves transmitted thru space. Yet even in the largest antenna the induced voltage is very minute. Local signals are caused by an induced current in the antenna of a thousandth of a volt for every yard of antenna wire! Weak signals are caused by an induced current of even far weaker strength. And with a frequency of the order of hundreds of thousands of cycles, the antenna current flows on the surface of the conductor instead of thru it.

Little wonder, therefore, that utmost precautions must be taken to safeguard the delicate antenna current, not only by providing an easy path for its flow to the radio receiver, but also by providing tall barriers in the way of insulation so that this evasive energy will not escape to the ground before its labors are completed.

The antenna proper should be provided with the best available insulators. Porcelain, china, glass and composition insulators are available, and it goes without saying that a good insulator costs more than a poor one, which is somewhat of a guide to proper insulation.

Good insulators have ridges which serve to increase the insulating surface and thus place a greater obstacle in the path of antenna current trying to leak to the ground. Furthermore, the ridges serve to break the film of moisture which forms on the insulator during rain or snow. While porcelain cleats and knobs may be employed as antenna insulators, they are mere improvisions. It pays to use real antenna insulators.

The lead-in wire, altho generally covered, should be kept away from the walls and other objects, using insulators if necessary. While the wire may be amply insulated in dry weather, it may be poorly insulated when wet.

McNutt—Just burned a hundred-dollar bill.

McNitt—Gosh! You must be a millionaire!

"Well, it's easier to burn 'em than to pay 'em."

Boring Young Man (holding forth to pretty girl)—You know, I'm funny like that—I always throw myself into any job I undertake.

Pretty Girl (sweetly)—How splendid! Why don't you dig a well?

Mention Pennsylvania Farmer When Writing Advertisers

ADVERTISERS WANT TO KNOW WHERE THEIR ADVERTISING IS SEEN AND THEREFORE APPRECIATE HAVING YOU MENTION THE NAME OF THIS PAPER WHEN YOU ANSWER ADVERTISEMENTS.

THE PENNSYLVANIA FARMER PHILADELPHIA, PA.

The Voice of the People

This department is [illegible] blems and matters of [illegible] briefly on any question [illegible] thus share them [illegible] 200 or 300 words. [illegible] department does not signify editorial endorsement [illegible]

We Farmers Want More "Liberty," But—

DEAR SIRS.—As [illegible] been reading your [illegible] week for some years I [illegible] been tempted to write [illegible] opinion of articles [illegible] recent issue gives [illegible] State College," and I can [illegible] resist the temptation.

Some years ago we lost a cow, and on having a veterinarian examine the carcass we were told she had had T. B. We were then informed for the first time of the way to put our cattle under test by the State and Federal Bureaus. There was no one else interested so we signed for the test and in due time our herd was tested. You can, perhaps, judge how I felt when the [illegible] came and told me half our herd was condemned.

A man who happened by the day they were killed heard the neighbors remark about our big loss and said to me, "Yes, it's a loss." But if in 10 or 12 years your family physician should tell you that baby you hold in your arms had tuberculosis, you'd never think of these old cows."

Only Accredited Herd in Section

Now for years our cows have been accredited. We can recommend our milk and our purebred cattle and yet there is not another accredited herd within miles. People are afraid to buy our cattle, "because they might have that disease," when their own may be rotten with it.

But what surprises me is that people would organize to fight a movement like that. The inspector who was sent to see our cattle slaughtered said to me, "You'll have less colds next winter than you had last," and I have noticed that we as a whole family have been enjoying better health ever since.

"Eternal vigilance is the price of liberty" indeed! This is a free country! It is only free insofar as one's boasted freedom does not interfere with the rights of others and I do not think selling the products of a herd of diseased cattle to innocent users is a very good "freedom" . . . The farmer who refuses to test his herd is just as guilty, in my mind, as tho he'd mix a poison in [illegible] think a little more of the "other fellow" and a little less of our boasted liberties and we will not need to hear so much about the farmer's hard times. Only by "doing unto others" instead of "doing others" can we ever expect the fullest measure of success. . . . —An Interested Reader.

Bounty for Crows

DEAR SIRS:—I notice that in your issue of April 9 an Edgar L. [illegible] written in defense of the crow. He states that we should protect our birds.

I have spent most of my days on the farm and I, too, think we should protect our birds and the best way in my judgment to do it is to kill all the crows.

We have numerous birds that build in the orchard, such as robins and doves. The crows will rob all their nests of both eggs and young birds. Bluebirds have the instinct to build in holes of trees or rails, but I have seen crows watch for the young birds to come out and devour them as soon as they do.

If a turkey or guinea or pheasant, or even a chicken, happens to make a nest along a fence the crows get all the eggs and they will pick up little chickens as fast as they are hatched unless you guard them with a shotgun.

Last spring my neighbor had a whole field of corn pulled by the crows. He replanted the corn and they pulled it out the second time. The only thing I ever saw them do to help the farmer was to pick cherries. They save him the time for that job.

I think that the state should pay a bounty for every crow shot so as to make it interesting for those who do the shooting.—Albert A. Leaver, Hunterdon County, N. J.

Dairy Train Tours Pennsylvania Next Week

AN EXHIBIT by the Pennsylvania Department of Agriculture at Harrisburg will be one of the features of The Boys' and Girls' Dairy Exhibit and Demonstration Train touring the New York Central Lines in Pennsylvania in May. This exhibit will show what the Department of Agriculture is doing to aid in the upbuilding and improving of Pennsylvania's great dairy industry.

The schedule of the Boys' and Girls' Demonstration Train is complete as given below:

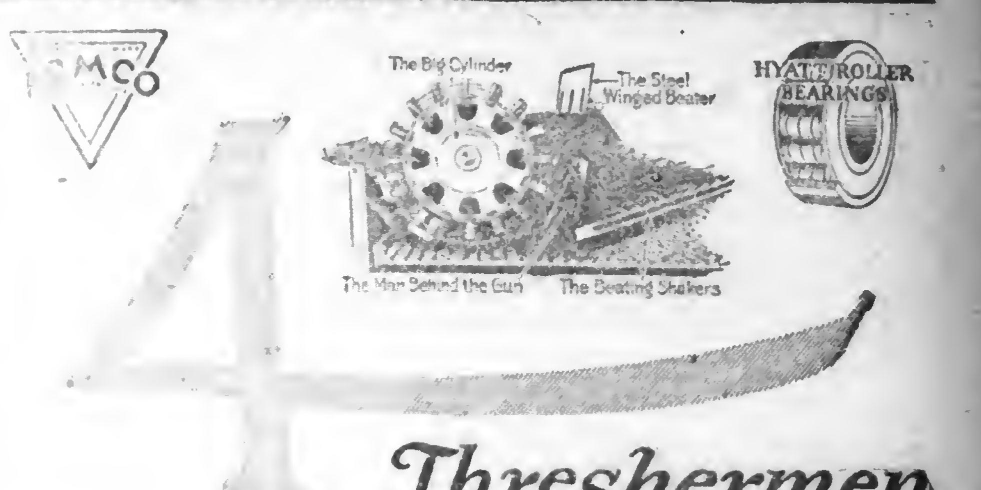
Westfield	N. Y. C.	Saturday	" 21	9:00 to 4:00

—it SAVES the FARMER'S THRESH BILL



4 *Threshermen* All in the 1927 Red River Special Line

The Red River Special Line is built to save your grain and to last.

An adjustable N & S Hart Special Feeder, under control of the straw and speed governors, feeds the grain just right under all conditions to the Big Cylinder.

The famous 4 Threshermen, the Big Cylinder, the Man Behind the Gun, the Beating Shakers and the Steel Winged Beater, will get the grain from the straw, even when the straw is rank and tough.

Hyatt Roller Bearings at every main bearing point, cut down the power needed to thresh, reducing the fuel bill. Alemite-Zerk Lubrication saves many minutes otherwise lost for oiling up. Nichols & Shepard first gave these improvements to the threshing world.

Armco Ingot Iron, used for the first time in a thresher in the Red River Special Line, will protect your investment from rust.

It makes the long lasting Red River Special Line still more long lasting.

Sheep—Week's bulk prices follow: Fed western wooled lambs, $15.75@16.75; fed clipped lambs, $14.50@16; western spring lambs, $17.40@18; clipped cull lambs, $11@12.25; yearling wethers, $14.50@15; wooled ewes, $8.25@9.25; clipped ewes, $7.50@8.

GRASS SEED—WHOLESALE PRICES

Toledo, Ohio, April 30, 1927.

Cloverseed, cash, imported, $16.75; domestic, $26.50; October, $16.40. Alsike, cash, $24. Timothyseed, old, $2.60; new, April and May, $2.70.

FEED PRICES

The prices below are for prompt shipments based on payment on arrival of cars as quoted by the Philadelphia jobbing trade to retail feed dealers on Monday, May 2, 1927. Quotations cover solid carlots for delivery at Philadelphia or Scranton rate points.

Pure spring bran	$37.50@38.50
Spring bran	37.00@37.50
Soft winter wheat bran	37.25@38.00
Hard winter wheat bran	36.00@38.00
Standard middlings	37.50@38.00
Soft winter wheat middlings	37.60@40.50
Flour middlings	39.50@42.50
Red dog flour	43.00@44.50
White hominy	32.25@34.25
Yellow hominy	33.20@33.25
Gluten feed	34.60@37.20
36 per cent cottonseed meal	38.00@39.00
41 per cent cottonseed meal	41.50@42.00
43 per cent cottonseed meal	42.75@43.00
31 per cent linseed meal	51.75@52.25

Millfeed in urgent demand with supplies light.

For Baltimore, Cumberland and Williamsport rate points, subtract 20c per ton (for cottonseed meal 40c per ton); for New York, Newark rate points, add 40c per ton (for cottonseed meal 60c per ton); for Woodbury, Bridgeton rate points, add $1.00 per ton; for Freehold, Toms River, Cape May rate points, add $1.40 per ton.

Prices Show Upward Trend

Review of the Week Ending April 30

POTATOES—The feature of the week's produce market was the rapid advance of potato prices on both new and old stock. This strengthening occurred in all sections, both at shipping points and at consuming markets. Many of the old potato sections stated that the demand exceeded the supply and that many farmers had about cleaned up their crops.

EGGS—Receipts of mid-western eggs were liberal in New York and the market was about steady on fresh clean stock. Considerable trading was being done in eggs for export but this business is expected to be very quiet up until the end of May, due to a lack of shipping facilities. Nearby eggs were in heavy supply and dealers with a surplus on hand were repacking for storage. Others were inclined to shade prices in order to clean up supplies. The trade generally was more particular as to quality and the finest grades brought a premium.

POULTRY—There was a better demand for live fowl in New York and trading was more active. Broilers sold readily altho receipts were rather liberal. Early in the week supplies of all live poultry were liberal and prices irregular but there was a firmer tone at the close.

BUTTER—The market opened steady but dropped sharply 3½@4c per pound. Receipts were heavier and even at the lower prices, dealers found it hard to move the surplus. Buyers were purchasing for immediate needs only in expectation of lower prices. Heavier production was the chief cause of the decline.

LIVESTOCK—The hog market in Chicago was dull and weak but strengthened toward the close of the week. Closing prices were about 10c higher than a week ago. All grades of beef steers advanced while heifers were unsettled. Vealers advanced sharply and heavy calves were steady. Prices on sheep and lambs were generally lower.

HAY—The market was generally steady but the demand was slow in some sections. Receipts were moderate with flood conditions restricting the movement. Timothy was dull and alfalfa about steady.

GRAIN—Prices of grain averaged higher. Wheat prices advanced due to lighter offerings and improved export demand. Cash oats and corn were slightly higher.

FEED—The feed market held firm with wheat feeds steady. There was a better demand for bran. Shorts and middlings were weaker in some markets. Linseed meal was about steady. Gluten feed was firm and hominy feed was higher. Cottonseed meal advanced.

ASPARAGUS—The first Pennsylvania asparagus arrived in Philadelphia early in the week but the cooler weather resulted in lighter shipments from all nearby sections. Prices held firm with green stock meeting a very good demand. White asparagus sold rather slowly. The prospects are bright at present for nearby growers.

County News and Comment

Berks County, Pa.—Cold and rainy. Most plowing done. Very little oats sown, ground being too wet and too cold. Most fields have been harrowed twice and are ready for oats and corn. It is too cold for baby chicks to make proper progress. Early-sown wheat looks fine while late-sown wheat makes very little progress and some fields have to be planted with oats. No potatoes planted on account of cold. Grass fields, mostly timothy, look good. Grange meetings well attended. Clover seed and fertilizers have been received. Another car of feed has been unloaded and the prospects are that a car of feed will be received every month. Wheat, $1.30; corn, 66c; oats, 50c; potatoes, $1; eggs, 25c.—W. N. M., April 26.

Blair County, Pa.—April rather damp and cold with a few very warm days. We have had numerous thunder showers; also some hail and heavy frosts last week. Cherry, plum and peach trees were full of blossoms but it is thought the crop will be light as they froze in some sections. Grass and wheat looking good. Most oats sown and farmers plowing for corn. More cattle are being tested for tuberculosis this spring. Many herds on the waiting list. Public schools are closing for the summer. Prices of farm products remain practically the same with wheat a little better. Eggs plentiful and sell for 20@25c.—H. E. H., April 27.

Carroll County, Md.—Farmers busy plowing, sowing peas, sowing oats, making garden, planting potatoes and spraying. Wheat is improving, looks well considering lateness of sowing. Pastures improving, clovers growing and spring-sown grass seed sprouting. Some farmers think early-sown clover was injured by freezing weather week of 11th but it is too soon to be sure whether it suffered or not. Early gardens look good. Cherry and peach trees in full bloom, while pears and apple trees are coming into bloom. Good seed corn scarce. Farmers with corn left from 1925 are selling same for seed. Farm sale season over. Fair prices were obtained for livestock and farming equipment. Weather has been favorable for young chicks. A number of farmers buy day-old chicks and use coal-burning brooders. Poultry business increasing in this section.—H. I. R., April 27.

Cumberland County, Pa.—Weather cool with heavy frosts last three mornings. Nothing apparently injured so far. Still some corn to be husked. Farmers about half done sowing oats. Potato planting begun. Increase in potato acreage expected. More chickens are being raised and some of the earlier hatches are already being marketed at 75c per pound, dressed. Eggs plentiful and low in price. Two of our local men made a trip to Libertyville, Iowa, where they purchased 48 baby beeves of the white-faced Hereford breed for this year's Cumberland County Baby Beef Club. Hogs very scarce and high in price. Farm help more plentiful than a year ago. Prices: Eggs, 20c; butter, 55c; potatoes, $1.50; apples, $1 bu.—A. L. B., April 25.

Dauphin County, Pa.—Freezing temperatures at this time after a warm period. Grass fields in fine shape. Many farmers sowing alfalfa and white clover. Planting potatoes are scarce. Acreage will be slightly below normal. Good seed corn scarce. Condition of roads has improved. Prices: wheat, $1.32; oats, 60c; potatoes, $1.50; timothy hay, $22; eggs, 25c; butter, 60c.—I. F. M., April 23.

Lancaster County, Pa.—Recent warm weather has greatly improved the wheat fields and grass fields. Good fruit crops indicated, judging from the amount of blossoms. Spring work is under way. Many farmers are contemplating the growing of potatoes on a much larger scale than usual. The tobacco acreage will not be increased. Roads are receiving attention and the passing of the Omnibus Bill will be a great benefit to Lancaster County. Prices: butter, 50c; eggs, 23c; lard, 19c; chickens, 25c.—R. C. R., April 25.

Lebanon County, Pa.—On April 2 the Annville and Lebanon Baby Beef Club members received twenty and twenty-five Hereford calves, respectively, from Kansas City to condition for the State Show next winter. Average weight, 525. The Chambers of Commerce of these two towns sponsored the move. Londonderry Grange held an all-poultry meeting in Gravel Hill Schoolhouse a week ago. Practical poultry experts were speakers. Two carloads of Michigan Russets were unloaded and distributed for planting. Bunker Hill Grange just held a meeting. Club purchasing of machinery, such as tractors, potato diggers, etc., was discussed together with a mirth-provoking program. Cherry blossoms are frozen black. Some early apples only starting to bloom and most apple buds may survive. Grass and wheat are improving. Most of oats sown last week in summer heat. Competent labor still hard to get. Day laborers get $3 and $3.50 a day without board. All crib corn is way off in quality. Old potatoes are getting scarce and $1.50 is being offered. Eggs, 22c; butter, 55c; corn, 75c; oats, 50c; hay, $20; fat bulls, 8c; fat steers, 11c; shoats, $6 up.—R. I. W., April 25.

Monroe County, Pa.—County Agent Roy M. Decker is organizing poultry clubs for boys and girls. Due to the low streams and cold weather trout fishing was not good. Few made good catches on the 15th. Continual high winds the past two weeks have made plowing difficult. Grain is slow, not much top. Little oats has been sown and little clover seed. Ground is dry and hard. The tuberculin test of cattle began the week of the 18th by county and state veterinarians and will continue for several weeks until completed. A number of bee meetings held last week for the benefit of those interested. Prices remain about the same with little change.—G. S., April 22.

Snyder County, Pa.—Freezing weather and snow flurries delaying farm work. Fruit buds slightly touched tho no apparent damage done. Oats being sown. Many early potatoes being planted. Some corn yet to husk. It shows up well even now. State roads are taking many men from farm work. Recent rains have soaked the ground and plowing for corn is being pushed. Many tractors in use. Some hog sales weekly with good prices prevailing for shoats and grown animals. Much building being done in and about Selinsgrove. Apple outlook not bad, tho the weather has prevented spraying thus far. Peaches promise full crop, unless severe cold destroys them. Eggs plentiful, about 22c. Good demand for all kinds of fowls.—W., April 25.

Sullivan County, Pa.—Changing weather conditions make farming a hazardous occupation; latest is a slight snow storm. A few farmers weer caught with spring wheat and oats in the ground; fruit will be injured to some extent. More farmers are sowing spring wheat than ever before since, of late years, winter wheat has been almost a failure. Indications point to a large acreage of buckwheat and a great many have doubled their acreage of oats. Most farmers beginning to realize that scrub stock does not pay and are raising purebreds; dairies and milk stations have a large part in this reformation.—M. G., April 24.

Union County, Pa.—Recent rains delayed the oats seeding. Many acres of sod have been plowed for corn but job is not half done. The corn borer has been found on some farms of one township in this county. Early potatoes have been planted. Orchards have had first spray. More attention will be given to spraying of orchards and potatoes than before as a number of new outfits have been sold in the county. Hay has been baled and sold at good prices for prime hay. Late sown wheat poor but early sown wheat presents good appearance. The stand of grass on new fields is not perfect but is coming along well. Rural schools closed the eight-month term this week. Teachers have been elected for next year with plenty of applicants for each school. There was more of a demand for farms this spring than a year ago. Farmers are anxious to get electric light and power for their farms. A few car loads of ear corn and some seed corn have been shipped from the county recently.—J. A. G., April 22.

Warren County, Pa.—Fruit so far uninjured; every indication of a big crop. Ideal weather for farming. Everyone busy getting soil in condition for seed but no seed sown as yet. Strawberries looking fine. Many poultrymen buying chicks this spring. Roads in fine shape. Fishermen report fish plentiful. Help on farms scarce. Bees wintered well. Prices: butter, 48c; eggs, 30c; potatoes, $1.50; apples, $1; oats, 50c; chickens, 28c; hay, $18@20.—H. C. J., April 25.

Westmoreland County, Pa.—Cold snap last week killed most all of the fruit. Some oats and spring wheat sown. Lots of plowing to be done yet. Winter wheat and grass looking fine on account of the open winter. Dairy and poultry the leading businesses; quite a few are increasing poultry flocks. Prices: timothy hay, $20; mixed, $25; wheat, $1.30; corn, 65c; oats, 60c; eggs, 35c; butter, 60c; potatoes, $2.—L. C., April 26.

Better Beef Special Tours Maryland

A BETTER Beef Cattle special train was operated by the Baltimore & Ohio Railroad over its lines thru Maryland and Virginia from April 4 to 16th. Cooperating with this railroad company were the agricultural colleges in the two states, the United States Department of Agriculture, the National Livestock and Meat Board and the three National Beef Record Associations.

The equipment on the train consisted of eight cars that were used to carry the exhibits, provide space for lectures and accommodations for the people with the train. A platform car was attached to the train and used as a platform upon which to put the cattle used for demonstrations. Two baggage cars were equipped with stalls on both sides and an aisle thru the center. These housed the cattle carried on the trip.

Five Grades of Steers Carried

The livestock equipment consisted of five head of commercial cattle and four purebred bulls of each of the beef breeds. The commercial cattle exhibit represented five different grades of steers, namely: Choice, good, medium, common and cutter. These were all arranged in the car with suitable description to give the visitors an opportunity to study the individuals and appreciate more fully the reason for the spread in price paid for the cattle which ranged from $7.50 to $11.50 per hundred pounds. This range is due to the difference in breeding and feeding.

The purebred beef bulls were carried to illustrate the modern beef type of cattle of the three breeds. These bulls were consigned by breeders at the request of the agricultural college and the Baltimore and Ohio Railroad. The bulls were offered for sale and were all sold at the close of the two weeks trip.

Cuts of Meat Exhibited

Another exhibit car was equipped with refrigerator cases in which was carried an exhibit of beef representing the different grades that might be secured from the grades of cattle on the train. In addition to making it possible to see the different grades of beef in the exhibit car, lectures were given by representatives from the Home Economics Departments from the Maryland Agricultural College and the Virginia Agricultural College and a representative from the National Livestock and Meat Board. The meat exhibit as well as the commercial cattle proved interesting and instructive to all who visited the train.

During the two weeks a total of about 5000 people passed thru the train or attended the lectures. In a number of cases the students from the upper grades in the vocational schools, together with the instructors, attended the meetings and demonstrations.

It is a difficult matter to estimate the direct results obtained from operating a demonstration train of this kind. The sections of the two states thru which the train was operated are well adapted to beef production and it has been an important phase of the livestock industry. The introduction of the purebred beef bulls thru this territory will improve the quality of the cattle produced and no doubt will be a means of introducing more good bulls in the future.—W. H. Tomhave.

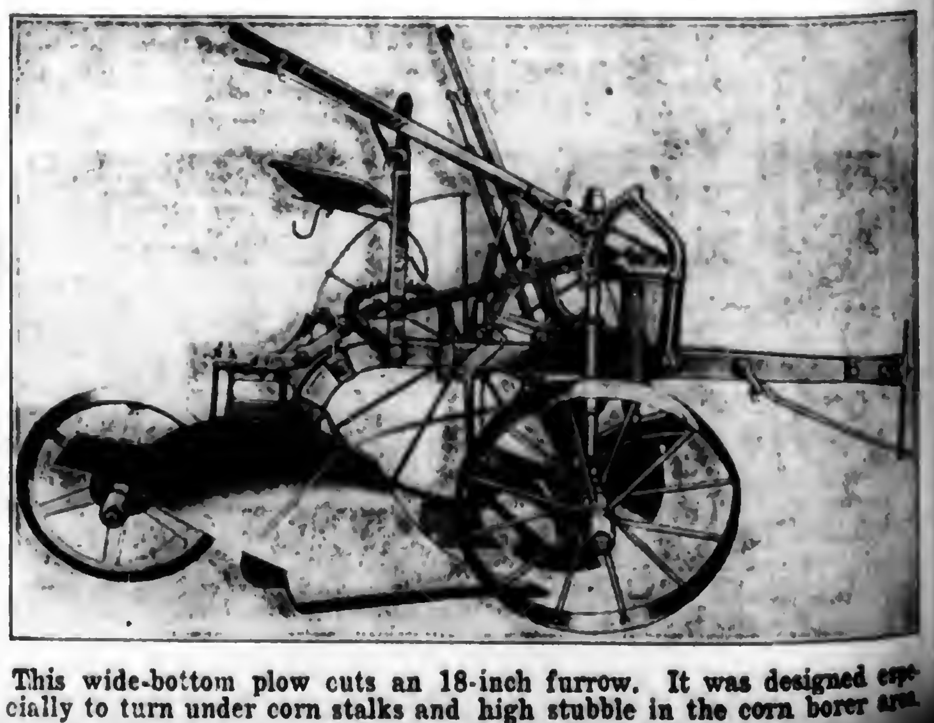
Illick Named Forester

SECRETARY Charles E. Dorworth, of the Pennsylvania Department of Forests and Waters, has announced the appointment of Joseph S. Illick as State Forester of Pennsylvania and Deputy Secretary of the Department.

As instructor at the State Forest School, Mont Alto, Mr. Illick taught most of the technical men now in the forest service in this state. He is thoroly familiar with trees and forests in every county of Pennsylvania. He has also made several tours of the forests of Europe. Last year, on a special forestry tour, he visited 12 European countries, going as far north as Lapland, over 100 miles north of the Arctic Circle.

The new State Forester is the author of twelve books on trees and forestry, one of which, "Pennsylvania Trees," has gone thru five editions totaling 45,000 copies. He is a graduate of Lafayette College, the Biltmore Forest School and took graduate work at the Forest School, University of Munich, Germany.

It Cuts a Wide Furrow



This wide-bottom plow cuts an 18-inch furrow. It was designed especially to turn under corn stalks and high stubble in the corn borer area.

Veterinary

Conducted by Dr. J. F. Shigley
Associate Professor of Veterinary Science, Pennsylvania State College, and Veterinarian in charge of College Livestock.

Advice thru this department is free to our subscribers. Each communication should state history and symptoms of the case in full; also the name and address of writer. Initials only will be published. We invite readers to make use of this service. Clippings from the column when properly preserved and classified, make one of the most valuable medical symposiums a farmer-stockman can obtain.

BITTER MILK.—I have one cow. She milks well. She was fresh about five weeks when her milk which stood over a day got very bitter and strong.—W. G., Hanlins Station, Pa. Bitter milk may be evident near the end of the lactation period, but in this case, as it is near the beginning of the period of lactation, you would do well to note the condition of the feeds in order to know if there is a possibility that moldy feeds were placed in the ration. Try giving this cow one pound of Epsom salts, and milk her three to four times daily for a few days in an attempt to clean up the condition. There may be some changes occurring in the udder which would be benefited by the increased number of milking periods daily.

LUMP ON LEG—HEAVES.—Would like to know what to do for a horse that has a lump on front leg as big as a half dollar. Had a man examine it and he told me it has joint water in it but nothing has opened yet. Also, would like to know what to do for a horse that has had the heaves for three years.—E. M. D., Harnedsville, Pa. From your description the lump is apparently on the knee. This may be due to an increase in the joint water as a result of injury such as falling on the knees. The treatment would be determined by the condition; that is whether this were due to an increase in the liquid, an abscess, or a new growth of bone. One might try bathing in warm water or bandaging the part if it is certain that the condition is simply joint water.

Inasmuch as heaves cannot be cured, one must look to the diet as the principal means of relief. Feed the bulk of the hay at night with grain as the principal part of the feed in the morning and at noon. Wet the hay in order to keep down the dust just before the animal is fed. Fowler's solution in teaspoonful doses twice daily for a period of ten days may be given to advantage, altho most of the emphasis should be placed on the question of the diet. Try, in addition, a handful of oil meal in the grain daily. A tablespoonful of raw linseed oil on the grain may be used instead of the linseed oil meal.

COW BREATHES HARD.—My cow has had a cough for nearly two months. She breathes hard when lying down. She will be fresh about April 15th. I stopped milking her as soon as I noticed cough for fear she may have consumption. Where could I get a state veterinarian to examine her for T.B.?—F. S. Drifting, Pa. Your suggestion for a tuberculin test is commendable. Have your veterinarian write to Harrisburg or you may write for such a test. Your letter may be sent to Dr. T. E. Munce, of Harrisburg. It is possible that the cow may have had pneumonia and some of the parts involved may have grown together. Difficult breathing during the last period of pregnancy is not at all uncommon. It is possible that the difficulty will be overcome after calving.

TECHNIQUE FOR SPAYING DOG.—Please give me complete detailed instructions for spaying a female dog. At what age should this be done?—F. E. S., Hyndman, Pa. You should consult your veterinarian on this point, as spaying is an operation requiring a knowledge of anatomy and surgical skill. It is best performed while the animal is under an anesthetic as it must be considered a "major" operation. A demonstration of the operation would be the only safe manner of getting this information.

Our Readers' Classified Advertising Department

A market place to buy or sell at little expense. Over 100,000 farm families read Pennsylvania Farmer every week. Rate 6 cents a word each for one, two or three consecutive weekly insertions; 5 cents a word each for four or more insertions. Count each number and initial and send cash with order. Orders, discontinuances or changes of copy must reach us by Wednesday of week preceding date of issue. All advertisements set in uniform style, no display type or illustrations. Poultry advertising may run here, but if displayed or illustrations used must run in display advertising columns at commercial advertising rate (65 cents per agate line). Livestock advertising not accepted in this department. Minimum, ten words.

The MAYTAG Sells Itself to FARM HOMES

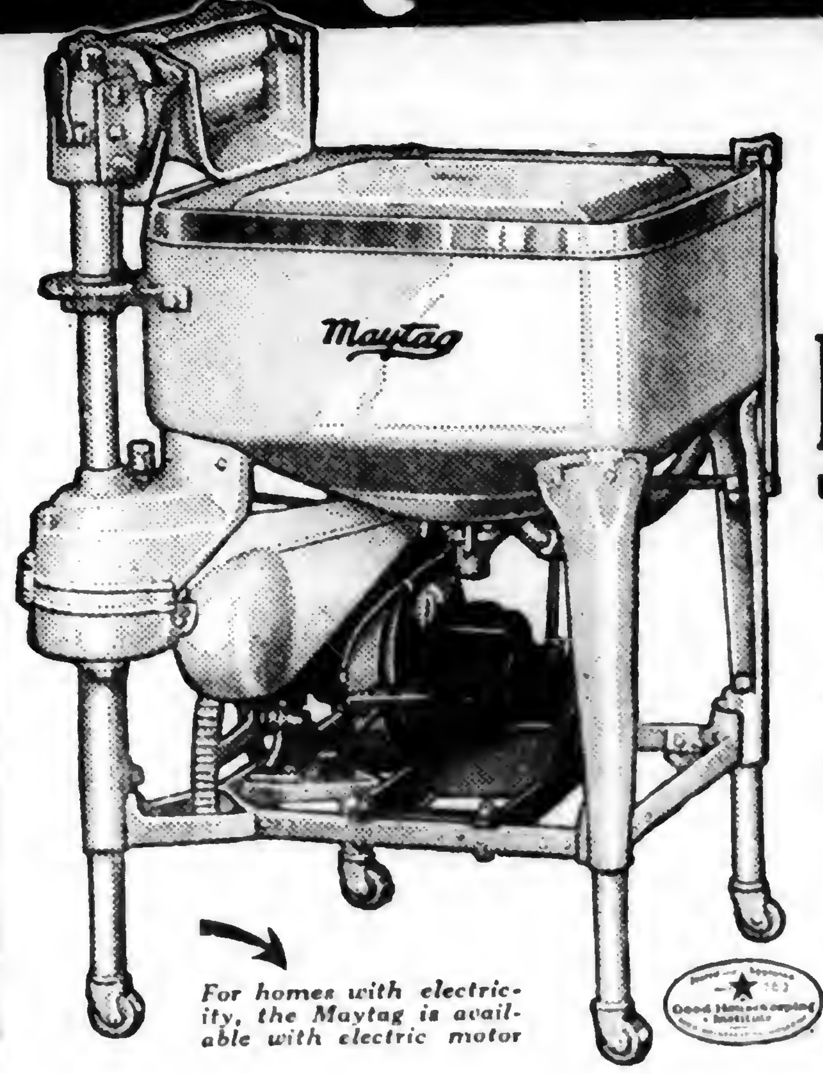
NOTHING but your own judgment, after you wash with a Maytag in your own home, need influence you to keep it. You risk nothing, pay nothing until the Maytag has sold itself to you by its faster, cleaner, more convenient washing.

If you have no electricity in your home, ask for a Maytag with the famous Maytag Gasoline Multi-Motor. It gives the Maytag its own in-built power plant, as simple, efficient and economical as an electric motor. If you have electricity, ask for the Maytag with electric motor.

The Maytag's seamless, heat-retaining, cast-aluminum tub holds four gallons more than ordinary washers. Washes clothes cleaner in half the usual time, and without hand-rubbing anything—a complete washing in an hour.

Its wringer automatically adjusts the tension for wringing a thin handkerchief or a bulky blanket and wrings both line dry. The legs are adjustable to suit your height.

THE MAYTAG CO., *Newton, Iowa*
Eastern Branch,
851-54 N. Broad Street, PHILADELPHIA, PA.
Deferred Payments You'll Never Miss



For homes with electricity, the Maytag is available with electric motor

FREE TRIAL

Write or telephone for a Maytag, either electric or gasoline powered. Do your next washing with it. You will discover many delightful, helpful advantages. If it doesn't sell itself, don't keep it.

Announcing the Master Farmer Awards—Page 3.

Beauty comes to your house with paint. Beauty *stays* with lead paint made of Dutch Boy white-lead.

WHAT to do and how to do it? These questions puzzle many house-owners when the time comes to redecorate the home, either inside or out. For the answer to such questions, send for the "Handbook on Painting" and the booklet (in color) "Decorating the Home." With the booklets you will receive a decorators' data form to use if you want our Department of Decoration to work up a special color scheme for your particular house.

DUTCH BOY WHITE-LEAD

"Don't kill 'em Chase 'em"

Crows pulled *one hill*, and said: "Good night!" writes C. H. Barrett, Thetford Center, Vt.

Hundreds of corn-growers write us letters like these: "Had no corn pulled that I could discover."—F. G. Vincent, W. Tisbury, Mass.

"Crows nor nothing seem to bother it" —M. Crockwell, Red Hook, N. Y.

"It does the job"—L. Varnum, Alexander, Me.

"One kernel was pulled by crows. None were eaten. Yet crows were in fields all the time catching bugs," says M. S. Taite, Turnhannock, Pa.

"The crows pulled only one hill of my corn"—L. Martin, Hillsboro, N. H.

"Saw but one hill taken"—A. J. Hicks, New Carlisle, Ind.

"Did not pull one hill in 11½ acres of corn"—G. Post, Dover, Mass.

Stanley's Crow Repellent

is what they are talking about. And we can give you scores and scores of more letters all saying the same thing. Why do you worry about your corn crop, when for $1.00 you can save from 1 to 2 acres of corn for every bushel of seed you plant? "Money Back" guarantee,—you to be the only judge. Large can, enough for 2 bu. of seed corn (8 to 10 acres) $1.50. Half sized can, $1.00. If your hardware, drug, or seed store doesn't have it in stock, order direct. Address Cedar Hill Formulae Co., Box 500-R, New Britain, Conn.

Keep Out. This field is mined. Brothers of Mr Crow
And this used to be our best Cornfield too
Boo-hoo hoo
Seed coated with Stanley's Crow Repellent

Why I Use Commercial Fertilizers

Letters From Readers Who Have Proved To Themselves That Proper Fertilization Pays

"Because It Pays"

First Prize Letter

I USE commercial fertilizer because it pays.

I know it pays because I have taken the trouble to find out just what it does do, and here is how I learned.

In 1924 I bought a run-down farm of twelve acres, three miles east of Lancaster, Pa. My neighbors told me I was crazy, that no good crop had been grown on the land for years and that none could be made to grow there.

I got possession April 1 and the best I could do that season was to get a neighbor with a tractor to plow four acres which I put into tobacco. I had no manure at all and following the advice of a fertilizer man I carried out the following program.

The four acres were surveyed and marked off into nine plots. My fertilizer was mixed as follows:

550 pounds nitrate of soda
1000 pounds acid phosphate
200 pounds sulphate of potash

making a total of 1750 pounds, equivalent to one ton of 5-8-5 fertilizer. The nine plots were fertilized as shown in the table which also shows the results obtained.

	Pounds per acre
Plot 1—⅛ acre not fertilized, produced	976
Plot 2—⅛ acre fertilized with 200 lbs. nitrate of soda per acre produced	1280
Plot 3—¼ acre fertilized with 875 lbs. of my mixture (this plot was storm-damaged and not harvested)	
Plot 4—¼ acre fertilized with 875 lbs. of my mixture, and 200 lbs. nitrate of soda per acre produced	1426
Plot 5—1 acre fertilized with 875 lbs. of my mixture per acre and 200 lbs. of nitrate of soda in 2 applications produced.	1524
Plot 6—¾ acre fertilized with 1312 lbs. of mixture per acre produced....	1123
Plot 7—¾ acre fertilized with 1312 lbs. of my mixture and 200 lbs. of nitrate of soda produced	1308
Plots 8 & 9—1 acre fertilized with 1750 lbs. of my mixture and 200 lbs. of nitrate of soda per acre produced	2108

These four acres were planted to wheat in October, 1924.

Two 1-40 acre plots were marked off from each of the original nine plots for checks, and the balance of the field, 3 22-40 acres which was topdressed in March, 1925, with nitrate of soda 100 lbs. to the acre, produced at harvest 188½ bushels of wheat or 53 1-10 bushels per acre.

The straw amounted to 11 tons worth $132 and with wheat at $1.50 per bushel, made a total yield valued at $116.75 per acre.

In 1925 four more acres were plowed and put into tobacco, fertilized with the same mixture about the same as in 1924. This year, again, the best results came from the largest amount of fertilizer and the high yield was 2300 pounds per acre.

In 1926 my crop was even better and the yield equally large.

In 1925 and 1926 my tobacco took prizes in the County Contest and also at the State Exhibit in Harrisburg.

In 1925 the price of tobacco was low so I packed my tobacco and a month ago sold it for twenty cents a pound. The same company has bought my 1926 tobacco at seventeen cents a pound—the very top of the market for the year, and pronounced it the finest crop they had seen in the county.

My check plots show me each year just what the fertilizer I use does to the crops and my figures show me that the biggest profit I get from anything on my farm is the profit I make by turning chemical fertilizers into crops.

My fertilizer costs me about $30.00 a ton and produces about 1100 pounds of tobacco per acre, more than where no fertilizer is used, making a return of $187.00 for each $30.00 worth of fertilizer used.

No one in my vicinity now says that Weaver is crazy or that the twelve acres are unproductive and this explains WHY I USE COMMERCIAL FERTILIZER.—J. F. Weaver.

The Winners

SOME very interesting letters were received in response to our request for letters from readers who have profited by the use of commercial fertilizers. Altho it usually is hard to measure the benefits resulting from the application of fertilizer, this contest has shown that Pennsylvania Farmer readers are using commercial fertilizer because they know it pays. They haven't taken someone's word that it pays,—they have found out for themselves.

The judges of the contest letters have made the following awards:

First Prize
J. F. Weaver,
Lancaster County, Pa.

Second Prize
Willis M. Hunsberger,
Bucks County, Pa.

Third Prize
E. R. Green,
Harford County, Md.

It is planned to publish letters written by some of the other contestants in future issues.—The Editors.

More Profit in Wheat

Second Prize Letter

I HAVE increased my profit nine dollars an acre on my wheat crop by using more fertilizer and growing larger yields per acre.

I worked for my father seven years previous to 1919, running his farm almost as tho it was my own. We grew good crops, always keeping a large dairy. In fact, we have not sold any crops, with the exception of some timothy hay each year, for the last 25 years, manufacturing most of our crops thru cattle, hogs and chickens, thus holding the fertility of our soil.

During the seven years we did not use much fertilizer (150 pounds per acre to the corn and 200 pounds per acre to the rye). We did not grow wheat as we have a heavy clay soil and could not grow it successfully with that amount of fertilizer. We grew an average of about 22 bushels of rye per acre.

In 1919 I rented this old homestead farm of 105 acres which has been in our family since 1798.

The first few years I grew about five acres of wheat each year, mere-

Who Will Be The Master Farmers?

nouncing a Plan to Give Merited Recognition to Twelve of the Outstanding Farmers of Pennsylvania, New Jersey, Delaware and Maryland

E country knows well its great men in industry, science, finance and literature. Their are household words because their achieve- have been heralded from the housetops. ere is just as large a proportion of great among farmers, but they have not been pub- recognized. There are many farmers who e recognition for their ability as farmers, eir influence as citizens, for the homes they developed and for the families they have

ost every community has one re farmers who stand out and known as "leading farmers." gers recognize them as they y. Their neighbors know them so often accept their ability as tter of course. It is time to up and publicly recognize the r Farmers. The whole business ming would be helped and popd by doing it.

id-West Honors Farmers

eral mid-western states have to look for and honor their nding farmers. They have it interesting and helpful. We just as good farmers in the East ywhere. Let us look them up. show the rest of the world there are truly great men fol- g the plow. They should be ed the degree of MASTER ER.

s year Pennsylvania Farmer the movement to seek out and recognition to the outstanding rs of its field by establishing Pennsylvania Farmer Master r Awards. With the assistance al agricultural leaders a score has been drawn up for use in ring the accomplishments of rs in Pennsylvania Farmer ter- . This score card is similar at used by the leading farm s of Illinois, Michigan, Ohio, , Nebraska and other states Master Farmer awards will de this year.

this work we ask the help of reader of this paper. We offer portunity to assist in promot- worth while project. It calls little sacrifice of time and for ying aside of all jealousy and ness. The motto must be, "Let best men win."

Be Members of National Club

is planned this year to select e Master Farmers,—nine from ylvania, two from New Jersey one from Delaware and Mary- combined. Next year another of Master Farmers will be se- . Each man who is given the er Farmer Award will auto- ally become a member of the sed National Master Farmers' to be composed of the Master ers of all states.

ch Master Farmer selected un- the auspices of Pennsylvania er will be given a beautiful l of solid gold. The medals will warded and the degree of Mas- armer will be conferred at a banquet to be held in Harrisburg during the Farm Products Show next January. To this banquet will be invited leading business men, agricultural leaders and other representative citizens so that the importance of the movement and the names of the winners will be assured of the recognition the occasion demands.

This is the plan to be followed in choosing the men to receive the Degree of Master Farmer and the Master Farmer Medal:

Candidates for the award may be nominated by their neighbors, by county agents, extension specialists, bankers, storekeepers, or even by their wives,—in other words, by anyone who will take the trouble to fill out the score card carefully.

Any farmer for whom a score card is properly filled out and sent in will be considered a candidate for the award. Extra copies of the score card and directions for scoring may be obtained from the Master Farmer Editor.

All properly nominated candidates will later be scored independently by members of Pennsylvania Farmer staff or their representatives. So far as possible the farms of men nominated will be visited personally by the Editors and by the Judges.

Pennsylvania Farmer's Score Card for Farmers

THIS score card will be used in selecting the 12 men on whom the degree of Master Farmer will be conferred by Pennsylvania Farmer. It also will be valuable in assisting farmers generally to measure their own accomplishments.

Judges to Be Announced Later

The final selection of the twelve farmers to receive the award will be made by the Board of Judges, the members of which will be announced in a later issue. The Board will consist of two or more well-known agricultural leaders and one member of the Pennsylvania Farmer staff.

All information about candidates which is used in filling out the score cards will be kept confidential. The names of candidates will not be published, except those who finally win the Award.

The following rules should be observed in nominating candidates for the Master Farmer Award:

Any bona fide farmer living in Pennsylvania, New Jersey, Delaware or Maryland is eligible.

Nominations may be made by anyone not directly connected with the staff of Pennsylvania Farmer.

To nominate a candidate for the award it is necessary only to fill out and send in the score card appearing on this page.

Nominations (i. e. score cards properly filled out and signed) should be mailed before July 15th.

All score cards and correspondence about the Master Farmer Awards should be addressed to the MASTER FARMER EDITOR, PENNSYLVANIA FARMER, 261 SOUTH THIRD STREET, PHILADELPHIA, PA.

Read the score card.

Make a mental canvass of your neighbors and acquaintances. If you find one you think will measure up well, fill out the score card and send it in.

Directions for Scoring

I. Operation of Farm—A Total of 290 Points.

1. Maintenance of Soil Fertility—60 Points.

Drainage—On soils that lack natural drainage, suitable ditches or tile drainage systems should be provided. Where drains have not been provided on such land, deduct up to 10 points.

Manure—If all manure is carefully saved and is hauled to the field with the least possible loss, make no deductions under this head. If manure is located so as to leach badly, deduct 15 points. If half or more of the manure is left in yards or piles, during the summer, deduct 8 points; other cuts in proportion.

Lime—If soil is too acid to secure a good stand of legumes three years out of four, deduct 15 points where no lime has been applied. If applied in adequate amounts make no deductions. If less than this amount, cut in proportion.

OUR JOB is to serve our readers. Whenever you are puzzled write to us and we will help you if we can.

"The only contented people ace those who realize how full the world is of things that they can do nothing about."

The Fertilizer Contest Letters

A FEW weeks ago we invited our readers to tell of their experience in using fertilizers. The response has been generous and the letters make interesting reading. In every instance the writer told of better crops and increased profits from the intelligent use of commercial plant food. The judging of these letters has been a somewhat difficult task, but the awards were finally placed as will be seen on page two of this issue. All these writers give concrete results and prove their cases by figures resulting from careful records. They prove the claims of Pennsylvania Farmer that more profits may be made by farming fewer acres if proper equipment and adequate fertility are supplied.

Will Try to Agree

THE news contained in our Washington letter on the next page suggests that it may be possible for the organized farmers to present a solid front to Congress on the matter of farm legislation. All too frequently farmers' organizations, at least the men who are supposed to represent them, have held opposite views on important bills and this gave congressmen an excellent excuse for avoiding or straddling the issues, thus proving the truth of the old saying that a house divided against itself shall fall. It is but natural, as with any other class of people, that there should be radicals and conservatives among farmers. But if they can agree upon a prearranged program it is not only likely to be safer and saner, but also more certain of accomplishment.

Buying Apples by Name

APPLE growers would do well to devise some method by which consumers could become acquainted with varietal names. At present very few town and city buyers know anything about the names of the fruit they buy. They are scarcely ever called for by name. We stopped at a city fruit stand the other day and asked for a Spitzenburg apple. The vendor was pleased, since he was a real lover of fruit and knew practically every kind of apple by name. But he said that not one buyer in a hundred called for them by name, or knew anything about names. Size and color are too often the deciding factors when they are seen at all. Yet, so well have manufacturers advertised their products, buyers nearly always specify the name of other foods even when ordering over the telephone. The public seems slow to learn the names of varieties in spite of the fact that buying by appearances is often deceiving. Doctor Funk used to say that "a little Italian spit and an old woolen sock would make a Ben Davis look as good as a Stayman."

A Joke on Somebody

IT WOULD seem that the people of New Jersey, or some of them at least, are tired of having the legislature meet every year, and also of having a Democratic governor and a Republican legislature. New Jersey is nominally Republican in politics, but certain exigencies in politics have brought about the election of a Democratic governor several times. Now, somebody with a partially brilliant mind conceived the idea of holding the election for governor every four years, coincident with the presidential election. Since the state always, or almost always, goes Republican the chances for electing a Republican governor would probably be greater. Accordingly, a bill was drawn, read, passed and the legislature adjourned. In addition to extending the term of the governor to four years, the bill also sought to set the time of holding sessions of the legislature at once in two years instead of every year as now. But here is where the joke comes in. After it is all ready to submit to the people, some crape hanger with a better education discovers that the amendment reads BIANNUAL sessions, and that biannual does not mean BIENNIAL. Instead of being relieved of the burden of annual sessions of the legislature, the people of the state would have on their hands a legislature meeting TWICE a year! Thus the politics of the states is all balled up by the misuse of a couple of innocent little vowels.

Pennsylvania Forests Grow

IT IS little more than a generation since the development of state forests in Pennsylvania was seriously begun. However, it is longer than that since Doctor Rothrock began calling attention to the necessity for reestablishing the fast disappearing forests of the state. But for a long time he was heard as a "voice crying in the wilderness," except that there was no longer any wilderness to cry in. People awake slowly to the necessity of providing for future needs. Immediate necessities are held so closely to the eye that the future is obscured. A few prophetic enthusiasts, however, kept pounding away until the public was convinced that something should be done and it consented to the establishment of a forestry department. This department has become one of the best in the United States and Pennsylvania is on the way to being the possessor of forest lands which may approach the state's primitive glory. Last year, over 16,000,000 trees were planted. We now have 1,132,444 acres in state-owned forest land, besides a considerable area of private plantings. Governor Fisher who, like the previous governor, is a strong believer in tree planting recently wrote: "Almost half of the land area of Pennsylvania is better suited to the growing of forest trees than anything else. There are about 13,000,000 acres of land in the state upon which the best crop is the tree crop."

Honesty in Advertising

THE report of the Better Busines of New York contains the state the modern method of telling the tr nothing but the truth in advertising ing results in many ways. The p learning to have confidence in printed ments in advertising because it finds the truth. Leading business men and facturers have for years been advi practicing this principle and it is g to note that all reputable firms are vinced that honesty is the best policy report also states that newspapers are than ever before, exercise a rigid over the kind of advertising admi their columns. True, there are still lishers who seemingly accept almost thing from the worst quack medicines leading money-making schemes. the publishers of such papers are sell their souls for a mess of po their papers have no standing with telligent public.

Big Increases in Stocks and

THE value of the securities listed New York Stock Exchange more than five and one-half billions of in 1926, according to the annual repo Exchange. The total value of the list and bonds was over seventy-five and billions of dollars. Most of the in due to the higher market value of the ties, altho over one and one-half bil in new stocks. We give these figures the relation between financial and business, and the business of farming present time. Coincident with this inal rise in security values, the value property has gone down several cording to government figures. The quoted could be duplicated in a sm in most communities. We know of stance in a small country town wh shares of the local bank (par val were offered to settle an estate. hundred dollars' worth of stock bro $1700.

Editorial Sidelights

LAST fall in Columbus, Ohio, we wer at the banquet where the Master of Ohio received their awards. It was exception, the most inspiring meeting we ever attended.

The men who received the degree Farmer were real dirt farmers, but wh they were! Some of them had started with no assets except their own ability loyalty of their wives. As the years finally started for themselves. They their land, bred better livestock, crops, educated their children and farms the kind of places anyone could to call home.

These Master Farmers had made their achievements weren't measured amount of money they had hoarded won the award because they rep very finest type of American citizenship ured by the Master Farmer Score Card lieve that the score card published of this issue will reveal a group of equal calibre in our own territory.

HERB the Handy Man makes his this week on Page 27. We trust that with us for some time with his weekly of sense and nonsense. His sense is in spite of his nonsense. The direction he hands out may be relied upon.

PLAN CONFERENCE

e Farm Organizations Will Unite on Legislation Program—Need Millions for Flood Relief.

Washington, D. C.

CONFERENCE of the executive heads of the National Grange, onal Farmers' Union and the ican Farm Bureau Federation be held in Washington in September or October, the object of h is the development of a uniagricultural legislative program. are the national dues-paying organizations that voice the ment of organized agriculture. ther they cover practically the country. They represent a bership of between 2,000,000 1,000,000 farmers. It is pro that a committee of three, repting the three farm organiza be selected to attend the nal political conventions, and see the farming business receives proper share of consideration in platforms of the two major parties figures furnish evidence that an unexpectedly large proportion of the canned tomatoes consumed in the United States are shipped in from foreign countries.

Loan Banks Lowered Interest

e benefits that have come from Federal Farm Loan system are limited to the low rates of intero farmers afforded by the Feder d banks and Joint Stock Land A member of the Farm Loan points out that the successful tioning of the Farm Loan syshas caused other great rural agencies to lower their interrates. In fact, it has brought a general reduction in interest, means vast savings not only rmers but to all groups of citi

kman Calls on Coolidge

visit to the White House was tly made by Fred Brenckman, National Grange, and Chester Gray, of the American Farm n Federation, for the purpose mmending the reappointment . S. Hill, of South Dakota, to United States Shipping Board to nt the agricultural interests. President gave no indication as decision in the matter, but the organizations feel that Mr. is the right man for the place.

Estate Sharks in Trouble

fraud order has been issued by Post Office Department against lorida Truck Farmers' Develop Company and Alford Realty any. It is claimed that truck and real estate lots were sold ese firms on the installment but no deeds have been given rchasers. The properties are ented as being high and dry, post office inspectors found the to be low and partly under r.

n Still Carrying Water

survey conducted by the General ration of Women's Clubs shows while farmers are purchasing automobiles and radio outfits very many have installed tele s in their homes, they are slow quire modern equipment, de d to save labor for the house

its campaign for better-equip homes, the federation addressed s to 40,000 farm women in 46 The replies indicate that than 20,000 of the 40,000 women are carrying water for hold needs from wells or gs a considerable distance from kitchen. Less than one-third running or pumped water at en sinks.

toes Imported from Italy

account of the overproduction omatoes and prevailing low s for canned goods, it hardly possible that canned tomatoes be imported into the United at a profit. Nevertheless, in there were 82,125,088 pounds nned tomatoes and 18,057,605 ds of tomato paste imported into country from Italy which is the canned tomato exporting coun The total production of canned toes in the United States last was 482,200,000 pounds. These figures furnish evidence that an unexpectedly large proportion of the canned tomatoes consumed in the United States are shipped in from foreign countries.

Need Millions for Flooded Farmers

More than $2,000,000 will be needed for agricultural relief for farmers in the flooded areas of the Mississippi Valley, according to Dr. C. W. Warburton, director of extension work, United States Department of Agriculture, who has been assigned to be agricultural adviser to Red Cross officials in relief work. The department is investigating the sources of seed supply for the flood-stricken states. Sufficient money has already been subscribed to take care of seed and feed requirements of farmers in Missouri and northeastern Arkansas.—E. E. R.

FISHER MOVES SLOWLY

Gradual Changes Made in Personnel of State Departments—Road Repair Work Begun.

Harrisburg, Pa.

ALTHO for weeks reports have been printed about impending shake-ups and makings-over in Capitol Hill departmental offices the new state administration appears to be as cautious in such matters as it was in legislation. It would appear that changes in personnel of the governmental force will be made gradually with the least possible disturbance of business and a minimum of fuss. The retirements of William H. Connell from the deputyship in the Highway Department and C. H. Hadley from the Bureau of Plant Industy are examples. There will probably be some protests, but it was only four, eight and twelve years ago that the same thing went on only with more moving at one time. The new plan is evidently intended to change without much effect on business, but to change in many cases.

Working on New Road Plans

State Highway Department officials are planning to begin on the preliminaries to what may be termed the new administration program. Thus far the contracts let have been very largely based upon plans and specifications worked out in the closing days of the last administration or what might be termed projected business. Now the Department is estimating, as the amount of money available is being made known, on work of its own selection. Such spring work as oiling, repairs, maintenance and the like is being pushed as vigorously as weather conditions permit. The administration is also planning to work out many petitions for state aid and to get the reward system into new shape.

Campaigns Going Along

Secretary of Agriculture Jordan has announced his general satisfaction with the progress of the campaigns against the pests, especially the manner in which public sentiment has responded to the call for cooperation. Both Doctor Jordan and Deputy Bressler have been devoting much time to personal supervision of the work against the corn borer, which is said at the Capitol to be the most extensive effort ever made by the state. It calls for the widest measure of cooperation between the federal government on one hand and the farmers on the other.

Hadley Going to Ohio

Dr. Hadley goes to Toledo where he will have charge of federal government work in the Ohio district against the borer. He came to Pennsylvania from the federal service, having been taken from the leadership of the Japanese beetle fight in the Philadelphia district to succeed Dr. J. G. Sanders. Dr. Hadley has been an active official and a capable organizer.

The Veto Stack Grows

Governor Fisher has shown a disposition to veto bills at a rate which has surprised some people here. Some legislators may be made uncomfortable by the veto messages for they point out weaknesses of measures in a rather bark-peeling manner. There are predictions the veto stack may be unusually large.—T. C.

GARDENERS MEET

County Agents Address Annual Banquet of Jersey Truck Growers—New Chick Disease Reported.

Trenton, N. J.

THE Fourteenth Annual Banquet of the North Jersey Market Gardeners' Association in Newark on April 30 brought out over 800 members and their friends. The association comprises leading market gardeners in the six northern New Jersey counties. Several speakers of state-wide reputation addressed the gathering, including A. E. Mercker, chief of the State Bureau of Markets. The county agents from Passaic, Morris and Essex Counties also addressed the gathering.

New Poultry Disease Appears

Several cases of an undetermined poultry affliction have been reported within the last two weeks at the State College of Agriculture. The exact trouble is unidentified for the moment and blood tests and a diagnosis of the organs of the chickens affected have failed to connect it with any of the common chick troubles. It is characterized by a drying up of the mouth and esophagus, a gasping for breath and sudden death. The State College has asked poultrymen and farmers thruout the state to report this trouble among their chicks as soon as noticed, so that early steps may be taken for its isolation and identification.

Canhouse Situation Uncertain

Up to early May the canhouse situation in south New Jersey tomato areas remained an indefinite factor. The acreage for this year is still a very uncertain factor. Canners report heavy supplies on hand and hesitancy on what to pack. There is decided reluctance on the part of canners to contract for a big acreage. Several years ago most of the local canners sold their packs before they contracted with the farmers, whereas the wholesalers' plan of buying in the last few years is to fill only immediate needs and buy at the last minute

Alfalfa Badly Damaged

Last winter was so severe on alfalfa located on the heavier soils in central New Jersey counties, notably in Hunterdon County, that the county agent's office is making substitute recommendations. Both new seedlings and old stands on the heavier land have been badly heaved. The farm bureau office is encouraging the farmers to sow peas and oats as soon as possible. This combination will allow the farmers to get their hay from the land before the usual August sowing of alfalfa or grass and clover. For late May sowing the recommendation is for soy beans when the hay is to be used for milk cow feeding.—W. H. B.

TRY TO HOLD MARKET

Dairymen Claim Cold Storage Cream and Increased Price Would Assure Adequate Milk Supply.

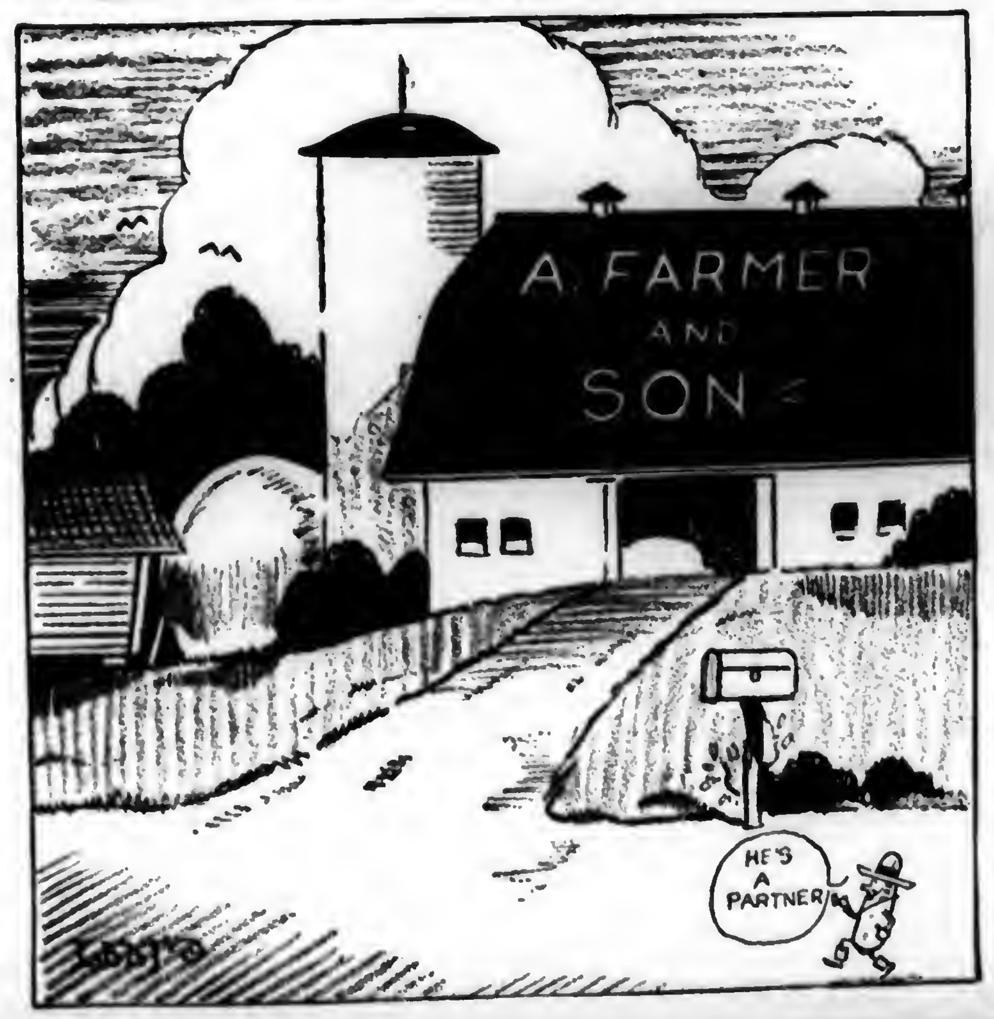
Ithaca, N. Y.

TWENTY-FIVE counties have completed the referendum on milk marketing problems. The referendum was designed to get the opinions of 150,000 dairymen who supply the milk needs of New York City. The industry is greatly disturbed over the announcement that the Board of Health of New York City will permit western milk to enter its markets next fall. A nine-county mass meeting was held in the northern part of the state a few days ago and resolutions were passed asking for an increased price next fall, and assuring the city that this inducement would result in an adequate milk supply. Coupled with last year's successful experiment in holding over in cold storage frozen cream from the surplus season a very slight increase in price, to make it worth while to feed for greater production, is thought to be the best solution, from the eastern farmer's point of view, and from the standpoint of eastern business generally.

Milk Prices Slightly Lower

April saw slight cuts in the secondary classes of milk, and May sees still further cuts in these classes. The price of Class 1 milk will continue as in April, and little change is expected thru the summer. Class 1 milk will bring $2.95 on a 3.5 per cent butterfat basis; Class 2-A will bring $2.31, and Class 2-B, $2.56; Class 3, or milk made into evaporated milk, milk chocolate, milk powder or hard cheeses, will bring $2.30 per hundred pounds. A new tank car service is being installed by the Dairymen's League for 650 farmers of Clinton and Essex Counties.—F.

WHY SOME BOYS DON'T LEAVE THE FARM



TEXT CUT OFF

Car owners expect more from Kellys—and they get it!

MORE people are buying Kelly-Springfield tires this year than in any year during the company's history.

The reason is not far to seek. The tires Kelly is building today are by far the best that ever have come out of the Kelly factory. This statement is not mere talk; it is an undeniable fact, as thousands of tire buyers can testify.

Car owners have learned to expect more from Kellys, and they are getting it—this year to an even greater extent than ever before.

Yet Kelly-Springfields don't cost any more than most other tires.

"Kelly dealers everywhere—there must be one in your town"

NESHAMINY GARDENS

WHERE AN EDITOR WORKS AND THINKS.

BY R. P. KESTER

GIVING advice is one of the best and most frequent things I do. Ever since the little tots attending my first term of school began asking me how to do sums, down to the present time when men ask me when to sell their potatoes and women want to know how to get more "pin money" from their husbands, people ask me how to solve their problems. Of course, answers are always freely and cheerfully furnished, but I seldom learn whether the advice is followed or not, because the people I know best don't often ask for any. Another proof of the adage concerning prophets.

◆ ◆ ◆

HERE is a late question which will serve as a sample: A woman writes: "Shall we buy a second-hand organ and pay cash and have the neighbors throw it up to our children every day that we are stingy, or buy a piano on monthly payments and take the chance of having the money to meet the payments; or, should we buy neither until we have the money to pay cash for a piano? I think there are a lot of parents who are in the same boat concerning something or other and who would be glad to have advice. We own our own home but have little past us and must depend upon days' work for our income. Only one of our small children is old enough to take music lessons, but other children are twitting him about us being too stingy to buy a piano."

◆ ◆ ◆

IF ALL questions were so easy to answer as this I would have a snap. Of course, the parents should use their own judgment which seems to be good. But they are too sensitive to what the neighbors may say. People who make mean insinuations in matters of this kind are not worth troubling about. Sensible neighbors will respect good judgment in business matters, while the gossiping kind will be just as likely to talk about their neighbors' debts as their stinginess. There is altogether too much mortgaging of the futur please ourselves or to "keep up the Joneses." I hope this wo will have nerve enough to snap fingers in the face of gossi neighbors if necessary.

◆ ◆ ◆

WE DUG OUT all the black berry plants we planted two ago. They were almost 100 per afflicted with crown gall and racnose. The plants showed it they came from the nursery. We little hopes of success from the because of this, and they never done much good. It will be too ba this berry must join the ranks of dodo and the dinosaur, but it almost impossible to get disease-f black raspberry plants. If any can direct me to such a place he earn my lifelong gratitude.

◆ ◆ ◆

WELL, we actually are started in the chicken busines Neshaminy Gardens at last. built a poultry house just in to receive the 500 baby chicks. save extra expense this year, built a house 16x20 feet to be now as a brooder house, and as part of a laying house. We installed a coal burning brooder a canopy 60 inches in diamete commercial chick feed will be to start them. Most of them w 72 hours old when they get first feed. I shall be glad to te exact truth from time to tim notes reporting our progress, or bad.

◆ ◆ ◆

I MADE a trip across the Pittsburgh week before last, tend a meeting of the Pit Dairy Council. I made the t daytime because I wanted to country on the other side of Allegheny Mountains since I not traveled that way by for some time. The freeze of week before evidently did able damage to the early Although it was the last we April little farm work was from the car window.

The Cheerful Plowman

A Helpful Old Couple

A HELPFUL old couple, bright-minded and supple, are Mr. and M McGraw; they're always so shining, they never are whining, th never are finding a flaw! He's eighty or better, but still a go-gette whitened but happy old gent; she's seventy-seven, yet brimming wi leaven, and never a particle bent!

A group of us neighbors took time from our labors, on Sat evening it was, we planned for a meeting to take a big greeting blessing to both the McGraws! We took them a present, it alway pleasant to take a small token you know, and I was selected, conscri ed, elected, to talk for a moment or so. Said I, "It's an honor to as the donor of tokens of earnest esteem, to people so snappy, so cheer ful, so happy, so filled with a sunshiny gleam! Your neighbors, notice, Pete, Jimmie and Otis, Tom, Henry and Billy and Si, Frank, Cha ley and Larry, Will, Samuel and Harry, Bartholomew, Kenneth and have come to remind you how useful we find you in this little valley ours; we've come with hearts swelling desirous of telling how you're deserving of flowers! You folks may not know it, but this— bestow it—is but a small token, indeed, to give to you neighbors, lighten our labors by every example and deed! You've done more farming by cheering and charming the neighbors who live in the than all the other forces we meet in our courses,—and I am not telli a tale! You've met all the sorrows, todays and tomorrows, and them with smiles, I would say, with spirits unbroken,—so here token, from all of your neighbors today!"—J. Edw. Tufft.

Friendly Talks

By EDGAR L. VINCENT

HE sun keeps right on shining. "I don't see why you keep on eeping that woman's walk. She erer seems to appreciate it, does he? Did she ever say 'I thank you' fter you get the job done?"

The old man to whom these words ere spoken straightened up and swered with a smile, "Well, maybe e will sometime. Anyhow, the always keeps on shining, whether folks say thank you or not."

It does seem sometimes as if there quite a lot of folks in this world t have a pretty small sense of reciation for kindnesses done m. They go on from day to day pting favors, many of them from Great Giver Himself, and very ly would anybody know that it ant much to them. In fact, you d I meet many who appear to nk that they are entitled to all e good things this earth has to tow, without their doing anying to make them worthy of them. e world owes me a living, and going to have it," is one of the yings that come straight from an grateful heart. It is never true, matter who says it. The earth es nobody anything; you and I are debtors, always and everywhere.

But the Man Rode Alone

And it would not be strange if ple that are always ready to do good turn should get tired of it r a while and stop sweeping the ks of their neighbors. Once when as a boy I was walking two miles school every day in the morning back at night. I used to see man traveling over the same route th a horse and buggy all alone in wide seat; but he never asked to get in and ride with him, and was too proud to ask for a lift the long road. But one day he stop and take me in, and he e then about having seen me dging up and down that road, he thought if a thing was worth ing, it was worth asking for. how that hurt me more than ever had to walk the two miles a hard day at school, and I e up my mind then I never would that man for a ride.

The Sun Keeps on Shining

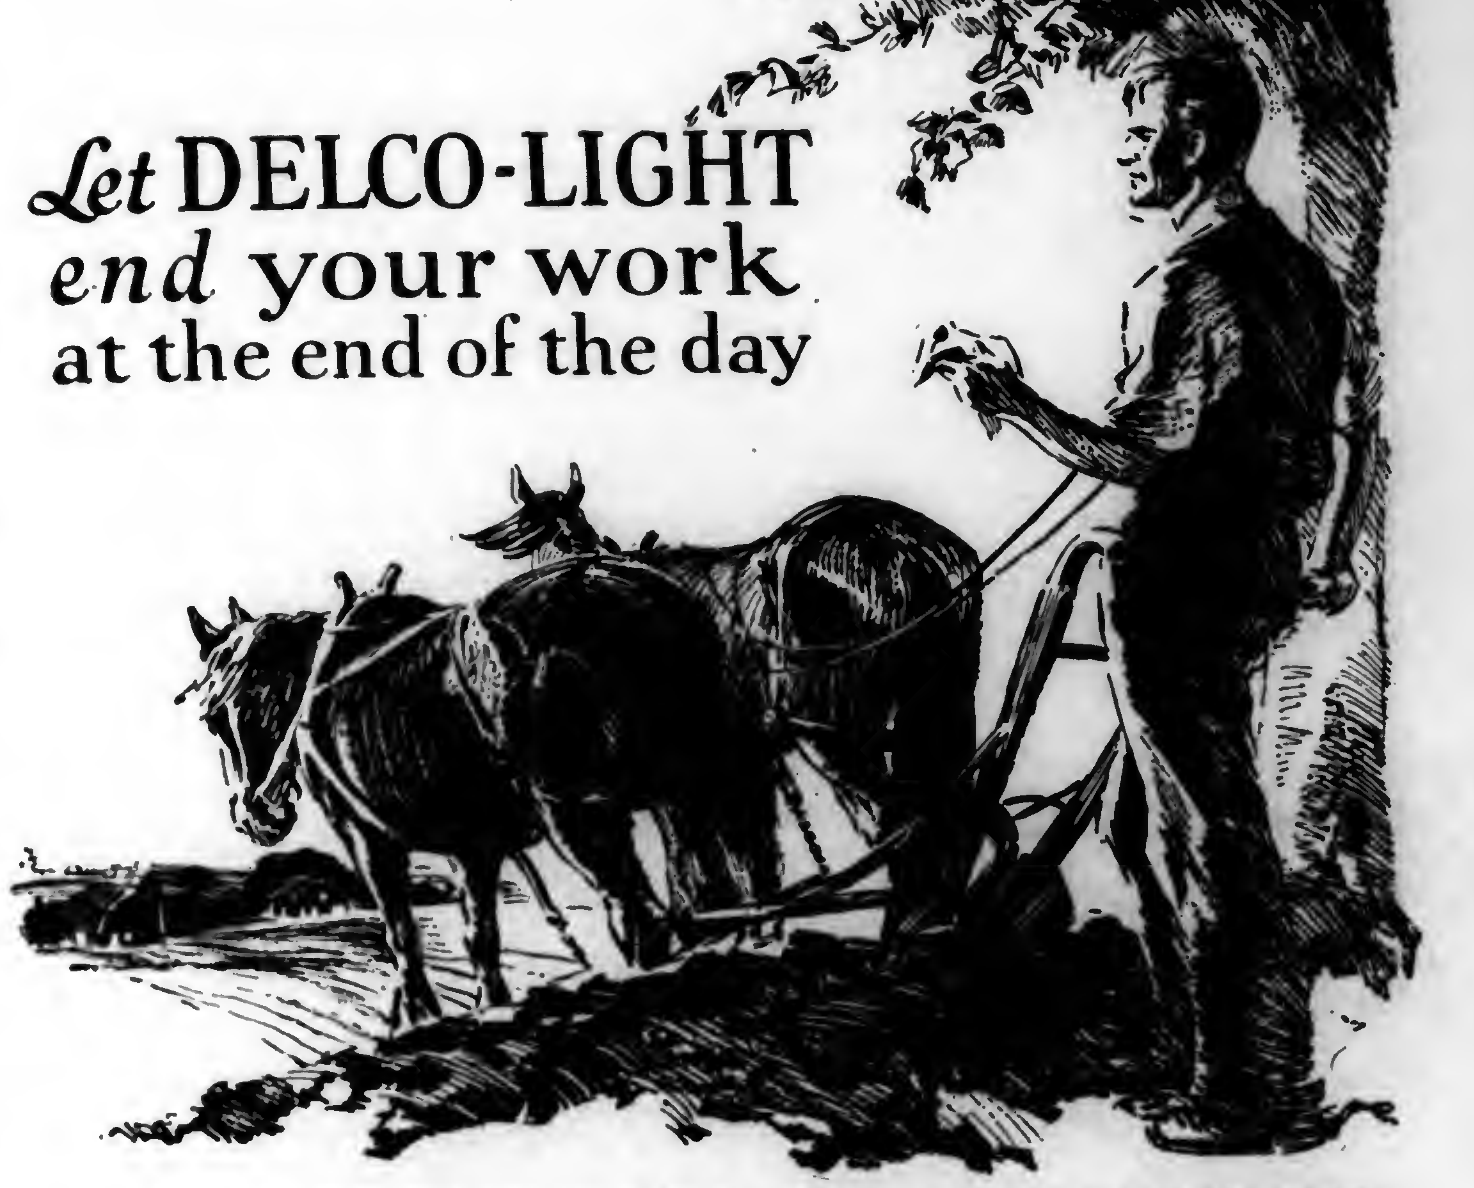
ut after all, it is a good thing remember the kindly man's re k when he was sweeping the k and think, "The sun keeps t on shining." What would it n if that were not so? Suppose a moment that when nobody ap elates the sunshine, or even nks it is shining at all, the good planet should go on a strike and , "Nobody cares. Guess I'll quit pell and see how they like it."

Well, that would mean trouble. corn would stop growing; the dows would lose their green; ers would fade; it would rain no e; this world would be a desert less time than we can imagine.

Right straight on the sun keeps ing, thru good report and evil report, and the time es when we do lift up our heads say, "You blessed old sun, you the best friend men have in this ld. We do thank you for every g you are doing for us, and we try to show it hereafter."

And I think it is that way with who often fail to show by t they do or say that they know thing fine is being done for . But by and by they come back their better selves and they show a thousand ways that their hearts all right and working every min of the day!

So let's keep on shining. It will p to make the world a better to live in.



Let **DELCO-LIGHT** *end* **your work at the end of the day**

NOW, this spring—when every hour of daylight counts—when your whole year's profit depends on early planting—when you are working against time and weather—that's when you need the help of Delco-Light.

Today, as you come to the end of the last furrow—as you pause for a moment to look with satisfaction on what you have done and think of the work yet to do—think what it would mean to have Delco-Light.

Water at the turn of a faucet; time-saving power for turning grinders, separators and all small power machinery; electric light at house, barn and outbuildings—these are the things you can have with Delco-Light.

Think of all that it means to have Delco-Light and arrange to have it now. See the Delco-Light dealer in your community or mail the coupon for complete information—today.

Garden and Truck Crops

GILBERT S. WATTS, Staff Contributor and Adviser
Logan Spring Farm

Barley and Oats Excel—Transplanting Machine Cuts Labor Cost

LAST fall a brief report was made in this column of a test with oats, barley, millet, buckwheat and sunflowers grown as green manure crops after early cabbage. Observations were given on relative growth up to freezing weather. The five-acre plot on which these crops were grown was plowed in late November. Today I went over the area with a heavy tractor disc harrow and it was exceedingly interesting to compare the physical condition of the soil where the various crops had been grown.

In this section there has been a great deal of rainy weather both last fall and in late winter and early spring. Following sunflowers, millet and buckwheat the soil had settled very tight and had run together to a considerable degree. Two passages of the double acting disc harrow were required to equal the penetration secured at one passage over the land that had been occupied by the oats and barley.

In the case of the barley and oats the furrows lay in very much the form they presented in December, the innumerable tiny rootlets had bound the soil particles and had effectively prevented puddling or packing.

A Trial Dispelled Skepticism

This spring for the first time we have used a transplanting machine for setting plants in the field. For a number of years such machines have been used successfully for setting tobacco, cabbage, tomato and sweet potato plants with little or no soil adhering to the roots. I have been skeptical about the feasibility of handling plants started under glass and which are to be set with a ball of soil but finally invested after a good gardener friend in another county assured me that it could be done. Results in setting nearly a hundred thousand plants to date have amply justified the purchase. With labor costs as they are today I believe no gardener who transplants large numbers of plants to the field can afford to do the job in the old way.

The first job we tackled was strawberries to be spaced 20 inches in the row. I would rather have begun with a less exacting plant the berries had to be set first. a team of small mules proved isfactory power. Altho the was light they did not have weight to move steadily at speeds. We soon discovered that feet per minute was the speed for first-class work and at this in well prepared soil we were hold the plants until they were tween the press wheels and depth of planting was exactly mined.

Water Prevented Wilting

The water gears were set to a shot of water every 20 which meant that the plants more evenly spaced than any we ever set before and that each had a cupful of water at its Practically every plant is now ing strongly. After trying the tractor and a fairly heavy slow we finally settled on the latter the best power and worked 75 feet a minute, at which practically perfect work can be at the rate of 20,000 plants a

Early cabbage was handled much the same manner except two additional persons were busy lifting the plants with a soil on the roots and placing in extra trays ready for the pers as the machine arrived ends of the field.

Going in as they did with undisturbed roots and water base of each plant absolutely wilting took place and 48 hours planting a few plants dug examination showed a host of white rootlets reaching out into field soil. Spacing 18 inches in 28-inch rows two acres in 10 hours and this is not with the idea that it is a record do believe it is as fast as one do good work with transplants.

At small additional cost a opener than standard is furnished This made it possible to set ries in a jiffy and there is ently no reason why all sorts small fruit plants can not be this way. —G. S. W.

Inspect Latest Garden Tractor

"ALL garden tractors when intelligently handled will do very good cultivating and thus eliminate much hand work," said E. R. Gross, agricultural engineer at Rutgers University, in a recent radio talk. "In cultivating the garden tractor will do one, two or three rows at a time and more satisfactorily than can be done by hand or with the horse. Because of its size, weight and construction it is extremely flexible and, therefore, tical on very small as well as areas."

The above picture shows of several makes of garden in use on New Jersey farms. photograph was taken at the machinery demonstration der the supervision of the New sey Agricultural Experiment at Del-Bay Farms, County.

ld His Potatoes by Mail before They Were Dug

ADE several extra dollars on potoes last summer, by selling my re crop before it was harvested. o this, I called at a nearby town, t three weeks before digging , and copied from the directory addresses of fifty prominent resits. I then mailed a letter to each hese persons, describing the prod I had for sale, and enclosed with a common postal card, worded :

CARD IS WORTH FIFTY CENTS!
hen applied on the purchase of bushels of potatoes from F. R. ens.
st fill in your name and address, mail, not later than Aug. 10th, will book your order at 50c reion and notify you when potaare ready.
....
ress ....
l want.......... bushels.

ese cards were self-addressed, carried their own postage so the rer was put to no expense. If s in the market for potatoes, all was necessary to place an oras to fill out the card and drop a convenient mailbox. No cash asked in advance.

Plan Brought Results

plan took well with the town ents, and before the time expir received twenty-three cards. In cases the orders were for five els each. Customers not wantthat many got their neighbors mbine orders with them. The were filed in order of receipt when digging time arrived I d the folks to call for their . Thus I was saved the expense livery. The potatoes were priced rrent quotations, and the value card was deducted from each ushel order.

this way, I turned my entire of potatoes into cash, and had assurance of a market several in advance; something not posby my former methods. This nated a lot of labor and worry, by giving each card a cash I was saved the trouble of uring out the product in small nts. There were no arguments sunderstandings about price or tity.

using the cards, I was able to duce my product among folks likely to be in the market, yet xpense was slight. One dollar seventy cents, spent for postage cards, was sufficient to sell my crop.—F. R. Cozzens.

It The Corn Borer?

had a nice patch of sweet corn year but the worms got in alt every ear, sometimes as many two or three in one ear. Can you me if they were the European borer? They were a dark yelh brown in color. The largest about one and one-half inch and about one-quarter inch in eter. When knocked off the corn would roll up in a ball for a and then would start to crawl —R. E. H., Fayette County, Pa.

the description you give I it is the common corn earwhich has been damaging your corn, as you mention injury to only. A mixture consisting parts of powdered arsenate and ground sulphur dusted silks early in the season may the degree of injury. No fultive control is known.

European corn borer averages half the size of the earworm, ally about three-quarters of an long and bores into all parts of rn plant except the root. Convery difficult. Clean plowing or early spring, shredding the or making it into silage will the degree of infestation.—G.

The Story of the "Second Sole"

INFERIOR quality often hides behind a mask of mere surface goodness.

For example, a shoe has two soles. But do you ever ask, do you ever stop to think—"What is behind the outer sole? What is the second sole?"

We cut apart several shoes that *looked like* Ward's—shoes made to sell for 25 cents less. The second sole was made of leather that cost 20 cents per pair. *When the first sole is worn out, the second sole will "disappear" with a few days' wear.*

Ward's second sole is made of 45 cent leather—as sturdy and strong and long-wearing as the outer sole.

The price of the inferior shoes is *seemingly* lower than Ward's. A quarter can be saved in cash, but at a loss of two dollars in *serviceability.*

At Ward's "we never sacrifice quality to make a seemingly low price." For fifty-five years this has been the Golden Rule policy back of every article we have sold.

We do not adulterate, "skimp," or use inferior substitutes to take a few cents off the price.

Ward's prices are as low as reliable merchandise can be sold—always. And no merchandise power in the world can buy at lower prices than Ward's!

Over 60 million dollars in cash is used to buy goods in the largest quantities to secure low prices. But we never make a price a few cents lower by sacrificing *service* and *your satisfaction.*

A Price too low—makes the Cost too great!

Theres Money in Custom Cider Pressing

Orchardists find it highly profitable to market their undergrades in the form of cider. Those who grow a thousand bushels or more, can own presses which will add 25% to 33 1-3% to the income from their crop; those who grow less can secure the same advantage by doing custom pressing. Owners of our presses are making from $30 to $100 a day during the harvest season. If you are located in a good apple growing section, you have the same opportunity. Write today for our free booklet.

Rambles of a Pennsylvania Fruit Gro

IX. Our Favorite Dream—An Orange Grove in Flori

A FAVORITE winter evening sport of denizens of the North, when frigid winds blow and snow heaps high, is to dream of owning an orange grove in Florida, there to escape the rigors of winter and at the same time make a comfortable living. Anyone may realize the first ambition who has the price, but few realize the second except thru years of travail.

There is a fair profit in Florida orange growing, but only for those who have made it a study. Few Northerners seeking a haven in the South can expect to dig gold out of Florida sands until they have learned how. This takes time. No fruit is more sensitive to varying conditions of soil and climate. Favoring and unfavorable conditions may exist within a quarter of a mile. Much of the promoted citrus land is untested. The newcomer should go slowly and take the advice of local men of experience who are not financially interested in the transaction.

Citrus fruits — mainly oranges, grapefruit, tangerines — are very tender; usually they are hurt when the temperature falls below 28 degrees. They may be grown in many parts of Florida but certain districts are commercially pre-eminent. Almost invariably these are locations where water has a moderating influence on local climate, or where there is a slight elevation above the surrounding country.

Water Influences Value

The famous Indian River orange district owes its reputation in large measure to water influence; also the interior lake counties on the "ridge" of the peninsula, such as Orange, Polk and Lake Counties. Florida is dotted with lakes. A lake front location is valued as much for citrus as a site facing Lake Ontario, Erie or Michigan is prized for the culture of deciduous fruits.

The highest point in Florida is only a little over 300 feet above sea level. Northern men are prone to scoff at the emphasis Florida realtors lay on local "heights," ridges only a few feet above the surrounding country; yet a few feet difference in elevation often makes a tremendous difference in the frost hazard.

Florida citrus soils range from almost pure sand to sandy loams, and require from two tons per nually of high grade fertili ing $45 a ton to less tha that much. The soils are ted, and the novice should Trees with "die-back" are poor soil or poor care. It to $100 an acre to clear th pine, palmetto and oak, more to plant it. A newly in a good location rarely than $300 an acre and Some of the "development ies" charge $1000 an acre, which is outrageous. A is secured in four or five full bearing is not reached or twelve years.

Fertilizer Applied Four

Cultural operations are exacting as with deciduou There is less pruning and but more tillage and much tilizing. Some growers do at all, depending on "na mies" of citrus pests, but growers spray once a year for scale and either spray several times a season for and kindred troubles. Few provide a cover crop. The not require thinning. F applied three or four tim the fertilizer bill of a F man always wrenches a his pocketbook.

The harvesting problem as compared with decid The crop ripens from N til January, according to will hang on the trees w ous deterioration for sever until market conditions able. There is, however, of losing the crop by a is left on the trees. This forty per cent of the F crop was hurt by the of early January.

Most of Crop Sold on

Sales of apples "on th once were common but no years. A convenience which ice at orange growing i appreciate is the almost practice of selling orang trees. Only the largest and pack their crop.

There are packing hou where and buyers take the grower's hands at so field box, which is supp

Stop Chick Diarrhea
White—any kind

When diarrhea appears in your flock, in any form whatever, stop it. Modern science has evolved a tablet to cope with this chick plague. You get it only in

Dr. Hess WHITE DIARRHEA TABLETS

You use them either way, as a preventive, or as a remedy.

Lots of folks like to take no chances of backsets from diarrhea in their flock. For the first three weeks they give all the drinking water this scientific treatment.

You simply crush and dissolve 4 tablets to each gallon. Need never stir but once.

These tablets are inexpensive. You get 225 fifteen-grain tablets for one dollar. Or 100 for fifty cents.

Now mark this—You use these tablets at our risk, not yours. If any form of diarrhea attacks your flock that Dr. Hess White Diarrhea Tablets will not remedy, and do it most effectually, your dealer will refund your money cheerfully, because he knows we protect him fully.

Fed Chicks Too Soon

Will you kindly tell me the cause of bowel trouble in chicks less than a week old? I feed them fine oat meal, plenty of fresh water, some grit and have alfalfa litter on the floor. I have no trouble with white diarrhea.—W. C. T., Chester County, Pa

I believe the trouble you describe came from feeding the chicks too soon, before the yolk had been absorbed. It has been my experience that chicks should not be fed until they are 72 hours old. Previous to that time my chicks, after they are removed from the incubator, are put under the hovers on a sand-covered floor and are given condensed buttermilk diluted 1 to 7 with water to drink. The first feed is a little fine chick feed.

I am following the 1927 recommendations of the New Jersey Experiment Station this year in rearing my chicks and they are certainly doing very well.

You might try a teaspoonful of baking soda per gallon of drinking water as a remedy, altho by now the harm has been done. Chilling also is a cause of bowel trouble.—R. L. S.-H.

Hens Molt in March

I have 260 Leghorn hens and pullets that have been laying over 50 per cent since last November 1st. Starting around the first week of March they began to molt, some the neck only, others a complete molt. At present fully 25 per cent are molting but they are still laying around 45 to 48 per cent. Quite a few of those molting keep right on laying. What I would like to know is, which birds are molting, the heavy layers, which have been laying probably 60 per cent, or the poorer layers, which have been laying, say 40 per cent? How should one cull this summer?—E. B. W., Perry County, Pa.

It seems to me that something is wrong in your management of your Leghorns that causes so much molting. Have you been feeding heavily on grain? I gave mine all they would eat during the winter and had practically no molting. Leghorns under lights should eat about 14 pounds of grain per 100 birds each day.

Right now is a time when a good many birds are thin from long, continued laying, and are liable to molt, get prolapsis or roup. It is a good plan to feed all the grain they will eat during the coming months in an endeavor to hold them up to tion during the summer when are profitable to have. Some men double the amount of corn in the mash now; others feed mash at noon containing one each of cornmeal, rolled oats condensed buttermilk per 100

It is rather hard to say just to cull this summer. I would few that are molting now and what they do later, and not closely early in the summer. unusual to have birds molt all as yours have.—R. L. S.-H.

Chilled in Broode

Can you tell me if there is thing as brooder pneumonia? We 160 chicks and have lost 70 of A neighbor told me she thought brooder pneumonia. First they sleepy, then later they just ga their breath.—P. E. R., County, Pa.

Brooder pneumonia, such as describe, is the result of severe ing or overheating caused by chicks crowding, followed by ing, and causes severe losses it gets a start. Be sure brooder house is warm, night, and well ventilated. it would be a good plan to and replace the litter, that the new material is not It is also advisable to remove the rest of the flock any chicks show the symptoms.

Sometimes the floor in a house dries out and leaves between the boards, if it is thickness. If you find this your house, two widths of paper six feet long laid under stove will stop floor drafts the chicks huddle at night.— S.-H.

There aren't enough veterinarians in the United States. The Animal Industry, which about 1350, recently had finding a man to qualify as veterinarian at an entrance of $1860 a year. Young men eated in becoming veterinarians obtain information about the sary education and a list of ited colleges from the Animal Industry, U. S. of Agriculture, Washington.

Vineland Trucks Fancy Eggs New York in 300-Case Lo

THE trucking of eggs to the New York market has become a popular method of transportation in recent years for the Vineland section of New Jersey. Approximately 3000 cases a week are now being transported from Vineland to the New York market. The eggs are packed in regular cases and move in loads of about 300 cases. Most of this big egg business is conducted by men who own five- and seven-ton trucks. The loads of 300 cases weigh about nine tons and make the trip in a few hours.

At the present there are about eight commercial truckers engaged in hauling eggs from the principal producing sections. These truckers are centered around Vineland, Tuckerton, Tom's River and the southern end of Hunterdon County.

The cost of transporting eggs by truck is considerably under the regular rail rates from the same towns to New York. Most of the eggs are collected from the farms about twice a week and assembled at a point where they are loaded big trucks for market. On turn trips, empty egg brought back to be refilled turned for the next load.

The egg trucking business come highly specialized. The are equipped with a type of that makes the truck easy The men engaged in this not haul mixed loads but stick sively to eggs.

The peak of the shipments reached late in April and May when the 3000-case reached. Then the season until the first of October when down to about 1200 cases per

These are some of the eggs sell in New York market at mium over the top figures quoted in the newspaper. They resent the highest quality that are produced in New Jersey are guaranteed as being fresh.—A. K.

Frost & Wood MOWER
One Horse and Two Horse Sizes

Popular throughout the world for many years. Thousands of satisfied users. Built for heavy crops and rough and hilly land. Roller bearings assure light draft. Its cutter bar strength and superior cutting mechanism give long service.

The Internal Drive Gear is always ready for work in heavy or light crops. Quicker response at knife bar, less wear on gears and fewer repairs. The knives keep on cutting when bar is raised to clear obstructions, saving time and crop.

Sizes 3½, 4, 5, 6 and 7 feet.

S. Third St., Philadelphia, Pa

NEST BOX NOTES

ONCE the young pullets are on range and accustomed to being out every day, it is a good thing to let them out early in the morning so that they can get to the mash hoppers and water supply. I recently saw a clever automatic device for letting the pullets out. The chicken door was hinged to open outward, and a spring was attached so as to keep it open. The catch that held this door shut was fastened to a piece of broomstick about a foot long. This broomstick was pivoted in the middle so as to swing freely, and the other end projected into the house. At night the poultry keeper bent down the end with the catch on so as to hold the door shut, and the first chicken that jumped on the stick the next morning pushed down the other end, releasing the catch, and the spring opened the door.

• • •

We have been rearing our chicks on the mash formula of the New Jersey Station, which contains codliver oil, and have not had a single case of leg weakness, altho some of the chicks at six weeks of age have never been outside. The vitamin D in the oil which promotes bone growth is responsible for this.

• • •

Chicks in confinement or in bare runs need a good supply of green feed. Dandelions are an excellent source of this and are greatly relished by the chicks. A butcher knife or an asparagus knife is great to cut them, and it takes no time at all to cut a basketful along the fences. Lawn clippings are mighty good, too, being short and tender. The clover they often contain is especially relished. We have a good sized lawn, and always save all the clippings for the chicks or old stock.

• • •

I recently heard of two disastrous experiences of poultrymen with young chicks, which will serve as a warning to others. One man had bought 1600 chicks from a hatchery and lost pretty nearly all of them. The hatchery sent out a man to try to discover the cause, and it was found that the chicks had been given sour milk in galvanized vessels. A poisonous compound resulted which had killed the chicks. The other case was the loss of 200 chicks due to the use of a cheap grade of codliver oil.

• • •

About now we have all been busy taking care of the chicks and putting in the garden and crops, and it is a pretty sure thing that there are a lot of dirty chicken houses to be found in the neighborhood. It is a good idea to take a day in the first wet spell and clean up. I have often noticed that the hens eat better off a clean floor. It is also true that cleaning out the dirty litter removes a lot of disease germs and parasites. This material should be spread a good distance away from the poultry buildings.—R. L. S.-H.

Three of a kind.

It Is Best To Buy That New Fencing by the Year—Not By the Rod

A RECENT investigation in two midwestern counties showed that the fencing costs on these farms varied from $1.82 to 62 cents an acre per year, and that the cost per year averaged $198 per farm. I think this will be a surprise to most farmers, as the highest figure would mean a cost of $364 per year on a 200-acre farm, while the lowest figure given would amount to $124 per year. This is certainly a heavy drain on the already too scanty farm income, and if there is any way of cutting the fencing costs without sacrificing efficiency all farmers should know about it.

They Save Time and Protect Stock

It is hard to estimate in dollars and cents all the advantages of good fences over poor ones. In the first place they are economical because they save the farmer's time in running after straying livestock, whose straying tendencies increase as the quality of the fencing decreases. They save many a bushel of growing crops from trampling and ravaging. Steel posts or fences properly grounded protect stock from lightning.

Good fences make for better farm management, since they admit of the proper rotation of crops and pastures, allow the farmer to utilize crop residue to the best advantage, permit the use of corn pickers and other labor-saving machinery by cleaning up with hogs and cattle, give a chance to keep fields and fence rows free from weeds by the use of sheep or goats and make a profit at the same time, allow a material saving in harvesting costs by hogging down corn, and often permit of salvaging with livestock a crop that otherwise would be a dead loss because of wind or hail storm.

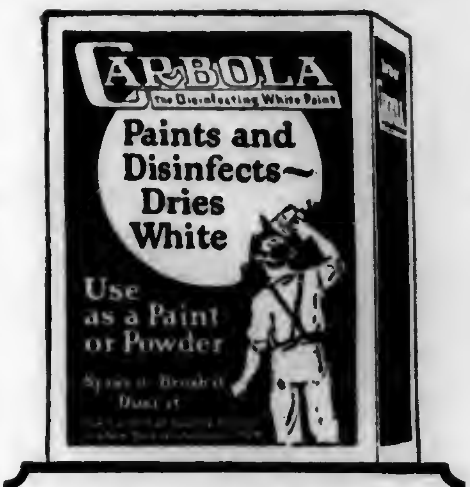
They are also an essential part of any program of livestock sanitation, such as the McLean system for hogs. Thus good fences enable the farmer to adjust his livestock quickly to varying conditions and to take advantage of sudden changes in feed and markets.

Lastly good fences make for better neighbors and more valuable farms. A prospective buyer sizes up a farm very much according to the condition of the building and lots and fences and fence rows. Then a farmer who keeps his fences in good shape will be better respected and will avoid friction with his neighbors.

Essentials of a Good Fence

The primary purpose of any fence is to turn whatever livestock is likely to be kept. Besides, a good fence must present a neat appearance, must take up the minimum amount of high priced land, must be easily kept clean and not harbor undesirable weeds and insects, and must have the lowest possible yearly cost compatible with the most efficient service.

Experience has pretty well demonstrated that the best general purpose fence, at least for permanent locations, is one of heavy lead or zinc coated wire mesh, with perhaps one or two barb wires at the top, and supported on heavy long life posts of some sort.—I. W. D.



CARBOLA The Disinfecting White Paint
Paints and Disinfects—Dries White
Use as a Paint or Powder

More Dollars from Farm Produce When You Use CARBOLA

Carbola is a dry mineral pigment (NOT LIME), combined with a powerful disinfectant. Dissolve it in water and apply with spray—or put on the NEW way, by dusting.

More EGGS Healthier Birds
Lice, mites and disease germs always interfere with poultry health and cut down egg production. Dusting with CARBOLA is a sure way to keep poultry healthy the year around.

More MILK Fewer Bacteria
Livestock kept in dirty buildings can never be healthy. Lice and germs decrease vitality and reduce milk supply. Where CARBOLA is used there can be no lice or mites—and you'll see the quality and quantity of the milk increase rapidly.

Healthier HOGS
CARBOLA is livestock insurance, affording maximum protection against hemorrhagic septicemia, hog flu and other diseases. The cost is a trifle, compared to what CARBOLA saves.

For Gardens, too
CARBOLA is effective in ridding plants and vegetables of bugs and worms. Especially recommended for cabbage worms, squash bug, cucumber worm and other destructive pests.

Get this Big Dust Gun
The last word in dusters. 17 inches long. Has oversize powder chamber with large opening for filling. Get from your CARBOLA DEALER, or order from us direct.

WHY MILK BY HAND?
Perfection pays for itself in cleaner milking.

Clean Milking Means Clean Profits

YOU have doubtless found that few, if any, can be trusted to do your milking as carefully and thoroughly as you would do it.

If milking isn't done thoroughly it isn't satisfactory. There is not only a waste in every milking but cows tend to dry up ahead of time. When figured in terms of dollars such losses are serious in the course of a year.

You can be certain that your milking is thoroughly done when you use a Perfection Milker. The Perfection milks thoroughly because it uses the same natural action as the calf. The new two piece teat cup, besides being easy to wash, milks cleaner, faster and with less vacuum. Low vacuum means contented cows. Contented cows give more milk. They yield freely to the gentle suction and the downward squeeze of the Perfection.

The Perfection milks clean and clean milking means clean profits.

A record of fourteen years of successful service is your best guarantee that a Perfection Milker will give you reliable, satisfactory service. Send for a copy of our new catalog.

The new 2 piece Teat Cup. One pull and it is all apart for quick and easy cleaning.

Doubtful Economy

TO C. D. A.:—The per cent of crude protein in the feeds you mention is listed in the following table taken from the average analyses of the feeds as given in Feeds and Feeding, by Henry and Morrison:

	% protein
Corn gluten feed	25.4
Corn, dent, grade No. 2	9.6
Oats	12.4
Buckwheat	10.8
Linseed oil meal (old process)	33.9
Cottonseed meal (choice)	44.1
Cottonseed meal (prime)	39.8
Cottonseed meal (good)	37.6
Hominy meal	10.6
Standard wheat middlings	17.4

It is difficult to say what is the highest percentage of protein in a mixture of the foregoing feeds that could be fed with safety. I know of mixtures containing 28 to 30 per cent of crude protein that were fed to dairy cows continuously for eight years without any harmful results. On the other hand, it is doubtful if it is good economy to feed a mixture containing such a high percentage of protein.

If you feed your cows clover hay and silage as roughage,—and this would be a good roughage combination,—then a suitable grain mixture to go with the roughage would probably contain approximately about 24 per cent crude protein.

Timothy hay is poor cow fe would much prefer clover hay a contains more protein, more m als and is more palatable than othy hay.—A. A. B.

Clipper Saves Mo

WE FIND that keeping our clipped is of great benefit clipping and following a practi brushing off before milking w cure very clean milk. Also, our stay healthier, sleeker and more fortable. By keeping the long on flanks, underline and udder ped off, growth of new hair is moted. Especially do we find advisable as fall arrives, ridding cows of their old, dead hair, them in readiness for their coat.

We have a clipping machine which two of us do the clipp a very short time, one turning machine while the other work clipper. We run over our cows once in awhile.

We had to contend with our cows one season. They on some new ones we bought found our clipping practice very ful for it greatly assisted us in bating these pests. We woul and then spray the cows with Being able to spray the materi most directly upon the lice, we ly got them.—R. L.

Central Guernsey Association Has Sixteen 300-Pound He

Editors' Note.—This is one of a series of annual reports of Pennsylvania cow testing associations. As each association completes its fiscal year a summary of its records is published in this department. The owners of herds with a 300-pound butterfat average, whose names appear at the end of the report, will be awarded prize ribbons by the Pennsylvania Dairymen's Association at the 1928 State Farm Products Show

THE Central Pennsylvania Guernsey Breeders' Association finished its third year March 1, 1927, with thirty-five whole members. In addition six members were in the association only part of the year. There were 653 cows in the association during all or part of the year.

The result for the three years' testing is as follows:

	Average no. cows	Lbs. milk	Lbs. butterfat
1925	188.99	6149	285.3
1926	436.49	6538	294.2
1927	429.17	6847	308.8
Increase	240.18	698	23.5

The results for the whole-year members are as follows:

Average number of cows in the association	429.17
Avge. per cow: lbs. of milk	6847
Pounds of butterfat	308.8
Percentage of butterfat	
Value of product	
Cost of pasture	
Cost of roughage	
Cost of grain	
Total cost of feed	
Value of product above feed cost	
Returns for $1 expended for feed	

The association includes in Blair, Cambria, Centre, and Huntingdon Counties. Griffith had one cow which over 700 pounds of butterfat other that exceeded 600 Seven cows in the associatio duced between 500 and 600 of fat, 31 produced between 500 pounds and 136 between 400 pounds, making a total cows with records above 300

Charles M. Schwab is president of the association; Gooderham, vice president; Agent H. C. McWilliams, J. W. Burket, treasurer. ers in charge, J. N. Fields, G. woody, J. F. Lamey, D. S.

Sixteen herds with an average of five or more cows exceed average production of 300 pounds of butterfat. A complete list of herds follows:

Owner	Avge. No. Cows	Breed	Pounds Milk
D. A. Morrow, Tyrone	8.50	R. G.	8647
Webster Griffith, Ebensburg	21.25	R. & G. G.	8615
John W. Burket, Tyrone	9.25	R. & G. G.	7996
Mrs. C. M. Schwab, Loretto	14.92	R. G.	6767
Wm. Morrow, Tyrone	12.00	R. & G. G.	7117
E. H. Karlheim, Patton	5.83	R. & G. G.	6498
K. S. Bagshaw, Hollidaysburg	10.00	R. & GBS.	8085
W. J. Karlheim, Patton	6.42	G. G.	6559
Mrs. M. Karlheim & Sons, Patton	12.75	R. & G. G.	6776
S. B. Wasson, State College	17.67	R. & G. G.	7016

Dr. Findley, Altoona	16.67	G. G., R. & G. H.	8363

Unadilla Silos are dependable

From the day you receive your silo, and quickly and easily set it up, through all the years of its use—the Unadilla is a dependable help. Many years of building silos have brought the Unadilla to its deserved leadership.

Its continuous door front allows openings at the level of the silage where the feed can be shoved out instead of being laboriously hand-forked up over the door and braces.

The door fasteners form a unique ladder that is unquestionably the safest, most practical silo ladder made. You don't risk your life when you climb this ladder—it's as safe as your front stairs.

Our handsomely illustrated silo catalog will prove very valuable to you. Send for it today—it's free. Inquire about our storage tanks, vats and water tubs.

UNADILLA SILO CO.
Box P. Unadilla, N. Y.

Free Trial of Proved Swedish Abortion Treatment

Famous Foreign Formula quickly relieves badly infested herds. Gives amazing results in cases believed hopeless.

Thousands of American Farmers say the Froberg Swedish Abortion Treatment has saved their herds from destruction. This remarkable treatment has been used with complete success in the big dairy herds of Sweden for many years, and has cleaned up whole districts over there literally rotting with contagious abortion.

It was only after great expense of time and money that this secret formula was made available to American Farmers. During the past nine years the treatment in American herds has given all the amazing results that made it so famous abroad. Herd after herd has been rid of this disease. Even cows considered hopeless by veterinarians have yielded to its healing qualities and been restored to health and produced fine vigorous calves.

SAVED HIS HERD

David Mohr, Jenison, Michigan, says: "Last year I raised only one good calf out of 14 cows bred, all other calves were aborted. I was desperate. I used your C.C.C. treatment. This year with the same herd I have not lost a single calf. It's wonderful. My neighbor lost 3 calves in a few days—I gave him some C.C.C. and it stopped the trouble right there."

The fame of Cow Calf Control (C.C.C.) the name of this treatment has spread from breeder to breeder. Today it is put out only on an absolute binding guarantee that it will stop every case of abortion; that every cow treated will deliver a normal calf, or the treatment cost is refunded. Two reliable banks stand behind our guarantee. You can't lose. C.C.C. is practically 100% successful.

SEND NO MONEY

Mr. John W. Froberg, a native of Sweden and a large dairy owner, is responsible for introducing C.C.C. into this country. He has made the treatment easy to give, and at a cost per animal that every farmer will gladly pay.

Write today for full details explaining our free trial offer. Just send your name and address without further obligation to Froberg Remedy Co., 18 Lincoln St., Valparaiso, Ind.

Mention Pennsylvania Farmer when writing to advertisers.

Sudan Grass and Soy Beans Make Good Roughage

I plan to sow some Sudan grass for hay and would like to know if it is good for all kinds of stock. When should I sow it and when is the proper time to cut it for hay?—C. F. S., Snyder County, Pa.

Sudan grass is an annual plant which is gradually becoming recognized as a valuable emergency crop for hay and pasture. In some respects it is like millet as a forage crop, but produces more dry matter per acre and is better liked by livestock. It can be fed to all domestic animals without danger of injury to them. As hay, Sudan grass is primarily useful for feeding horses. For cows it does not contain enough protein to make a first-class hay. However, when mixed with soy beans, it makes a very satisfactory hay for cows.

Plant Prefers Hot Weather

This grass is strictly a hot weather plant and should not be sown until the weather becomes warm and settled. Corn planting time or a little later is about the right time for sowing. Broadcast seeding, by drill or hand, is usually recommended, the seed being sown at the rate of 20 to 25 pounds per acre. If sown with the drill, the machine should be set so as to seed 2 pecks of wheat, which will distribute about 20 pounds of Sudan grass seed.

When harvested about the time it is in full bloom, it will make a vigorous renewal growth, and two cuttings may usually be taken in one season. In good corn land this grass will become 5 feet high and the total yield will be from 2½ to 4 tons per acre.

Where Sudan grass is to be sown with soy beans, there should be used 10 pounds of the former and 1 bushel of the latter per acre. The soy beans should be put in the large hopper of the drill and the Sudan grass in the grass seed hopper. This mixture with soy beans is a little easier to cure than the soy beans alone.—J. G. Lipman.

2551 Cows on 40 Pound List

THE 41 Pennsylvania cow testing associations making reports for March tested 15,109 cows. There were 2551 cows giving more than 40 pounds of fat and 3252 giving more than 1000 pounds of milk during the month. Of the 40-pound list, 909 cows gave more than 50 pounds of fat and 1745 cows gave more than 1200 pounds of milk. There are 57 cows reported on official test. During the month 158 unprofitable cows were sold and 13 bulls purchased. Twenty-three separators were tested.

They Own the High Cows

The owners of the highest three cows in milk production are as follows:

First, W. H. Landis, Montgomery County, 3128 lbs.; second, W. H. Barclay, Lycoming County, 3078 lbs.; third, A. B. Craig, Allegheny County, 2883 lbs. All three of these records were made by registered Holsteins milked four times a day.

The highest three cows in butterfat production are as follows:

First, W. M. Stiegerwalt, Carbon-Lehigh, 130.4 lbs., milked three times a day; second, W. H. Landis, Montgomery County, 115.7 lbs., milked four times a day; third, State Hospital, Warren County, 99.9 lbs. These records also were made by registered Holsteins.

The three associations with the highest ten-cow average in butterfat:

First, Carbon-Lehigh, 79.9 lbs.; second, Laurel Hill (Bradford County), 73.1 lbs.; third, Wellsboro (Tioga County), 72.8 lbs.

Facts about the De Laval Milker

1. 650,000 cows now milked the De Laval Way.
2. De Laval Milkers now in their eleventh year of use.
3. 83.27% of the users report average saving of 2 hrs., 12 mins. per day.*
4. 97.13% of the users say it agrees with their cows.*
5. 99.4% of the users say they get as much or more milk as by hand milking.*
6. 9.49% average increase in production per cow reported by those who have records.*
7. 94.80% of users say their De Laval is easy to keep in a clean and sanitary condition.*
8. Average bacteria count of all reporting, 14,542—62% report counts of 10,000 and less.*
9. 96.45% of De Laval users say their milker is "the best," "one of the best," or a "good" investment.*

*Based on reports from 1844 De Laval Milker users in all parts of the U. S. and Canada.

De Laval Milkers

The De Laval Milker as an Investment

OF MORE than 1800 users who answered a questionnaire concerning their experience with the De Laval Milker 96.45 per cent say that their milker is "the best," "one of the best," or a "good" investment, as compared with other farm equipment they own.

Users of the De Laval Milker say that years of continuous, satisfactory service have made their milkers one of the most dependable and valuable pieces of equipment on the farm.

Money invested in the De Laval Milker pays high dividends in increased profits, time and labor saved, beneficial effect on cows, a better product and easier, pleasanter work.

Music Has Been Slighted Too Long

Why Not Revive the Old Singing School?

MUSIC WEEK comes in May, and what a splendid thing it would be if the Grange, the Parent-Teacher Association and all similar organizations in every farming community would have some sort of program to revive interest in music.

We hear and read a great deal about canning clubs, poultry clubs, baby beef clubs—all kinds of junior projects for the boys and girls; home economics for the housewife; every phase of farming for the farmer, but how often is mention made of music?

People who have passed the half century mark say it was not always so. There was a time when nearly every community had its "Singing School." The itinerant singing teacher went from hamlet to hamlet, a tuning fork in his pocket and a singing book under his arm. He was a wizard at sight singing and could play the organ if necessary. He could start the sopranos on the right key; encourage the faltering altos; round out the tenors' high notes or go down into the depths with the basso profundos.

Everyone Likes to Sing

One to two dollars was the price for a term of twenty weeks. At the end of the term there was a concert at which the most talented pupils sang the chanteys, rounds, anthems and songs they had learned. The public at large attended, applauded and enjoyed it. There always were pupils who could not sing, but there were many fine voices also. Very often neighboring schools held singing matches and a splendid community spirit prevailed.

It would be stupid to expect those "good old days" to return. The radio, the phonograph, the auto and the movies have made that impossible, but love of music is inborn and everybody likes to sing, whether they can sing or not.

It would be a simple matter to have a community sing. It could be made a little out of the ordinary by rounding up the singing school pupils and having them bring their old song books. Invite everybody. Select a leader who can sing and who has the knack of making others want to sing, and a pianist who has the "pep" to play with spirit as well as sympathetically. Have them even if they are paid outsiders. A good start is half the battle.

By the time the singing school pupils have sung some of their songs and rounds, and the remainder of the audience has helped with the usual well-known songs, they will be in a friendly, receptive mood. Then make suggestions for plans to have music week continue thruout the year. Ask the people to write suggestions and turn them in to the leader. Use as many of these ideas as possible. Give everyone a reason to be interested in the undertaking, or have them work in it, and it will be apt to succeed.

Appreciation Easily Taught

Work with the children and young folks should be stressed. Where there is sufficient talent, bands, orchestras and singing groups may be formed. If this is not practicable music should have a prominent place in all group activities.

In the home, mother, big sister or aunt can teach appreciation of good music with the aid of piano or phonograph. Records of everything worth while in music may be bought in any music store and a study of record catalogs is an education in itself. Other helps may be secured from magazines, library books and music teachers.

Surely, boys and girls of today should be given every opportunity possible to learn and appreciate the best in music if the men and women of tomorrow are to have ideals beyond jazz and the Charleston.—Jane M. Bush, Pa.

Let's awaken to a greater interest in rural music. With just such home talent orchestras as this and the youngsters with harmonicas, we should make the echoes ring. What is your neighborhood doing to vie with the birds in songs of good cheer?

Making Saturday Night Come Oftener

"HELLO there, Neighbor John. Do come in for a little while and listen in with us. The music by radio is wonderful tonight."

"Thank you, Jake, I must be moving toward home. Tomorrow is another big day and I'm too dirty to come in anyhow."

"Now, look here, John. It's high time you are thinking of something besides just plowing, harrowing, sowing, cultivating and harvesting. A man lives but once, and he's foolish for not living as largely as he can while he's at it. Take a bit of advice from one who's been at it twenty years longer than you, and forget work once in a while, at least. Now, listen to that fine number and then I want to tell you something."

"Well, Jake, that was beautiful. Now go ahead with the advice."

"I just wanted to point out to you a few little things that have made life new for me and my family. Each year we plan to put in at least one improvement, and one that heads the list is the bathroom we installed a few years ago. After a dirty day's work on the farm, we men folks are quickly and completely refreshed. What a nuisance it was to trot around with a bucket and tea-kettle. How impossible to get clean when every inch of your body was speckled with earth. But now-a-days after a genuine bath in a tub, then a tasty bite of supper, and the radio, I am ready for a perfect night of rest and work goes so much better the next day.

"The children and mother appreciate the bath as much as I do and let me whisper this—I really believe that bathroom is more than half responsible for Tom and Fred sticking to me and the farm as they do. Those boys like to clean up right, after the heat and dust of a big day. I think you would be very sensible to put in a bath. As I look at it, no farmer can afford to be without one."

"Yes, Jake, I believe you're right. Here you are all cleaned up, feeling tip-top, and look at me. I must go home and get my 'bucket and tea-kettle' and think it over."—A Farmer's Wife.

Monday Can Be Sunny

THE Sunny Monday Contest Editor is pretty busy these days, and wishes all the men folks who read this paper could help act as judges. She wants to remind you that the contest is open to all readers and to tell you to be sure to get your letter in before June 1st.

Dustless Dusting Lightens Work

DUSTING is of little use if the dust is only stirred into the air to settle again in a short time. A cloth, even if it is clean and soft as is often recommended, will not take up and hold the dust. Cheesecloth is very satisfactory for dusting, but cheesecloth or any other material is much more effective if it is treated to make it retain the dust. A dustless dust cloth can be made at home by putting a tablespoonful of any good furniture polish into a preserve jar, and by tilting the jar so that the polish coats the inside thoroly. Then pour out the surplus polish, and place the clean dry cloth in the jar and let it stand over night or longer until the cloth has absorbed the polish. Such a duster both cleans and polishes wood surfaces, and makes easier the routine care of the house.

The Balsam Belies Its Name

OH, what gorgeous Touch-me-nots! I have always known them as just that, and it seems to me a great misnomer. I proved this to my satisfaction last season, for I had the best luck ever with Touch-me-nots. By chance I learned the secret—they love to be touched, and you can sprinkle, shower, and douse them with water. They never shout "Touch-me-not" at all.

I do a good bit of photographic work which means there is a lot of waste water from washing numerous prints during Touch-me-not season. Yes, I could pour it down the drain, but why waste it?

Last year a row of these plants was standing still and didn't seem to grow. Because I was extra tired one day, I threw every drop of water from a batch of pictures on those Touch-me-nots. Next day the same trick, and so on for a week. Some evenings they were dripping wet, but they only laughed, and grew until they were waist high and thick with blossoms.

Touch-me-nots.

Catalogs list them as Balsams—Impatiens Balsamina. "King" and "Queen" are special beauties, and "White Perfection" is like a double snow ball. Balsams are a joy, are easily grown and we know, too, that they are not "Touch-me-nots."—Gertrude Shockey, Ohio.

Do You Carry a Spare?

IN THESE days of "spares" a new one has cropped up which is of as much importance to the woman driver of an automobile as the spare tire. The new device consists of a "spare" bag, holding either one extra silk stocking or a pair which either match or can take the place of those being worn. The bag is made square, round or oblong, but it must be flat, and no larger than necessary to hold the "spare" stocking or stockings, extra pair of gloves, handkerchief and face towel.

No woman should drive without such a bag tucked into some corner or pocket, since we all know and realize the sensation of that unsightly run or hole in our stocking, and if silk is worn, these runs will appear no matter how much we pay for the stockings.—Esther A. Cosse, N. J.

If you have not been enjoying rhubarb pie and early garden asparagus, better plan at once to have some growing for spring in 1928. It is a fine time, too, to be planting next year's strawberries.

Timely Tips

GRANDMOTHER'S eight-pound flat iron, covered with several layers of heavy cloth, is just fine for polishing the waxed floor or furniture. The point of the iron gets into corners with ease. The children enjoy helping to "iron the floor."

* * *

An excellent finish for linoleum and painted floors can be made at home. Put one quart of turpentine in a self-sealing fruit jar (two-quart jar) to this add four ounces of finely shaved beeswax. Adjust the lid and set in the sunshine, shaking occasionally. When the beeswax is dissolved and the mixture is of the consistency of thick cream, apply with a small cloth, rubbing it thoroly into the floors and polishing with a second cloth.—L. M. Thornton, N. Y.

* * *

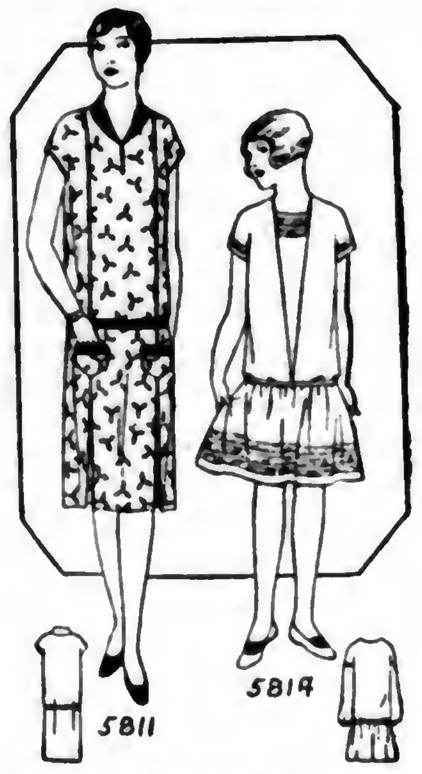
Have you been careful to do away with those first fly visitors? They are the great-great-grandparents of the terrible swarms that torment country folk in August.

* * *

There have been some extra fine spring days, and as each one came along, I have wondered just how many little Pennsylvania Farmer babies were getting those health-promoting sun baths. Surely some mother will write us soon about her little brown son that has increased vitality since his sunnings have been started. It's not too late to start now if you have been retarded before.—G. S. S.

Dainty Frocks for Spring Days

Directions for Ordering.—Give figure or figures of each pattern exactly as printed at beginning of each description. Give bust measure when ordering waist patterns, waist measure for skirt, and age for children's patterns. Address Pennsylvania Farmer, 261 S. Third Street, Philadelphia, Pa.



5811.—Figured percale, cotton foulard, linen, gingham or tub silk could be used for this model. Six sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. A 38-inch size requires 4⅛ yards of 27-inch material together with ⅝ yard of contrasting material for facing on collar, belt and pockets. The width of the dress at the lower edge with plaits extended is 1¾ yard. Pattern, 10 cents.

5814.—Crepe de chine, chiffon or voile could be used. The dress may be made without the peasant sleeve portions. Four sizes: 6, 8, 10 and 12 years. To make the dress as illustrated in the large view for a 10-year size, will require ⅞ yard of lining and 2½ yards of 32-inch material together with 6½ yards of lace insertion or banding. If made with peasant sleeve portions the dress will require 2⅞ yards of material. Pattern, 10 cents.

Send 10c in silver or stamps for our up-to-date spring and summer 1927 Book of Fashions.

Needs no watching

Color in Newest Perfections!

WOOL Blankets Batting Send us your wool and we will make it into warm fluffy batts, or beautiful serviceable blankets. We sell direct. Write today for samples and descriptive folder. WEST UNITY WOOLEN MILLS, 107 Lynn St., West Unity, Ohio.

Harmonica or Mouth Organ

Some of our greatest musicians started with a mouth organ or Harmonica. Here's a real one. Plays either side. Two different keys. Size: 2 inches wide by 8 inches long. Guaranteed to give satisfaction.

Given for two yearly subscriptions to Pennsylvania Farmer at 50c each.

PENNSYLVANIA FARMER,

261 South Third Street, Philadelphia, Pa.

OUR YOUNG PEOPLE'S FORUM.

From Forum Members and Friends

Dear Cousin Ruth:—I do not live on a very big farm. We raise mostly uits, strawberries and pears. I would like to send you some strawberries but they are not ripe.

We have one horse and one cat with six little kittens. I also have a pet rabbit.—John B. Wenger, Lancaster County, Pa.

Those strawberries sound good to me but I'm afraid the postman might not like delivering them! How about it? When you eat a luscious one think of me.

COUSIN RUTH.

Dear Cousin Ruth:—On Easter Sunday my mother and father, two brothers and sister and myself went for arbutus. We went about two miles away and stopped by the roadside, then went down into the field to a big hillside and found a nice lot of it. We had a good time.

I wish you could come and see us this summer.—Emma Lodge Clevenger, Fulton County, Pa.

Thanks for the invitation, I'd like to come. It would take me all summer to visit my many Forum cousins, tho, and I don't see how I can find the time. Let me hear what you find to keep you busy.

COUSIN RUTH.

Dear Cousin Ruth:—I am very happy that spring is here. In school we went to take a walk and on our way we caught a snake. We had it a few days in school and we fed it. We gave the snake some worms and insects but in the night it got away.

For pets I have a dog, cat and lamb. On Easter I gave my little lamb some candy and he ate it. I got my pin and I thank you very much. I wish you could come to me and pick flowers, Cousin Ruth. Don't you wish you could come.—Mabel M. Heffelfinger, (X), Berks County, Pa.

Yes, I'd like to come pick flowers with you, Mabel.

COUSIN RUTH.

Dear Cousin Ruth:—I received the pin and was very glad to get it. When I wore it to school a few days after the children wanted to know where I got the cute pin from. They did not want to believe me that I was a member of the Young People's Forum.

A PICTURE OF AN ECLIPSE
Gladys Hamilton, Hunterdon Co., N. J.

I will tell you of our white rooster. He is a very good fighter, especially with me. One day I went out to feed the chickens and he was there in the coop with the other chickens. When he saw me he came in back of me when I didn't see him and flew on my back. I jumped and threw him off. He then tried to get in my face. I ran to the house and called mother. The ones who were in the house laughed at me but I told them if it was done to them or if I would have had my eyes scratched out it would not have been quite so funny.—Helen F. Hrehor, (X), Broome County, N. Y.

Dear Cousin Ruth:—For pets I have four banties, and one cat whose name is Tom. All my pets know their names and come when I call them. Pete, the rooster, will crow when I tell him. When I lay him down he will stay there and does many other comical tricks.

I help my mother attend to the chickens and help her with many errands. — Maybelle Morris, ten, Chester County, Pa.

Dear Cousin Ruth:—I like to help my father on the farm. My brother and I have 14 rabbits and 2 goats. The carpenters are here. We are building a shed to the barn.—John Diemer, (X), Lancaster County, Pa.

MY PET COLLIE
Ruth Fisher, Bedford County, Pa.

Dear Cousin Ruth:—I am having good times this year. We play marbles and we play ball. I have to work hard now days for our workhand left us on April 1st.

I do not have to milk now because my father got a new milker. It does not take as long to do the milking as it used to. I am getting along in school very good now. We did not have any school this afternoon and I was glad.—Karl Scott, (X), Warren County, N. J.

Dear Cousin Ruth:—I go to school every day. I rank first in my spelling class. We have perfect marks. If I win I will get a book.

At school we play tag and prisoner's base. When it is not nice outdoors we play blind man's bluff.—Hedwig Malas, eleven, Somerset County, Pa.

Dear Cousin Ruth and Forum Friends:—Our farm is located in the eastern part of Crawford County. For pets we have two dogs and a goat. We have a harness and wagon for the goat and we can drive him anywhere we want to.

We also have a very pretty tiger cat that will sit up on his hind legs and begs for things to eat.—Donald W. Bement, Crawford County, Pa.

Dear Cousin Ruth:—We have a patch of strawberries and I helped to gather them last summer. I am going to take music lessons this summer. We have a bunch of chickens and we are getting a whole lot of eggs. I am going to school. I missed a lot of school because we had the measles. — Clara McGaughey, Armstrong County, Pa.

Dear Cousin Ruth:—I have a little brother five years old and we have a little rabbit dog six weeks old for a pet. Daddy built a pretty bird house for the birds to build in. We set it on a pole in the middle of a flower bed which we will plant cannas around. I live on a small farm. We have some baby chicks now. I am in the fourth grade at school. My daddy runs a wheat threshing outfit.—Cora E. Orr, eight (X), Cumberland County, N. J.

I'M HOLDING BEAUTY
Miriam M. Retten, (X), Lancaster Co., Pa.

Dear Cousin Ruth and Forum Friends:—I have a niece who is past two years old. She likes to play with me, so her mother wants me to visit her this summer.

I have a dog whose name is Buster. He is quite old. Sometime ago someone shot him on the leg and we thought he was going to die but I am glad he didn't.

I live three miles from the school so I go in a bus. I go to a school in the same village as my grandmother went. I am in the fourth grade. I go to a new school.—Kathryn B. Mount, nine (X), Monmouth County, N. J.

Dear Cousin Ruth and Forum Friends:—I live on a farm a short distance from the state highway between Trenton and the sea. Much repair work is being done. Later the road is to be concreted.

I wonder if any of the Forum friends pass over this highway on their way to the seashore in the summertime? Probably you have stopped at our roadside stand, near Bergens Mills. I would wish to meet the friends if they have. Wouldn't it be grand to have what we might call a "Forum Reunion." We would be able to become very well acquainted, wouldn't we?—Elinor E. Mount, (X), Monmouth County, N. J.

Dear Cousin Ruth and Forum Friends:—I live with my grandfather. We are making syrup now. I have a pony named Billy. He is black and weighs 250 pounds and is thirty-eight inches tall. I also have a Beagle hound, her name is Tootsie. She likes to ride horseback with me. When I don't help her on she runs and jumps on behind me on the pony's back.—Alfred Dates, (X), Tompkins County, N. Y.

Dear Cousin Ruth:—I received my membership pin and thank you very much for it. I was very much surprised when I came from school. You asked me what all I am going to do on the farm this summer? I do not know what all but am going to help harvest.

You also asked which I liked best, cows or horses? I believe horses. We have a rooster which is cross and will flog you if he gets a chance. We will get peeps this month. Sometime we are getting 400 Leghorns and 100 Plymouth Rocks. I like to have peeps when they do well. Last year they did not do very well. How many Forum members and friends like to ride horseback? I do. I do not have a horse but my chum has one and we ride horseback. Next summer I will have a wheel, and maybe a horse to ride.

I have a wheel now but it is broken.—Mervin F. Burkholder, thirteen (X), Franklin County, Pa.

OUR LITTLE FOLKS' PUZZLE CORNER

DEAR LITTLE FOLKS:—You know how one thing leads to another and you will find that this word "HAPPINESS" contains all the letters you will need to use in filling in the blank spaces in the words below in order to make what I think you will all agree is a very true sentence. Perhaps I had better tell you that the letter "I" does not occur in the sentence and there is only one "S" used. All the other letters are used, some of them more than once. But I'm not going to spoil your fun by telling you any more. I might tell you this, tho,—I surely am glad to welcome you Little Folks who are just beginning to send in answers and, of course, my little friends who send in answers so regularly know that the Puzzle Corner is a place where we all feel very much at home.

When you have solved this week's puzzle, send me the answer on a postal card or in a letter so that it reaches me by May 21st. BE SURE TO SAY HOW OLD YOU ARE, WHEN YOUR BIRTHDAY COMES AND DO TELL ME THE NAME OF YOUR COUNTY. The prizes go to the ten children, sending in the correct answer, whose cards or letters are the best in grammar, spelling, punctuation, penmanship and general appearance. Address all puzzle answers to The Puzzle Editor, Pennsylvania Farmer, 261 South Third Street, Philadelphia, Pa.

The answers to the puzzle published on April 23 (the one with the names of cities which you were to complete to make the name of the great writer) is: WILLIAM SHAKESPEARE.

The prize winners are: Isabella Andrews, age 13, St. Thomas, Pa.; Charles A. Beerens, age 9, Charlarol, Pa.; Carey L. Britton, age 10, Penns Grove, N. J.; Allen A. Green, age 11, Lehighton, Pa.; Ruth Long, age 10, Almont, Pa.; Ervin Messersmith, age 10, Brodbecks, Pa.; Viola Myers, age 10, Westminster, Md.; Margaret Jane Paisley, age 8, Conyngham, Pa.; Mary Warnes, age 10, Salem, N. J.; Joseph H. Weber, Jr., age 8, Harleysville, Pa.

I'm glad so many of you had such a good time with this puzzle and to hear that quite a few of you already knew about this man and had read some of his writings.

HAPPINESS

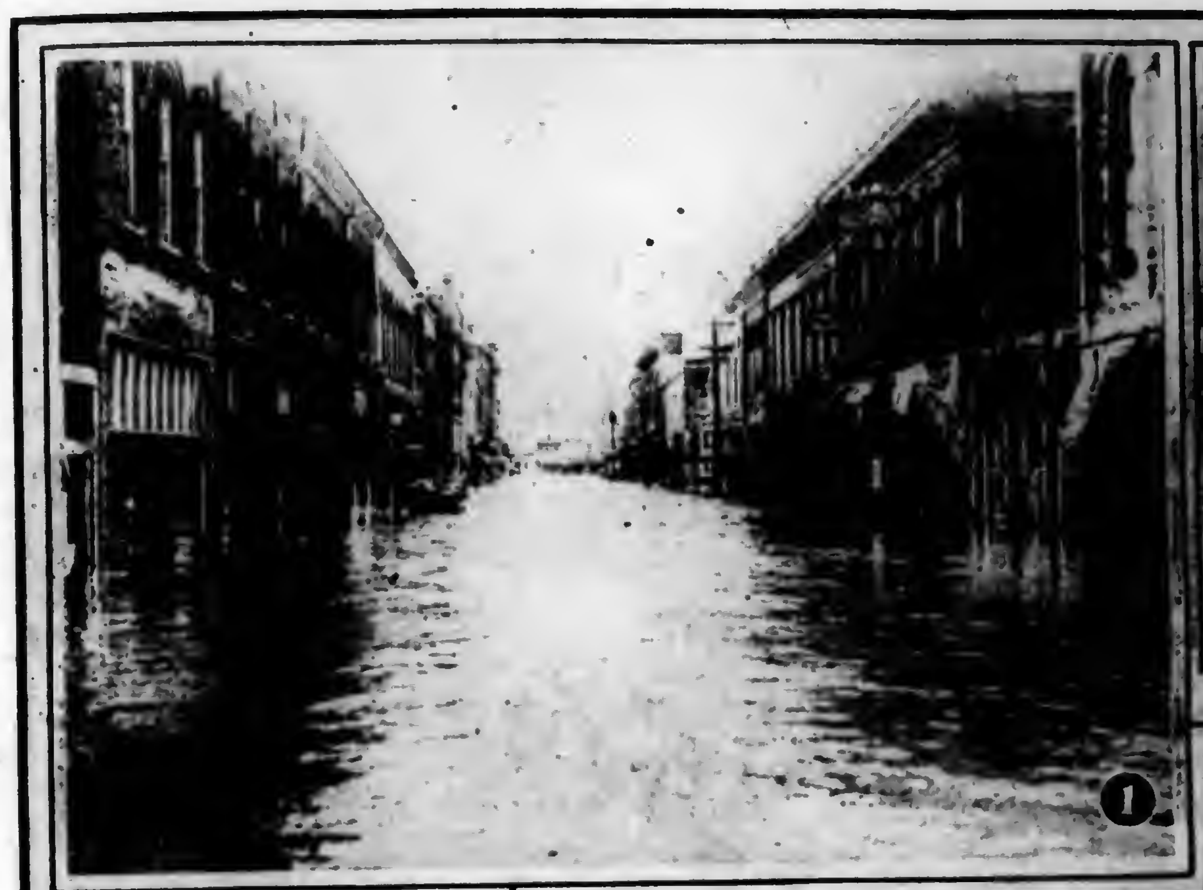
PASSING EVENTS IN PICTURES



(Copyright by Underwood and Underwood)

1.—Clinton Street, the main business thoroughfare of Hickman, Kentucky, under eight feet of water. This is but one of many towns which suffered when the Mississippi River flooded the valley.

2.—Edith von Maltzan, daughter of Baron Ago von Maltzan, German Ambassador to the United States, and her big German police dog enjoy sunny spring days.

3.—A lottery under government supervision was held in Lower California, Mexico, for the purpose of obtaining funds for road development in that section. Three poor road laborers won $10,000 in the drawing. A ten-year-old boy selected the marked ball and officials of the Mexican government recorded the numbers.

4.—Mrs. C. H. Thomas, of San Francisco, may seem unusually strong, but the huge rock she has placed on her shoulder is only Oregon pumice stone which weighs just a few pounds.

5.—A picturesque scene during an entertainment at a dance in Tokyo, Japan, given in honor of the great Meiji Emperor. One hundred guests of high standing in court circles and public life were present.

(Continued from last week)

GIVE and take it was from the first blow, with none of the finesse of a boxers' match, with less thought of escaping punishment than of inflicting it. More than once had Bud Lee felt he was falling only to catch his balance and come back at Trevors; more than once had Trevors gone reeling backward, smashing into the wall. Many a time did Melvin count his money won and lost. And Carson, crouching now, tense, eager, a little fearful, muttered constantly to himself.

"They've both got the sand!" grunted Melvin. "Which one draws the luck?"

But luck stood by and did not enter into the battle that grew ever hotter as Bud Lee's and Trevors's gorge rose higher at every blow. It was to be simply the best man wins, and none of the six men who watched knew from the beginning until the end who the best man was. What tricks Trevors knew, he used, and they were met by what cunning lay in Bud Lee; what strength, what resistance, what power to endure was in each panting body was called upon to the last reserve.

Already the spring had gone out of their steps. They came at each other for the most part more slowly, more cautiously, but more determined not to give over. Faces glistening with sweat, grimy with the dust their pounding feet beat up from the floor, the roots of Lee's hair red where with a bloody hand he had pushed it back, Trevors's lips swollen and ugly, they fought on until the men who looked at them wondered just where lay the limits upon which each depended.

"Lee's tough," Carson whispered to himself. "Riding every day an' working . . . Trevors has been setting in a chair. . . . Bud'll wear him out. . . . My ——! Bud, look out! Foot work. . . ."

Yes, foot work, but not as Carson expected it, not the thing Bud Lee looked for when he sensed rather than read in Trevors's eyes that a fresh trick was coming. He was ready for a lifted boot, and, instead, Trevors, rushing down upon him, threw grappling arms about him, heedless of the fist smashing again into his cut lips. Trevors doubled and twisted and got a grip about Lee's middle, at him, seeking to throw him.

Down they went together with no particular advantage to either man. But as they rolled apart and Lee threw out an arm to lift himself Trevors saw the chance he sought and mightily, brutally, cursing as he jumped up for it, he drove the heel of his boot down upon Lee's hand on the floor.

From Lee's white lips burst an involuntary groan as it seemed to him that every bone in his hand had been crushed, from Carson a choking cry of rage, from Trevors a short laugh as he called out sharply:

"Hands off, Carson! Our fight—any way—"

Again on their feet, Trevors a second first and with the advantage clearly his now rushed Lee seeking to finish what he had begun. And Bud Lee, his face white and drawn, looking ghastly with the blood smears across it, moving swiftly but not swiftly enough, went down, Trevors's weight against him, Trevors's fist beating into his side just below the arm-pit.

"Five hundred on Trevors!" shouted Melvin. Carson did not hear him.

"At him, Bud, go at him!" he was crying over and over. "That's the last dirty trick he's got. Get him, Buddie. Buddie, go get him!"

Trevors was upon him again, but Lee slipped aside, even rolled over, managed to get to his feet. Again Trevors bore down upon him, a new leaping fire in his eyes. Again, tho barely in time, Bud Lee slipped away from him. He drew Trevors's harsh laugh after him and Trevors's questing, eager fists. Lee put up his arm, his right arm, guarding his face, and drew away, back and back. Carson was almost whimpering, calling whiningly:

"Stand up to him, Bud! Oh, go get him, Buddie!"

STILL up and down the room they went, Trevors rushing at Lee, Lee taking what blows he must, striking out but little, seeking now only to pull himself together, to get his head clear of daze and dizziness. Stepping backward, he again got the wall at his shoulders, slipped to one side, strove only to get the empty room behind him, succeeded and let Trevors drive him, drive until again his back was to a wall.

"Run away, will you?" panted Trevors. "I've got you, d—— you. Got you right."

Lee didn't answer. He was thinking dully that Bayne Trevors was near telling the truth, that Bud Lee was almost beaten—almost. That was as far as a gentleman ever went—just to that desperate "almost beaten." Not quite. No! not quite. Never that.

Both men were nearly spent; Carson saw that while he cursed softly in his corner; Melvin saw it and watched for the end, wondering just how it would come. Trevors should swing for the point of the jaw, put all that was in him into a final, smashing blow, beat thru an insufficient guard, do it now, quickly. For both Carson and Melvin saw another thing, a thing which both had sensed at the outset: Bud Lee was harder than Bayne Trevors. Lee, slipping away at every step was getting something back which had nearly gone from him; Trevors was breathing in noisy jerks; save for the vital fact that he now had two hands to Bud Lee's one, Trevors was showing more signs of weariness than Lee.

"Bud'll get him—somehow," whispered Carson. "Good old Bud. Somehow."

What Carson and Melvin sensed Trevors knew. He saw that Lee was having less trouble in eluding him now, that Lee's feet were quicker, lighter than his, that Lee was beginning to strike back viciously at him, and when the blow landed, Trevors's big body rocked, shot thru with pain. There came to him the thought which was Melvin's, but it came in Trevors's way: Now, quickly, before Lee was ready for it, must come the end. So, for the third time that day Bayne Trevors, with much at stake, resorted to "what weapons God gave him, what weapons he could lay his mind to, his eyes to, his hand to"—his feet to. Resorting to the old trick which came up from South American ports in disreputable wind-jammers, which is known to the San Francisco waterfront, he raised a heavy boot, striking for Lee's stomach, seeking with one low, horrible blow to double up his already handicapped antagonist in writhing pain on the floor.

"An' I gave my word!" bellowed Carson, the sweat on his own tortured brow. "Oh, my G——."

But just that one brief instant too late did Bayne Trevors lift his foot. For Bud Lee had expected this, never had forgotten it, had prayed within his soul that the man he fought would use it. Just by that fraction of time which has no name was he quicker than Trevors, and he knew it. Now, as he read the sinister purpose in Trevors's glaring eyes, as he glimpsed the raised boot as it left the floor, he lowered his own head, averted it ever so little, stooped—and his hand closed like a locked iron about the calf of Trevors's leg. A stifled cry from the bulkier man, a little grunt of effort from Lee, Lee straining, heaving mightily, and Trevors went back, toppled, fought for his slipping balance, and fell. As he went down Lee was upon him, Lee's arm was about his neck, Lee's weight flung upon him, Lee holding his body between a powerful pair of knees which rode him as they rode daily some struggling Blue Lake colt.

Now Bud's left arm, defying the agony of a broken hand, was around him, Lee's legs were about the frantically fighting body, and at last Lee's right hand went its sure way to the thick, bared, pulsing throat. Trevors's right arm was caught at his side, held there by the body upon his. His left hand beat at Lee's face, struck and battered again only to come back like a steam-driven piston to hammer again. But Bud Lee's pain-racked body clung on, his thumb and fingers sank and sank deeper into the corded muscles of the heaving throat, crooked like talons, white and hard and relentless.

TREVORS'S eyes were terrible, filled with hatred, red-flecked with rage. He sought, with a sudden heave, to roll over. But he could not shake off the legs which were like stubborn tentacles about him, could not free his throat of the tensing clutch. He tore at the wrist, smote again at Lee's head, set his own hand to Lee's throat. In an instant his hand was back at the hand worrying him, but he was unable to drag it away.

His face went white, flamed red, grew purplish. His eyes bulged up at Lee's, his deep chest contracted spasmodically. Lee, summoning all of the force within him, drove thumb and fingers deeper.

"Got enough?" he panted.

For the last time Trevors strained with him and they rolled like death-locked mountain-lions. But still Lee's left arm was about Trevors's neck, his legs about the tossing body, his hand at Trevors's throat. Trevors's breath caught, failed him. . . .

Then and then only did a new look come into the bulging eyes. A look of more than fear, of utter, desperate terror. Trevors threw up his hand weakly, then let it fall so that it struck the floor heavily, a dead weight.

Lee's grip at the strangling throat relaxed. But he did not move his hand.

"Got enough?" he panted again.

The answer came brokenly, weakly, almost inarticulate. But it did come and the men drawn close heard it:

"Yes."

"You'll get out of the country?"

"Yes."

Bud Lee drew back and rose, going to the door swiftly. He stooped for his hat and passed out. And as Bayne Trevors got unsteadily to his feet and sank slumping into the chair offered him, two big tears formed in his eyes and rolled down his cheeks. The first tears in many a year, the tears of a strong man broken for the first time in his life.

"Sand did. it!" grunted Melvin "Just sand, Carson."

"I'll stick aroun' an' see he moves on, Bud," Carson followed Lee to say. "Oh, he'll go. But I'll just tell him how the boys is headed this way by now an' it's tar an' feathers for him if he don't mosey right along. That's something he couldn't stand right now. An', Bud—"

He put out his hand and locked Lee's in a grip that made the sore fingers wince. Then, swinging upon the heel of his boot, he went back to collect a hundred dollars from Melvin and help Bayne Trevors shape his plans.

BUT Bud Lee did not wait. He was on his horse, swaying a little, an arm caught in a rude sling, glad to be out in the late sunlight.

"Fog along, little horse," he was saying dully. "Fog right along. She's waiting, little horse. Judith is waiting! Think of that. That's right—fog right along."

At the old cabin above the lake Bud Lee dismounted. His hand in its rude sling was paining him terribly, demanding some sort of first-aid treatment. Tomorrow he could take it to a doctor; perhaps in an hour or so he could get Tripp to look to it; just now he must do what he could for himself with hot water and strips torn from an old shirt.

The hand treated first, it was slow, tedious business seeking to remove the traces of his recent encounter with Trevors; and, tho he could wash his face and manage a change of clothes, there was nothing dapper about the result. But at length, shaking his head at the bruised face looking at him from his bit of mirror, he went out to his horse and rode down the trail that led to the ranch headquarters. Judith was waiting for him—that was vastly more important than the fact that he had a crippled hand and a cut or so upon his face.

Night had descended, serene with stars. He wondered if the boys were back yet from the lumber-camp. He had met them, as Carson had predicted he would, riding in a close-packed, silent, ominous body. He felt assured that they would find no work for them to do at the company's office, that Carson was right and Trevors would "be on his way." But he stopped at the bunk-house.

No, the boys hadn't come in yet. But there was a message for Lee, just received by the cook. It was from Greene, the forester, brief and to the point:

Greene had lost no time in finding the sheriff of the adjoining county at White Rock and in going with him to the cave. They had found Quinnion. He was dead, the manner of his death clearly indicated. For he lay at the foot of the cliff straight below the cave's mouth, his face terribly torn and scratched by a mad woman's nails, the mad woman herself lying huddled and still close beside him. He had allowed the escape of her captive; she had accused him after the two of them had gone back to the cavern, had thrown herself upon him, tearing at his face, and the two had fallen. Mother and son? Lee shuddered, hoping within his heart that Judith had been mistaken. It was too horrible.

BUT, such is youth, such is love, Bud Lee promptly forgot both Quinnion and Mad Ruth as he went thru the lilacs to the house. He remembered how Marcia had flown once to Pollock Hampton when he had made a hero of himself, how again just today she had gone swiftly to him because he had made a fool of himself and because it seemed she loved him. In due time there was going to be a wedding at Blue Lake ranch. A wedding! Just one? Lee hurried on.

Yes, Judith was waiting for him. She was there in the living-room, curled up on a great couch, lifting her eyes expectantly as his step sounded on the veranda. A wonderfully gowned, transcendently lovely Judith; a Judith of bare white arms, round and warm and rich in their tender curves; a Judith softly, alluringly feminine even in the eyes of Bud Lee, no longer theorist; a Judith whose filmy gown clung lingeringly to her like a sun-shot mist, a Judith whose tender mouth was a red flower, whose eyes were Aphrodite's own, glorious, dawn-gray, soft with the light shining in them, the unhidden light of love for the man who came toward her swiftly; the Judith he had first held in his arms and kissed.

HE CAME in quickly, his heart singing. The color suddenly ran up hot and vivid in the girl's cheeks. Standing over her he put out his hand. But she slipped her own hands behind her.

"Good evening, Mr. Lee," said Judith brightly. "Really, you have taken your time in making your first call. Won't you sit down?"

"No," said Bud Lee gravely. "I'll take mine standing, please!"

"Like a man to be shot at dawn?" cried Judith. "Dear me, Mr. Lee, that sounds so tragic. What, pray, are you taking?"

"A new job," said Lee. "I've come to tell you that just being horse foreman doesn't suit me any longer. What you need and need right away is a general manager. That's what I want to be, your general manager, Judith. For life!"

Judith laughed softly, happily. Her hands flew out to him like two little homing birds, and she followed them—home.

"You'll find your work cut out for you, Mr. Lee," she told him.

"It's the kind of work I want," answered Bud Lee.

Then suddenly her arms went about his neck and tears sprang into her eyes and she set her lips to the cut he had sought to cover with his hair, and took his sore, swathed hand tenderly into her own two hands, laying it against her cheek.

"Carson telephoned me," she whispered, her lips trembling all of a sudden. "He told me how Trevors fought . . . and how you fought! And he was half crying over the telephone, he was so proud of you. And I am proud of you! And—oh, Bud Lee, Bud Lee, I love you so!"

From without came the sound of the Blue Lake boys returning, Carson at their head. Riding close together they were singing, their voices floating thru the night in an old cowboy song. Mrs. Simpson heard and ran out into the courtyard to listen. Marcia and Pollock Hampton, lost to all save each other in the shadows far down the veranda, listened, and Marcia clapped her hands. The voices were to be heard from afar, the strong voices of a score of men. The strange thing is that neither Judith nor Bud Lee heard; that neither had the vaguest consciousness just then that there were in all the world any other mortals than—Judith and Bud Lee.

(The End.)

Coming—A Great Surprise

We have in store for readers of Pennsylvania Farmer one of the greatest features ever offered to the readers of any magazine. That is a strong statement, but we mean it. Truth is stranger than fiction, and the true stories we are planning to publish this summer surpass the dreams of the greatest novelists. More than that, they deal with people who live and work in Pennsylvania and surrounding states. Watch for the first of these great stories.

The harvester-thresher combine makes quick work of wheat harvesting, even on the almost limitless prairies of the West.

Will Advertise Jersey

A STATE-wide Pomona Grange exhibit of farm crops, fruits and produce will be one of the new features to be staged at the Trenton Fair this fall to advertise New Jersey agriculture. Every county in the state has been invited to make a county exhibit thru its Pomona Grange. The management of the Fair Association is putting up a minimum sum of $25 to every Pomona Grange for the work of the exhibit. Many of the Pomona Granges of the state have already assured State Master David Agans of their support of this work, and all but two are expected to make a decision favorable for this Grange exhibit in a few weeks.

Back of this Grange movement is an effort to have every county stage its exhibit in packages and containers suitable for the retail trade. To standardize the work, the Grange is limiting the exhibit to ten of the most common vegetables and fourteen of the most valuable apple varieties grown commercially in the state. A part of the exhibit will include canned fruits and vegetables, preserves, jellies, jams, cider, etc.—A. K.

An ounce of clean-up is worth a pound of swatting.

Hit the Low Spots Now

HERE are two ways, recommended by Penn State, for removing depressions or low spots in lawns:

1. Take up the sod for several feet beyond the limits of the depression, place good top soil in the depression, tamp it well and replace the sod. Or—

2. Place not more than 3 to 3½ inches of top soil over the existing grass and sow grass seed. The old grass plants will grow thru the soil.

Did you ever hear this one?—

Open for Bids

A printer was asked by a physician to submit a price on a letterhead; different sizes, different grades, different colors, and a number of other "differences" were to be included in the printer's bid. In addition, the form was to be left standing. The printer answered in the following way:
